Identified by

Advocate

The Deponent above named being duly identified by Sri A. K. Mohanty Advocate at appears before me at 10.09.26 at about 9.40 A.M. and states on oath that the contents of this affidavit are true to the best of his knowledge

ANIL KUMAR MOHANTY
NOTARY, BBSR
REGD. No.-ON-116/2009

File No. TPCODL/Regulatory /2026/108
10th September 2026

To,
The Secretary
Odisha Electricity Regulatory Commission
Bidyut Niyamak Bhawan
Plot No 4, Chunokoli, Shailashree Vihar
Bhubaneshwar 751021

Dear Sir

Sub: Petition for Approval of the Capital Investment Plan for FY 2027-28

We are through this letter submitting a petition to the Hon'ble Commission for approval of the Capital Investment Plan for the FY 2027-28.

We have also submitted this petition vide our email dated 10.09.2026.

We request you to kindly approve the same.

We trust our submissions are in order

Thanking You,

Chandan Singh
Chief – Regulatory

TP Central Odisha Distribution Ltd. TPCODL *BBSR*

Encl: Petition for Approval of Capital Investment Plan for FY 2027-28

BEFORE THE ODISHA ELECTRICITY REGULATORY COMMISSION,
BIDYUT NIYAMAK BHAWAN.
PLOT No-4, CHUNOKOLI, SHAILASHREE VIHAR, BHUBANESWAR-751021

Case No:_____/2026

IN THE MATTER OF: Application for approval of Capital Investment Plan for the FY 2027-28 in the Licensed Area of TP Central Odisha Distribution Ltd as per para 3.2 of the OERC (Terms and Conditions for determination of Wheeling Tariff and Retail Supply Tariff) Regulations, 2022

And

IN THE MATTER OF: TP Central Odisha Distribution Ltd., Corporate Office, Power House, Unit 8, Bhubaneswar- 751 012 represented by its Chief-Regulatory

.... Petitioner

IN THE MATTER OF: M/s GRIDCO, OPTCL, SLDC, Department of Energy, Govt. of Odisha and All Concerned Stake Holders.

.... Respondents

1. Background for Submission of the Petition

The Odisha Electricity Regulatory Commission (Terms and Conditions for Determination of Wheeling Tariff and Retail Supply Tariff) Regulations 2022 (herein referred to as "Tariff Regulations,2022") requires submission of Capital Investment Plan for each year of Control period and also separate annual Capital Investment Plan for each year of Control Period. The relevant extract from the Tariff Regulations,2022 is provided below.

3.2. Capital Investment

3.2.1. The Distribution Licensee shall submit detailed capital investment plan, financing plan and physical targets for each year of the Control Period for strengthening and augmentation of distribution network, meeting the requirement of load growth, reduction in distribution losses, improvement in quality of supply, reliability, metering, reduction in congestion, etc., to the Commission for approval, as a part of the Business Plan applicable for the entire control period and annual proposal for each year of the Control Period.

TP Central Odisha Distribution Ltd. TPCODL BBSR

*3.2.2. The Distribution Licensee shall **file a separate annual Capital Investment Plan** comprising of capital investment plan, financing plan and physical targets for each year of the Control Period as per the timelines specified in Annexure-I.*

(Emphasis Supplied)

In compliance to the Tariff Regulations,2022 ,TPCODL had filed its Business Plan for FY 2023-24 vide submission dated 30.01.2023 (registered as Case 11/2023) and Business Plan for FY 25 to FY 28 vide submission dated 31.05.2023 (registered as Case 45 /2023). The Business Plan application of TPCODL comprised of, among other component of Business Plan as per Tariff Regulation,2022, Capital Investment Plan for the Control Period. The Business Plan application for FY 2023-24 was disposed off by the Hon'ble Commission in the Tariff Order for FY 2023-24 dated 23.03.2023.The Hon'ble Commission has issued order in the matter of Case 45/2023 on 14.09.2023 and has stipulated following with regards submission of Capital Investment Plan.

33. Capital Investment

...

*j. **The Commission opines that the Capital expenditure involves multidimensional aspects which undergoes changes due to rapid urbanization & industrial growth. Ensuring reliability of power supply, reducing interruptions & AT&C loss and providing electricity at an affordable tariff to the consumers etc. are major challenges**. In view of such dynamism in the system, the Commission **directs the DISCOMs to submit the year wise Capex plan for the control period for approval of the Commission.** The Commission also observes that the DISCOMs are required to catch up in capitalization with the approval by the Commission. **(Emphasis Supplied)***

In compliance to the above regulatory requirements, we are submitting this application for approval of Capital Investment Plan for FY 2027-28.

2. Total Capex approved by the Board of TPCODL for FY 2027-28

It is submitted that the Board of Directors of TPCODL in its meeting dated 18th July 2026 has accorded approval for the Capital Investment Plan of Rs. 642 Cr for FY 2027-28 . The certified true copy of the Board Resolution is enclosed as **Annexure-A** to this submission. Board approval for Rs. 9 Cr proposed towards Smart Metering Backend infrastructure under ' Technology & Infrastructure' is being obtained and will be submitted subsequently.

3. Summary of the Capital Investment Plan for FY 2027-28

We are through this petition filing the proposal for approval of the Capital Investment Plan for FY 2027-28 . While the detailed Capital Investment Plan for FY 2027-28 is provided in the **Appendix**, the summary of the proposal is provided in **Table-A** below.

The Capital Investment Plan provided in **Appendix** includes scope and objective, purpose of investment, benefits and location wise details (wherever applicable) .

All the scheme proposed in this petition for FY 2027-28 are prioritized scheme out of the balance scope based on Load flow study, field inputs, high loss and high risk locations etc.

The capital structure of investment will be in the form of debt to equity ratio of 70:30.

Table A: Capital Investment Plan for FY 2027-28 (Hard Cost Only)

Major Head	Activity	Proposed CAPEX Plan for FY 2027-28 (in Rs. Cr)
Statutory & Safety	Technology-enabled Safety, Disaster Resilience, Workforce Training Infrastructure Strengthening & Sustainable Mobility Initiatives	3
	Fire-Wall	2
	Cradle Guard at Road Crossings	1
	Testing Equipment for Meter Testing Labs & Others	2
	Fencing & Boundary Wall for Switchyard and PSS	15
	Defective AB Cable Replacement	1
	Enhancing vertical clearance through interposing Poles	8
	Sub Total: Statutory & Safety	**32**
Loss Reduction	33kV Network Reconfiguration - Power evacuation, Length Reduction	25
	Smart DT Meters	10
	LT Bare to AB Conversion	30
	Damaged / Defective Service Cable replacement for theft elimination,Safety & Reliability	Will be Claimed at Actual in True up
	Sub Total:Loss Reduction	**65**
Reliability	SCADA & Communication Strenghtneing of existing PSS through Replacement of RAPDRP RTU	3
	Grid Sub-station Automation System	15
	FLC Switchgear Van	4
	33kV Network Reliability	75
	11kV Network Reliability	60
	New PSS to meet Network Reliability	25
	Replacement of Aged PTR's to improve reliability	11
	Mitigation of single PTR at 33/11kV PSS	14
	PSS Refurbishment	11
	Mitigate VCB Group Control for 33kV and 11kV network Breakers	21
	LV Protection (63kVA and above)	30
	T-OFF removal from 33KV Network	5
	Sub Total:Reliability	**274**
Load Growth	New Connection Release	Will be Claimed at Actual in True up
	33kV Network Overload mitigation	20
	11kV Network Overload mitigation	40
	Augmentation of PTR to meet load demand	40
	LT Network Strengthening for Load Growth	10
	DTR/ CSS (New & Aug.) to meet load Growth	70
	Sub Total: Load Growth	**180**
Technology & Infrastructure	Admin Infrastructure	2
	Stores Infrastructure	2
	Strengthening of IT & Technology	30
	CCTV installation to improve Security & Safety	5
	Civil Infrastructure	34
	Residential Training Centre Phase-II	15
	Initiatives for a Sustainable Infrastructure	3
	Smart Metering Backend Infrastructure	9
	Sub Total: Technology & Infrastructure	**100**
Grand Total		**651**

Table B: Percentage Break up of Capex proposed for FY 2027-28

Sr No	Major Head	Capex Proposed for FY 2027-28 (Rs. Cr)	% Break up
1	Statutory & Safety	32	5%
2	Loss Reduction	65	10%
3	Reliability	274	42%
4	Load Growth	180	28%
5	Technology & Infrastructure	100	15%
Total		**651**	**100%**

As can be observed ,the network related investment constitute more than 80% of the total Capex proposed for FY 2027-28.

The Capital Investment Plan of Rs. 651 Cr as depicted in Table -A above is hard cost only. Other items like employee cost, interest during construction and other cost exclusively incurred for project related work will be over and above and would be in addition to the amount that would be approved by the Hon'ble Commission under this petition.

The detailed Capital Investment Plan for FY 2027-28 including status of Capex investment already made vis-à-vis the approved amounts is provided in the **Appendix.**

Certain works proposed under the Capital Investment Plan for FY 2027-28 are critical in nature and need to be taken up on priority for improving system reliability, safety and quality of power supply to consumers. Some of these activities may overlap, either fully or partially, with activities proposed under the Licensee's various Capex Petitions, which are presently under consideration by the Hon'ble Commission and are at different stages of hearing.

Since, these activities are of high priority and are essential for the improvement of system reliability and quality of supply. Accordingly, they have also been included in the present Annual Capex Petition.

The Licensee, therefore, respectfully prays that the Hon'ble Commission may kindly take cognizance of above and consider and accord approval for FY 2027-28 either under the present Annual Capex Petition or under the respective Capex Petitions already under hearing before the Hon'ble Commission.

Actual Cost towards 'Damaged Service Cable Replacement' and 'New Connection'

a. Since vesting, TPCODL has been undertaking systematic replacement of damaged and very old service cables to improve safety of households, reliability and eliminate pilferage

of electricity.

However, during site inspections, it has been observed that several service connections continue to operate with defective or jointed cables which not only create risks of electrocution and theft but also result in unmetered consumption and reduced billing efficiency. Such cases are primarily associated with elimination of theft, load enhancement where existing service cables are undersized, meter shifting requirements to facilitate proper installation at designated locations, and defective service cable replacement identified during field inspections. Continuation of these defective connections adversely impacts collection efficiency, increases AT&C losses and poses significant consumer safety hazards, thereby necessitating an extension of the replacement program in a phased manner under the current CAPEX plan.

TPCODL is recovering such expenditure from the consumers wherever it is clearly established that the service cable has been damaged dues to reasons attributable to the consumers. However, in most of the cases the reason of damage is not attributable to the consumers (e.g. service cable damage due to old age, due to outdoor harsh environmental conditions etc.) or it cannot be established, in such cases these service cables need to be replaced under by the DISCOM under CAPEX.

The Hon'ble Commission in Capex Order for FY 2026-27 dated 15.05.2026 in the matter of Case No-77/2025 has stipulated such cost to be allowed at actuals during truing up, relevant extract of the order is produced below.

> *The Commission is of the view that the replacement of service cables is generally recovered from consumers. However, the differential expenditure of service cables (if any) over and above the consumer contribution will be considered at the time of true up exercise based on audited expenditure after prudence check.*

In view of the above, we are not proposing any cost under this head in this petition ,and request the Hon'ble Commission to allow the actual expenditure at time of Truing up in line with above direction given in Capex Order of FY 2026-27.

b. In order to meet the increasing power demand, the existing distribution network infrastructure needs to be augmented/ strengthened/ expanded to release the new connection. Network extension/ augmentation/addition is required as some of the new connection cannot be released from the existing network and require augmentation/addition/extension before release of new connection.

The cost recovered from consumers by way of service connection charges are not

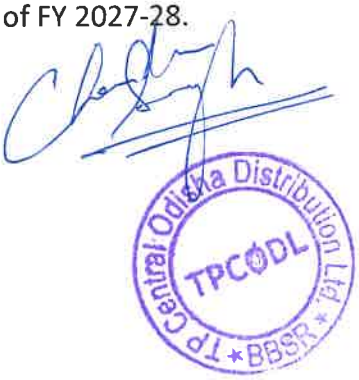
TP Central Odisha Distribution Ltd. TPCODL *BBSR*

adequate in certain new connection release cases and the Hon'ble Commission has been allowing this differential cost associated with new connection release including unrecovered cost of service cable in the capex.

In the Capex order dated 10.07.2025 in the matter of Case No-80/2024 and order dated 15.05.2026 in the matter of Case No-77/2025, the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual. Relevant extract from both the orders is provided below.

In the Capex order dated 10.07.2025 in the matter of Case No-80 of 2024 under para 23 (iv), the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual.

"



. . . However, the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis."

In the Capex order dated 15.05.2026 in the matter of Case No-77 of 2025 under para 24 (iv), the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual.

"

. . . The Commission in Capex Order dated 10.07.2025 in the Case No.80/2024 has stipulated that the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis. Following the same principle, the additional expenditure towards new connection release over and above the contribution of consumer(s) will be considered by the Commission during the Truing up exercise based on audited accounts."

In view of the above directive, we are in this petition not proposing any amount towards 'New Connection Release' as the same will be claimed during truing up of FY 2027-28.

Prayers

TPCODL prays that the Hon'ble Commission may kindly be pleased to:

1. Approve the Capital Investment plan of Rs. 651 Cr (Hard Cost) for FY 2027-28.

2. Allow actual expenditure incurred towards 'Damaged Service Cable Replacement' and 'New Connection Release ' at time of Truing up in line with previous Capex Orders.

3. Allow Employee Cost , Interest During Construction and Other Cost related to projects based on actuals to be capitalised over and above the Capex (Hard Cost) for FY 2027-28.

4. Permit Carrying forward of the unspent Capital Expenditure to subsequent years.

5. That, the petitioner craves leave for submission of further /additional submission as and when required by the Hon'ble Commission.

6. To kindly condone any inadvertent omission /errors/shortcoming and allow to make future submission as may be required in future to support this application in terms of modification /clarifications, if any.

7. Grant any other relief as deemed fit and proper in the facts and circumstances of the case.

8. Any other direction as the Hon'ble Commission may think appropriate.

Chandan Singh

Chief – Regulatory

Annexure-A

Certified True Copy of the resolution passed at the Board Meeting held on 18th July 2026

"RESOLVED that Capital Expenditure (Capex) of the Company for FY28, be and is hereby approved, as under, subject to the approval of Odisha Electricity Regulatory Commission (OERC):

(₹ in crore)

Sl. No.	Capex Head	FY28
1.	Safety and Statutory	50
2.	Loss Reduction	67
3.	Reliability	274
4.	Load Growth	160
5.	Technology and Infrastructure	91
Total		**642**

Note: *The proposed Capex cost was exclusive of capitalizable project employee cost and interest during construction.*

FURTHER RESOLVED that the Chief Executive Officer and the Chief Financial Officer of the Company be and are hereby severally authorized to take all necessary steps in this regard."

1 Capital Investment Proposal for FY 2027-28

1.1. Need for Capital Expenditure

Capital investment is required to improve Power supply reliability, reduce the AT&C losses, ensure the safety and security of network, and make the network adequate enough to cater the load growth and implementation of the technology to bring process efficiency in the operations.

In view of achieving the above objectives, the TPCODL has farmed its Capex Investment plan based upon the following need/requirements:

1. **Statutory & Safety** – Investment required for addressing unsafe conditions and making the network statutory compliant. This covers set up of safety culture through safety and testing equipment, fencing of DSS & switchyards etc, erecting interposing poles etc.
2. **Loss Reduction** – Investment required for taking initiatives for reducing the technical Losses in the network. This includes Energy accounting measures, LT Bare to AB Cable and Defective cable replacement, Network Reconfiguration, Damaged Service Line replacement for theft elimination etc.
3. **Reliability** – Investment required to improve the Reliability and Quality of Power Supply by taking various initiatives like addition / augmentation of 33 kV and 11 kV Network Infrastructure, Addition/upgradation of network components at 33/11 kV PSS, Installation of LV Protection, Grid Sub-Station Automation System with SCADA enablement etc.
4. **Load Growth** – Investment is required to meet the Load Growth in the network and making the network future ready. This includes Augmentation / Addition of Power Transformers and DTs, New Connection release, mitigation of network overloading etc.
5. **Technology and Infrastructure** – Investment related to technology adoption and strengthening of various infrastructure to improve internal as well as external customer satisfaction. This includes IT & Technology infrastructure, civil infrastructure, etc. Initiatives for sustainable future.

As explained in our earlier petitions, TPCODL has identified a number of other challenges related to Network , Metering infrastructure, Customer Services, and Technology usage. These challenges are planned to be addressed through a systematic investment plan prepared by TPCODL, a part of which was proposed by TPCODL for FY 2020-21 in the petition filed in Case No 32 of 2020, Case 05 of 2021 for FY 2021-22 , Case 14 of 2022 and Case 51 of 2022 for FY 2022-23, Case 98 of 2022 for FY 2023-24, Case 102 of 2023 for FY 2024-25 , Case 80 of 2024 for FY 2025-26 and Case No 77 of 2025 for FY 2026-27.

Technologies implemented by TPCODL have been instrumental in improving the overall performance of the company and been able to deliver benefit in terms of lowering losses and improving reliability and better management of business and consumers.

TPCODL considers customers as its most important stakeholders. Hence, it has prepared its strategy to create value for the customers by improving the reliability of supply for better customer experience. So, Capex intervention is required to reinforce the network to enhance the useful life of assets and bring in new technology.

The proposed Capex plan represents a justified and efficient level of total capital investment estimated by TPCODL to meet its service obligation ensuring safe and reliable network, maintaining high level of service standards and to provide customer services at benchmark level through process improvement, capacity building and technology adoption.

1.2. Status of Capex and Capitalization against Capex approved by the Hon'ble Commission for FY 2020-21, FY 2021-22, FY 2022-23, FY 2023-24, FY 2024-25 ,FY 2025-26 and FY 2026-27

The Hon'ble Commission has approved Capex of Rs.280.63 Cr for FY 2020-21 in its order dated 08.09.2020. For FY 2021-22, the Hon'ble Commission has approved a Capex of Rs.298.73 Cr in its order dated 18.09.2021. For FY 2022-23, the Hon'ble Commission has approved a Capex of Rs. 380.56 Cr vide order dated 19.07.2022 and 16.12.2022. For FY 2023-24, the Hon'ble Commission has approved Capex of Rs. 283.72 Cr in order dated 21.06.2023. Further, Rs. 380.68 Cr was approved by the Hon'ble Commission for FY 2024-25 in order dated 12.12.2023.. The Hon'ble Commission has also approved Rs. 429.82 Cr for FY 2025-26 vide order dated 10.07.2025 in the matter of Case No-80/2024 & order dated 24.09.2025 in Case No-61/2025. The Hon'ble Commission has also approved Rs. 485.67 Cr for FY 2026-27 vide order dated 15.05.2026 in the matter of Case No-77/2025.The status of project progress against the Capex approved for FY 2020-21 , FY 2021-22 ,FY 2022-23 ,FY 2023-24 ,FY 2024-25 ,FY 2025-26 and FY 2026-26 as on 30.06.2026 is as provided in table below.

Table 1 : Actual Status as on 30.06.2026 against Capex approved for FY -21 to FY-26 (Rs Cr)

in Rs. Crores

Sr No	Major Heads	Cumulative Capex Approved till 31.03.2026	Actual Status as on 30.06.2026	
			Capex	Capitalization
1	Statutory & Safety	165	162	160
2	Loss Reduction	239	234	229
3	Reliability	879	833	800
4	Load Growth	430	397	376
5	Technology & Infrastructure	394	369	367
Total		**2106**	**1995**	**1932**

* Note-1: The above is Hard Cost Only

Note-2: Rs. 485.67 Cr for FY 2026-27 was approved on 15.05.2026 (Out of which Capex of Rs. 6 Cr done as on 30.06.2026)

It is worthwhile to point out that, in addition to above, TPCODL has incurred substantial Capex under various Government Schemes also.

TPCODL is working towards executing the balance Capex on priority basis so that corresponding benefits to the stakeholders are accrued.

1.3. Summary of the Capital Expenditure for FY 2027-28

TPCODL has considered Capital Expenditure under following five major heads:

a) Statutory and Safety
b) Loss Reduction
c) Reliability
d) Load Growth and
e) Technology and Infrastructure.

The summary of the Capex planned for FY 2027-28 (only Hard Cost i.e. without considering Employee Costs capitalized , Interest During Construction & Other project related Cost) is as summarized below

Table 2: Summary of Capex plan for FY 2027-28 (only Hard Cost i.e. without considering Employee Cost , IDC capitalization & Other project related Cost)

Major Head	Activity	Proposed CAPEX Plan for FY 2027-28 (in Cr)
Statutory & Safety	Technology-enabled Safety, Disaster Resilience, Workforce Training Infrastructure Strengthening & Sustainable Mobility Initiatives	3
	Fire-Wall	2
	Cradle Guard at Road Crossings	1
	Testing Equipment for Meter Testing Labs & Others	2
	Fencing & Boundary Wall for Switchyard and PSS	15
	Defective AB Cable Replacement	1
	Enhancing vertical clearance through interposing Poles	8
	Sub Total: Statutory & Safety	**32**
Loss Reduction	33kV Network Reconfiguration - Power evacuation, Length Reduction	25
	Smart DT Meters	10
	LT Bare to AB Conversion	30
	Damaged / Defective Service Cable replacement for theft elimination,Safety & Reliability	Will be Claimed at Actual in True up
	Sub Total:Loss Reduction	**65**
Reliability	SCADA & Communication Strenghtneing of existing PSS through Replacement of RAPDRP RTU	3
	Grid Sub-station Automation System	15
	FLC Switchgear Van	4
	33kV Network Reliability	75
	11kV Network Reliability	60
	New PSS to meet Network Reliability	25
	Replacement of Aged PTR's to improve reliability	11
	Mitigation of single PTR at 33/11kV PSS	14
	PSS Refurbishment	11
	Mitigate VCB Group Control for 33kV and 11kV network Breakers	21
	LV Protection (63kVA and above)	30
	T-OFF removal from 33KV Network	5
	Sub Total:Reliability	**274**
Load Growth	New Connection Release	Will be Claimed at Actual in True up
	33kV Network Overload mitigation	20
	11kV Network Overload mitigation	40
	Augmentation of PTR to meet load demand	40
	LT Network Strengthening for Load Growth	10
	DTR/ CSS (New & Aug.) to meet load Growth	70
	Sub Total: Load Growth	**180**
Technology & Infrastructure	Admin Infrastructure	2
	Stores Infrastructure	2
	Strengthening of IT & Technology	30
	CCTV installation to improve Security & Safety	5
	Civil Infrastructure	34
	Residential Training Centre Phase-II	15
	Initiatives for a Sustainable Infrastructure	3
	Smart Metering Backend Infrastructure	9
	Sub Total: Technology & Infrastructure	**100**
Grand Total		**651**

2 Annual Capex Plan

2.1 Statutory and Safety

The proposed budget for Safety & Statutory under CAPEX FY 27-28 is Rs. 30 .00 Cr. The details of the same are as given in the table below:

Table 3: Capital Expenditure Safety and Statutory

Sl. No.	Activity	Total Cost (In Rs. Cr)
1	Technology-enabled Safety, Disaster Resilience, Workforce Training Infrastructure Strengthening & Sustainable Mobility Initiatives	3
2	Fire-Wall	2
3	Cradle Guard at Road Crossings	1
4	Testing Equipment for Meter Testing Labs & Others	2
5	Fencing & Boundary Wall for Switchyard and PSS	15
6	Defective AB Cable Replacement	1
7	Enhancing vertical clearance through interposing Poles	8
Total		**32**

The description of the various schemes are as under

2.1.1 Technology-enabled Safety, Disaster Resilience, Workforce Training Infrastructure Strengthening & Sustainable Mobility Initiatives

The proposal under this head is provided in table below.

Table 4: Scope Proposed for Technology-Enabled Safety, Disaster Resilience, Training Infrastructure & Sustainable Mobility Initiatives

Sl. No.	Activity	Qty	Estimated Rate (In ₹ Cr)	Total Cost (In ₹ Cr)
1	Portable Emergency Communication Hubs for Disaster & Emergency Management	20	0.015	0.30
2	Advanced AI Smart Work Monitoring Device for Smart Safety Equipment	50	0.014	0.70
3	Development of Training Yards for Work-at-Height & Vertigo Assessment	5	0.25	1.25
4	3-Wheeler EV Bike	53	0.015	0.75
	Grand Total			**3.00**

Item wise details are provided in following paragraphs.

2.1.1.1 Portable Emergency Communication Hubs for Disaster & Emergency Management

Background

TPCODL operates across a geographically widespread area covering cyclone, flood and disaster-prone regions of Odisha. During major natural calamities, conventional communication networks may become unavailable or unreliable due to damage to telecom infrastructure, impacting coordination between Emergency Control Centres and field restoration teams. To ensure uninterrupted communication during emergency situations and strengthen disaster preparedness, deployment of Portable Emergency Communication Hubs with independent communication capability is proposed. The system will support emergency coordination, restoration activities and business continuity during large-scale disruptions.

Proposal

It is proposed to procure 20 Nos. Portable Emergency Communication Hub devices for deployment during disasters, emergency situations and large-scale restoration activities. The proposed system will provide independent communication capability during failure of conventional networks, enable direct communication between the Emergency Control Centre and field restoration teams, support real-time coordination during cyclone, flood and other disaster restoration activities and improve emergency response and restoration management.

Justification/ Need of the Proposal

Field Operations in Odisha vulnerable to cyclones (Kalabaisakhi), floods and other natural disasters, requiring continuous communication between Emergency Control Centres, field teams and response groups during restoration activities. During above conditions, communication networks may get disrupted, affecting coordination and emergency response.

The proposed Portable Radio Communication Hub system will ensure reliable communication continuity, improve coordination of restoration teams, enable faster decision-making and resource deployment and strengthen disaster management, safety response and business continuity preparedness.

Scope of Work

Deployment of 20 Nos. Portable Radio Communication Hub devices with necessary accessories and communication facilities at the Emergency Control Centre and identified critical restoration locations to ensure reliable communication support during disaster, emergency and large-scale restoration activities

Table 5: Proposed Cost estimate break up-portable emergency device

Description	Qty.	Unit Rate (Rs. In Cr)	Amount (Rs. In Cr)	Remarks
Portable Emergency Communication Hub devices	20 Nos.	0.015	0.3	Data Sheet is enclosed, Price is including rate escalation.

Cost Benefit Analysis

The proposed investment will provide reliable communication support during disasters when conventional communication systems are affected. It will improve restoration coordination, reduce response time, enable effective emergency management and support faster restoration of power supply.

Benefit to the System and Consumers

The initiative will enhance emergency preparedness, emergency response and safety monitoring capability by ensuring reliable communication during critical situations. The advanced communication system will improve coordination, support faster restoration activities and enable safer execution of field operations, ensuring continuity of essential power services to consumers during emergencies.

2.1.1.2 Advanced AI Smart Work Monitoring Devices for Smart Safety Equipment

Background

Field Staff carryout extensive field operations across a geographically area of TPCODL with varying operational challenges. Due to the spread of network, continuous monitoring of field activities is challenging for organization and certain common unsafe practices may go unnoticed during execution of critical electrical works. To strengthen real-time work monitoring and safety assurance, deployment of body worn smart monitoring devices is proposed. The devices will enable live streaming of field activities, geo-fencing-based location monitoring, two-way communication between field personnel and supervisors and AI-based analytics for identifying unsafe practices and improving safety compliance. Phased deployment planned in FY28 – FY32 to cover all the 975 Nos of Field teams.

Proposal

Deployment of 50 Nos. Advanced Smart Work Monitoring Devices in urban areas during FY28 to enable real-time visibility of field activities and strengthen safety monitoring during critical electrical works.

Justification/ Need of the Proposal

The existing monitoring mechanism has limitations in providing continuous visibility of field activities. The proposed devices will provide live work visibility, voltage hazard sensing and two-way interaction, while geo-fencing and AI integration will support improved monitoring of work execution and safety compliance. The recorded information can also support safety review, audit and incident analysis.

Scope of Work

Deployment of 50 Nos. helmet-mountable Advanced Smart Work Monitoring Devices in selected urban areas, including live camera, voltage sensor, two-way interaction, geo-fencing and AI integration.

Table 6: Proposed Cost estimate break up-Advanced AI Smart Work Device

Description	Qty.	Unit Rate (Rs. In Cr)	Amount (Rs. In Cr)	Remarks
Advanced AI Smart Work Monitoring Device	50 Nos.	0.014	0.7	Quotation is Enclosed, Price is including rate escalation.

Cost Benefit Analysis

The proposed investment will improve visibility of critical field activities, strengthen safety monitoring and enable quicker identification of unsafe conditions. It will also provide digital information for safety review and continuous improvement.

Benefit to the System and Consumers

The adoption of AI-enabled safety monitoring technology will demonstrate TPCODL's commitment towards digital transformation and modernization of safety practices in the power distribution sector, aligning with the vision of technology-driven and future-ready utility operations.

2.1.1.3 Development of Training Yards for Work-at-Height & Vertigo Assessment

Background

Field personnel, particularly Linemen, are required to perform work at height activities involving poles and electrical structures. Presently, assessment of competency and suitability of newly deployed field personnel for working at height requires further strengthening through practical evaluation.

Proposal

To ensure competency of new field staff before deployment as Linemen, dedicated Work at Height and Vertigo Assessment Structures are proposed at 5 Circles. The facility will enable practical skill assessment, identification of vertigo-related limitations and improvement of workforce readiness before undertaking height related activities.

Justification/ Need of the Proposal

Working at height is a critical activity for lineman, requiring adequate competency, confidence and suitability of personnel. Deployment of personnel without proper assessment of work-at-height capability and vertigo-related limitations may increase the risk of unsafe situations and incidents. The proposed training yard will enable competency assessment of newly inducted field staff before deployment as Linemen, provide practical evaluation of work-at-height skills, improve confidence of personnel, reduce the possibility of unsafe acts during height-related activities and establish a standardized assessment and training facility across Circles.

Scope of Work

Development of Work at Height and Vertigo Assessment Training Infrastructure at 5 Circle locations, including construction of vertigo assessment structures, installation of safety nets and fall protection arrangements, development of fencing and boundary walls, paved flooring, civil foundation works and other allied infrastructure required for safe practical competency assessment and training of field personnel.

Table 7: Proposed Cost estimate break up-Training Yard Infrastructure

Description	Qty.	Unit Rate (Rs. In Cr)	Amount (Rs. In Cr)	Remarks
Training Yard Infrastructure for Work at Height Vertigo Test structure.	5 Nos.	0.25	1.25	Rate reference from TPNODL, Price is including rate escalation.

Cost Benefit Analysis

The investment will establish a standardized competency assessment mechanism for field personnel, improve suitability verification before deployment, reduce the probability of height-related incidents and strengthen safety culture

Benefit to the System and Consumers

The initiative will enhance workforce competency, ensure deployment of physically and technically suitable personnel for height-related activities and reduce safety risks during field operations. Improved competency of field staff will contribute towards safer maintenance practices and reliable power supply to consumers.

2.1.1.4 3-Wheeler EV Bikes for FCC for Enhancing FCC mobility

Background

At present, FCC teams do not have dedicated vehicles for carrying safety devices, PPE and emergency equipment. Due to dependency on available transportation arrangements, field personnel may hesitate to carry additional safety equipment or may need to return to FCC locations for collecting required safety gear, which can affect timely response and safety compliance. To address this requirement, deployment of 3-Wheeler EV Bikes for FCC teams is proposed for the first time. These vehicles will provide dedicated mobility support for carrying

essential safety equipment, PPE and field tools, enabling teams to remain better prepared and respond effectively during field
activities. Under FY'28 CAPEX, 53 Nos. of EV Maintenance bikes are proposed for deployment as pilot program, Further, phased deployment will be in subsequent FY29 – FY32 to cover all the 975 nos of Field teams.

Proposal

It is proposed to deploy 53 Nos. 3-Wheeler EV Bikes for FCC teams to improve field mobility and ensure availability of safety gear. The EV bikes will facilitate quick movement of FCC personnel for field response & restoration activities while enabling carrying of essential PPE, safety devices and tools at site.

Justification/ Need of the Proposal

FCC teams play an important role in field coordination, restoration support and operational activities. Dedicated EV mobility support will improve field readiness by ensuring availability of required PPE, safety devices and tools during field deployment, while improving mobility and response time. The proposed EV bikes will support field coordination and restoration activities, reduce dependency on hired vehicles and promote adoption of sustainable EV-based mobility solutions for future maintenance operations.

Scope of Work

Deployment of 53 Nos. EV 3-wheeler Bikes for FCC team in FY28.

Table 8: Proposed Cost estimate break up-3 Wheeler EV Bike

Description	Qty.	Unit Rate (Rs. In Cr)	Amount (Rs. In Cr)	Remarks
3-Wheeler EV Bike	53 Nos.	0.015	0.75	Comparison sheet is enclosed, Price is including rate escalation.

Cost Benefit Analysis

The investment will improve FCC mobility, reduce response time and enhance field-monitoring capability. It will reduce dependency on hired vehicles, lower recurring transportation costs and support sustainable operational practices through EV adoption.

Benefit to the System and Consumers

The initiative will enhance FCC mobility, improve emergency response and strengthen field safety monitoring capability. Adoption of EV-based mobility solutions will support sustainable utility operations while enabling faster restoration support and improved continuity of power services to consumers

2.1.2 Fire Wall

Background

Power Transformer installed at sub-station is a critical asset for maintaining reliable power supply to the connected consumers. In the event of a transformer fault or fire, there is a possibility of fire spreading to nearby electrical equipment and other transformers. The existing arrangement does not provide adequate physical fire separation. Hence, provision of a suitable fire wall is required for improving the safety and protection of sub-station.

Proposal

It is proposed to construct a suitable fire-resistant wall between Power Transformer and adjacent equipment as per applicable safety requirements. The fire wall will act as a physical barrier and help restrict the spread of fire in case of any transformer fire incident.

Requirement/ Need of the Proposal

The proposed fire wall is required to provide effective fire separation and prevent the spread of fire from the Power Transformer to adjacent transformers and other critical sub-station equipment. It will help protect breakers, cables and associated electrical assets from fire-related damage and improve the safety of operating and maintenance personnel. The provision of fire wall will also reduce the extent of damage in the event of a transformer fire, minimize the risk of prolonged power interruption and enhance the overall safety and reliability of the sub-station.

Scope of Work

The work will include construction of the required foundation and erection of a fire-resistant RCC/masonry wall of suitable height and length. Necessary structural supports, wherever required shall also be provided. The scope shall further include plastering, finishing and painting of the fire wall, along with all associated civil works required for proper, safe and durable. Cost for construction of each firewall is. Rs. 7.5 Lakhs. The

substation constructed under ODSSP scheme wherever space is available between the PTR for construction of firewall has been considered under below scope.

Table 9: Proposed Cost estimate break up-Firewall

Items Description	Total Scope	Proposed in FY'28	Per Fire Wall Cost in Cr.	Total Cost in Cr. considered in Capex 27-28
Fire Wall	288	27	0.075	**2.00**

The total cost for Fire Wall is approx. 2 cr.

Proposed Cost with Estimate Break-up
Please refer to **Annexure – 1** for details of BoQ for the above cost estimate and Locations covered in this scope.

Benefit to the System and Consumers

i. Restricts the spread of fire from the Power Transformer to adjacent equipment.
ii. Protects nearby transformers, breakers, cables and other critical sub-station assets from fire-related damage.
iii. Improves the safety of operating and maintenance personnel during fire incidents.
iv. Minimizes the possibility of prolonged power interruption due to fire-related equipment damage.
v. Enhances the overall safety, reliability and resilience of the sub-station.

2.1.3 Cradle Guard at Road Crossings

Background

A substantial portion of TPCODL's distribution network operates through overhead feeders, many of which were constructed several years ago and currently lack adequate cradle/guard wire arrangements at road crossings and other vulnerable locations. In the event of conductor snapping, the absence of guard wires may result in live conductors falling onto roads or public areas, thereby posing serious risks of electrocution, accidents, and other public safety hazards.

Further, to enhance the safety of the public and vehicular traffic, TPCODL proposes the installation of underground cable crossings at National Highways (NH), State Highways (SH), and other major road crossings where overhead electrical feeders traverse such routes. This

initiative aims to eliminate the safety risks associated with overhead line crossings in high-traffic areas and ensure compliance with applicable statutory regulations.

Moreover, underground cabling will significantly improve the reliability and resilience of the power distribution network by reducing exposure to external disturbances, minimizing outages, and lowering maintenance requirements. The proposal aligns with TPCODL's commitment to developing a safe, reliable, and regulation-compliant distribution network.

As part of ongoing network strengthening initiatives, a requirement has been assessed for the installation of cradle/guard arrangements at 1,453 locations on 33 kV and 11 kV feeders. No work has been completed focusing under this scope up to March 2026, and phased implementation is proposed during subsequent CAPEX periods.

Proposal

TPCODL proposes the installation of cradle/guard wire arrangements at critical road crossings and other vulnerable locations on 33 kV and 11 kV overhead feeders. The cradle guard arrangement ensures that, in the event of conductor snapping, the fallen conductor comes into contact with the cradle wire, thereby completing the fault circuit and enabling protective relays and circuit breakers to operate promptly. This facilitates immediate isolation of the faulted section and significantly minimizes the risk of electrocution and public accidents.

The proposal also includes the conversion of selected overhead line crossings at NH, SH, and other major crossings into underground cable crossings to further enhance public safety and improve system reliability.

The scope covers the installation of cradle/guard arrangements, DP structures, underground cable crossings, and all associated accessories required for safe and reliable operation.

Justification / Need of the Proposal

To enhance safety, reliability, and protection across the distribution network, several critical gaps have been identified in the existing overhead line infrastructure. Many overhead feeder crossings at National Highways, State Highways, district roads, and other public utility crossings currently lack adequate cradle/guard arrangements.

The absence of guard wires increases the risk of electrocution and public accidents in the event of conductor snapping due to ageing conductors, environmental conditions, or external disturbances. Similarly, overhead crossings at major roads and highways pose potential safety risks to vehicular traffic and the public.

Such failures may lead to serious safety incidents, interruption of power supply, damage to utility assets, legal liabilities, and non-compliance with applicable electrical safety standards.

The proposed investment will address these deficiencies by:

- Providing effective protection against conductor snapping incidents.
- Enhancing public and operational safety.
- Reducing electrocution risks and accident-related hazards.
- Eliminating overhead conductor crossings at critical roads through underground cabling.
- Improving network reliability and continuity of supply.
- Ensuring compliance with statutory safety requirements and regulatory directives relating to overhead line safety and guarding arrangements.
- The proposal is also aligned with initiatives for strengthening distribution safety systems under the Retail Supply Tariff (RST) framework and prevailing electrical safety regulations.

Scope of Work

The overall scope of work in TPCODL is as tabulated below.

Table 10 : Scope of Work

Installation of Cradle/ Guard wire in Overhead feeders at road crossings	UOM	Total requirement	Completed till March'26	Planned in FY'27	Proposed Scope for FY 28	Proposed Budget for FY 28	Balance	Budget for Balance (in Cr)
For 33 kV Feeders	Nos	201	0	0	10	0.43	201	11
For 11 kV Feeders	Nos	1252	0	0	31	0.59	1252	58
33 kV Line Crossing through U/G Cable and DP without AB Switch	Ckm	4	0	0	0	0	4	12
11 kV Line Crossing through U/G Cable and DP without AB Switch	Ckm	33.84	0	0	0	0	34	56
Grand Total					**41**	**1.02**		**137**

In this CAPEX petition, we propose for an amount of Rs 1 Cr only, to cover high priority locations.

Please refer to the **Annexure 2** for location-wise details and the detailed BOQ corresponding to the above cost estimates.

Table 11 : Proposed Cost with Estimate Break-up

Sl. No.	***Description***	***Unit***	***Cost per Unit (In Cr.)***	***Total Qty.***	***Total Cost (In Cr.)***
1	BOQ for 33 kV Line Protecting Guarding on Double Pole (13 Mtr. WPB) for Road Crossing (Span-40 Mtr.)	EA	***0.040***	***10***	***0.40***
2	BOQ for 11 kV Line Protecting Guarding on Double Pole (11 Mtr. WPB) for Road Crossing (Span-40 Mtr.)	EA	***0.032***	***5***	***0.16***
3	BOQ for 11 kV Line Protecting Guarding on Single Pole (11 Mtr. WPB) for Road Crossing (Span- 30 Mtr.)	EA	***0.016***	***26***	***0.43***
				TOTAL	***1.0***

Notes for Cost Estimates:

i. All rates have been considered as per the Cost Data Book (CDB) approved by the Energy Department, Government of Odisha, vide Notification dated 05.05.2026.

ii. For items not covered under the approved CDB, material supply, civil works, and erection rates have been considered based on the latest rate contracts finalized through competitive bidding or budgetary quotations obtained from OEMs.

Cost Benefit Analysis

The proposed scheme will provide the following tangible and intangible benefits:

- Significant reduction in electrocution risks and hazards arising from conductor snapping.
- Enhanced public safety at road crossings and other vulnerable locations.
- Improved protection system performance through timely fault detection and isolation.
- Elimination of safety risks associated with overhead line crossings at critical roads and highways.
- Reduction in accident-related liabilities and compensation claims.
- Improved compliance with statutory electrical safety requirements.
- Enhanced reliability and resilience of the distribution network.
- Long-term improvement in network safety, operational performance, and maintenance efficiency.

Benefits to the System and Consumers

- Enhanced public safety by preventing accidental contact with snapped conductors.
- Improved safety at National Highways, State Highways, and other major road crossings through underground cabling.
- Reduction in feeder shutdowns and service interruptions.
- Improved reliability and continuity of power supply.
- Improved compliance with statutory and regulatory safety requirements.
- Increased consumer confidence through safer network infrastructure.
- Strengthening of overall distribution system resilience and operational reliability.

2.1.4 Testing Equipment for Meter Testing Labs and Others

Capex proposal under this head is provided in table below.

Table 12: Proposed Procurement – Meter Testing Labs & Others

Equipment	Available Qty	Qty proposed under CAPEX FY 28	Per unit cost	Total
Online HT Metering testing Kit	0	5	0.27Cr	1.35Cr
HT Accu-check	5	5	0.05Cr	0.25Cr
3position Meter test bench	0	1	0.40Cr	0.40Cr
Total				**2Cr**

Item wise details are provided below.

2.1.4.1 Procurement of Online HT Testing kit, HT Accu-checks & Insulation Resistance tester.

Background

TPCODL has approximately 3,700 HT Large & Medium category consumers with HT CT & PT metering arrangements. As per Clause 109 of the OERC Distribution (Conditions of Supply) Code, 2025, all HT meters are required to be tested at least once every year. Conventional HT meter testing requires shutdown of the consumer installation, causing supply interruption, operational inconvenience, and potential revenue loss. Online HT testing provides a viable alternative by enabling accuracy and performance testing of CTs, PTs, HT meters, and metering cubicles while the installation remains energized. This will ensure regulatory compliance, minimize consumer interruption, improve testing efficiency, and strengthen revenue protection and metering reliability. Further, additional 15nos. HT Accuchecks and Megger equipment are required so that all 20 Divisions are fully equipped to undertake HT meter testing and associated electrical checks. At present only 5 nos. HT Accucheck & insulation tester available with MMG TPCODL.

Accordingly, procurement and deployment of online HT testing kits, HT Accuchecks, and Megger equipment across all 20 Divisions is proposed.

Proposal & Justification

The procurement and deployment of **5 Nos. Online HT Testing Kits and 5Nos.** of HT Accuchecks across all **20 Divisions** is proposed to facilitate timely and reliable HT meter testing at site, minimize supply interruptions, and ensure compliance with prescribed periodic testing requirements in line with applicable regulation.

Scope of Work

Procurement and deployment of 5 Nos. Online HT Testing Kits and 5 Nos. HT Accucheck across the 20 Divisions for carrying out HT meter testing and related diagnostic activities at site. The equipment will support periodic testing requirements while reducing the need for shutdowns and associated supply interruptions.

Cost Benefit Analysis

Enables online HT testing without shutdown, ensuring uninterrupted supply, faster field testing, improved reliability and revenue assurance.

Benefit to the System and Consumers

This initiative converts a traditionally shutdown-dependent activity into an online diagnostic process. It strengthens network reliability, consumer service, operational efficiency and metering Governance through one integrated solution.
Uninterrupted power supply, improved reliability indices, Revenue assurance Protection of consumer operations; Condition assessment under real load, faster field execution can be achieved.

2.1.4.2 Procurement of 1no. 3position Energy Meter test bench

Background

The Meter Testing Laboratory, Bhubaneswar presently has a 2nos. 20-position test bench for testing three-phase Smart Meters, with a normal testing capacity of approximately 120 meters per day**.**

Consumer challenge testing and other special testing requirement(tender sample, tamper cases) is affecting the regular testing schedule and daily throughput.

To ensure that normal testing of 120 three-phase Smart Meters per day remains uninterrupted**,** it is proposed to procure a dedicated 3-position test bench for consumer challenge and other special testing activities. This will provide operational flexibility while maintaining the required routine testing capacity.

Proposal

It is proposed to procure a dedicated 3-position test bench for three-phase Smart Meters to undertake consumer challenge testing and other special/urgent testing requirements. This will ensure that the normal testing capacity of 120 meters per day on the existing 20-position test bench remains uninterrupted**,** while providing a dedicated facility for challenge testing.

Justification/ Need of the Proposal

The existing 20-position test bench is required to maintain normal testing of approximately 120 three-phase Smart Meters per day. Consumer challenge testing requires dedicated test positions and may otherwise affect the routine testing schedule. A dedicated 3-position test bench will facilitate challenge/special testing without disturbing normal testing activities.
The proposed facility will ensure uninterrupted testing throughput, timely disposal of consumer challenge cases, and better utilization of the existing 20-position test bench.

Scope of the Work

Procurement of 1 No. 3-position three-phase SMART Meter Test Bench to provide a dedicated facility for consumer challenge testing, re-testing and other special testing requirements. The additional test bench will enable such tests to be carried out independently, ensuring that the existing 20-position test bench remains available for routine testing of around 120 meters per day. This will help maintain regular testing throughput and avoid delays in consumer challenge cases.

Cost Benefit Analysis

Enables dedicated consumer challenge/re-testing without affecting routine testing capacity, ensuring faster disposal of cases and uninterrupted laboratory operations & better consumer satisfaction.

Benefit to the System and Consumer

Procurement of the dedicated 3-position SMART Meter Test Bench will enable consumer challenge, re-testing and other special testing activities to be carried out without affecting the routine testing of approximately 120 three-phase SMART Meters per day on the existing 20-position test bench. This will ensure uninterrupted testing operations, reduce testing backlog, facilitate faster resolution of consumer complaints and improve consumer confidence through timely and transparent meter testing. It will also provide greater operational flexibility and optimum utilization of the existing testing infrastructure

2.1.5 Fencing / Boundary Wall of PSS and DSS

Capex proposal under this head is provided in table below.

Table 13: Proposed Cost estimate – Fencing / Boundary Wall

Sl No	Activity planned	No. of Locations Proposed	PuC	Total Cost Proposed (in Cr)
1	Compound walls in PSS	20	Location based	3,00,89,000.00
2	Switchyard Chain-link Fencing in PSS @ 115 mtr/ Location	34	5,22,974.55	2,04,48,305.08

Sl No	Activity planned	No. of Locations Proposed	PuC	Total Cost Proposed (in Cr)
3	DSS Chain-link Fencing	951	1,04,594.91	9,94,69,760.27
Total No of Location Proposed		**1005**		**15,00,07,065.35**
Total No of Location Proposed (Rs. Cr)				**15.00**

The item wise details are provided below.

2.1.5.1 Compound Wall in PSS

Background

There are 386 operational PSS across TPCODL as of today. At the time of takeover, 178 PSS were not having a proper boundary wall. So far from FY 20-21 to 25-26, 99 PSS boundary wall have been constructed / upgraded. 21 compound wall are under for FY 27 plan, 20 Nos are proposed in this petition and remaining 38 to be covered in upcoming years. Besides many of the PSSs are being used as section and sub-division offices and having a customer footfall.

Proposal

It has been planned to construct 1.8 m height compound wall along with 0.6 meter concertina coil fence at remaining PSS to ensure safety and security of TPCODL staff, public, animals and network.

Requirement/ Need of the Proposal

Due to non-availability of boundary wall with concertina coil fence, it is difficult to avoid entry of unauthorized staff, public, and animals into the PSS and there are chances of incident /accidents.

TPCODL intends to provide proper boundary wall at each PSS at the earliest, to ensure safety and security of its employees, public and animals.

Scope of Work

Construction of boundary wall at 20 location.
Detail Location Name attached in **Annexure-3.1**

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **INR 3.00 Cr.**

Total Location: 20 (Detailed Estimate attached in **Annexure-3.1).**

Cost Benefit Analysis

Compound wall prevents unauthorized personnel or animals wandering into the switchyard, where they could be exposed to high-voltage equipment and deters potential intruders or thieves from entering the PSS and tampering with or stealing valuable equipment.

Benefit to the System and Consumers

- Safety of network assets.
- Safety of TPCODL staff, and general public.

2.1.5.2 Switchyard Chain-link fencing

Background

There are 386 operational PSS across TPCODL as of today. So far from FY 20-21 to 24-25, 118Switchyard Fencing have been constructed, 4 under construction in FY 27, 35 Nos proposed for FY 28 and 223 Nos to be proposed in upcoming years.

Besides many of the PSSs are being used as section and sub-division offices and having a customer footfall. TPCODL is providing fencing to the 33KV Switchyard to restrict the unauthorized access to the live network. However, still a large no of PSS requires fencing of the switchyards to safeguard the public.

Proposal

It has been planned to construct metal chain link fence of height 1.8 meter between substation premises and switchyard at PSS to avoid entry of unauthorized persons in live switchyard which may lead to incident / accident.

Requirement/ Need of the Proposal

Due to non-availability of metal fence between control room and 33kV switchyard, it is difficult to avoid entry of unauthorized staff, public, and animals into the live switchyard and there are chances of incident /accidents.

TPCODL intends to provide proper switchyard fence at each PSS at the earliest.

Scope of Work

Construction of Switchyard fencing at 34 location.

Detail Location Name attached in **Annexure-3.2**

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **INR 2.00 Cr.**

Total Location: 34 (Detailed Estimate attached in **Annexure-3.2**)

Cost Benefit Analysis

Chain-link fencing prevents Public or animals from accidents/ unauthorized entry, tampering with or stealing valuable equipment from switchyard area.

Benefit to the System and Consumers

- Safety of network assets.
- Segregation of section office and 33KV switchyard.
- Safety of TPCODL staff, and general public.

2.1.5.3 DSS Chain-link / FRP fencing

Background

As per organization requirement, fencing is being done for existing DSS across TPCODL. Every year TPCODL is installing Fencing to the Distribution Substations to restrict unauthorized access to the Distribution substation.
Out of the total 53620 Nos of DSS requiring fencing in TPCODL licensed area as on 2020, 2263 Nos have been covered till now. 476 Nos under execution plan of FY 27 and 951 Nos are proposed for FY 28. The balance 44930 Nos of DSS fencings will be completed in a phase wise manner over the upcoming years.

Proposal

It has been planned to construct 1.8 m height chain link fencing on a brick toe wall to ensure safety and security of TPCODL staff, public, animals and network.

Requirement/ Need of the Proposal

From safety and security point of view, the DSS area needs to be fenced to avoid public contact and animal accidents and provide secure area for working and maintenance purpose.

Scope of Work

It is proposed to Construct Fencing around 951 DSS for Safety and Security Point of view. For enhancing safety, the DSS shall be barricaded using 1.8 meter high chain-link fencing.

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **INR 10.00 Cr.**

Total Location: 951 (Detailed Estimate attached in **Annexure-3.3**)

Cost Benefit Analysis

Fencing prevents unauthorized personnel or animals getting in contact with live equipment where they could be exposed to high-voltage equipment.

Benefit to the System and Consumers

- By preventing unauthorized access, there is less chance of equipment being tampered with, which will help in providing reliable power distribution.
- DSS fencing will also help in avoiding any unforeseen incident of general public coming in contact with live equipment which otherwise might cause danger to life.
- Safety of employees, stray animals and residential people are one of the most important statutory compliances.

2.1.6 Defective AB Cable Replacement

Background

TPCODL has an extensive LT distribution network of approximately **41,772 Ckm**, comprising LT overhead bare conductors, underground cables, and LT AB cables. Out of the total LT network, approximately **37,746 Ckm** consists of LT AB cable infrastructure. Over time, several sections of the LT AB cable network have deteriorated due to ageing, prolonged exposure to adverse weather conditions, UV radiation, tree contact, mechanical stresses, and other environmental factors.

The deterioration of insulation and cable components has resulted in damaged LT AB cables at multiple locations across the licensed area. Such defective cables pose safety risks to the public and animals, increase the likelihood of electrical faults, and adversely affect the reliability and quality of power supply. Frequent interruptions arising from insulation failures, conductor exposure, and cable damage have led to consumer grievances and increased maintenance requirements.

To address these challenges, phased replacement of defective LT AB cables is proposed under the FY'28 CAPEX plan.

Proposal

TPCODL proposes the phased replacement of deteriorated and damaged LT AB cables with new LT AB cables across critical and vulnerable locations identified through field surveys, maintenance records, and operational feedback.

The proposed work is of an emergent nature and is aimed at ensuring public safety, minimizing electrocution risks, improving network reliability, and reducing supply interruptions caused by defective LT AB cable infrastructure.

The project will prioritize locations experiencing recurring faults, consumer complaints, safety concerns, and reliability issues.

Justification / Need of the Proposal

The presence of deteriorated and defective LT AB cables across the distribution network has resulted in significant safety, operational, and commercial concerns.

Major issues associated with defective LT AB cables include:

- Increased risk of accidents and electrocution to the public and animals.
- Violation of statutory electrical safety requirements and standards.
- Frequent supply interruptions leading to consumer grievances and reduced customer satisfaction.
- Reduced conductor clearances from ground level, posing hazards to humans and livestock.
- Exposure of live conductors due to cracks, tears, and degradation of insulation, thereby increasing the likelihood of fatal electric shocks.
- Increased risk of fire incidents arising from short circuits, electrical arcing, and sparking.
- Water ingress through damaged insulation causing phase-to-phase and phase-to-ground faults, particularly during the monsoon season.
- Voltage fluctuations and voltage drops resulting from increased conductor resistance and insulation deterioration.
- Higher technical losses due to leakage current through deteriorated insulation.
- Increased vulnerability to power theft through damaged cable sheaths and accessible conductors.
- Risk of line snapping due to weakening of cable components and messenger wire arrangements.

The proposed replacement program will address these deficiencies and strengthen the overall safety and reliability of the LT distribution network. The investment is therefore essential from both statutory compliance and public safety perspectives.

Scope of Work

The overall scope of work in TPCODL is as tabulated below:

Table 14: Overall Scope

Proposal	UOM	Total requirement	Completed till March'26 in Capex	Planned in FY'27	Proposed Scope for FY 28	Proposed Budget for FY 28	Left out Qty.	Budget for Left out Qty. in cr
Defective AB Cable Replacement	Ckm	279.16	61.8	0	10.2	1	207	20

In this CAPEX petition, we propose for an amount of Rs 1 Cr only, to cover high priority locations.

Please refer to the **Annexure – 4** for location-wise details and detailed BOQ corresponding to the proposed scope of work.

Proposed **Cost with Estimate Break-up**

Table 15 : Est. Cost Break up- Defective AB Cable replacement

Sl. No.	*Description*	*Per Unit*	*Cost per Unit (In Cr.)*	Qty	Total Cost (In Cr.)
1	Defective AB Cable Replacement - LT ABC 4C×95 mm² (P)+1C×95 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.11	**3.6**	0.39
2	Defective AB Cable Replacement LT ABC 4C×70 mm² (P)+1C×70 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.09	**6.6**	0.60
Total				**10.2**	**1.0**

Notes for Cost Estimates

1. All rates have been considered as per the Cost Data Book (CDB) approved by the Energy Department, Government of Odisha vide notification dated 05.05.2026.
2. For items not covered under the approved CDB, material supply, civil works, and

erection rates have been considered based on the latest rate contracts finalized through competitive bidding or budgetary quotations obtained from OEMs.

Cost Benefit Analysis

Implementation of the proposed scheme is expected to provide substantial technical, operational, and safety benefits, including:

- Improved reliability and continuity of power supply to consumers.
- Significant reduction in accidents involving public and animals.
- Elimination of risks associated with deteriorated insulation and exposed conductors.
- Reduction in electrocution hazards and fire incidents.
- Reduction in frequent outages and consumer complaints.
- Improvement in voltage profile and service quality.
- Reduction in technical losses arising from leakage current and insulation failure.
- Prevention of power theft through replacement of damaged cable infrastructure.
- Strengthening of the 415 V LT distribution network.
- Reduction in maintenance expenditure and emergency breakdown restoration activities.
- Improved compliance with statutory safety standards and regulatory requirements.
- Enhanced operational efficiency and overall network resilience.

Benefit to the System and Consumers

- Reliable and uninterrupted power supply to consumers.
- Enhanced public safety through replacement of unsafe and deteriorated LT AB cables.
- Reduction in electrocution and fire hazards.
- Improved network reliability and service quality.
- Reduction in technical losses and operational inefficiencies.
- Improved voltage regulation and consumer satisfaction.
- Strengthened 415 V distribution network.
- Reduced consumer complaints arising from frequent interruptions.
- Improved compliance with statutory and safety requirements.
- Long-term improvement in safety, reliability, and operational performance of the distribution system.

2.1.7 Enhancing Vertical Clearance through Interposing Pole

Background

TPCODL spanning over a geographical area of 29,354 sq.km has a vast network having 33kV, 11kV and LT network. Different types of Pole infrastructures (like PSC POLES, WPB Poles and H Poles) are majorly installed in the existing network. Several irregularities in the span lengths of these networks are observed in old feeders, where the span length ranges from 70 meter to more than 100 meter at some places. These large span lengths have resulted in:

i. Sagging of conductors,
ii. Low ground clearances - vertical clearance of conductor from ground is lower than the permissible limits for LT Lines - 5.5 m along the Road and 5.8 m across the Road. For HT Lines, permissible limits are 5.8m along the road and 6.5m across the road.
iii. Accidents due to sagging & low ground clearances.

TPCODL has already installed 7754interposing poles under CAPEX since inception in FY 20-21.1691 Nos are under plan of execution under CAPEX FY 27 and another 1854 Nos proposed for FY 28.. Remaining another 39521 locations have been identified, which will be mitigated in a phase-wise manner in upcoming years. The prioritization has been done based on factors such as maintaining phase to ground clearances as per statutory requirement particularly in residential areas, road crossing, high traffic marketplaces, as well as addressing sections with long spans to strengthen the network and considering environmental factors like elephant corridors, thereby ensuring safe operations.

Need of Project

To overcome such scenarios, where the span length is on the higher side and violates the safety and statutory guidelines, it is of utmost importance to provide intermediate poles in between the long spans. Addition of intermediate poles will address the issue of sagging, low gound clearances & accidents caused due to this. Proper upkeep of the feeders is important for ensuring safety and reliability of power supply.

The sagged wires in 33kV and 11kV feeders are posing major threat to the lives of human beings and animals. At some places, due to re-construction / widening of roads, vertical/ horizontal clearances of the feeders have been reduced. This is not only causing violation of statutory guidelines but also increasing the chances of electrical hazards and accidents.

Scope of the Project

For FY 2027-28 , 1854 quantity of interposing poles are proposed at 33 kV, 11 kV and LT lines.

Table 16: Interposing Poles estimate break up

Sl. No.	Description	Unit	Cost per Unit	Total	Total Cost
			(In Cr.)	Qty.	(In Cr.)
1	BoQ for Installation of Interposing poles- (13 Mtr. WPB) at 33 kV line	EA	**0.006**	**161**	**0.988**
2	BoQ for Installation of Interposing poles- (11 Mtr. WPB) at 33 kV line	EA	**0.005**	**325**	**1.728**
3	BoQ for Installation of Interposing poles- (11 Mtr. WPB) at 11 kV line	EA	**0.0051**	**918**	**4.654**
4	BoQ for Installation of Interposing poles- (9 Mtr. PSC) at LT Line	EA	**0.0014**	**450**	**0.632**
Total				**1854**	**8**

Please refer to **Annexure – 5** for details of **BoQ and proposed locations**.

Proposal for CAPEX Investment

To ensure safety and cater reliable power supply to end consumers, TPCODL proposes installation of interposing poles emphasizing critical areas such as schools, hospitals, markets and other key installations of frequent human mobility.

Benefit

With the installation of interposing poles at low clearance locations, statutory compliances will be met and hence safety of employee, public and animals will be enhanced, reducing the chances of electrocution.

2.2 Loss Reduction

The proposed budget for Loss Reduction under Capital Investment Plan FY 2027-28 is as given in the table below:

Table 17: Breakup of Capital Expenditure under Loss Reduction

Activity	Capex Plan for FY 2027-28 (in₹ Cr)
33kV Network Reconfiguration - Power evacuation, Length Reduction	25
Smart DT Meters	10
LT Bare to AB Conversion	30
Damaged / Defective Service Cable replacement for theft elimination, Safety & Reliability	Will be claimed at Actuals at the time of Truing up (in line with Hon'ble Commission's direction given in Capex Order dated 15.05.2026 in Case No 77/2025
Total	**65**

The description of the various schemes are as under

2.2.1 33kV Network Reconfiguration - Power evacuation, Length Reduction Damaged Cable Replacement

Background

In the TPCODL license area, the 33kV network serves as the backbone of the power supply system, interconnecting various 33/11kV primary substations (PSS), where power is stepped down to 11kV for further distribution. However, in many areas, the 33kV feeders are constructed with lower-sized conductors are extended over long distances and are predominantly radial in nature. These characteristics contribute to frequent overloading and low voltage issues, which in turn lead to increased technical losses within the network. There are 18 no's of 33kV feeders which technical loss is more than 3% and 37 no's of feeder length is more than 30 Ckm is a major reason for high losses in 33 kV network.

Proposal

In this proposal, TPCODL intends to implement proposals to reduce technical loss in the 33kV network through augmentation of feeders to strengthen the network, interlinking between 33kV feeders for load balancing and construction of new 33kV feeders nearby existing/ upcoming GSS to reduce the length of existing 33kV feeders.

Requirement/ Need of the Proposal

To reduce the technical loss and improve power supply reliability in the existing 33kV network, the following proposals are considered under capex 27-28 for selected 33kV feeders which cost effective & will also help in for power evacuation from upcoming OPTCL GSS, providing ring connectivity & N-1 connectivity.

i. It is proposed to evacuate power from near by OPTCL Grid substations for feeder load bifurcation and length reduction, for reduction of technical losses and improving the voltage profile at the PSS.

ii. Augment the lower sized conductors in the existing feeder in order to reduce the losses in the feeder and mitigate the overloading issue of the feeder.

iii. It is proposed to have interconnectors in between existing 33kV network for better load balancing and convert the system in ring and perform NOP changes to mitigate the high loss in the network. Further, this interconnection would help in managing the load in case of any exigency and mitigate the issue of overloading.

It is proposed for construction of new 33kV feeder from nearby existing / upcoming OPTCL grids for load bifurcation & length reduction

Scope of Work

Table 18 Scope proposed for Loss Reduction of 33kV through Length Reduction

Summary of Proposal Details for Feeder Loss Reduction								
Sl. No	***Circle***	***Division***	***GSS Name***	***33kV Feeder Name***	***Proposals***	***Estimated Cost (In Cr)***	***Loss Saving with LLF***	***Annexure***
1	BBSR-I	NED	Upcoming Nua Betanda GSS	Proposed Betanda Feeder and Astaranga feeder	Proposal for construction of 2 Nos. 33 kV Feeders from Upcoming OPTCL Betanda GSS to Betenda PSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement	2.94	709.30	Annexure-6.1

					Interconnection of ESIC PSS and RRL PSS.			
3	BBSR-II	KHD	Upcoming Hatabasta	Proposed Hatabasta Feeder	Proposal for construction of a New 33 kV Feeder from Upcoming OPTCL Hatabasta GSS to Binodpada for Power Evacuation, Ring Connectivity, Technical Loss Reduction, and Network Reliability Improvement	6.23	392.71	Annexure-6.3
4	Cuttack	CED	Upcoming Nua Betanda GSS	Proposed Kulakapasi Feeder	Proposal for construction of 1No 33 kV Feeders from Upcoming OPTCL Betanda GSS to Kulakapasi PSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement	4.15	368.14	Annexure-6.4
5	Dhenkanal	ANED	Upcoming Chhendipada	Proposed Chhendipada Feeder	Proposal for construction of 1No 33 kV Feeders from Upcoming OPTCL Chhendipada GSS to Chhendipada PSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement	5.54	555.68	Annexure-6.5
Total						**25.00**	**2097.09**	

The total cost for feeder loss reduction through length reduction is₹ 25 Cr.

Proposed Cost with Estimate Break-up

Please refer to **Annexure-6** for details of BoQ for the above cost estimate.

Cost Benefit Analysis

Table 19 Cost Benefit through 33kV feeder Length reduction

Revenue Return Sheet				
Sr. No.	**Description**	**Formula**	**Value**	**UoM**
A	Total cost of scheme	-	25.00	RS Cr

B	Additional load due to load growth	-	44785.81	kVA
C	Total kW due to load growth	BXPF(power factor)	42546.52	kW
D	Total units consumed yearly (Load x days x Hrs x load factor)	CX365X24XLF	37270751	kWh
E	Power Purchase cost per unit	-	3.55	Rs.
F	Avg. Power Sale cost per unit	-	5.94	Rs.
G	Diff. (Sale-purchase)	F-E	2.39	Rs.
H	Revenue owing to serving additional load	(GXD)/10^7	8.91	RS Cr
I	Revenue owing to tech. loss reduction	From Technical Loss Calculation	6.52	RS Cr
J	Net Revenue Collected	H+I	15.43	RS Cr
K	% revenue return	(J/A)X100	61.7	%
L	Pay Back Period	100/K	1.62	Years

Benefit to the System and Consumers

By executing the proposals as made in this head, loss reduction in the network can be achieved. Following benefits are envisaged from this investment:

i. Reliable Power supply to the Consumers.
ii. Loss reduction in the 33kV network.
iii. Voltage improvement in 33kV network due to load bifurcation & feeder length reduction.
iv. After execution of the above proposals, approx. 2.09 MW reduction in the technical loss is expected in the 33kV network.

2.2.2 Smart DT Meters

Background

Energy Accounting prescribes accounting of all energy inflows at various voltage levels in the distribution periphery of the network, including renewable energy generation and open access consumers, as well as energy consumption by the end consumers. This will help DISCOMs to ascertain high loss making feeders, DT and identify theft pockets to enable corrective actions.

Proposal

Execution plan for balance Smart Metering of all 63kVA DTs of TPCODL licensed area and High Loss 11kV Feeders associated DTRs (Upto 25kVA):

Table 20 : Proposed Execution Plan

Sl No	DT capacity	Total Pending Scope as on March'27	Plan of Execution
1	63 KVA DT	15698	Proposed under CAPEX FY 27-28
2	Utility owned 25 KVA in High loss feeders	1228	Under execution with approved budget of FY 27
3	Pvt 63 KVA DT in high loss feeders	162	
4	Pvt 25 KVA DT in high loss feeders	525	

Justification/ Need of the Proposal

The Bureau of Energy Efficiency with the previous approval of Central Government, in The Gazette of India, has made the following regulations:

- *Bureau of Energy Efficiency (Manner and Intervals for conduct of Energy Audit in electricity distribution companies) Regulation 2021 on 06th Oct 2021.*

As per the regulations, Distribution Companies shall:

a) Ensure that all feeder wise, circle wise and division wise periodic energy accounting shall be conducted by the energy manager of the electricity distribution company for each quarter of the financial year;

b) Submit the periodic accounting report to the Bureau and State Designated Agency and also made available on the website of the electricity distribution company within 45 days from the date of the periodic accounting;

c) Conduct an annual energy audit for every financial year, submit the annual energy audit report to the Bureau and respective State Designated Agency and also made available on the website of the electricity distribution company within a period of four months from the expiry of the relevant financial year.

Further, Hon'ble Commission, in Para- 268, 267 and 272 of Tariff Order for FY'27 have directed TPCODL to complete the metering of DTRs with capacity upto and including 63 kVA in the FY 2026-27, 100% metering of at least 2 to 3 nos. of High Loss 11 kV feeders in each division (with high revenue earning) and associated DTRs & consumers and list out high loss making feeders and prioritize them based on quantum of load catered through such feeders and to take appropriate action to reduce the AT&C loss from present loss level by end of financial year 2026-27. The additional amount approved by the Hon'ble Commission in Capex order FY 2026-27 towards metering of DT with 63 kVA and above capacity will cover only around 11258 nos of 63 kVA DT in FY 2026-27, we are proposing Rs.10 Cr for Smart metering of 4440 DTs in FY 2027-28.

Table 21 : Scope of Work

DT capacity	Total Scope	Qty to be completed in FY'27	Qty proposed in CAPEX FY'28
63 KVA DT	15698	11258	4440

Proposed Cost with Estimate Break-up

4	LTCT Meter with box Installation	1	1560	1560	1841
5	3Ph Seal (Green seal)	6	4	24	28
Total				**19133.78**	**22578**

Table 23 : **Proposed Scope for Smart Metering at 63kVA DT under CAPEX FY28**

DT capacity	Total Pending Scope as on March'27	Cost Per installation (Rs)	Proposed Qty for CAPEX FY 28	Amt required in FY'28
63 KVA DT	15698	₹ 22,578	4440	₹ 10.02 Cr

Cost Benefit Analysis

This will help DISCOMs to ascertain high loss-making feeders, DT and identify theft pockets to enable corrective actions to reduce AT&C loss.

Benefit to the System and Consumers

- Tracks the parameters of power and distribution transformer
- Keeps the distribution transformers from failing
- Minimizes the losses of power distribution
- Monitors & alerts when the transformer phase fails.
- Can Build Strategies to Reduce Thief
- Puts a Spotlight on High Loss areas

2.2.3 LT Bare to AB Conversion

Background

In power distribution, LT network constitutes a critical element for last mile connectivity to the end consumers. Currently, a significant portion of the LT network relies on bare overhead conductors, which present multiple operational and commercial challenges. Bare conductors are highly susceptible to transient faults caused by external contacts, such as tree branches or accidental falling of foreign objects on the line. These frequent interruptions not only inconvenience consumers but also contribute to higher LT technical losses. In addition, bare LT lines are vulnerable to electricity theft through unauthorized direct hooking, leading to substantial revenue leakage and increased Aggregate Technical & Commercial (AT&C) losses.

Replacing bare LT conductors with Aerial Bunched Cables (ABC) offers a technically superior and commercially secure alternative. ABC provides insulation, ensures adequate safety clearances, minimizes transient faults, and significantly curtails theft, thereby supporting both operational efficiency and financial sustainability.

Proposal

TPCODL proposes to undertake the systematic conversion of LT bare overhead

conductors to LT AB Cable across identified network segments. The adoption of LT AB Cable will help mitigate frequent transient tripping and enhance consumer satisfaction, while simultaneously reducing electricity theft.

With the budgets approved by the Hon'ble Commission in previous years, TPCODL has converted 1,035 Ckm of LT bare lines to LT AB Cable. Another 300 Ckm is currently under execution and is targeted for completion by March 2027.

Of the remaining 3,760 Ckm of LT bare lines, TPCODL has proposed the conversion of 2,150 Ckm in the DPR, in line with the directives of the Hon'ble Commission issued in RST Order dated 24.03.2026 , with a planned utilization over a period of five years. Out of the proposed 2,150 Ckm, 378 Ckm has been included in the present petition.

Requirement/ Need of the Proposal

The conversion from LT bare to LT AB Cable is necessitated by the following factors:

iv. **Reduction of Faults:** LT AB Cable minimizes transient faults caused by external contacts, thereby reducing interruptions to consumers.
v. **Mitigation of Theft:** Direct hooking on bare conductors will be effectively eliminated, reducing pilferage of electricity and lowering AT&C losses.
vi. **Revenue Protection:** By curbing unauthorized connections, the scheme will safeguard revenue and contribute to financial efficiency.
vii. **Improved Safety:** LT AB Cable provides enhanced safety by ensuring adequate clearance from consumer premises and reducing the risk of accidental electrocution.

Statutory Compliance requirement

Hon'ble OERC had given target of AT&C loss reduction for TPCODL and the same has been mandated in vesting order. By implementation of aerial bunched insulated cables instead of bare conductors, pilferage of electricity can be curtailed which subsequently helps in reduction of AT&C losses.

Scope of Work

Table 24 LT AB Cable Size Wise Quantity

Sl. No.	*Description*	*Per Unit*	*Cost per Unit (In Cr.)*	Qty	Total Cost (In Cr.)
1	Conversion Bare to AB Cable using - LT ABC 4C×95 mm² (P)+1C×95 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.1045788	45	4.71
2	Conversion Bare to AB Cable using - LT ABC 4C×70 mm² (P)+1C×70 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.0870525	115	10.01
3	Conversion Bare to AB Cable using - LT ABC 4C×50 mm² (P)+1C×50 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.0739473	190	14.05
4	Conversion Bare to AB Cable using - LT ABC 4C×35 mm² (P)+1C×35 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	kM	0.0634270	20	1.27
Total				**370**	**30.04**

The total cost for conversion of LT Bare to LT AB Cable is approx.₹ 30 Cr.

Proposed Cost with Estimate Break-up

Please refer to **Annexure – 8** for details of BoQ for the above cost estimate and Locations covering the scope of work.

Cost Benefit Analysis

Table 25 : **LT Bare to AB Cable conversion – Cost benefit analysis**

Cost Benefit Analysis for LT Bare to LT Ab Cable Conversion			
Sl. No	**Description**	**UoM**	**Value**
A	Span/km (1 span = 40m)	No	25
B	Hooking/ Span	No	5
C = A X B	Hooking/ kM	No	125
D	Units/ hooking (after conversion to new consumers/ increase after parallel hooking removal)/month	Unit/hooking/Month	50
E = C X D	Units recovered per km per month	Unit/kM/ Month	6250
F = E X 12	Units recovered per km per year (12 months)	Unit/kM/Year	75000
G = F / 10^6	Units recovered per km per year (12 months)	MU/kM/Year	0.075
H	Proposed LT Bare to LT AB conversion	Ckm	370
I = G X H	**Total Additional Energy due to reduction in Commercial Losses**	**MU**	**28**
J	**Additional Energy due to reduction in Technical Losses (Estimated)**	**MU**	**3.32**
K = I + J	**Total Additional Energy due to reduction in AT&C Losses**	**MU**	**31**
L	LT ABR Approved in Tariff Order FY 2025-26	Rs/kWh	5.26
M = K X L	Additional Revenue	Rs. Cr.	16.34
N	Total Investment Proposed	Rs. Cr.	30
O = N/ M	**Payback Period**	**Months**	**22.03**

Tangible Benefits

Reduced Theft: ABC systems are designed to minimize electricity theft, which can provide significant financial benefits for power utilities.

Intangible Benefits

i. Improved Safety:
   a. Reduced Electrocutions: The insulation of conductors in ABC cables significantly lowers the risk of accidental electrocutions for people and animals, making the system safer.
   b. Enhanced Fire Prevention: ABC cables are better suited for areas prone to bushfires, like forests and rural regions, reducing fire hazards compared to bare wires.

ii. Increased Reliability and Stability
   a. Fewer Outages: The bundled and insulated design protects against external disturbances like tree branches and lightning strikes, leading to fewer power interruptions.
   b. Better Performance in Harsh Conditions: ABCs are designed to withstand

adverse weather, including intense sunlight, heat, and cold, providing a more dependable supply in all conditions.

iii. Reduced Power Losses & Improved Voltage Regulation

a. Lower Losses: ABC cables have higher energy efficiency and lower overall system losses, as the close proximity of insulated conductors minimizes energy loss through electromagnetic fields (induction and radiation) compared to bare conductors.
b. Better Voltage Regulation: This efficient energy transfer leads to better voltage regulation, providing a more stable and reliable power supply to consumers.

iv. Lower Operational & Maintenance Costs

a. Reduced Maintenance: Less need for frequent tree trimming, fewer fault repairs, and protection against environmental damage translate to lower maintenance costs.
b. Faster Installation: ABCs are easier and faster to install, especially in difficult terrains or congested urban areas, reducing project implementation time.
c. Ease of Connections: Insulation-piercing connectors (IPCs) allow for quick and safe connections to the network without the need to strip insulation.

v. Aesthetic Improvement:

a. In urban areas, bundled cables are often considered more aesthetically pleasing than traditional bare overhead lines.

2.2.4 Damaged /Defective Service Cable Replacement for Safety, Pilferage elimination & Reliability

Background

Since vesting, TPCODL has been undertaking systematic replacement of damaged and very old service cables to improve safety of households, reliability and eliminate pilferage of electricity.

However, during site inspections, it has been observed that several service connections continue to operate with defective or jointed cables which not only create risks of electrocution and theft but also result in unmetered consumption and reduced billing

efficiency. Such cases are primarily associated with elimination of theft, load enhancement where existing service cables are undersized, meter shifting requirements to facilitate proper installation at designated locations, and defective service cable replacement identified during field inspections. Continuation of these defective connections adversely impacts collection efficiency, increases AT&C losses and poses significant consumer safety hazards, thereby necessitating an extension of the replacement program in a phased manner under the current CAPEX plan.

TPCODL is recovering such expenditure from the consumers wherever it is clearly established that the service cable has been damaged dues to reasons attributable to the consumers. However, in most of the cases the reason of damage is not attributable to the consumers (e.g. service cable damage due to old age, due to outdoor harsh environmental conditions etc.) or it cannot be established, in such cases these service cables need to be replaced under by the DISCOM under CAPEX.

The Hon'ble Commission in Capex Order for FY 2026-27 dated 15.05.2026 in the matter of Case No-77/2025 has stipulated such cost to be allowed at actuals during truing up, relevant extract of the order is produced below.

> *The Commission is of the view that the replacement of service cables is generally recovered from consumers. However, the differential expenditure of service cables (if any) over and above the consumer contribution will be considered at the time of true up exercise based on audited expenditure after prudence check.*

Proposal

In view of the criticality of this capex under this head and the Hon'ble Commission above directive given in the Capex order FY 2026-27, it is requested that actual cost under this head may kindly be allowed at time of Truing up .

Replacement shall be undertaken only in specific cases such as:

- Elimination of Pilferage of electricity cases.
- Load enhancement cases.
- Meter shifting to easily accessible area
- Defective cable replacement.

The work will be executed based on inspection and certification by field officers, ensuring that only technically justified cases are taken up.

Justification/ Need of the Proposal

The presence of defective service cables and joints contributes to:

- Safety hazards due to possible electrocution.
- Unauthorized consumption and theft through pilferage points.
- Higher technical and commercial losses.
- Inefficient billing and revenue realization.
- Replacing these cables will reduce risk, improve system reliability, and ensure accurate energy accounting.

Scope of Work

Scope will be ae per actual requirement basis.

Proposed Cost with Estimate Break-up

Table 26 : The approximate estimate for cable replacement at each location

SL No	Material/ Service description	Unit	Unit rate With GST)	Qty	Total Cost (Incl GST)/ 30 mtrs
A	C	D	E	F	G
1	Material- 2C X 6 sq mm cable	Mtr	78	30	2,340
2	Material-1Ph seal (Purple)	No	3.52	3	10.56
3	Service- Installation of 2C*6 sqmm armoured cable	No	830.72	1	830.72
4	Service- Service Cable Removal	No	323.32	1	323.32
Unit cost of service cable replacement including material and services (Rs)-H					**3,504.60**

Cost Benefit Analysis

- Enhanced consumer safety by eliminating risks of electrocution.
- Reduction in electricity theft and pilferage.
- Improvement in billing and collection efficiency.
- Lower AT&C losses leading to better financial health of the utility.
- Improved reliability of supply and consumer satisfaction.

Benefit to the System and Consumers

- Tracks the parameters of power and distribution transformer
- Keeps the distribution transformers from failing
- Minimizes the losses of power distribution
- Monitors & alerts when the transformer phase fails.
- Can Build Strategies to Reduce Thief

- Puts a Spotlight on High Loss areas

2.3 Reliability

The proposed budget for Reliability under CAPEX FY 2027-28 is as given in the table below:

Table 27 : Break up of Capital Expenditure under Reliability

Sr No	Activity	CAPEX Plan Proposed for FY 27-28
1	SCADA & Communication Strengthening of existing PSS through Replacement of RAPDRP RTU	3
2	Grid Sub-station Automation System	15
3	FLC Switchgear Van	4
4	33kV Network Reliability	75
5	11kV Network Reliability	60
6	Replacement of Aged PTR's to improve reliability	12
7	New PSS to meet Network Reliability	25
8	Mitigation of single PTR at 33/11kV PSS	15
9	PSS Refurbishment	10
10	Mitigate VCB Group Control for 33kV and 11kV network Breakers	20
11	LV Protection (63kVA and above)	30
12	T-OFF removal from 33KV Network	5
	Total	**274**

The description of the various schemes are as under

2.3.1 SCADA & Communication Strengthening through replacement of RAPDRP RTU SCADA

Background

TPCODL has been in the forefront, in adoption of latest technology in the power utility sector pan Odisha. Together with its culture of Consumer Service Excellence, Continuous Learning, Performance Orientation, Innovation and Empowerment, it has been able to set benchmarks in accelerated reduction of tripping, equipment failure, enhance consumer satisfaction and improve employee productivity.

One of the significant challenges that the utilities face is restricting the fault at minimum possible section of the electrical network and clearing the fault in minimum possible time. To achieve this feature utility works round the clock to minimize equipment failure, equipment down time and faster restoration thus ensuring reliability and enhanced MTTR. All the utility across the globe moving towards deployment of technology to make

the Grid smarter in order to ensure operation excellence and serve the consumer with green and continuous power supply with any interruption. To achieve the TPCODL Vision and Mission, TPCODL deploying the latest technology for automation of Primary Substation for Centralized monitoring and control of entire distribution network for faster decision making and corrective action for restoration of the network ensuring. TPCODL already deployed Substation Automation System in FY 20-21 and till now **integrated 290 Nos. of 33/11 kV primary substations** in phased manner and remotely monitored and controlled from a centralized location PSCC at Bhubaneswar.

Proposal and Necessity

It is proposed to upgrade and strengthen Substation Automation System & Network Infrastructure by replacing the existing old RTUs in 33/11kV PSS and provisioning of industrial-grade Ethernet switches with structured network cabling (FO/ LAN) for higher system availability and enhanced reliability.

Modernization & Upgradation of 33/11kV PSS Substation Automation & Network Infrastructure under RAPDRP/IPDS/PNP/ODSSP:

The existing RTUs installed under RAPDRP, IPDS, PNP and ODSSP schemes—covering critical areas in Bhubaneswar, Cuttack, and Puri Town—have exceeded their vendor support lifecycle. This has resulted in frequent SCADA system unavailability, data outages, and increased maintenance overhead. Furthermore, the absence of redundant, managed communication switches poses a significant risk to network reliability, introducing single points of failure.
In addition to above following aspects are to be enhanced:

- Non-Redundant RTU
- Obsolesce of Hardware, Spares & Support
- Missing latest upgradation, scalability & flexibility
- Non-compliance of Cybersecurity features & NCIIPC, Cert-IN Standards
- Interoperability Issue with modern protocols like IEC-61850
- Reduced reliability & Performance

The proposed arrangement will ensure improved uptime, SCADA visibility, cyber resilient system, and regulatory compliance across substations.

Statutory Compliance Requirement

All statutory requirement complied as and when required for the proposed CAPEX plan.
The communication infrastructure proposed for the integration of SCADA & Substation Automation System are from the services of Network Bandwidth Service Provider (NBSP).

All statutory compliance with respect to communication infrastructure will be managed by NBSP in consultation with TPCODL.
The proposed SAS System will have the provision to comply all the guidelines issued of CERT-IN, NCIIPC during the implementation.

Proposal for the Capex Investment

TPCODL has identified a number of challenges related to Safety, 33KV/11KV Substation Automation infrastructure and Technology usage. These challenges are planned to be addressed through a systematic investment plan by TPCODL. The proposed "Capex Plan" represents a justified and efficient level of total capital investment estimated by TPCODL to meet the service obligation; improving safety, reliability of network and level of service standards.

Table 28 : CAPEX Proposed for Upgradation of Sub-station Automation System

Sl. No.	Activity Planned	Capex Proposed (FY 28)
1	Upgradation of Substation Automation System at 30 Nos of 33/11kV PSS in BBSR-I	2.82 Cr
2	Strengthening of Network Infrastructure at 30 Nos of 33/11kV PSS in BBSR-I	0.18 Cr
3	**Total Cost**	**3.0 Cr**

Scope of the Proposal:

In TPCODL, there are approx. 52 Nos. of 33/11 kV Sub-stations under RAPDRP/IPDS/PNP/ODSSP and are planned to upgrade the substation automation system & network infrastructure in two subsequent financial years. i.e. FY27 to FY28. In FY 27, Hon'ble Commission has approved ₹ 2 Cr for 22 Sub-stations in Cuttack area. Rest 30 locations in Bhubaneswar area are being proposed in the current financial year.

The proposal of FY28 is for BBSR-I as mentioned in the table below:

Scope of Work	No. of Substation	Execution Plan
Upgradation of Substation Automation System & Network Infrastructure at 33/11kV PSS of BBSR-I	30	FY 28

Cost Estimation and Execution Timelines

Table 29 : **Break-Up of Cost estimate for Upgradation of Substation Automation**

Sl. No.	Proposal	Details	Quantity / PSS	Total PSS	Total Qty	UoM	Unit Price	Total Cost
1	Existing RTU Replacement - under RAPDRP/IPDS/PNP/ODSSP Scheme	RTU Rack	1	30	30	Nos.	6,00,000.00	1,80,00,000.00

Benefits

- **Tangible and Intangible**

Upgradation of Substation Automation System would ensure optimum resource utilization and functionalities used in the SCADA System along with enhancement reliability and higher system availability. Other benefits include:

- Improved SCADA Data Availability through modern automation hardware and reliable communication architecture.
- Reduction in Maintenance Efforts and Downtime due to supportable, upgraded, and standardized equipment.
- Cost Savings over the long term by eliminating recurring failures and manual interventions.
- Enhanced System Reliability and Uptime, contributing to better grid stability and customer satisfaction.
- Future Scalability and Flexibility to integrate modern substations and advanced protocols (e.g., IEC-61850).
- Cybersecurity and Regulatory Compliance, aligning with guidelines of NCIIPC, CERT-In, and national standards.
- Operational Efficiency through improved data visibility, faster response times, and reduced manual dependency.
- Improved Interoperability across multivendor devices using standardized protocols.

- **Benefits to Customer**

- Reduction in restoration time of outage
- Improved reliability of service
- Better control of power quality and enhanced use of reactive power sources
- Useful feedback information to the customer in terms of expected outage duration time etc.

- Monitoring the potential quality problems and also the reliability problems due to supply interruptions.

- **Indirect Savings/Improvements**

- Reduction in overall maintenance and inventory carrying cost.
- Strengthening of existing operational technology infrastructure.
- Detection and protection of operational system from Cyber Security vulnerabilities.
- Improvement in reliability of power supply to consumers.

2.3.2 Grid Sub-Station Automation System with SCADA Enablement of Conventional Sub-station

Background

TPCODL, began operations on June 1, 2020, after taking over from the erstwhile CESU. The company serves a large distribution area of about 29,354 square kilometres, catering to a population of nearly 1.36 crore people. With a customer base of around 33 lakh, TPCODL is responsible for ensuring reliable electricity supply across Central Odisha. Its extensive distribution network includes approximately 4,082 circuit kilometres of 33 kV lines, 39,350 circuit kilometres of 11 kV lines, and 50,435 circuit kilometres of low-tension lines, 386 no. of Primary Substations**,** making it one of the largest power distribution utilities in the region.

Initial Status at the Time of Inception:

At the time of vesting, TPCODL inherited 33/11 kV conventional Primary Substations (PSS) from erstwhile CESU. The substations were equipped with electro-mechanical/static relays and control panels, which were not SCADA compliant. This limited the monitoring and control capability of the substations, thereby impacting reliability, fault restoration time, and operational efficiency. SCADA was there for 52 No's RAPDRP stations and 4 PNP stations. It was un-utilized for centralized remote control and monitoring.

TPCODL has proposed to upgrade and strengthen Substation Automation System & Network Infrastructure by replacing the existing old RTUs in 33/11kV PSS and provisioning of industrial-grade Ethernet switches with structured network cabling (FO/ LAN) for higher system availability and enhanced reliability. Hon'ble Commission has approved for this upgradation at 22 Nos of PSS in CAPEX FY 27 and remaining 30 Nos are being proposed under CAPEX FY 28. Along with RTU upgradation, the upgradation of non-SCADA compliant electro-

mechanical/static relays and control panels are very essential for complete remote monitoring and SCADA operation.

Scope Completed Since Vesting:

TPCODL has already implemented a state-of-the-art SCADA system, enabling real-time monitoring and operations of the network. Out of 386 PSS, till now **290 PSS** have been automated and integrated with SCADA. By end of FY 27, 333 PSS have been targeted for automation with SCADA with available budgets approved by Hon'ble Commission.

25 Nos are proposed under the CAPEX FY 28 against a budget of ₹ 15.33 Cr.

Volume Balance to be completed under Subsequent CAPEX:

TPCODL has planned to automate and integrate all PSS by FY29 with kind approval from the Hon'ble Commission.

A total of 333 PSS has been planned to be integrated by the end of FY27. 25 Nos are proposed in this CAPEX petition for FY 27-28. Remaining will be proposed under CAPEX FY 29.

Proposal

Implementation of **Grid Substation Automation System (GSAS)** across all Primary Substations (33/11 kV) by replacing obsolete/non-communicable relays and control panels with **SCADA-compliant equipment**, ensuring **real-time remote monitoring and control** from the Power System Control Centre (PSCC).

Requirement/ Need of the Proposal

1. **Deficiency in the Existing System**
    a. Conventional substations with outdated electro-mechanical/static relays are **not SCADA compliant**.
    b. Inability to monitor and control substations remotely delays **fault isolation, restoration, and preventive maintenance**.
    c. Increased **Mean Time to Restore (MTTR)** and reduced network reliability.
2. **Benefits of the Proposed Arrangement**
    a. Centralized monitoring and control from PSCC.
    b. Faster fault detection, isolation, and restoration.
    c. Improved operational efficiency and asset reliability.
    d. Reduction in downtime and customer interruptions.
3. **Statutory Compliance**
    a. Ensures compliance with **CEA guidelines** and regulatory directives for **automation, safety, and reliability**.
    b. Supports the transition towards a **Smart Grid framework** as per national roadmap.

Scope of Work

a. Replacement of non-communicable relays/control panels with IED-based (Intelligent Electronic Device) SCADA-compliant relays.
b. Integration of PSS with the existing SCADA system.
c. Phase-wise execution as per approved roadmap.
d. Installation of State-of-the-art CRP in place of old dilapidated CRP

TPCODL has planned to implement GSAS in 25No's of PSS with 15.33 crore.

Table 31 : ***Proposed Cost with Estimate Break-up***

Sl. No.	Description	Unit	Per Unit Cost (In Cr.)	Total Qty.	Total Cost (In Cr.)
1	BOQ for Installation of CR panel for 3 Feeder Protection (33 kV or 11 kV)-CRP3F	EA	**0.103**	**44**	**4.55**

				15.333

Attached estimate copies, PSS wise scope has been attached here-with

Table 33 : **Cost-Benefit Analysis**

No. of operators before GSAS	No. of operators after GSAS (7/3PSS)	Salary of operator (INR)	Salary Benefit (Annual)	Calculations	Value	unit
A	B = no. of PSS x 7/3	C	D = (A-B)XCx12			
149	59	22000	2,37,60,000.00	Total Scheme Cost (incl. Taxes)	15.33	Cr.
				Pay Back Period of Scheme (F=Total Project Cost/E)	6.45	Years
				% Rate of Return	15.50	%

The above payback calculation is based solely on manpower optimization. Additional benefits from improved reliability, reduced O&M expenditure, faster fault isolation, reduced equipment damage, and enhanced system availability have not been monetized and therefore the actual project benefits are expected to be significantly higher.

Effective payback is expected to be lower considering additional benefits from reduced outages, avoid equipment failure, lower maintenance costs, and improved reliability.

Benefit to the System and Consumers:

- Centralized monitoring and control through PSCC will enable real-time visibility of substation assets and improve operational safety.
- Reduction in field visits and manual intervention will lead to lower O&M expenditure and improved resource utilization.

- Faster detection, isolation, and restoration of faults will reduce Mean Time to Restore (MTTR).
- Advanced IED/BCPU-based protection system will minimize equipment stress and avoid major transformer/switchgear failures.
- Improved reliability indices (SAIDI/SAIFI) resulting in better consumer service levels.
- Enhanced power system resilience and preparedness for future Smart Grid integration.
- Compliance with statutory and regulatory requirements for communication and automation infrastructure.

Compliance for CEA Guidelines:

The proposed GSAS scheme complies with the provisions of the CEA (Technical Standards for Communication System in Power System Operation) Regulations, 2020, specifically:

- **Regulation 4:** Functional Requirements
- **Regulation 16:** Access to Data
- **Regulation 18:** System Upgradability and Expandability
- **Regulation 19:** Centralised Monitoring

Benefits:

a. Avoided equipment damage and reduced failure rates.
b. Faster restoration → lower SAIDI/SAIFI indices.
c. Lower O&M costs due to remote supervision.
d. Enhanced regulatory compliance and customer satisfaction.

Benefit to the System and Consumers

For the System:

a. Reliable and resilient grid with real-time monitoring.
b. Enhanced control and operational efficiency.
c. Reduced breakdowns and preventive maintenance support.
d. Readiness for Smart Grid integration.

For Consumers:

a. Reduced outage duration (improved MTTR).
b. Improved reliability and power quality.
c. Better customer satisfaction due to faster service restoration.

The Scope of work, estimate with BoQ and Cost Benefit Analysis is enclosed as **Annexure-9.**

2.3.3 Fault Location Van (FLC Switchgear Van)

Background

TPCODL currently has four van-mounted cable fault locator systems deployed for cable fault location, testing, and maintenance activities across its expanding underground cable network. With the continuous growth of the 11 kV and 33 kV underground cable network, along with the increasing deployment of RMUs and Compact Substations, the operational dependency on reliable and readily available cable fault location equipment has increased significantly.

Out of the four systems, two systems, namely Cable Test Vans bearing vehicle numbers MH 02 ER 6726 and MH 02 ER 6725, were purchased in 2018 and are approximately 9 years old. Both systems are M/s Megger India SPG-40 models and have completed more than 2000 cable test cycles. Due to ageing and continuous field operations, these systems are experiencing frequent breakdowns. Further, the OEM has informed that both existing SPG-40 models have become obsolete and that the availability of critical spare parts and electronic components is becoming increasingly difficult, which will make repair of both systems increasingly difficult. Considering the equipment's serviceable life of approximately 10 years (**Annexure-10** attached Letter from BA on service life of the van), continued operation of these ageing systems is expected to result in frequent system breakdowns, longer repair times, and higher repair costs.

Of the remaining two systems, one is a compact system with limited testing capabilities and is not suitable for certain critical applications, particularly testing of long-length cables and locating high-resistance faults.

The existing cable fault locator van details are as follows:

Table 34 : Fault Locator Van Details

Sl. No.	Name of Vehicle	Year of Purchase	OEM	Model	Features
1	Cable Test Van (Force Traveller MH 02 ER 6726)	2018	M/s Megger India	SPG-40	Test: IR & DC Hi-pot; Pre location: ARM, ICE, Decay; Pinpoint: Surging
2	Cable Test Van (Force Traveller MH 02 ER 6725)	2018	M/s Megger India	SPG-40	Test: IR & DC Hi-pot; Pre location: ARM, ICE, Decay; Pinpoint: Surging
3	HT Test Van (Mahindra Camper OD 02 CF 3390)	2022	M/s Techno Ins Pvt. Ltd	SURGEN 8, SURGEN 5	Pre location: ARM; Pinpoint: Surging

4	CENTRIX Fault Locator (Force Traveller OD 02 CJ 9144)	2023	M/s Megger India	Centrix EVO	Test: IR & DC Hi-pot; Conditioning: Burning, Power Burning; Pre-location: ARM, ARM+, ICE, Decay; Pinpoint: Surging, ICE Surging; Diagnosis: VLF, PD, Tan Delta; Cable Tracer: Audio Frequency; Sheath Test: Sheath Fault Pinpoint

TPCODL's underground network has expanded significantly, covering a wide geographical area across multiple operational circles. The extensive deployment of fault locator vans and long-distance mobilisation often results in increased response time, particularly when multiple cable faults occur simultaneously. Equipment breakdowns further increase dependency on the limited available systems, adversely affecting fault response and timely cable fault pinpoint.

Proposal

Procurement of one additional modern van-mounted cable fault locator system with advanced testing and fault location capabilities is proposed to enhance equipment availability, reduce fault response and restoration time, provide operational backup during breakdowns, and strengthen preventive and emergency cable test activities.

Justification/ Need of the Proposal

Considering the continuous growth of the underground cable network, increasing fault incidences, extensive geographical coverage, ageing and obsolete equipment, frequent breakdowns, and limited capability of the existing system, the present fleet is no longer adequate to efficiently meet operational requirements.

The two SPG-40 systems purchased in 2018 are approximately 8 years old and have completed more than 2000 cable test cycles. Due to ageing and continuous field operations, these systems are experiencing frequent breakdowns. Further, the OEM has informed that the existing SPG-40 model has become obsolete and that the availability of critical spare parts and electronic components is becoming increasingly difficult. Continued operation of these ageing systems is therefore expected to result in frequent system breakdowns, longer repair times, and higher repair costs.

Further, one of the remaining systems is a compact system with limited testing capabilities and is not suitable for certain critical applications, particularly testing of long-length cables and locating high-resistance faults.

The extensive geographical coverage of TPCODL's underground cable network and long-distance mobilisation of fault locator vans also results in increased response time, particularly when multiple cable faults occur simultaneously. Equipment breakdowns further increase dependency on the limited available systems, adversely affecting fault response and timely cable fault pinpoint.

In view of the above, procurement of one additional modern van-mounted cable fault locator system with advanced testing and fault location capabilities is required to improve equipment availability, reduce fault response and restoration time, and provide operational backup during breakdowns.

Scope of Work

Procurement of one additional modern van-mounted cable fault locator system with advanced testing and fault location capabilities for deployment across TPCODL's underground cable network.

Table 35 : **Proposed Cost with Estimate Break-up**

Description	QTY	UOM	Unit Price	GST(18%)	Unit Price(With GST)	Rate Reference
Vehicle mounted Megger Fully Automatic 33KV Van Mounted CFL with VLF	1	EA	3,40,00,000.00	61,20,000.00	4,01,20,000.00	Vendor Quotation

Cost Benefit Analysis

The proposed procurement will enhance the availability of cable fault location equipment and reduce dependency on the limited existing systems. It will help reduce fault response and restoration time, particularly during simultaneous cable faults and periods of equipment breakdown.

The additional system will also provide operational backup and strengthen preventive and emergency cable test activities across TPCODL's expanding underground cable network.

Benefit to the System and Consumers

The procurement of one additional modern van-mounted cable fault locator system will enhance equipment availability for cable testing and fault location activities across TPCODL's expanding underground cable network.

The proposed system will help reduce fault response and restoration time, provide operational backup during breakdowns, and strengthen preventive and emergency cable test activities. This will support timely cable fault pinpoint and improve the operational capability of TPCODL's underground cable network.

2.3.4 33 kV Network Infrastructure

Background

In TPCODL licensed area, 33kV network forms the backbone of the power supply system. This network is widely spread across the region and connects various 33/11kV Primary Substations (PSS), where power is stepped down to 11kV for further distribution. The 33kV feeders are critical assets for the distribution utility, as they interconnect power substations and ensure reliable power supply to end consumers.

To strengthen the existing network and address operational challenges, the following key intervention areas have been identified:

- **33kV Network Refurbishment** to replace aging infrastructure and improve network operational performance.
- **Enhancement of Reliability of the 33kV Network**, with a focus on critical areas such as Bhubaneswar city, Cuttack city, industrial zones and other strategically important locations.
- **Providing 33kV second source to the PSS,** to enhance the reliability of the 33kV feeders.

Proposal

In this proposal, TPCODL intends to improve reliability of the 33kV feeders by feeder augmentation, feeder interconnection and construction of new feeders.

Requirement/ Need of the Proposal

33kV Network Refurbishment

The 33kV network in the TPCODL licensed area includes a significant portion of undersized conductors, long spans, dense vegetation in the feeder passage, compromised vertical and horizontal clearances which leads to frequent breakdowns and prolonged shut down to the consumers. Most of these 33kV lines are very old, having porcelain insulators susceptible to repeated failures and pass-through paddy fields, difficult terrains and dense vegetation which requires urgent refurbishment. Refurbishment of this network is essential to strengthen the existing 33kV network by adding additional interposing poles, new conductors and associated accessories to meet the load demands, reliable power quality and safety standards. This initiative will enhance the current carrying capacity of feeders, reduce fault rates, improve voltage regulation and ensure reliable and uninterrupted power supply to consumers. The proposed use of XLPE covered conductors will significantly improve the reliability and safety

of the distribution network by reducing faults caused by tree branches, bird contacts, etc. These conductors provide better insulation and mechanical strength compared to bare conductors, resulting in fewer interruptions, reduced maintenance requirements, enhanced public safety and improved reliability of power supply, especially in densely vegetated and urban areas.

33kV Network Interconnection for ring connectivity

Most of the 33kV feeders and associated feeders are connected in radial nature. The 33kV interconnection enables the ring connectivity and help in load diversion during contingency situations and help in load bifurcation thereby reducing the risk of overloading on individual feeders. This helps provide alternative power supply to affected network during faults, maintenance, minimizing supply interruptions to consumers. This improves restoration time, reduces feeder tripping incidents and supports load growth without the immediate need for large-scale infrastructure expansion. Overall, feeder interconnection contributes to a more resilient and responsive distribution network across the TPCODL licensed area.

Providing 33kV second source to the PSS

Many 33/11kV Primary Substations (PSS) in the TPCODL network have only a single source connectivity, which creates a significant reliability concern. In the event of an upstream feeder fault, maintenance activity or any network contingency, the entire substation and its connected consumers experience prolonged outages due to the absence of an alternate power supply. Single connectivity also reduces operational flexibility, increases restoration time and affect the reliability of power supply to the consumers.

There are 382no's of PSS in summer'26, out of which only 45% of the PSS having dual sources which will be increased to 63% by summer-28 through execution of ongoing schemes as well as CAPEX 27-28.

In CAPEX 27-28 it is proposed, 21nos. 33/11kV PSS are to be provided with second source connectivity are proposed

33 kV Feeder Ring Connectivity

In summer'26 there are total 283no's of 33kV feeders out of which 31no's are dedicated and 78% are in ring connectivity excluding dedicated HT consumers feeders. The ring connectivity will be increased to 88%, 9 no's feeders ring connectivity proposed under CAPEX 27-28. Out of 9 no's feeders 7no's feeders proposed under Network Reliability and 2 no's under Loss Reduction head.

Scope of Work

- Construction of new 33kV interconnecting/linking lines and provision of second source (N-1 connectivity) to single-source 33/11 kV PSSs for enhancing network reliability and ensuring uninterrupted power supply.
- Refurbishment and augmentation of existing 33kV feeders by replacing undersized conductors with higher-capacity conductors/ XLPE covered conductors, strengthening line infrastructure, reduction in feeder tripping and improving feeder power supply reliability.

The total cost for 33kV Network Infrastructure is approx. 75cr.

Benefit to the System and Consumers

- Reduction of feeder outages, improving system reliability, enhancing network safety and minimizing power interruptions
- Providing second 33kV source to 33/11kV PSS.
- Enhancing operational flexibility.
- Elimination of frequent vegetation-related interruptions, facilitate easier maintenance and patrolling and enhance the overall reliability the network.
- Ensuring safe, reliable and quality power supply to the consumers by improving N-1 reliability.
- Providig underground network & cyclone resilint overhead network for Disaster resilient.
- Providing XLPE covered condutor for tripping reduction , improve reliability & safety.

2.3.5 11 kV Network Infrastructure

Background

In the TPCODL licensed area, the 11kV network serves as the primary distribution backbone for delivering electricity from 33/11kV primary substations (PSS) to end consumers. This network is extensively spread across both urban and rural regions and plays a crucial role in ensuring last-mile connectivity. The 11kV feeders are vital assets for the distribution utility, as they directly impact the quality, reliability and efficiency of power supply to consumers.

To strengthen the existing 11kV network, reduce the length of the lengthy feeders and address the reliability challenges the following key intervention areas have been identified:

- Enhancement of Reliability of the 11kV Network, with a focused approach in high-density urban areas such as Bhubaneswar city and Cuttack city, as well as industrial belts and other critical zones where uninterrupted power supply is essential.
- Mitigation of issues due to lengthy 11kV feeders in order to mitigate low voltage issues and improve reliability of power supply to the consumers.
- 11kV Network Refurbishment to replace lower sized conductors and associated infrastructure, thereby improving reliability of power supply.

Proposal

In this proposal, TPCODL intends to improve reliability and reduce the length of lengthy 11kV feeders by feeder augmentation, feeder interconnection and construction of new feeders. The proposed works will enhance reliability of the network, provide network redundancy through alternate supply arrangements, reduce length of the lengthy 11kV feeders, improve voltage profile, improve safety in the network. Further, conductor refurbishment works will ensure safe, quality and reliable power supply to the consumers while catering to future load growth.

Requirement/ Need of the Proposal

Enhancement of Reliability of the 11kV Network

The enhancement of the 11kV network is imperative to ensure reliable and uninterrupted power supply in high-density urban areas such as Bhubaneswar and Cuttack, as well as in critical zones including industrial belts and other essential infrastructure over the TPCODL licensed area. These regions are experiencing rapid load growth and host critical services where power outages can lead to significant economic, safety and operational disruptions. The existing 11kV infrastructure faces challenges such as overloading during N-1 contingency condition, limited redundancy, frequent faults due to network inadequacy such as DSS connecting to network without any protection device and inadequate capacity for future expansion. Strengthening the network is essential to improve supply reliability, reduce technical losses and ensure quality power supply.

11kV Network Refurbishment

The 11kV network in the TPCODL licensed area includes a significant portion of undersized conductors which leads to frequent breakdowns, higher technical losses and reduced reliability. Refurbishment of the network is essential to meet peak load demands and upcoming load growth in the areas. This will enhance the current carrying capacity of feeders,

reduce fault rates, improve voltage regulation and ensure reliable and uninterrupted power supply to consumers.

Table 43 : Scope – 11 kV Network Refurbishment (ckm)

Total scope in the network	Work Covered (up to FY:27 DPR)	Balance Requirement	Considered under CAPEX FY: 27-28	Planned for future CAPEX
2246	991	1255	146	1109

11kV Feeder Length Reduction

In the existing TPCODL area, there are some lengthy feeders where the feeder length exceeds 50Ckm. This issue leads to voltage drops, increased technical losses and reduced power supply reliability. To address the issues, the construction of new 11kV feeders and bifurcation of existing lengthy feeders is essential. The proposals required will help in load diversion, reduce feeder length, improve voltage profiles and enhance the overall reliability of the network.

The 11kV network interconnection enables the diversion of load during peak demand or contingency situations, thereby reducing the risk of overloading on individual feeders and improving power quality. They also provide alternative power supply routes in case of faults/ maintenance, minimizing supply interruptions to consumers. Feeder interconnection contributes to a more resilient and responsive distribution network across the TPCODL licensed area.

Table 44 : Consideration in FY 2027-28

No of Feeders length in FY21	No of Feeders length by March '26	To be completed by March'27	Considered under CAPEX FY:2027-28	No's of Feeders left out after FY'28 D=A-(B+C)
191	133	58	4	71

There are 133nos. 11kV feeders where the length is more than 50km in As is condition. Out of the 133nos. feeders, 58nos. of 11kV feeder length reduction will be mitigated either through NOP change or from ongoing proposals WIP under different Govt. and Capex schemes by Mar-27.

Further out of the remaining 75nos. 11kV feeders, length reduction of 4nos. 11kV feeders are considered under CAPEX FY: 2027-28. The rest 71nos. 11kV feeder length reduction will be planned in subsequent schemes.

The length of the 11kV feeders can be reduced by the following 3 categories:

- Reduction of 11kV feeder length by laying new 11kV feeders from existing PSS.
- Reduction of 11kV feeder length by laying new 11kV feeders from approved upcoming PSS

which are presently under execution.

Table 45: List of 11kV feeders proposed for length reduction under CAPEX 27-28

Sl. No	Circle	Division	PSS Name	11kV Feeder Name	Proposals	Existing Feeder length in CKM	Feeder length in CKM after proposal execution
1	Paradeep	JED	Nabapatna PSS	Mansadahi	Proposal for refurbishment of 7.5 CKM 11 KV line of 11 kV Mandasahi Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole along with construction of 1 CKM 11 kV line for N-1 connectivity between 11 kV Mandasahi & Jankothi Fdr. for length reduction of Mandasahi Fdr.	56.3	31.3
	Paradeep	JED	Markandapur	Jankoti		22.6	48.6
2	BBSR-II	NYED	Gania	Koska	Proposal for reliability improvement as well as length reduction of 11KV Kuska feeder by construction of new 11kV feeder of 0.7 CKM from Gania PSS.	65.7	23.7

11 kV feeder Ring Connectivity

In summer'26 there are total 1459no's of 11kV feeders out of which 19no's are dedicated and 57% are in ring connectivity excluding dedicated HT consumers feeders. The ring connectivity will be increased to 63% in Summer'28, 27 no's feeders ring connectivity proposed under CAPEX 27-28. Out of 27 no's feeders 23 no's feeders proposed under Network Reliability and 4 no's under Overloading mitigation head.

Table 46

No's of 11kV Feeders	Summer'25	Summer'26	% Feeder with no of sources in summer'26	Summer'27	% Feeder with no of sources in summer'27	Summer'28	% Feeder with no of sources in summer'28	Remarks
Radial	643	622	43%	564	39%	537	37%	**27**no's feeders proposed under CAPEX 27-28
Ring	758	818	57%	876	61%	903	63%	
Total	**1401**	**1440**		**1440**		**1440**		

Scope of Work

- Construction of new 11kV lines and interlinking arrangements to provide ring connectivity, feeder bifurcation, feeder length reduction and alternate source connectivity for improved reliability & safety of the network.
- Augmentation and refurbishment of existing 11kV feeders by replacing aged/ undersized conductors with higher-capacity AAAC/XLPE covered conductors and strengthening the distribution network.

The total cost for 11kV Network Reliability is approx. 60cr.

Proposed Cost with Estimate Break-up

Please refer to **Annexure-12** for details of BoQ for the above cost estimate.

Benefit to the System and Consumers

Implementation of the proposals under this section will significantly strengthen the 11kV network, thereby enhancing the overall quality and reliability of power supply to consumers.

- 11kV proposals will help in managing the load in case of any exigency.
- Strengthening of the 11kV feeder and ensure lower interruption.
- Improving the tail-end voltage of the feeder.
- Ensure reliable, safe and quality power supply hence leading to satisfaction of the consumers.

2.3.6 New PSS to meet Network Reliability

Background

Background

The Gadakana and Patharagadia areas have emerged as rapidly developing urban load centres in Bhubaneswar City witnessing sustained growth in load demand due to increasing infrastructure development. The existing load in these areas is presently catered through multiple 11kV feeders originating from nearby substations, which are experiencing progressively higher loading levels, frequent trippings and increasing operational stress, thereby adversely affecting supply reliability for a large number of consumers. Further, substantial additional loads are expected to be connected in the near future and projected demand growth indicates that several of the existing feeders will approach or exceed their current carrying capacities by Summer'28. Considering the densely developed urban environment, limited right-of-way availability and the requirement for extensive underground cabling, construction of new 11kV feeders from existing substations would entail significant capital expenditure while providing only a short-term solution. Accordingly, the construction of new 33/11kV Primary Substations at Gadakana and Patharagadia, along with associated lines and network strengthening works including feeder augmentation, underground cabling, RMU installations and load bifurcation, has been identified as the most technically feasible and viable solution to relieve feeder overloading, reduce interruptions, improve voltage profile and supply reliability, accommodate future load growth and strengthen the overall distribution infrastructure in these rapidly expanding urban areas.

Proposal

New PSS (2X12.5MVA) at Gadakana:

To address the rapidly growing load demand and recurring reliability issues in the Gadakana, Kanan Vihar and nearby area, it is proposed to construct a new 33/11kV Gadakana Primary Substation (2X12.5 MVA PSS) along with associated network strengthening works. This PSS will cater 12MVA load out of which 4MVA is upcoming load and 8MVA load diversion from the existing 11kV nearby feeders of different PSS (C.s.pur-1 PSS, Sainik School PSS).

The scope of the scheme includes construction of the 33/11kV PSS, laying of 3.5Ckm of 33kV underground cable from Mancheswar-A with tapping from the existing 33kV Xavier feeder, and development of 11kV underground cable links for integration with the Kelucharan Park, Pokharan, and Shree Vihar feeders. The proposal also includes augmentation of the existing Pokharan, Shree Vihar and Info-Shree Vihar feeders to facilitate load redistribution and network reinforcement. Further, two 12.5 MVA Power Transformers are proposed to be installed at the new substation through asset optimization by utilizing transformers becoming available from Unit-8 PSS and Badagada PSS following planned augmentation works (under CAPEX FY:2027-28). The scheme will facilitate effective load bifurcation from heavily loaded

feeders, support future load growth, improve voltage profile and significantly reduce feeder outages and supply interruptions in the area.

New PSS (2X8MVA) at Patharagadia:

Similarly, to strengthen the distribution network in the rapidly developing Patharagadia area, it is proposed to construct a new 33/11kV Patharagadia Primary Substation (PSS) with associated feeder strengthening and load transfer arrangements. This PSS will cater 7.5MVA load out of which 3MVA is upcoming load and 4.5MVA load diversion from the existing 11kV nearby feeders of different PSS (Chandaka PSS, Infocity PSS).

The proposed works include laying of 0.6Ckm of 33kV underground cable for LILO connectivity of the 33kV Chandaka underground feeder, development of 11kV underground cable links for integration with the Patharagadia, Rajvatika and Polymer Complex feeders, installation of Ring Main Units (RMUs) at strategic locations, augmentation of the Rajvatika and Polymer Complex feeders, and installation of an E-House relocated from Mulapadia Substation (spare). The substation will be equipped with two 8 MVA Power Transformers proposed to be sourced through transformer swapping from Samanga PSS and Balugaon PSS after completion of planned augmentation works (under CAPEX FY: 2027-28). The proposed scheme will enable effective load bifurcation, enhance operational flexibility, improve voltage regulation, reduce feeder trippings and outage duration, and ensure reliable, quality power supply to existing and future consumers while meeting the long-term demand growth requirements of the Patharagadia. In future, load growth increases, only the transformer will be upgraded to higher rating.

Requirement / Need of the Proposal

The proposed 33/11kV Primary Substation at Gadakana and Patharagadia is necessitated by sustained load growth, increasing feeder overloading in the existing distribution network, which cannot be effectively addressed through further feeder augmentation due to urban right-of-way constraints and high underground cabling costs. The proposal is therefore required as it will improve system reliability, ensure quality power supply, enhance network resilience and cater to the load demand growth of the approval.

Scope of Work

The scope of work proposed under CAPEX FY: 2027-28 as follows:

i. Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS along with associated 33kV and 11kV lines.
ii. Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS along with associated 33kV and 11kV lines.

The approx. costing for New PSS is given below:

Table 48: Proposed Cost with Estimate Break-up

Sl. No.	Name of Circle		Name of Division	Name of New 33/11kV PSS	Proposal Details	Amount (in cr.)
1	BBSR-1		BCDD-2	Gadakana	Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS along with associated 33kV and 11kV lines. (Existing PTR will be utilized, cost is not included)	16
2	BBSR-1		BCDD-2	Patharagadia	Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS along with associated 33kV and 11kV lines. (Existing PTR and switchgear will be utilized, cost is not included)	9
					Total Cost (Cr.)	**25**

Benefit to the system and consumers

- To improve reliability and quality of power supply.
- Create additional load centre with adequate transformation capacity to cater to the existing load, upcoming loads as well as future load growth in the area.
- To improve voltage profile.
- To improve operational flexibility and network redundancy.

The detailed proposal , scenario analysis, justification , cost estimate , BoQ and benefits are provided at **Annexure-14.**

PSS Reliability Improvement

Background

For any distribution company, apart from a strong 33kV & 11kV network, healthy & trouble-free network equipment or asset base is a requisite. It forms the base for reliable power supply to the consumer.

In TPCODL, based on the detailed survey reports, it was found that at some place's intervention at equipment level is required to make the network strong & trouble free so as to ensure reliable power distribution till customer point.

Proposal

To provide uninterrupted power supply to customers, we need to replace the old and unreliable equipment. OEMs have stopped providing spares and services for many equipment. As a result, it is becoming difficult to ensure trouble free operation of these equipment. In order to keep the overall expenditure minimum, useful parts from the old equipment are planned to be used to service the same make of equipment installed at other PSS to extend their useful life.

Table 49 **Activities Proposed for PSS Reliability Enhancement**

Sl. No.	Description	Unit	Per Unit Cost (In Cr.)	Total Qty.	Total Cost (In Cr.)
1	Replacement of Aged PTR's to improve reliability				**11.49**
	Replacement of Sick 12.5MVA PTR with new 12.5/16MVA PTR	EA	**3.41**	**2**	**6.83**
	Replacement of Sick 7.5MVA PTR or 8MVA PTR with new 8MVA PTR	EA	**2.33**	**2**	**4.66**

				TOTAL	**57.05**

2.3.7 Replacement of Aged PTR to improve reliability

The detailed scope & proposal under this head is provided below.

Table 50: Cost Estimate

Sl. No.	Description	Unit	Per Unit Cost (In Cr.)	Total Qty.	Total Cost (In Cr.)
1	Replacement of Sick 12.5MVA PTR with new 12.5/16MVA PTR	EA	**3.41**	**2**	**6.83**
	Replacement of Sick 7.5MVA PTR or 8MVA PTR with new 8MVA PTR	EA	**2.33**	**2**	**4.66**
	Grand Total				**11.49**

Power Transformers in 33/11 kV PSS are critical components in power distribution networks. Over time certain PTR models have been identified as vulnerable due to aging infrastructure, obsolete technology and lack of manufacturer support.

By phasing out transformers that have exceeded their designated service life, the initiative will minimize the risk of outages, equipment failure, and potential safety hazards. New efficient PTRs will reduce technical losses, improve voltage stability, power supply reliability and lower maintenance costs. Moreover, the investment supports regulatory compliance, strengthens asset health management and ensures readiness for uninterrupted power supply.

Total 126 Nos. of PTRs different rating has completed 25 years and more and installed in different PSS across TPCODL distribution licensed area.

After 25 years of the useful life, power Transformers Insulation Breakdown increases, Core degradation started increasing and mechanical wire become significant which causes increase in Transformer failure rates. Theses transformer are required frequent maintenance and testing to keep the transformer in running condition.

a. Out of 126 Nos. PTR, there are 25 Nos. PTRs having capacity 7.5 MVA and above.

b. Out of these 25 Nos. of PTRs, 5 Nos. of PTRs is planned for replacement under approved Capex 26-27.

c. In Capex 27-28, 4 Nos. of PTRs are proposed for replacement.

d. Rest 16 Nos. PTRs above 7.5 MVA will be considered for replacement in phase manner in sub-sequent Capex.

e. After replacement completion of these higher rating PTR (7.5 MVA and above), further replacement planning will be done for lower rating PTR (5 MVA and below- 101 Nos. PTRs) in future Capex.

Table 51

Items Description	Total No. of PTR more than 25 Years	No. of PTR rating 5 MVA & below	No. of PTR rating 7.5 MVA & above	No. of PTR replace till now	Planned in FY'27	Proposed in FY'28	Total Cost in Cr. considered in Capex 27-28	Left out Qty. 2.3.8 Single PTR Augmentation

In the TPCODL area, some PSS were originally designed with a single Power Transformer. Due to this design limitation the power supply must be shut down if the transformer fails or is taken out of service for maintenance as there is no standby transformer available to ensure continuity.

As a standard design practice, it is recommended to have a minimum of two Power Transformers at each PSS to address such deficiencies. Installing a second transformer enhances system resilience, improves load-sharing capabilities, and supports future capacity expansion. It also facilitates the transition to a more robust and future-ready grid, allowing utilities to maintain service continuity, meet increasing demand, and achieve N-1 compliance.

In the TPCODL licensed area, there are 23 Nos. PSS currently operating with a single PTR.

Of these 7 Nos. PSS do not have sufficient space for installation of a second PTR. At these 7 Nos. locations mitigation will be done through 11 kV interlinking lines from nearby PSS.

Status of Single PTR Mitigations through 11 kV interlinking-

a) Out of 7 Nos. PSS, 2 Nos. have been mitigated through 11 kV interlinking lines from nearby PSS.

b) For remaining 5 Nos. PSS, 11 kV interlinking lines are required to be established to enable load transfer and will be considered in future Capex.

Status of Single PTR Mitigations by installing 2nd PTR-

a) Out of the remaining 16 Nos. of PSS where a second PTR can be installed.

b) 3 Nos. of PSS already have the second PTR installed.

c) 2 Nos. of PSS have ongoing work for installation.

d) In 4 Nos. of PSS, installation of a second PTR is planned Capex 2026–27.

e) In 6 Nos. PSS, installation of a second PTR is proposed in Capex 2027-28. Out of these 6 Nos. locations, at 5 nos. of locations PTR cost is not considered in the estimate, PTRs which are available spare after swapping plan is proposed for used at these PSS locations to optimize the Capex cost and sweating of existing asset to the optimum level whereas at One location only PTR cost is included in the estimate.

f) The remaining 1 Nos. of PSS will be considered in a phased manner under subsequent Capex plans.

Table 53: Scope

Items Description	No. of PSS Locations where 2nd PTR can be installed	Completed till March'26	WIP	Planned in FY'27	Proposed in FY'28	Total Cost in Cr. considered in Capex 27-28	Left out Qty.
Installation of 2nd PTR on Single PTR PSS	16	3	2	4	6	**13.50**	1

Table 54: Cost Estimate

Sl. No.	Name of Circle	Name of PSS	Existing PTR rating (MVA)	2nd PTR rating (MVA)	Cost in Cr.	Remarks
1	CUTTACK	Khuntakanta	8	5	2.07	PTR cost is not part of the estimate
2	DHENKANAL	Dayanbil	3.15	3.15	2.07	
3	PARADEEP	22 Mouza	5	5	2.07	
4	PARADEEP	Paruna	5	3.15	2.07	
5	PARADEEP	Patrapur	5	5	2.07	
6	PARADEEP	Sahupada	5	5	3.15	PTR cost included in the estimate
	Total				**13.50**	

Out of 16 locations, after completions of Capex 27-28 only One PSS location will be left out for addition of 2nd PTR where space is available.

Out of total 23 Nos. of Single PTR locations, mitigation will be completed for 17 Nos. of locations till Capex 27-28. Total Left out are 6 Nos. of PSS. (2nd PTR addition-1 No. + 11 kV interlinking- 5 Nos.)

The detailed proposal, justifications, locations, detailed cost estimate and benefits are enclosed at **Annexure-15.**

2.3.9 PSS Refurbishment: Life Extension and refurbishment of existing 33/11 kV Primary substations

A large number of 33/11kV primary substations are more than 30-35 years old and are in dilapidated / unsafe condition. Due to No / inadequate maintenance during erstwhile CESU period, and excessive fault operations, most of the circuit breakers have exceeded their designed mechanical endurance.

Many PSS don't have earth mat, gravels, trenches, and control room buildings. At few PSS, there is no space for addition of control panels. The bus bars and risers have undersize conductors.

TPCODL extended the life of these PSS / equipment through extensive maintenance but the same now requires replacement for ensuring safe and reliable power supply to all customers.

VCBs age beyond their designed service life (typically 15–25 years), several performance and safety issues begin to emerge. Normally VCB is built with 10k to 15k operations. In TPCODL, most of the feeders in Overhead and several transient fault reduces the life span of VCB based on the no. of operation. So, new VCB is proposed for minimizing the faults at PSS.

DC battery banks installed at many primary substations are 12V Batteries. As a result, they are required to be replaced every 5-6 years. TPCODL intends to use 2V batteries designed for

installation in substations and having a useful life of 10+ years. This action will ensure safety and reliable operation of equipment at primary substations.

In addition to age, the AB switches installed on feeders have a lower rating of 400 A. There is a need to upgrade these AB switches with isolators of higher capacity to avoid frequent burning of contacts. Besides, parts of these AB switches are not available for maintenance and upkeep.

PSS Refurbishment:

Several power sub-stations under TPCODL's jurisdiction were found to be in deteriorated condition due to prolonged exposure to harsh environmental factors, such as high humidity and saline atmosphere. Many of these assets, including steel structures, equipment supports, and foundations, have suffered significant corrosion and wear, compromising structural integrity and operational safety.

The scope includes:

a) Replacement of 33 kV and 11 kV Switch gear Panel Board along with modification of Control room Buildings.

b) Replacement of severely corroded steel structures (gantries, equipment supports, cable trays, etc.)

c) Strengthening of foundations and earthing systems

d) Surface treatment (sandblasting, anti-corrosive painting, galvanization)

e) Retrofitting of outdated panels and protection systems.

f) Replacement of corroded clamps, connectors, and busbars.

Atharnal PSS:

At Atharnala PSS, the existing 33 kV and 11 kV outdoor auto-recloser type breakers are in dilapidated and obsolete condition. Further, OEM support is no longer available for repair and maintenance of these breakers, resulting in increased risk of equipment failure and prolonged restoration during faults. Atharnala PSS is a critical source for supplying power to Puri Town and other important loads, and failure/non-functioning of the existing breakers during a fault can affect the entire PSS, thereby adversely impacting the reliability and continuity of power supply to Puri Town. Frequent or prolonged fault conditions may also increase the stress on the power transformers and adversely affect their operational life.

In view of the above, it is proposed to replace the existing 33 kV and 11 kV outdoor breakers with new indoor switchgear panels along with construction of a new control room building. The proposed modernization will improve operational safety, fault isolation, protection system performance, and supply reliability. The indoor switchgear arrangement, along with

the new control room, will also provide better protection against adverse weather conditions and support the development of a cyclone-resilient distribution network, thereby enhancing the overall reliability and resilience of power supply to Puri Town.

Sunamuhi PSS:

Sunamuhi PSS is located in a low-lying area, resulting in frequent ingress of rainwater into the PSS premises and control room. The recurring moisture/water ingress has led to frequent breakdowns of the switchgear due to moisture-related issues and repetitive flashovers. The existing switchgear panels are also in a severely deteriorated condition, thereby affecting the reliability and safe operation of the substation. To improve system reliability and prevent recurrence of such failures, it is proposed to replace the existing switchgear panels and raise/heighten the existing control room building by more than 1.0 m above the existing road level, thereby minimizing the risk of water ingress.

For optimum utilization of available resources and to minimize CAPEX expenditure, removed spare 33 kV Indoor GIS Panel Board and 11 kV AIS Panel Board from other PSS will be reutilized at Sunamuhi PSS. Accordingly, estimate has been restricted to building/civil modifications, dismantling, shifting, installation and associated works required for commissioning of the re-used panels. The proposed work will enhance the operational safety, reliability, and resilience of Sunamuhi PSS while ensuring economical utilization of existing spare assets.

Itamati PSS:

At Itamati PSS, existing switchgear panels are in a severely deteriorated condition, thereby affecting the reliability and safe operation of the substation. To improve system reliability and prevent recurrence of such failures, it is proposed to replace the existing switchgear panels and modification the existing control room building thereby minimizing the risk of water ingress.

So, construction of a new control room with essential facilities, strengthening of 11 kV DP structures, PCC and metal spreading, covered cable trench, rainwater drainage, strengthening of the earthing system with earth mat and provision of water pump, sump and overhead tank. These works are necessary to address existing infrastructure deficiencies, prevent equipment deterioration, facilitate safe operation and maintenance and ensure reliable operation of the PSS.

Balikuda PSS:

At Balikuda PSS, improvement of existing switchyard and electrical arrangement is required for safe and reliable operation. The proposed works include development of 33 kV bay areas, re-orientation of 33 kV and 11 kV equipment, construction of earth pit chambers, busbar

upgradation with bus-coupler arrangement and painting of existing structures. These works will improve the layout, safety, accessibility and maintainability of the substation and ensure reliable operation of Balikuda PSS.

Parjang PSS:

At Parjang PSS, the existing civil and electrical infrastructure requires refurbishment and improvement to ensure safe, reliable and efficient operation of the substation. The existing control room, busbar arrangement, earthing system, switchyard fencing, cable trenches and associated facilities require upgradation. Accordingly, renovation of the control room with new store room and toilet, busbar upgradation with bus-coupler arrangement, new earth mat, switchyard fencing, covered cable trench, earth pit chambers, 33 kV bay development, transformer plinths, painting of existing 33 kV/11 kV structures, approach road improvement and water supply arrangement are proposed. These proposed works will address existing infrastructure deficiencies, improve safety, protect electrical equipment and ensure reliable operation of Parjang PSS.

Table 55: Cost Estimate- PSS Refurbishment

Sl. No.	Description	Total Cost in Cr. considered in Capex 27-28
1	PSS refurbishment at Atharnala PSS	4.67
2	PSS refurbishment at Sunamuhi PSS	2.50
3	PSS refurbishment at Itamati PSS	1.29
4	PSS refurbishment at Balikuda PSS	0.50
5	PSS refurbishment at Parjang PSS	1.05
	TOTAL	**10.00**

Battery Charger cum DCDB

Existing Battery Charger with DCDB is required to be upgraded/replaced to ensure reliable and uninterrupted DC supply for protection, control, tripping, closing, indication and communication systems of PSS.

Battery Charger with DCDB is a critical auxiliary system as the availability of reliable DC supply is essential for proper operation of circuit breakers, protection relays and other control equipment during normal as well as emergency conditions. Existing arrangement has limited capacity and requires augmentation to meet the present and future DC load requirements.

Accordingly, it is proposed to provide new Battery Charger with DCDB which will improve the reliability and availability of PSS DC auxiliary supply and minimize the risk of failure of protection and control equipment due to DC supply interruption.

Table 56 : **Proposed Scope for Battery Cum DCDB**

Description	Qty.	Total Cost in Cr. considered in Capex 27-28
Battery Charger with DCDB	32	1.25

Total cost considered in Capex 27-28 is Rs. 1.25 Cr.

The detailed proposal, justifications, locations, detailed cost estimate and benefits are enclosed at **Annexure-16**.

2.3.10 Mitigate VCB Group Control for 33kV and 11kV network Breakers through enhancement of Protection of equipment

A number of 1.6, 3.15, and 5 MVA power transformers, 33, and 11kV feeders at 33/11kV primary substation don't have required circuit breakers along with associated protection equipment's. 33 and 11kV feeders, and power transformers are controlled through group circuit breaker leading to poor reliability.

Controlling multiple feeders with a single breaker introduces several critical challenges in safety, reliability, power system design and operation. This configuration is significantly hampering the reliability and operational risks, especially for the PSS. Relay settings and coordination become more complex, increasing the risk of maloperations, un coordinated tripping or slow fault clearance and stress on the equipment's life cycle. Each feeder with individual VCB can be switched on or off independently without affecting to other feeder. Where as in case of Group Control system, multiple feeders' shutdown is required whenever there is a breakdown or preventive work. It also causes delay in restoration and fault finding.

Since FY'21, TPCODL has taken the initiative for eliminating Group control by installing individual circuit breakers and its associated protections for each individual 33kV feeders, Power Transformers, and 11kV feeder. However, a substantial portion of this equipment's are still operating with group-control arrangement. Total requirement of VCB to eliminate the Group Control is given.

Table 57: Status of Group Control Mitigation in TPCODL Network

Items Description	Total requirement	Completed till March'26	Planned in FY'27	Proposed in FY'28	Total Cost in Cr. considered in Capex 27-28	Left out Qty.
33KV Breaker with bay equipment	176	84	18	44	**20.81**	30
11 KV Breaker with bay equipment	172	109	61	2		0

Total	**348**	**193**	**79**	**46**	**20.81**	**30**

Table 58 : Proposed Scope and Costing for Mitigation of Group Control

Sl. No.	Description	Unit	Per Unit Cost (In Cr.)	Total Qty.	Total Cost (In Cr.)
1	33 kV Fdr. group control	EA	0.37	44	16.37
2	11 kV Group control	EA	0.27	2	0.54
3	Control Room to accommodate CRP Panels to eliminate Group Control	EA	0.45	8	3.60
4	CR panel for 3 Feeder Protection (33 kV or 11 kV) for elimination Group Control	EA	0.10	3	0.30
				TOTAL	**20.81**

Total 46 Nos. of VCB has been planned for removing Group Controls, modification of 8 Nos. PSS Control Room to accommodate CR panels, installation of new CR panel to address Group control issues. Total budget requirement is Rs. 20.81 Cr. in Capex 27-28.

The detailed proposal, justifications, locations, detailed cost estimate and benefits are enclosed as **Annexurte-17.**

2.3.11 LV Protection (63 kVA and above DTs)

Background

In the existing scenario, due to the absence of LTDB or LT ACB, it is not possible to individually control the LT feeders and any fault on LV side leads to the tripping of 11 kV feeder breaker at DSS.

Proposal

Distribution Substation (DSS) comprises of various equipment, which perform specific task to ensure delivering the power supply at appropriate voltage to the end consumers. Main components are 11kV AB Switch, 11kV HG Fuse, Transformer, LV Protection, Earthing, Fencing and LT Distribution Box.

The most expensive equipment in the DSS is Transformer and its life depends upon the healthy condition of all other components, be it LV Protection, HV Protection, Earthing or fencing. It is observed at various locations that the LT side & HT Side protection is bypassed through GI wires. Due to this bypassed scenario, for any maintenance or corrective work at LT level, due to non-availability of switching equipment, outage / Hand trip is taken from the 33/11kV PSS resulting into interruption to all the consumers connected on that 11KV feeder even though for a short duration. Similarly, for any fault on LV side leads to tripping of 11kV feeder breaker at DSS.

However, this can be addressed by installing a LTDB after the Distribution transformer so that only that LT feeder needs to be taken into outage where the work is supposed to be

carried out. The main function of LTDB is to individually control the LT feeders thus helping in attending the complaint of any feeder without disturbing the power supply to other LT feeders from same distribution transformer. This will help in reducing the affected consumers count and thus improving the reliability indices.

Requirement/ Need of the Proposal

This scheme is proposed to ensure flexibility to the field teams in 11kV & LT operation. At some locations there is no LT protection at Distribution Transformers and therefore to attend/work at LT feeder, outage to be taken from 33/11kV PSS which results into interruption to all consumers connected to the particular 11kV feeder.

Scope of Work

In this scheme, it is proposed to install LT DB's for all 63 kVA and above rating DTRs, where LT side protection is not available, across the five city divisions of Bhubaneswar and Cuttack.

In proposed scope DSS refurbishment work also considered to improve the overall condition and reliability of Distribution sub-station. The scope includes replacement of damaged AB Switch and HG Fuse, improvement of earthing arrangements, replacement of deteriorated structures and supports, LT cable laying, zero pole installation, DSS fencing work and other civil works as required.

The refurbishment will help reduce equipment failure, improve operational safety, minimize breakdowns and maintenance requirements and ensure reliable power supply to connected consumers. The proposed CAPEX investment is therefore essential for strengthening the existing distribution infrastructure and improving the overall reliability and quality of power supply.

Table 59 : Scope of LV protection for FY 2027-28

Items Description	Total requirement	Completed till March'26	Planned in FY'27	Proposed in FY'28	Total Cost in Cr. considered in Capex 27-28	Left out Qty.
LV Protection (63kVA and Above DTs)	37358	7985	2008	711	**30**	27365

The total cost for LTDB work is approx. 30 cr.

Proposed Cost with Estimate Break-up

Please refer to **Annexure – 18** for details of BoQ for the above cost estimate and Locations covered in this scope.

Benefit to the System and Consumers

- Improve in reliable power supply to consumers.
- Reduction in un-coordinated and hand Tripping during LT fault.
- Ease and flexibility for operation to the field teams.
- Improving the safety in terms of Equipment operation
- Field engineers would have flexibility to isolate the faulty LT feeder locally instead of switching off entire 11kV feeder.

2.3.12 T-OFF Removal from 33 kV Network

Background

In the existing 33kV network, several HT consumers are connected through T-off arrangements at 33kV feeders. These T-off connections presently do not have dedicated switching and protection facilities at the tapping points. Consequently, any fault occurring in the T-off section results in tripping of the 33kV feeder breaker at the PSS/GSS, leading to interruption of supply to all consumers connected on the 33kV feeder, even though the fault may be localized to a specific branch. This not only affects supply reliability but also increases outage duration due to the time required for fault identification, sectionalization and restoration of supply. As the number of connected consumers and critical loads continues to increase, there is a growing need to strengthen the network with suitable switching arrangements to improve reliability and operational flexibility. The installation of 33kV Ring Main Units (RMUs) at strategic T-off locations has therefore been identified as an effective solution for faster fault isolation, minimizing feeder shutdowns and ensuring faster restoration of supply.

Proposal

To improve supply reliability and operational flexibility in the existing 33kV network, it is proposed to install 33kV Ring Main Units (RMUs) at identified T-off locations feeding HT consumers.

The proposed 33kV RMUs will provide switching, isolation and protection facilities at the tapping points, enabling quick identification and isolation of faulty sections without affecting the healthy portion of the 33kV feeder. During any fault in the T-off section, only the affected branch can be isolated while maintaining power supply to the remaining consumers connected to the 33kV feeder. This will considerably reduce outage duration, minimize consumer disruptions and improve the overall reliability of the network.

Requirement / Need of the Proposal

The proposed installation of 33kV RMUs is required to strengthen the existing 33kV network by providing dedicated switching, protection and sectionalizing facilities at T-off points, thereby enabling faster fault isolation and restoration of supply. At present, faults occurring in T-off sections result in tripping of the entire 33kV feeder, causing unnecessary supply

interruptions to a large number of consumers connected to the feeder. Further, fault identification and restoration activities consume considerable time, leading to prolonged outage duration. The proposed RMUs will improve network reliability and operational flexibility by localizing the impact of faults, facilitating efficient fault management and maintenance activities, minimizing feeder-wide outages and ensuring reliable power supply to consumers.

Scope of Work

The scope of work proposed under CAPEX includes installation of 33kV RMUs with FRTU at identified T-off locations in the existing 33kV network, including all associated accessories and SCADA integration facilities.

The approx. costing for T-Off removal from 33kV Network is given below:

Table 60 : Proposed Cost with Estimate Break-up- T-OFF Removal

Sl. No.	Circle	Proposed Location for 33kV RMU	Quantity (in nos.)	Cost (in Cr.)	Total Cost (in Cr.)
1	BBSR-1	Near IOCL (33kV C.s.pur-1 and C.s.pur-2 Feeder)	2	0.625	1.25
2	BBSR-1	Eco. Railway (33kV Railway Feeder)	1	0.625	0.62
3	BBSR-1	Xavier Square (33kV Xavier Feeder)	1	0.625	0.62
4	BBSR-1	Govindpur 6-Pole (33kV Govindpur Feeder)	2	0.625	1.25
5	BBSR-1	Utkal Builders (33kV Naharkanta Feeder)	1	0.625	0.62
6	BBSR=2	Bharat Electrical T-Off point (33kV Bhusandapur Feeder)	1	0.625	0.62
Total			**8**		**5.00**

The detailed Cost estimate is provided at **Annexure-19.**

Benefit to the system and consumers

- Improvement in reliability and quality of power supply by minimizing 33kV feeder outages.
- Enabling faster identification and isolation of faulted T-off sections.
- Prevent unnecessary tripping of the entire 33kV feeder for localized faults and ensures uninterrupted supply to healthy sections of the feeder during fault conditions.
- Enhancement of operational flexibility and ease of maintenance.
- Improvement of network redundancy.
- Ensuring uninterrupted supply to healthy sections of the feeder during fault conditions.
- Increase in consumer satisfaction through reliability of power supply.

2.4 Load Growth

The proposed budget for Load Growth under Capital Investment Plan FY 2027-28 is as given in the table below:

Table 61 *:* Capital Expenditure for Load Growth

Sr No	Activity	CAPEX Proposed for FY 27-28 in Rs. Cr
1	New Connection Release	Will be Claimed at Actual in True up
2	33kV Network Overload mitigation	20
3	11kV Network Overload mitigation	40
4	Augmentation of PTR to meet load demand	40
5	LT Network Strengthening for Load Growth	10
5	DTR/ CSS (New & Aug.) to meet load Growth	70
Total		**180**

The description of the various schemes are as under

2.4.1 New Connection Release

In order to meet the increasing power demand, the existing distribution network infrastructure needs to be augmented/ strengthened/ expanded to release the new connection. Network extension/ augmentation/addition is required as some of the new connection cannot be released from the existing network and require augmentation/addition/extension before release of new connection.

The cost recovered from consumers by way of service connection charges are not adequate in certain new connection release cases and the Hon'ble Commission has been allowing this differential cost associated with new connection release including unrecovered cost of service cable in the capex.

In the Capex order dated 10.07.2025 in the matter of Case No-80/2024 and order dated 15.05.2026 in the matter of Case No-77/2025, the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual. Relevant extract from both the orders is provided below.

In the Capex order dated 10.07.2025 in the matter of Case No-80 of 2024 under para 23 (iv), the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual.

"

. . . However, the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis."

In the Capex order dated 15.05.2026 in the matter of Case No-77 of 2025 under para 24 (iv), the Hon'ble Commission has stipulated that differential cost for new connection release will be allowed during Truing up at actual.

"

. . . The Commission in Capex Order dated 10.07.2025 in the Case No.80/2024 has stipulated that the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis. Following the same principle, the additional expenditure towards new connection release over and above the contribution of consumer(s) will be considered by the Commission during the Truing up exercise based on audited accounts."

In view of the above directive, we are in this petition not proposing any amount towards 'New Connection Release' as the same will be claimed during truing up of FY 2027-28.

2.4.2 33 kV Network Overload Mitigation

Background

In TPCODL licensed area, 33kV network forms the backbone of the power supply system. This network is widely spread across the region and connects various 33/11kV Primary Substations (PSS), where power is stepped down to 11kV for further distribution. The 33kV feeders are critical assets for the distribution utility, as they interconnect power substations and ensure reliable power supply to end consumers.

Some of the 33kV feeders are experiencing overloading conditions with 2years load growth scenario. Prolonged overloading of 33kV feeders leads to increased technical losses, voltage drops at consumer and PSS ends, overheating of conductors and a higher frequency of feeder tripping. These factors collectively impact the reliability and quality of power supply, resulting in increased customer complaints and reduced network reliability.

Proposal

In this proposal, TPCODL intends to mitigate overloading and improve reliability of the 33kV feeders by feeder augmentation, feeder interconnection and construction of new feeders.

Requirement/ Need of the Proposal

33kV Feeder overloading Mitigation

In the existing condition (Summer-26), out of 283nos. 33kV feeders, 15nos. 33kV feeders are identified to be overloaded (loading≥100%). All these feeder overloading mitigations are work under progress under different schemes (CAPEX & Govt. schemes).

With 2 years load growth in summer 28, 54nos. 33kV feeders will be overloaded (loading ≥100%) in summer'28.

Table 62 : 33 kV Feeders Overloading Details

Overloading of 33kV feeders leads to increased technical losses, frequent voltage fluctuations and a higher risk of feeder tripping, especially during peak demand periods.

Scope of Work

In order to mitigate the overloading of the 33kV feeder proposals are identified after subsequent interaction with field teams. Overloading mitigation done through below initiatives:

b) Augmentation of feeder capacity by upgrading conductor size and associated infrastructure – 3nos.
b) Interconnections with nearby feeders to enhance load-sharing capability and enhance network reliability – 1no.

These initiatives will contribute significantly to improving the reliability of the network, also reducing technical losses and improving quality of power supply for consumers.

The overloading mitigation of 4Nos. overloaded 33kV feeders is proposed under CAPEX FY: 2027-28.

Cost Benefit Analysis

The detailed cost benefit analysis is attached in **Annexure-20.**

Benefit to the System and Consumers

- Overloading mitigation of 33kV Feeders.
- Reduction in technical loss of network and improve the voltage profile.
- Ensure reliable & improved voltage supply to the consumers area.
- Improving the vertical clearances and other safety statutory requirements complying to CEA safety guidelines.

2.4.3 11 kV Network Overloading Mitigation

Background

11kV feeders are the main power link between Primary substations (PSS) with the distribution substation (DSS) and give power supply to 11kV HT consumers. In the TPCODL licensed area,

some of 11kV feeders are experiencing overloading conditions with 2years load growth scenario. Prolonged overloading of 11kV feeders leads to increased technical losses, voltage drops at consumer ends, overheating of conductors and transformers and a higher frequency of feeder tripping. These factors collectively impact the reliability and quality of power supply, resulting in increased customer complaints and reduced network reliability.

Proposal

In the existing condition (Summer-26), out of 1459nos. 11kV feeders, 90nos. 11kV feeders are overloaded (loading≥100%). All these feeder overloading mitigations are work under progress under different schemes (CAPEX & Govt. schemes).

In the annual network load flow study, 157nos. 11kV feeders overloading are identified (loading ≥100%) with 2years load growth during Summer'27 out of which in CAPEX FY: 2027-28 we have considered only 50nos. feeders. For the rest 107no's feeders, work in progress under different schemes and expected to be completed by March-2027.

Total	7	43	51	6	50	**157**

In order to mitigate the overloading of the 11kV feeder proposals were identified after subsequent interaction with field teams.

Overloading mitigation are done through below initiatives:

a) Conductor upgradation

b) Load transfer through feeder interconnection

c) New 11KV Feeder for load bifurcation/ diversion

Requirement/ Need of the Proposal

The conductor augmentation, feeder interconnections, feeder bifurcation and new feeders are required to mitigate the overloading of 11kV feeders resulting due to continuous load growth.

Scope of Work

In Summer’28, 157 nos. 11kV feeders will be overloaded, out of which 50nos. are considered in CAPEX FY:27-28. Out of these 50nos. 31nos. are considered under load growth category whereas rest 19nos. are proposed under Reliability. Under reliability these 19nos. 11kV feeders are serving both serving overloading mitigation and reliability purpose.

Cost Benefit Analysis

The proposal, justifications, locations, detailed cost estimate and benefits is attached in the **Annexure-21.**

Benefit

These proposals will help to eliminate overloading on identified feeders, improve voltage profiles, reduce technical losses and enhance network reliability. These measures will also support future load growth, reduce the risk of feeder tripping, improve operational flexibility and ensure reliable and quality power supply to consumers across the TPCODL licensed area.

2.4.4 Power Transformer Augmentation and Addition to meet Load Growth

Background

Overloading of Power Transformers is an alarming issue and need immediate attention for implementing overloading mitigation proposals. PTR overloading issue can be mitigated by below measures:

i. 11kV Feeder load diversion to lightly loaded PTR.
ii. 11kV Feeder swapping with lightly loaded feeder in other lightly loaded PTR.
iii. PTR Swapping with higher rating PTR.
iv. Augmentation of existing PTR with higher rating of PTR.

To carry out the detailed study of the PTR, inputs were collected from existing log sheet data, Smart meter data and SCADA data from each 33/11 kV substations. Then we analyzed the loading pattern and fixed the load growth and conducted load flow analysis taking into consideration the peak loading experienced during Summer'26. As per the load flow analysis, the loading of different PTRs overloading under TPCODL jurisdiction has been identified. Since the priority of Power transformer overloading mitigation is crucial, we have prioritized and considered Power Transformer overloading mitigation wherein PTR loading is greater than 80% in Summer'26 which will be subsequently overloaded in Summer'28 with load growth. Additionally, 1no. proposal considered for supply and installation of 11kV Switchgear panel board for enabling 11kV power evacuation from Delta PSS and 1no. proposal considered for installation of 11kV Switchgear panel board for enabling 11kV power evacuation from Gurujanga PSS and installation of 33kV Switchgear panel board.

As per the trend, load growth year-on-year basis for BCDD-1, NED and ANED has been considered as 10%, BCDD-2 and BED have been considered as 15%, PED and CDD-2 have been considered as 13%, KHD and BAED have been considered as 12%, CDD-1, KED-1,

KED-2 and PDP have been considered as 11%, JED has been considered as 9%, AED, DED and TED load growth has been considered as 8%, CED has been considered as 7%, NYED and SED have been considered as 6% and for AED, DED and TED load growth has been considered as 8%.

As per the PTR loading analysis, 62nos. PTRs are loaded beyond 80% in Summer'26 as follows :

Table 67 : Details of overloaded PTRs beyond 80% loading in Summer'26

Sl. No.	Name of Circle	Name of Division	Name of 33/11kV PSS	PTR No.	PTR Rating (MVA)	Sum'26 Loading (MVA	% Loading (Sum'26)	Loading with 2yrs LG (Sum'28)	% Loading with 2yrs LG (Sum'28)	Scheme	Proposal Head

Proposal

In order to mitigate the overloading of the PTRs, instead of considering the Power Transformer augmentation of all the overloaded PTRs, we have considered for optimally utilizing our existing assets by 11kV load transfer or 11kV feeder swapping or PTR swapping schemes are undertaken under OPEX. The PTRs which are getting augmented under CAPEX schemes are further utilized under Power Transformer Swapping (OPEX) scheme to mitigate overloading of the transformers at locations required augmentation.

Out of 62nos. overloaded PTRs only 7nos. PTRs are proposed for augmentation under CAPEX FY 2027-28 for overloading mitigation. The PTR overloading mitigation plan scheme-wise is given in the below table:

Table 68 : PTR Overloading Mitigation Plan

Proposal	Schemes						Total
	CAPEX FY: 2025-26 (WIP)	CAPEX FY: 2026-27 (WIP)	CAPEX FY: 2027-28	Govt Funded	OPEX	Others	
11kV Feeder Load diversion	9	4	2	5	3		23
11kV Feeder Swapping					13		13
PTR Swapping					13		13
PTR Augmentation		5	7			1	13
Total	**9**	**9**	**9**	**5**	**29**	**1**	**62**

Requirement/ Need of the Proposal

Power transformer augmentation is required to mitigate the overloading of Power Transformers resulting due to continuous load growth and to ensure compliance with the N- 1 contingency criteria feeding critical loads.

Scope of Work

The scope of work proposed under CAPEX FY: 2027-28 as follows:

i. Upgradation of 7nos. Power transformers are considered under load growth.
ii. Supply and installation of 11kV Switchgear panel for 11kV feeder power evacuation.
iii. Installation of 11kV Switchgear panel for 11kV feeder power evacuation along with installation of 33kV Switchgear panel.The approx. costing for PTR overloading mitigation is given below:

Proposed Cost with Estimate Break-up

Cost Benefit Analysis

The detailed proposal, justifications, locations, detailed cost estimate and benefits are enclosed as **Annexure-22.**

Benefit to the System and Consumers

i. To mitigate overloading condition on the power transformers.
ii. To cater future load growth of the consumers connected to network.
iii. To ensure quality and reliable power supply to the consumers.

2.4.5 LT Network Strengthening for Load Growth Power

Background

TPCODL has an extensive LT distribution network of approximately 41,772 Ckm, comprising LT overhead conductors, underground cables, and LT AB cable systems. Out of the total LT network, approximately 37,746 Ckm consists of LT AB cable infrastructure.

With the continuous growth in consumer demand and load addition across urban, semi-urban, and developing areas, several existing Distribution Transformers (DTs) have either been upgraded or identified for capacity augmentation. However, increasing transformer capacity alone does not adequately address the limitations of the downstream LT distribution network. At several locations, the existing LT AB cable feeders have become overloaded or are of inadequate size to evacuate the enhanced transformer capacity effectively.

Further, in many areas, the existing LT feeder network is unable to accommodate the increased load demand, resulting in voltage drop issues, feeder overloading, higher technical losses, reduced reliability, and consumer complaints regarding poor quality of supply. Accordingly, installation of additional LT AB cable feeders has become necessary to ensure efficient power evacuation and distribution from upgraded DTs.

To address these challenges, phased installation of additional LT AB cable feeders is proposed under the FY'28 CAPEX Plan.

Proposal

TPCODL proposes the phased installation of additional LT AB cable feeders across critical locations identified through field surveys, load studies, maintenance records, and operational feedback.

The proposed work is aimed at strengthening the LT distribution network to cater to increasing consumer demand, improve power evacuation from upgraded Distribution Transformers, reduce technical losses, improve voltage regulation, and enhance system reliability.

The scheme shall prioritize urban and high-load-density areas experiencing recurring overloading, frequent interruptions, excessive voltage drops, consumer grievances, and reliability concerns.

Justification / Need of the Proposal

The growing demand for electricity across the TPCODL network necessitates strengthening of the LT distribution infrastructure in addition to DT augmentation. Installation of additional LT AB cable feeders is essential for efficient utilization of transformer capacity and reliable delivery of power to consumers due to the following critical reasons:

1. Thermal and Current Carrying Capacity

Overcoming Cable Overloading

The existing LT feeder network has fixed current-carrying limits. While upgrading a DT increases the power available for distribution, the downstream LT network may not be capable of safely carrying the additional load. Overloaded cables operate at higher temperatures, leading to insulation deterioration, accelerated ageing, and eventual failure.

Distribution of Load Current

Installation of additional LT AB cable feeders allows the connected load to be distributed across multiple circuits, thereby keeping conductor loading within permissible limits and improving overall network performance.

2. Voltage Regulation and Tail-End Voltage Improvement

Reduction in Voltage Drop

With increasing load growth, current drawn by consumers increases correspondingly. Higher current flow through long LT feeders results in significant voltage drops, adversely affecting consumers located at far-end locations.

Shortening of LT Circuits

The proposed additional feeders will facilitate network bifurcation and load segregation, thereby reducing circuit length and feeder loading. This will significantly improve voltage profile and supply quality for consumers.

3. Mitigation of Technical Losses

Reduction in I^2R Losses

Technical losses in LT networks are directly proportional to the square of current flowing through the conductor. By distributing the load through additional feeders, current on individual circuits is reduced substantially, resulting in lower technical losses and improved energy efficiency.

4. Improvement in Reliability and Fault Management

Enhanced Network Reliability

Dependence on a single heavily loaded feeder increases the risk of widespread outages due to faults or cable failures.

Load Segregation and Operational Flexibility

Provision of additional feeders allows utilities to segregate load, balance phases effectively, and isolate faults impacting only a limited section of consumers while maintaining supply to the remaining network.

5. Safety

Enhanced Public Safety

Additional LT AB cable feeders improve mechanical and electrical safety by minimizing conductor overloading, reducing cable burnout incidents, and lowering the risk of electrocution during adverse weather conditions.

The proposed investment is therefore technically justified and essential for supporting load growth while ensuring safe, reliable, and efficient power distribution.

Scope of Work

Table 70 : **Scope of work for LT Network strengthening based on current loading of network**

Proposal	UOM	Total requirement	Completed till March'26 in Capex	Planned in FY'27	Proposed in FY'28	Budget for FY'28 in cr	Left out Qty.	Budget for Left out Qty. in cr
LT Network Strengthening for Load Growth	Ckm	355.985	79.395	0	91.6	10	184.99	20

Please refer to **Annexure 23** for location-wise details and detailed BOQ corresponding to the proposed scope of work.

Table 71 : **Proposed Cost with Estimate Break-up**

Sl. No.	Description	Unit	Per Unit Cost (In Cr.)	Qty.	Total Cost in Cr.
1	Construction of 1 CKM LT line using 9 Mtr. PSC pole and 4C×95 mm² (P)+1C×95 mm²(M)+1CX16 mm²(Street Light) LT AB Cable	KM	0.12	77.00	9.10
2	Construction of LT Line using - LT ABC 4C×70 mm² (P)+1C×70 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	KM	0.10	9.00	0.91
	Total				**10.00**

Notes for Cost Estimates

1. All rates have been considered as per the Cost Data Book (CDB) approved by the Energy Department, Government of Odisha vide Notification dated 05.05.2026.

2. For items not covered under the approved CDB, material supply, civil works, and erection rates have been considered based on the latest rate contracts finalized through competitive bidding or budgetary quotations obtained from OEMs.

Cost Benefit Analysis

Implementation of the proposed scheme is expected to provide substantial technical, operational, and commercial benefits, including:

- Improved reliability and continuity of power supply to consumers.
- Enhanced capacity utilization of upgraded Distribution Transformers.
- Reduction in feeder overloading and cable burnout incidents.
- Improvement in voltage profile and quality of supply, particularly at tail-end locations.
- Reduction in technical losses through effective load distribution.

- Improved load balancing and operational flexibility.
- Reduction in supply interruptions and consumer grievances.
- Enhanced public safety through utilization of insulated LT AB cable systems.
- Reduction in power theft opportunities and associated commercial losses.
- Strengthening of the 415 V LT distribution network to cater to projected load growth.
- Reduction in maintenance expenditure and emergency restoration activities.
- Improved overall network resilience and operational efficiency.

Benefit to the System and Consumers

- Reliable and uninterrupted power supply to consumers.
- Improved voltage regulation and enhanced quality of supply.
- Increased network capacity to accommodate future load growth.
- Reduction in feeder congestion and overloading.
- Enhanced reliability and operational flexibility of the LT network.
- Reduced technical losses and improved energy efficiency.
- Reduced consumer complaints relating to low voltage and interruptions.
- Enhanced public safety through strengthened LT infrastructure.
- Better utilization of upgraded Distribution Transformers.
- Long-term strengthening of the LT distribution system to support sustainable demand growth and consumer satisfaction.

2.4.6 Distribution Transformer / CSS (New & Augmentation)

Scheme Proposed	To cater the increasing load demand DT augmentation and addition is required to avoid overloading of transformers leading to transformer failure and power interruptions.
Capex Amount	Rs. 70 Cr.

Background

To cater the increasing load demand DT augmentation and addition is required to avoid overloading of distribution transformers leading to transformer failure and power interruptions.

In order to ensure reliable power supply to our consumers, Distribution Transformers loading have to be maintained at optimum loading so as to avoid any mechanical stress on the transformers due to overloading.

When a distribution transformer loading exceeds 80% of the rated capacity of the transformer, then it is considered to be "overloaded". After capturing the loading data of the Distribution Transformers, it has been observed that at several locations, DTs are operating at overloaded condition or will be overloaded considering the load growth in the respective areas.

Therefore, to avoid these distribution transformer overloading issues where the load growth is high, it is required to augment the capacity of the Distribution transformers or addition in order to mitigate the overloading issues. The removed DTs after augmentation will be utilised at other locations to mitigate DT overloading.

Proposal

In this proposal, TPCODL intends to carry out Distribution Transformer's augmentation and addition for those DTs, which are identified as overloaded and low voltage issues based on the peak load served.

Requirement/ Need of the Proposal

The overloading of the Distribution Transformers not only hampers the power supply to the consumers but also may cause pre-mature failure of DT which occurs due to operating for long hours on overloaded condition. Thus, to abide by the safe loading limits, augmentation of distribution transformers or DT addition are proposed for locations, where loading is exceeding the maximum value.

When a distribution transformer loading exceeds 80% of the rated capacity of the transformer, then it is considered as trigger point for replacement as the DT will be overloaded in next 2years considering natural load growth.

Table 72 : DTR Overloading & Mitigation

DTR Rating (in KVA)	Total No. of Overloaded DTR (loading> 80%)	No. of DTR Overloading mitigation planned in FY-27	No. of DTR Overloading mitigation proposed in FY-28	Left out DTR
25	142	1		141
63	231	2	1	228
100	1224	131	119	974
150	3	0		3
160	1	0	1	0
200	36	8	15	13
250	352	80	106	166
500	99	27	16	56
630	3	1	2	0
750	2	0	2	0
Total	2093	250	262	1581

a. Total of 2,093 DSS locations have been identified where the DTR loading is above 80% in Summer-26.
b. Out of these, 250 DTR augmentation works are currently in progress under the approved CAPEX plan for FY-27.
c. Under the CAPEX Plan for FY-28, overloading mitigation has been proposed for 262 DTRs. This includes procurement of 126 new DTRs, comprising 20 Nos. of 1000 kVA DTRs and 106 Nos. of 500 kVA DTRs. 136 Nos. of DTRs removed during augmentation will be re-utilized for further overloading mitigation works.
d. Wherever DTR swapping is proposed, required HT and LT protection accessories have also been considered in CAPEX estimate to ensure safe and reliable operation of the system.
e. Priority has been given to the overloading mitigation of all 500 kVA and above DTRs having loading exceeding 100%, considering higher risk to system reliability and equipment life.
f. For the remaining 1,581 overloaded DTRs, mitigation works will be taken up progressively under subsequent CAPEX plans based on loading conditions and system requirements.
g. In locations where LT line length is high and consumers are experiencing low-voltage issues, new DSSs have been proposed closer to the load Centre to improve voltage profile and supply reliability. Accordingly, 64 Nos. of new DSSs have been proposed along with the required HT and LT line extensions. Out of these, only 9 new DTRs will be procured, while the remaining 55 DTRs will be sourced through re-utilization of DTRs removed during augmentation, thereby optimizing the utilization of existing assets and reducing the overall CAPEX requirement.

Table 73 : Scope of Work

New CSS

H	Revenue owing to serving additional load	(G*D)/10^7	24.16	RS Cr
I	Pay Back Period	A/H	2.90	Years

Benefit to the System and Consumers

To cater the increasing load demand, DT augmentation and DT addition is required to avoid overloading of transformer leading to transformer failures and power interruptions. Further, in order to ensure reliable power supply to our consumers, Distribution Transformers has to be kept at optimum loading to avoid any mechanical stress on the transformers due to overload.

Reliable power supply by reducing chances of fault in network, thereby reducing power interruptions

Reduce over-burdening of existing Distribution transformers thereby reducing power cuts.

2.5 Technology & Infrastructure

The proposed budget for Technology & Infrastructure under Capital Investment Plan FY 2027-28 is as given in the table below:

Table 75 : Capital Expenditure for Technology & infrastructure for FY 27-28

Sr No.	Activity	Capex Plan for FY 2027-28 (in Rs. Cr)
1	Admin Infrastructure	2
2	Stores Infrastructure	2
3	Strengthening of IT & Technology	30
4	CCTV installation to improve Security & Safety	5
5	Civil Infrastructure	34
6	Residential Training Centre	15
7	Initiatives for a Sustainable Infrastructure	3
8	Backend Infrastructure for Smart Metering	9
	Total	**100**

2.5.1 Admin Infrastructure

Background:

Office Furniture: Furniture and fixture's available in many offices are from CESU period which are in poor condition. Even though with the approved budgets from Hon'ble Commission since FY 20-21, we have equipped many offices with the proper infrastructure, but still a major scope is yet to be covered.

Air-Conditioner: In most Sub-Division offices, A.C. is available only in SDO cabins and other SDO office staffs have no access to AC and also the AC's available in most of the PSS's are very old and need replacement. The repair and maintenance charges are becoming high day by day due to frequent breakdown of old AC's.

Water Purifier/Water Cooler: The Water purifiers & Coolers are available in most of the offices, but due to unavailability of water sources and water connections, some of the offices are left out. We propose to install water purifier to provide RO drinking water to the employees after ensuring proper water connections.

Photocopier: Photocopiers are installed in Corporate, Circle, and Division Offices, with standalone printers in various offices which need to be replaced with centralized printers to have better control on printing activity.

Display Screen: TVs are to be installed in the conference and meeting rooms in different offices to conduct meetings and communications across the company.

E-vehicle (Car) for Business use as pool vehicle incl. Charger installation : The two available vehicles (Tata Harrier) were procured in 2020 and currently not in good condition. Therefore, two new e-vehicles are proposed be procured along with charger installation for business usage.

Proposal:

A total CAPEX investment of ₹ 2 Cr, is proposed for CAPEX FY 27-28.

The item wise break up is as below:

Table 76 : Capital Expenditure for Admin Infra for FY 27-28

S. No.	Activity	Budget Proposed of FY 27-28 (in ₹)
1	Office Furniture	20,00,000.00
2	Air-Conditioner	87,50,000.00
3	Water Cooler	4,00,000.00
4	Water Purifier	2,80,000.00
5	Photocopier	12,50,000.00
6	TV (Display Equipment) & Digital Podium	4,00,000.00
7	E-vehicle (Car) with Charger installation [Pool vehicle for Business use]	70,00,000.00
	Proposed Budget (in Rs.)	**2,00,80,000.00**
	Proposed Budget (in Rs. Cr)	**2.00**

Justification/ Need of the Proposal:

The proposed CAPEX is intended to strengthen the office infrastructure, improve operational efficiency, facilitate effective communication, and provide essential facilities for employees, visitors, consumers and Senior Management.

The requirement of the proposed assets is justified as under:

a) Office Furniture

Adequate and functional office furniture is essential for providing a proper working environment and ensuring efficient utilization of office space. Existing furniture are inadequate, old, damaged or not aligned with the present manpower and functional requirements. Procurement of suitable workstations, tables, chairs, storage units and other essential furniture will facilitate effective workplace management and improve employee productivity and comfort.

b) Air-Conditioner

Air-conditioning is required to maintain a comfortable and suitable working environment, particularly in offices, meeting rooms, customer-facing areas and other critical workspaces. Considering the climatic conditions and operational requirements, installation of energy-efficient air-conditioners will improve employee comfort and facilitate uninterrupted working.

The same is also required to be installed in the PSS wherein high value relays are installed to get uninterrupted functioning of the relays resulting in uninterrupted power supply to the consumers.

c) Water Purifier / Water Cooler

Provision of safe and hygienic drinking water is an essential employee and workplace facility. The proposed Water Purifier/Water Cooler will ensure availability of potable drinking water for employees, visitors and consumers visiting the office premises. This will also reduce dependency on packaged drinking water and support a cleaner and more sustainable workplace.

d) Photocopier

A dedicated photocopier is required for regular printing, scanning and copying of official documents, records, correspondence, forms and other operational documents. Availability of an in-house photocopier will reduce dependency on external service providers, minimize turnaround time and ensure confidentiality of official documents.

e) Display Screen (TV)

The proposed display screen will be utilized for displaying important operational information, safety messages, consumer awareness information, organizational communication, presentations, dashboards, notices and other relevant information. It will also support effective communication during meetings, review sessions and management presentations.

f) EV Vehicle (Car) as Pool Vehicle for Business use

The existing vehicles are of 6 years old and the condition is deteriorating day by day resulting in huge maintenance expenses. The proposed e- vehicles shall facilitate timely mobility of team and enable effective supervision and monitoring of organizational activities across different locations.

Accordingly, procurement of the above assets , incl. charger installation is considered necessary for strengthening the existing infrastructure and ensuring smooth, efficient and professional functioning of the organization.

Scope of Work:

The scope of the proposed CAPEX shall include procurement, supply, installation, commissioning and/or deployment of the required assets, as applicable.

The broad scope shall comprise:

1. **Office Furniture**
    - Workstations and office tables.
    - Executive/visitor chairs and other seating arrangements.

- Storage cabinets, pedestals and related furniture.
- Meeting room/conference room furniture, wherever required.
- Any other essential office furniture based on approved layout and requirement.

2. **Air-Conditioners**
   - Supply and installation of suitable capacity air-conditioners and stabilizers.
   - Required electrical and installation accessories.
   - Testing and commissioning.
   - Warranty and after-sales support as per applicable terms.
3. **Water Purifier / Water Cooler**
   - Supply and installation of suitable-capacity water purifier/water cooler.
   - Necessary plumbing/electrical connections and accessories.
   - Testing and commissioning.
   - Warranty and maintenance support as applicable.
4. **Photocopier**
   - Supply of suitable multifunction photocopier with printing/scanning/copying functionality.
   - Installation and commissioning.
   - Necessary accessories and initial consumables, as applicable.
   - Warranty and after-sales service support.
5. **Display Screen (TV)**
   - Supply and installation of suitable-size commercial/LED display screen.
   - Necessary mounting arrangement, connectivity accessories and installation.
   - Testing and commissioning.
   - Warranty support.
6. **EV Vehicle (Car) as pool vehicle for business use including charger installation**
   - Procurement of a suitable vehicle as per the approved organizational requirement and applicable procurement norms.
   - Registration, insurance and other statutory requirements, as applicable.
   - Necessary accessories and delivery of the vehicle in operational condition.
   - Warranty and after-sales service support.
   - Installation of Charger

All procurement shall be undertaken in accordance with the applicable procurement policy, technical specifications, budgetary provisions and approval matrix of the organization.

Table 77 : **Proposed Cost with Estimate Break-up**

Asset / Item	Quantity	Indicative Unit Cost (in ₹)	Estimated Cost (in ₹)
Office Furniture	Lumpsum	NA	20,00,000.00
Air-Conditioner	175	50000	87,50,000.00
Water Purifier	40	10000	4,00,000.00
Water Cooler	8	35000	2,80,000.00
Photocopier	5	250000	12,50,000.00
Display Screen (TV)	8	50000	4,00,000.00
E-vehicle (Car) with Charger installation	3	2334000	70,00,000.00
Total Proposed CAPEX (Rs.)			**2,00,80,000.00**
Total Proposed CAPEX (Rs. Cr)			**2.00**

The above estimate shall be finalized based on approved technical specifications, budgetary quotations/market assessment and applicable taxes, duties, installation charges, registration, insurance and other associated costs, wherever applicable.

Cost Benefit Analysis

The proposed investment is expected to provide both direct financial benefits and indirect operational benefits to the organization.

a) Office-Furniture: Proper furniture will improve workplace utilization, employee comfort and productivity. Replacement of obsolete or damaged furniture will also reduce recurring repair and maintenance expenditure and improve the overall working environment.

b) Air-Conditioner: Energy-efficient air-conditioning systems will provide a comfortable working environment and support uninterrupted operations. Selection of appropriate energy-efficient equipment will help control long-term operating and maintenance costs. Also, it will help in enhancing the equipment efficiencies in the control rooms / PSS.

c)Water-Purifier / Water Cooler: The facility will provide safe drinking water while reducing recurring expenditure on packaged drinking water. It will also provide a convenient and sustainable drinking-water facility for employees and visitors.

d) Photocopier: The in-house photocopier will reduce expenditure incurred on outsourced photocopying/printing services and minimize time lost in sending documents outside the office. It will also improve document confidentiality and operational turnaround time.

e) Display Screen (TV): The display screen will provide an effective platform for real-time communication of operational information, consumer awareness messages, safety

information and management presentations. This will improve information dissemination and reduce dependency on conventional communication methods.

f) E-Vehicles (Car) as pool vehicle for Business use (incl. Charger installation): A dedicated good conditioned vehicle will facilitate business need like attending official meetings, site visits, inspections and operational reviews. It will improve time utilization, mobility and responsiveness while reducing dependency on ad-hoc/hired transportation for recurring official requirements.
Overall, the proposed CAPEX will provide long-term operational utility and is expected to generate value through improved productivity, reduced recurring expenditure, better resource utilization and enhanced service delivery.

Benefit to the System and Consumers:

- Installation of AC in PSS will increase the lifespan of PSS equipment.
- Use of water purifier is a statutory compliance and will be beneficial for employee's health
- Installation of projector and screen will lead to have communication with senior leadership and guidance to achieve organizational target in terms of BE, CE, Safety etc.
- The proposal suggests capital investment for office furniture, ACs, water coolers and purifiers, projectors, TVs, photocopiers, and other upcoming offices Enhance workplace quality and employee satisfaction
- Enhance workplace quality and employee satisfaction. Improve employee efficiency with on-site printing and scanning.
- Boost motivation through interaction with corporate leadership. Enhance employee skills. Equip offices with necessary amenities.

Conclusion

In view of the above, procurement of Office Furniture, Air-Conditioners, Water Purifier, Water Cooler, Photocopier, Display Screen (TV) and e-vehicle Car as pool vehicle **for** business usage is proposed under CAPEX for strengthening the required infrastructure and supporting smooth and efficient operations.

The proposed investment is considered necessary from the perspective of operational efficiency, employee and consumer facilitation, management effectiveness, infrastructure improvement and long-term cost optimization**.**

2.5.2 Store Infrastructure

Background

At the time of vesting and commencement of operations, all central stores and sub-store yards were predominantly unpaved and lacked proper approach roads. The absence of adequate hard surface storage areas created operational difficulties during material handling, vehicle movement, loading and unloading activities. During the monsoon season, the storage yards frequently became waterlogged and muddy, adversely impacting operational efficiency, worker safety, and material preservation.

Further, adequate covered warehouse facilities for indoor storage of materials and consumables were not available, resulting in a constant risk of deterioration, damage, pilferage, and loss of inventory value.

Substantial infrastructure improvements were undertaken to enhance stores operations utilizing the approved budgets by Hon'ble Commission over the past years since FY 20-21. Concrete flooring and paver block paving were developed in major storage yards, and warehouses were constructed at the Central Stores located at Chaudwar and Bhubaneswar as well as the Sub-Stores located at Khurda, Kendrapada, and Banarpal. These initiatives significantly improved material handling efficiency and storage conditions.

However, the storage yards at Janla Sub-Store and Bidanasi Scrap Store continue to remain unpaved, resulting in operational constraints, especially during adverse weather conditions. In addition, the growing volume of CAPEX inventory, smart meters, and critical electrical materials has created a requirement for warehousing facilities equipped for enhance storage capacity and protection of indoor electrical materials.

The existing warehouses at Bhubaneswar are also not equipped with automatic fire sprinkler systems and fire detection & alarm systems. Although fire hydrant systems have already been installed at Stores, additional automatic fire suppression and detection arrangements are essential to safeguard critical utility assets and ensure business continuity.

Proposal

1. Construction of paver block paving at Bidanasi Scrap Store Yard and Janla Store Yard.
2. Construction of Shed (25X12X5M) at Choudhwar Store.
3. Fire Sprinkler system with fire detector & fire Alarm in existing sheds at BBSR Store, Kendrapada and some of CDR Store.

Justification/ Need of the Proposal

a. **Paver block yard development** will provide a stable surface for equipment and personnel, reducing operational delays and safety risks and avoid deterioration of stored materials and scrap inventory.

b. To **enhance storage capacity** by optimizing vertical and horizontal space with protection of critical electrical materials like jointing kits, meters, LTDB, and consumable materials.
c. To provide **protection from fire** for storage materials at Sheds

Table 78 : Scope of Work

Scope of Work	Store Location
Yard Development with Paver Block in side the Store (Total Area: 12000 SQM+4200 SQM)	Bidanasi Scrap Store, Janla Store
Weather-Resistant Storage Shed for the critical materials- Smart Meters, Battery bank & Charger , Jointing Kits, LTDBs, Consumable materials (Size: 25X12x5 M)	Chaudhwar Store
Fire Sprinkler System with fire detector and fire alarm in existing shed	BBSR Store

Table 79 : Proposed Cost with Estimate Break-up

Scope of Work	Store Location	Approximate Budget (Cr.)	Remarks (Source of Estimate)
Yard Development with Paver Block in side the Store (Total Area: 12000 SQM+4200 SQM)	Bidanasi Scrap Store, Janla Store	1.45	Refer to PO 3200030485 – Paver Block executed at Bhimatanki
Weather-Resistant Storage Shed for the critical materials- Smart Meters, Battery bank & Charger , Jointing Kits, LTDBs, Consumable materials (Size: 25X12x5 M)	Chaudhwar Store	0.4	As estimate received from Civil Department
Fire Sprinkler System with fire detector and fire alarm in existing shed	BBSR Store	0.15	Quotation received from Excel Engineering
Total Estimated Cost in Cr.		**2.00**	

Cost Benefit Analysis

A. Yard Development with Paver Block

- Elimination of waterlogging and muddy conditions during monsoon.
- Improved movement of trucks, cranes, forklifts, and material handling equipment.
- Reduction in unloading/loading time and handling cost.
- Prevention of damage and corrosion of materials stored in open yards.
- Improved housekeeping, safety, and accessibility within stores.

B. Weather-Resistant Storage Shed

- Protection of critical and high-value inventory from rain, sunlight, dust, and moisture.
- **Enhanced storage capacity**
- Optimized utilization of storage space and reduced risk of material deterioration

C. Fire Sprinkler System with Fire Detector & Fire Alarm

- Early detection and automatic suppression of fire incidents.
- Protection of high-value materials stored inside warehouses
- Improved compliance with industrial safety and risk-management practices.

Benefit to the System and Consumers

- Reduced Material Handling Time
- Optimized Space Utilization
- Improved Inventory Management
- Reduced Risk of Damage
- Enhanced Worker Safety
- Modular Infrastructure

2.5.3 Strengthening of IT & Technology

The scope of work under this head is provided in table below.

Table 80 : Strengthening of IT & Technology proposal for FY 2027-28

Sl No	Activity Name	FY 27-28 Estimated Capex (in Cr)
1	Strengthening of Data Centre	5.31
2	Strengthen Network Connectivity	0.59
3	End user Computing Devices & License	16.50
4	Smart Grid	7.50
5	Strengthening of Automation-ADMS (OT Firewalls)	0.10
Total		**30.00**

2.5.3.1 Strengthening of Data Center

Background –

TPCODL has leveraged the power of IT to provide best in class services to consumers, earn consumer delight and improve satisfaction among other stakeholders. Hence, proper, robust and reliable IT Infrastructure is needed for smooth function of IT system to cater to the customer needs. Further, IT systems have been implemented to provide end-to-end solutions for important business functions viz. Commercial, Operations, Finance, HR and Administration etc. Furthermore, for business continuity purpose, Disaster Recovery Centre (DR site to recover and restore data, technology infrastructure and operations when the primary Data Centre is unavailable) has been set up to quickly recover data from disasters.

Moreover, the ageing / End-of-Life / out of warranty devices in the Data-Centre network need to be replaced to ensure better uptime and reliability & security which will enable better operational excellence, value added customer services, optimized distribution system asset performance, energy efficiency and conservations, and environmental sustainability. Hence, it is required to procure network equipment etc. to meet the requirement as mentioned above.

Proposal & Justification/ Need of the Proposal

Table 81 : **Requirements at Data Center for CAPEX FY 2027-28**

Sl No	Item Description	Quantity	Requirement Reason	Earlier Procurement Reference
1	SAN Switches-48 Port	2	Obsolete device as per asset life principle.	2 nos. being proposed against 6 nos. procured during FY 2020-21 and balance quantity shall be proposed during Next FY.
2	Windows Server Type-1	10	Obsolete device as per asset life principle.	10 nos. being proposed against 34 nos. procured during FY 2020-21 and balance quantity shall be proposed during Next FY.

Scope of Work & Proposed Cost with Estimate Break-up

Table 82 : **Proposed Cost for Data Centre**

Sl No.	Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)	Source of Estimate
1	SAN Switch - 48 Port	Nos	2	0.8779	1.76	Recent Order
2	Servers	Nos	10	0.3550	3.55	Recent Order
	Total				5.31	

Benefit to the System and Consumers

- Reduction in downtime of critical applications
- High-availability of systems
- Reduce Risk of over-shooting Performance Assurance Time lines for consumer services

2.5.3.2 Strengthen Network Connectivity

Background –

A robust, reliable, scalable and secure communication network connecting the Data-Centre with each establishment of the Discom is vital to ensure the running of critical IT & OT applications including Metering, GIS, CRM, SAP-ERP, SAP-ISU etc. for providing reliable power and effective services to consumers.

To support business growth, multiple offices have been opened at various locations of TPCODL and users are also expected to increase at existing locations for effective service. Network connectivity at these locations is required to enable employees to perform business critical processes like metering, billing, collection, power outage management and meeting performance assurance timelines. Unavailability of network will increase the restoration time of power outage and delay in providing other critical services to consumers thereby affecting the consumer satisfaction.

Further robustness, reliability, resilience, scalability and Security in Communication system is envisaged in phased manner including reachability to each user / user-desk / Display Monitor / VC System / Office wise Centralized Printer-Scanner and Biometric Devices etc. in wired / wireless manner. Moreover, the ageing / End-of-Life / out of warranty devices (as per the guideline of Hon'ble Commission) in the Communication network need to be replaced to ensure better uptime and reliability & security.

Robust Communication network will enable better operational excellence, value added customer services, optimized distribution system asset performance, energy efficiency and conservations, and environmental sustainability. Hence, it is required to procure network equipment etc. to meet the requirement as mentioned above.

Proposal & Justification/ Need of the Proposal

To improve network reliability at TPCODL IT & OT locations, below mentioned activities are planned.

Table 83 : ***Activities planned at TPCODL IT & OT Locations***

Sl No	Item Description	Quantity	Requirement Reason	Earlier Procurement Reference
1	OFC laying at below mentioned links a) Ranasinghpur OPTCL - Kalinga Nagar PSS b) Kesura OPTCL - Badagada PSS c) Nayapalli OPTCL - Nayapalli SDO d) Chandaka OPTCL - Kanan Vihar PSS e) Kalinga Stadium square - Unit 4 SO (Via Unit-4 PSS) Badambadi Campus - Sishu Bhawan SDO f) LAN Augmentation work at Different offices	30 Km	Implementation of OFC ring closure activity to ensure 24x7 IT service availability	
2	Microwave Link with Towers (2 Nos / Link) i.e. Technology Centre - ICC Gajapati Nagar	2	New requirement to improve the network availability of ICC.	
3	VC system (Poly Studio)	1	Obsolete device as per asset life principle.	One VC system procured during 2020-21

Scope of Work & Proposed Cost with Estimate Break-up

Table 84 : ***Expenditure planned at TPCODL IT & OT Locations***

Sl No.	Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)	Source of Estimate
1	OFC with Accessories	KM	30	0.012	0.37	Recent Order
2	MW Link with Tower (2 Nos / Link)	Nos	2	0.0966	0.19	Recent Order
3	VC system (Poly Studio)	Nos	1	0.0269	0.0269	Recent Order
	Total				0.59	

Benefit to the System and Consumers

- Communication backbone network for business-critical applications.
- Support for Providing reliable power supply to consumers through availability of IT & OT services
- Ease in monitoring and control of network

- Meeting PA timelines leading to consumer satisfaction
- Efficiency in performing critical business processes
- Ease in inter-office communication

2.5.3.3 End User Computing Devices and License

Background

All offices of Central Odisha are enabled with IT systems covering Laptops, Desktops with UPS, Printing & Scanning facility, Biometric Devices, various user software & accessories to provide best in class services to consumers. Further, with increase in consumer base (increasing at around ~6% per annum) and adoption/ implementation of new technologies and for proper functioning of important business processes and meeting the PA timelines, additional requirements arise. It is proposed to procure user-devices, associated software & accessories basing on requirement covering the ageing / End-of-Life / out of warranty as detailed below.

Table 85 : Proposal for end user computing devices and license

Sl No	Item Description	Quantity	Requirement Reason	Earlier Procurement Reference
1	Laptops	540	Obsolete device as per asset life principle.	538 nos. Laptops procured during 2020-21 + 2 Buffer Stock for exigency
2	Desktops with UPS	180	Obsolete device as per asset life principle.	186 nos. Desktops (with UPS) procured during 2020-21
3	Scanners	324	Obsolete device as per asset life principle.	341 nos. of Scanners procured during 2020-21
4	Printer	290	Obsolete device as per asset life principle.	290 no of Printers procured during 2020-21
5	MS Office 2019 / 2021 (Word, Excel, Power Point) – On-premise License)	920	Obsolete Software as per asset life principle. **	2300 nos. of Licenses procured in phases since FY20-21

**** Also, End of Life is declared by Microsoft by end of 2026 and hence the software updates/ patches shall not be available to address the vulnerabilities and hence the current version needs to be procured in batches against the obsolete MS Office Suite.**

The list of above devices with asset class and date of installation are enclosed as **Annexure-25** (Annexure-25.1 to 25.4) to this submission .From the list ,it can be observed that these devices are completing their lives in FY 2027-28. Further as can be observed from these annexures, the nos of devices (Laptops, Desktops, Printer , Scanners etc) that

are completing its life in FY 2027-28 is more than the requirement given in this capex as it being done in phased wise manner optimizing the capex. Hence as these devices are being proposed against assets that are completing its life in FY 2027-28 and are essential for smooth running of the business , the Hon'ble Commission may kindly approve these amounts.

Scope of Work & Proposed Cost with Estimate Break-up

Table 86 : Proposal for end user computing devices and license

Sl No.	Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)	Source of Estimate
1	Laptops	Nos	540	0.0150	8.10	Recent Order estimate
2	Desktops with UPS	Nos	180	0.0091	1.65	
3	Scanners	Nos	324	0.0056	1.81	
4	Printer	Nos	290	0.0041	1.20	
5	MS Office Professional Suite	Nos	920	0.0041	3.75	

Benefit to the System and Consumers

- Performing automated business processes
- Office automation
- Improved employee productivity
- Enhanced Consumer Satisfaction
- Faster communication
- Printing & Scanning of Official documents (Reports, Sign-Offs) / Consumer Documents (Bill, Receipt & Various Acknowledgments).

2.5.3.4 Smart Grid

Background –

Over the years, TPCODL has successfully deployed multiple robust IT and OT systems to manage its operations-including SAP, GIS, SCADA, HES, MOM and various Mobility Applications for MMG, Operations etc. All these applications are meant to be used for carrying out the day-to-day operations digitally which enables the organization to have data from site. Various reports have been created to monitor the outcome. While these applications perform

well individually, the organization faces significant challenges in leveraging the wealth of data scattered across them:

a. Siloed Data & Fragmentation

b. Lack of Holistic Visibility

To bridge these scattered data and operational gaps, it is envisaged to establish a Grid Data Hub (GDH). The GDH will serve as a centralized digital foundation designed to aggregate and harmonize data from diverse enterprise systems (ERP), operational technologies (OT), sensors, APIs, and engineering applications. GDH shall be backbone of companys vision to create futuristic analytics using AI/ML techniques which shall provide all the level of Analytics like Descriptive, Predictive & Prescriptive.

The following use cases will be developed in the GDH:

i. LV Outage Aggregator (LOA) - Develop the Outage detection model using smart meter data, GIS using data from GDH. This module is expected to take the load off from ADMS system which is not meant for handling large volume of data from Smart Meter which shall provide better insight for efficient & effective handling of multiple LT incidents data.

ii. Grid Data Hub Data Pipeline - for ingestion of data from multiple IT & OT sources into a single data lake of Grid Data Hub: Asset Performance Management (APM) System and Asset Investment Planning (AIP) system which shall derive the maintenance and investment planning.

Proposal & Justification/ Need of the Proposal:

Grid Data Hub Deployment will unify IT/OT data streams and unlock advanced grid analytics. By unifying massive, fragmented data streams from currently siloed systems—such as SCADA, Advanced Metering Infrastructure (AMI), GIS, and billing ERPs—into a single source of truth, this platform will unlock high-velocity enterprise analytics.

It will correlate the real-time equipment loads with historical data to enable predictive asset maintenance, minimizing failures, extending equipment lifespan, and reduction in outage durations (SAIDI/SAIFI). Ultimately, this foundational big-data architecture future-proofs our grid infrastructure, providing scalable visibility needed to seamlessly integrate bidirectional power flows from expanding electric vehicle (EV) charging hubs and distributed renewable energy sources without destabilizing the local distribution network.

Scope of Work & Proposed Cost with Estimate Break-up

Table 87 : **Proposed scope for development of Grid Data Hub**

Sl No.	Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)
1	Low Voltage Outage Aggregator Solution	EA	1	1.5000	1.50
2	Grid Datahub Pipeline Solution	EA	1	2.5000	2.50
3	APM & AIP Solution	EA	1	3.5000	3.50
	Total				7.50

*** Implementation shall be carried out in phased manner and further requirement (if any) shall be proposed subsequently.**

Benefit to the System and Consumers

- Improved Operational efficiency.
- Centralized Storage: Combines massive volumes of meter data and master data into single source.
- Real-Time Monitoring: Tracks grid health, asset performance, and power quality instantly
- Demand Flexibility: Helps balance peak energy demands and prevents local grid overloads
- Better Data Security: Protects sensitive data using uniform compliance and modern encryption tools.

Strengthening of Automation-ADMS (OT Firewalls)

Background –

To strengthen IT security and posture of the distribution network, OT Firewalls to be installed at 2 Critical Hub location during the proposed FY.

Proposal & Justification/ Need of the Proposal

For adherence to guidelines specified by MeitY and CERT-In.

Table 88 : **Scope of Work & Proposed Cost with Estimate Break-up**

Sl No.	Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)	Source of Estimate
1	OT Firewalls	SET	2	0.05	0.10	Recent Order

Benefit to the System and Consumers

- Protect networks and data from unauthorized access.
- Better management of security.
- Improved information security and business continuity management.
- Improved stakeholder confidence in your information security arrangements.
- Improved company credentials with the correct security controls in place.

2.5.4 CCTV installation to improve Safety & Security

Background –

TPCODL has almost 800 establishments viz. PSS, offices, GRFs, Consumer care centres, cash collection centres etc. at various locations. For Safety & Security of these establishments, it is required to monitor the activities going on at these locations on 24x7 basis. Furthermore, at various instances, Govt. administration / Police also suggested to install Security Solution covering Video Surveillance system at these locations.

Hence, it is proposed to augment / install Physical Security Solution at various establishments of TPCODL. The system will comprise of various types of cameras (Dome, PTZ, Bullet, Night Vision etc.) and Video Recorder (NVR / DVR) installed at various locations including Central Server and Storage at Data Centre. The video recorded at various locations will be transferred to central storage at defined interval. There centralized monitoring system comprising of big monitoring screens and operators' desk is also to be augmented for 24x7 central monitoring.

Proposal & Justification/ Need of the Proposal

CCTV system across PSS and administrative offices is critical to ensure infrastructure security, operational continuity, and workforce safety. As on date CCTV system has been deployed at 40 Nos. of locations, it is planned to scale up the existing system in Phase-wise manner YOY. During FY28, it is planned to deploy at additional 50 locations.

Table 89 : **Scope of Work** & Proposed Cost with Estimate Break-up

Item Detail	UOM	Qty	Unit Price (in Cr)	Amount (in Cr)	Source of Estimate
CCTV Solution	EA	50	0.1000	5.00	Recent Order

Benefit to the System and Consumers

- 24x7 monitoring of critical locations.
- Video surveillance system will act as a deterrent to crime. Seeing the Camera can be unnerving to the would-be criminals / crimes.
- Create the ability to apprehend a suspect when any crime occurs
- Protection of worthy elements like property and assets in terms of buildings, important installed equipment, goods, records etc.
- Monitoring can prevent any exigency, theft, intrusion and sabotage.

2.5.5 Civil Infrastructure

Proposed activities under this head are provided in table below.

Table 90 : List of Activities covered under Civil Infrastructure

Sl No	Activity planned	Expenditure planned in FY 27 - 28 (In Cr)	Annexures
1	Construction of Engineering & Contracts Office at Bhubaneswar	3.00	Annexure – 26.1
2	Construction of Division Office at Marshaghai	3.00	Annexure – 26.2
3	Construction of Sub Division office at 5 location	2.00	Annexure – 26.3
4	Construction of Section office at 15 location	6.00	Annexure – 26.4
5	Construction of Section store at 16 location	2.00	Annexure – 26.5
6	Construction of BSK at 16 location	2.00	Annexure – 26.6
7	Furniture at 29 location for 205 seating capacity	1.00	Annexure – 26.7
8	Construction of Finance Excellence Centre Office at Bhubaneswar	5.00	Annexure – 26.8
9	Construction of Commercial Excellence Centre Office at Bhubaneswar	5.00	Annexure – 26.9
10	Construction of Integrated Call Centre Office at Bhubaneswar	5.00	Annexure – 26.10
Total		**34.00**	

2.5.5.1 Construction of Engineering & Contract Offices at Bhubaneswar

Background

Engineering and Contracts office is operating from rented premises which is causing considerable inconvenience to employees and consumers. Frequent shifting of these offices from one location to another further adds to the increasing operational cost as well as the inconvenience faced by consumers and business associates. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, deteriorating infrastructure and lack of proper customer interface areas. The building design is basically a residential space which further makes it not suitable for office space.

Also, since a lot of our business associates are visiting this office, inadequate space does not support a healthy environment for various confidential discussions.

Proposal

A new office in Bhubaneswar is being proposed to ensure adequate workspace, enhanced storage, and smooth business associate and customer access.

Justification/ Need of the Proposal

It will improve operational efficiency and enhance accessibility and visibility for consumers. It will also enable improved service standards and working conditions, directly benefiting both the staff and business stakeholders served by the Office, while also ensuring compliance with workplace safety, fire safety, and other statutory norms. The proposed facility will also provide dedicated customer interface areas for enhanced consumer experience and better service delivery.

Scope of Work

Building Specification: 2 Storied RCC framed structure for 82 seating capacity.
Location: Unit 8, Bhubaneswar

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ **3.00 Cr.**
Detailed Estimate attached in **Annexure – 26.1**

Cost Benefit Analysis

New Building Cost: ₹ 3.00 Cr
Current annual rent expenditure: ₹ 0.80 Cr approx., Payback period: 04 Years
Improved Service Delivery and enhanced workplace environment for Employees and Business Stakeholders.

Intangible benefits: Improved employee productivity, customer satisfaction, and compliance with statutory requirements.

Benefit to the System and Consumers

- Improved employee productivity, customer satisfaction, and compliance with statutory requirements.
- It also creates a customer-friendly environment for grievance redressal
- Better experience for business associates.

2.5.5.2 Construction of Division Office at Marshaghai

Background

The Division Office, Marshaghai is operating from rented premises which is causing considerable inconvenience to employees and consumers. Frequent shifting of these offices from one location to another further adds to the inconvenience faced by consumers. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, lack of proper customer interface areas, and deteriorating infrastructure. The building is also affected by seepage and other structural issues. The building design is basically a residential space because of which it is not suitable for office space.

Proposal

A new office at Marshaghai, Paradeep to ensure adequate workspace, storage, and customer access.

Justification/ Need of the Proposal

It will improve operational efficiency and enhance accessibility and visibility for consumers. It will also enable improved service standards and working conditions, directly benefiting both the staff and consumers served by the Office, while also ensuring compliance with workplace safety, fire safety, and other statutory norms. The proposed facility will also provide dedicated customer interface areas for enhanced consumer experience and better service delivery.

Scope of Work

Building Specification: G+1 RCC framed structure.
Location: Marshaghai, Paradeep

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ **3.00 Cr.**
Detailed Estimate attached in **Annexure – 26.2**

Cost Benefit Analysis

Improved Service Delivery and enhanced workplace environment for Employees.

Intangible benefits: Improved employee productivity, customer satisfaction, and compliance with statutory requirements.

Benefit to the System and Consumers

- Improved employee productivity, customer satisfaction, and compliance with statutory requirements.
- It also creates a customer-friendly environment for grievance redress and bill payment.

2.5.5.3 Construction of Sub Division Office at 5 Locations

Background

We have constructed/ strengthened 58 SDO Offices out of 65 across TPCODL. At present, 07 nos Sub-Division Offices are operating from rented premises which is causing considerable inconvenience to employees and consumers. Frequent shifting of these offices from one location to another further adds to the inconvenience faced by consumers. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, lack of proper customer interface areas, and deteriorating infrastructure. The building is also affected by seepage and other structural issues. The building design is basically a residential space because of which it is not suitable for office space.

Proposal

It is proposed to Construct 5 nos new Sub division Office at our own land to provide best service experience to the consumers as well as working staff.

Justification/ Need of the Proposal

SDO offices are situated in residential houses and are not user friendly. Shifting of offices from rented to own property using our land available near PSS campus for long-term rental cost savings and to provide ergonomically better work environment.

Scope of Work

Building Specification**:** RCC framed structure

Location: Kalinga Biju Pattnaik Chowk, Kujang, Marshaghai, Pallahara, Sakhigopal

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ **2.00 Cr. (40 Lakh Each),**
Detailed Estimate attached in **(Annexure – 26.3)**

Cost Benefit Analysis

New Building Cost: ₹ 40 Lacks Each
Current annual rent expenditure: ₹ 4.0 Lakhs approx., Payback period: 10 Years

Benefit to the System and Consumers

- User friendly work environment for Employees.
- Over extended periods, the total rent paid can surpass the cost of Building.
- Better Consumer Platform for Grievance Redress.

2.5.5.4 Construction of Section Office at 15 Locations

Background

TPCODL currently operates a total of 247 section offices across its network. Of these, 223 offices have already been constructed or strengthened. Among these, 21 offices are functioning from rented premises, which are often overcrowded, lack adequate infrastructure, and do not provide sufficient space for consumer interaction or staff operations. These limitations significantly impact the efficiency of service delivery and grievance redress mechanisms.

Proposal

It is proposed to construct the remaining 24 section offices in a phased manner with standard design, layout, and facilities. Priority will be given to the 21 offices operating in rented and inadequate spaces, followed by the remaining 3 that require new construction for strengthening of consumer interface and field support.

Justification/ Need of the Proposal

Rented premises are congested and lack adequate space for consumer service counters, meeting rooms, complaint desks, and storage of records. Also, Non-availability of essential utilities like waiting areas, toilets, parking space, and consumer-friendly infrastructure.

Scope of Work

Section Office Building Specification: RCC framed structure at below 15 location.

Table 91 **Locations identified for construction of Section Office Building**

Sl. No	Location	Sl. No	Location	Sl. No	Location
1	Gridco Colony	6	Itamati-2	11	Rajnagar-2
2	Naugaon	7	Bhapur-1	12	Balikuda-2

3	Sakhigopal-1	8	Bhapur-2	13	Pallahara
4	Sakhigopal-2	9	Banpur-1	14	Pattamundai-2
5	Itamati-1	10	Danpur	15	Olavar

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ **6.00 Cr. (for 15 no Locations- 40 Lakhs Each.)**
Detailed estimate attached in **Annexure – 26.4**

Benefit to the System and Consumers

- Faster grievance redress due to improved facilities and organized consumer handling space.
- Best Consumer Platform for Grievance Redress.
- Long-term sustainability with scope for future technological integration (smart service counters, IT-enabled facilities).
- Cost savings from elimination of rental expenditures

2.5.5.5 Construction of Section Stores at 16 Locations

Background

At present scenario, there is 247 Section Offices across TPCODL. Each section needs storage space for keeping ready to use electrical tools and equipment for operational purpose which are currently being stored in unprotected open areas.

Proposal

It is proposed to construct a storage room at each location to store tools and equipment in safe and secure environment.

Justification/ Need of the Proposal

Protection of tools and equipment from weather damage, pilferage and theft. Ensure compliance with safety standards for electrical material storage.

Scope of Work

Store room Specification: RCC framed structure. **Locations: 16 nos.**

Table 92 : Locations identified for construction of section stores

Sl No	Location	Sl No	Location	Sl No	Location
01	Ranpur	07	Godisahi	13	Kalpana-1
02	Aul	08	Nimapara-1	14	Nirakarpur
03	Rajnagar-1	09	Nimapara-2	15	Delta
04	Banki-1	10	Pipili-1	16	Brit
05	Balikuda-1	11	Vigilance Office		
06	Unit-IX Flat	12	Begunia		

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ **2.00 Cr. (12 Lakh for single Location.)**
Detailed Estimate attached in (**Annexure - 26.5)**

Cost Benefit Analysis

Covered and secure storage enhances equipment lifespan. And Faster and smoother material handling, resulting in imparting training in efficient manner.

Benefit to the System and Consumers

Ensure systematic storage of training tools and equipment.

2.5.5.6 Construction of BSK at 16 Locations

Background

Bidyut seva kendra plays a vital role in the routine maintenance work and consumer grievance redressal in all areas across TPCODL. Some of the locations area having the electricity network circuit around 15 to 20 km. With the growing demand of consumption of electricity it is difficult to manage a huge long range area during critical times.

Proposal

It is proposed to construct a permanent **Bidyut Seva Kendra** at a centrally accessible location to cater to consumer service requirements.

Justification/ Need of the Proposal

Difficulty in ensuring timely resolution of outages, voltage fluctuations, and maintenance requirements across large geographical areas. Inadequate facilities for frontline staff for effective deployment and monitoring.

Scope of Work

The scope of work includes RCC framed structure at below 16 Location.

Table 93 : **Locations identified for construction of BSK**

Sl No	Location	Sl No	Location	Sl No	Location
01	Nimapara-1	07	Kacheri	13	Rajkanika
02	Chandaka	08	Baliapanda	14	Paradeepgarh
03	Unit IX Road	09	Ghodabazar	15	Ersama
04	Balakati	10	Power House	16	Mandasahi
05	Naval Structure	11	Charinala		
06	Itamati Town	12	Ranihat-1		

Proposed Cost with Estimate Break-up

The Total estimated Cost will be₹ 2.00 Cr. (12 Lacks for single Location)
Detailed Estimate attached in (**Annexure - 26.6**)

Cost Benefit Analysis

Payback Period: 4–5 years considering rent savings and enhanced revenue realization.

Benefit to the System and Consumers

- Provides a single-window system **for all consumer-related services and Improves** service delivery efficiency and reduces turnaround time.
- Long-term cost savings and asset creation for the utility. Enhanced consumer satisfaction, reduction in grievances, improved statutory compliance.

2.5.5.7 Furniture at 29 Location for 205 seating capacity

Background

The existing office furniture is outdated, dilapidated, and beyond repair. Most of the current furniture lacks ergonomic design, which affects employee comfort and productivity.

Proposal

It is proposed to provide the office Furniture's such as Workstations, Tables Storage cabinets, Chairs etc with better ergonomic design for comfort and improved productivity for newly built offices.

Justification/ Need of the Proposal

Modern furniture can be strategically selected and arranged to optimize available space and create distinct functional zones within the office. It enhances workflow, encourages interaction, and supports a healthier work culture.

Scope of Work

The scope covers the supply and installation of furniture across renovated and newly constructed Offices.
Seating Capacity: 205 nos at 29 location

Table 94: **Locations identified for installation of furniture**

Cuttack Circle	Hindol Town Section	Sakhigopal-1 Section	Rajnagar-2 Section
Dhenkanal SDO	Kujanga SDO	Sakhigopal-2 Section	Balikuda-2 Section
Power House SDO-1	Marshaghai SDO	Itamati-1 Section	Pallahara Section
Bhuttamundai Section	Pallahara SDO	Itamati-2 Section	Pattamundai-2 Section
Kanan Vihar section	Kalinga SDO	Bhapur-1 Section	Olavar Section
Gondia Section	Sakhigopal SDO	Bhapur-2 Section	
Kamakhyanagar Section	Gridco Colony Section	Banpur-1 Section	
Charbatia Section	Naugaon Section	Danpur Section	

Proposed Cost with Estimate Break-up

Total Estimated Cost: 1.0 Cr.
Detailed Estimate attached in (**Annexure - 26.7**)

Cost Benefit Analysis

Enhances employee comfort, reduces fatigue, and supports health.
Efficient layout and modularity allow better space utilization and Modular furniture adheres to safety standards, minimizing risks of accidents.

Benefit to the System and Consumers

- Designed with replaceable parts (panels, drawers, and fittings), reducing wastage and Creates a uniform and modern look, improving workplace environment.
- Improve Productivity & Cost effective in long run.

2.5.5.8 Construction of Finance Center of Excellence Office at Bhubaneswar

Background

Finance team is operating from rented premises which is causing considerable inconvenience to employees, business associates and consumers. Frequent shifting of these offices from one location to another further adds to the inconvenience faced by consumers. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, lack of proper customer interface areas, and deteriorating infrastructure. The office is currently operating from multiple locations which is causing inconvenience in terms of travel, vehicle availability, traffic restrictions, climatic restrictions to employees as well as customers.

Proposal

A new office in Bhubaneswar is being proposed to ensure adequate workspace, storage, and customer access.

Justification/ Need of the Proposal

It will improve operational efficiency and enhance accessibility and visibility for consumers. It will also enable improved service standards and working conditions, directly benefiting both the staff and business stakeholders served by the Office, while also ensuring compliance with workplace safety, fire safety, and other statutory norms. The proposed facility will also provide dedicated customer interface areas for enhanced consumer experience and better service delivery.

Scope of Work

Building Specification: 3 Storied RCC framed structure for 150 seating capacity.
Location: Unit 8, Bhubaneswar

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **Rs. 5.00 Cr.**
Detailed Estimate attached in (**Annexure – 26.8**)

Cost Benefit Analysis

New Building Cost: ₹ 5.00 Cr
Current annual rent expenditure: ₹ 1.30 Cr approx., Payback period: 04 Years
Improved Service Delivery and enhanced workplace environment for Employees and Business Stakeholders.
Intangible benefits: Improved employee productivity, customer satisfaction, and compliance with statutory requirements.

Benefit to the System and Consumers

Improved employee productivity, customer satisfaction, and compliance with statutory requirements. It also creates a customer-friendly environment for grievance redress and bill payment.

2.5.5.9 Construction of Commercial Center of Excellence Office at Bhubaneswar

Background

Commercial team is operating from rented premises which is causing considerable inconvenience to employees and consumers. Frequent shifting of these offices from one location to another further adds to the inconvenience faced by consumers. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, lack of proper customer interface areas, and deteriorating infrastructure. The office is currently operating from multiple locations which is causing inconvenience to employees as well as customers.

Proposal

A new office in Bhubaneswar is being proposed to ensure adequate workspace, storage, and customer access.

Justification/ Need of the Proposal

It will improve Billing, Collection and operational efficiency and enhance accessibility and visibility for consumers. It will also enable improved service standards and working conditions, directly benefiting both the staff and business stakeholders served by the Office, while also ensuring compliance with workplace safety, fire safety, and other statutory norms. The proposed facility will also provide dedicated customer interface areas for enhanced consumer experience and better service delivery.

Scope of Work

Building Specification: 3 Storied RCC framed structure for 150 seating capacity.
Location: Unit 8, Bhubaneswar

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **Rs. 5.00 Cr.**
Detailed Estimate attached in **(Annexure-26.9)**

Cost Benefit Analysis

New Building Cost: ₹ 5.00 Cr
Current annual rent expenditure: ₹ 1.30 Cr approx., Payback period: 04 Years
Improved Service Delivery and enhanced workplace environment for Employees and Business Stakeholders.

Intangible benefits: Improved employee productivity, customer satisfaction, and compliance with statutory requirements.

Benefit to the System and Consumers

Improved employee productivity, customer satisfaction, and compliance with statutory requirements. It also creates a customer-friendly environment for grievance redress and bill payment

2.5.5.10 Construction of Integrated Call Center Office at Bhubaneswar

Background

Integrated Call Centre is operating from rented premises which is causing considerable inconvenience to employees and consumers. Frequent shifting of these offices from one location to another further adds to the inconvenience faced by consumers. Over time, the office has encountered significant challenges due to insufficient space, inadequate storage facilities, lack of proper customer interface areas, and deteriorating infrastructure. The office is currently operating from multiple locations which is causing inconvenience to employees as well as customers.

Proposal

A new office in Bhubaneswar is being proposed to ensure adequate workspace, storage, and customer access.

Justification/ Need of the Proposal

A better work environment and infrastructure will improve Billing, Collection and operational efficiency and enhance accessibility and visibility for consumers. It will also enable improved service standards and working conditions, directly benefiting both the staff and business stakeholders served by the Office, while also ensuring compliance with workplace safety, fire safety, and other statutory norms. The proposed facility will also provide dedicated customer interface areas for enhanced consumer experience and better service delivery.

Scope of Work

Building Specification: 3 Storied RCC framed structure for 200 seating capacity.
Location: Bhubaneswar

Proposed Cost with Estimate Break-up

The Total estimated Cost will be **Rs. 5.00 Cr.**
Detailed Estimate attached in (**Annexure-26.10**)

Cost Benefit Analysis

New Building Cost: ₹ 5.00 Cr
Current annual rent expenditure: ₹ .70 Cr approx., Payback period: 07 Years
Improved Service Delivery and enhanced workplace environment for Employees and Business Stakeholders.
Intangible benefits: Improved employee productivity, customer satisfaction, and compliance with statutory requirements.

Benefit to the System and Consumers

Improved employee productivity, customer satisfaction, and compliance with statutory requirements. It also creates a customer-friendly environment for grievance redress and bill payment.

2.5.6 Residential Training Centre

Background
To train and develop existing as well as new workforce (TPCODL employees as well as BA employees), people have to come to attend the training and no accommodation facility is available. Also,there is no dedicated training set-up for new GETs/DETs being recruited every year.

Proposal

It is proposed to construct 3 no Training Hall of total 240 seating capacity with accommodation provision for 90 occupants in the same campus .

Justification/ Need of the Proposal

In order to conduct full syllabus training programs of two or more days, it is proposed to construct a residential training center at Bhubaneswar in our own premises.

Scope of Work

2 Nos Training Hall of 60 occupants1 No Training Hall of 120 occupants Accommodation capacity for 90 occupants

Proposed Cost with Estimate Break-up

Total Cost for execution of the above mentioned scope for Residential Training Centre is Rs 35 Cr, of which 13 Cr is already approved under FY 24-25 budget, 15 Cr is being proposed under

FY27-28 budget and remaining 7 Cr will be sought under FY28-29 budget with completion period of 33 months.

Completion Target

Year	CAPEX (in Cr)	Capitalization (in Cr)
2026-27	**4.00**	
2027-28	**24.00**	
2028-29	**7.00**	**35.00**

The detailed cost estimate is enclosed as **Annexure-27.**

Benefit to the System and Consumers

Residential training centre offers an immersive learning environment that can lead to deeper understandings, faster skill acquisition and stronger bond among participants. In addition, it can be more cost effective for providing accommodation, food and training in one location than to source these services individually.

2.5.7 Initiative for Sustainable Infrastructure

Background

As part of Project Aalingana, TPCODL has undertaken initiatives towards developing sustainable, resource-efficient and environmentally responsible infrastructure across its operational facilities. The initiative is aligned with Tata Power's long-term sustainability objectives, including Net Zero Carbon by 2045, Zero Waste to Landfill by 2030 and Water Neutrality by 2030**,** and focuses on reducing environmental impact through energy efficiency, renewable energy adoption, water conservation, waste management and other sustainable infrastructure interventions.

Since inception, TPCODL has initiated and completed various interventions under this initiative, including conversion of standalone rooftop solar systems to grid-connected systems, installation of energy-efficient sensor-based lighting systems, water-saving devices such as sensor faucets and automatic urinal flushing systems, rainwater harvesting, plantation and other resource-efficiency measures. These interventions have contributed towards reduction in energy and water consumption, increased utilization of renewable energy and improvement in the overall sustainability performance of the organization.

TPCODL is committed to measuring, setting objectives, identifying and implementing focused initiatives to minimise the adverse environmental impact of its operations. The objectives are related to the Sustainable Development Goals (SDGs) material to its operations.

The proposed CAPEX shall consequently support the progressive implementation of sustainable infrastructure projects across TPCODL and enable the Company to achieve

the objectives of Project Aalingana, while delivering measurable benefits in terms of energy conservation, renewable energy adoption, water efficiency, waste reduction, carbon emission reduction and overall environmental performance.

Proposal

We propose the Climate Action efforts in below lines.

1. Roof Top Solar: TPCODL has 381 PSS across its operational area. Based on an internal assessment, approximately 60 PSS need to be covered annually to progressively cover the identified rooftops and support the Company's FY32 milestone towards Zero Scope 2 Emissions.

As the first phase of implementation, TPCODL proposes to install rooftop solar systems at 30 PSS during FY28, subject to site feasibility and technical assessment. The intervention will increase the share of renewable energy in TPCODL's operations, reduce dependence on grid-sourced electricity and contribute towards reduction of Scope 2 emissions. The balance PSS will be covered progressively in subsequent phases based on site readiness, technical feasibility and CAPEX availability.

2. Sensors to Conserve Resources: Monitoring and optimizing the consumption of electricity and water across offices and PSS can help TPCODL reduce avoidable resource consumption and improve operational efficiency. Based on the successful pilot implemented at the Corporate Office during FY26, TPCODL proposes to scale up sensor-based resource conservation measures across identified offices during FY28.

2.1 Energy & Electrical Resource Conservation Sensors

TPCODL proposes to install 80 occupancy, motion-based sensors per office in 10 offices, resulting in a total proposed installation of 800 sensors during FY28.

The 10 offices will be selected based on site feasibility and potential for energy savings. The sensors will enable automatic switching-off or control of lighting and other applicable electrical loads when areas are unoccupied, thereby reducing unnecessary electricity consumption and improving energy efficiency.

2.2 Water Conservation Sensors

To reduce water wastage and improve water-use efficiency, TPCODL proposes to install touchless water-saving taps, automatic touchless urinal flush sensors in 10 offices and 100 water flow meters during FY28. The offices will be finalized based on water consumption, site feasibility and potential for water savings.

The proposed installation includes:

- 10 touchless water-saving taps per office × 10 offices = 100 taps
- 10 automatic touchless urinal flush sensors per office × 10 offices = 100 sensors
- 1 water flow meter installed per office × 100 offices = 100 water flow meter.

The touchless water-saving taps will facilitate controlled water flow based on user presence, minimizing unnecessary water discharge. The automatic urinal flush sensors will optimize flushing based on usage and help prevent excessive or continuous flushing.

3. Rainwater Harvesting: Water conservation is an important component of TPCODL's sustainable infrastructure roadmap under Project Aalingana. During FY27, TPCODL proposes to undertake a Water Neutrality Roadmap Study through a specialized consultancy to assess the existing water balance, identify water conservation and replenishment opportunities, and develop a phased roadmap for achieving the Company's water neutrality objectives.

In parallel, planning and pilot work is being pursued at 4 office locations for implementation of Rainwater Harvesting (RWH) systems. Based on the outcomes, recommendations and site-wise prioritization emerging from the Water Neutrality Roadmap Study, TPCODL proposes to implement Rainwater Harvesting systems in 10 new buildings during FY28.

4. Decentralized Organic Waste Management System: As part of TPCODL's commitment towards Zero Waste to Landfill (ZWtL) under Project Aalingana, a ZWtL Roadmap Study was undertaken in FY26 to assess the existing waste management practices, identify gaps and recommend interventions for progressively achieving the ZWtL objective.

Based on the recommendations and site-level assessment emerging from the ZWtL Roadmap, TPCODL proposes to establish decentralized organic waste management systems at suitable offices and operational locations during FY28. Depending on the quantity and nature of organic waste generated and site feasibility, appropriate solutions such as composting pits, drum composters or composting machines will be implemented.

Justification/ Need of the Proposal

TPCODL has identified significant opportunities to improve resource efficiency and reduce environmental impact across its operations in alignment with Project Aalingana**.** The proposed interventions, including rooftop solar, sensor-based energy and water conservation, rainwater harvesting and decentralized organic waste management, will reduce dependence on grid electricity and freshwater, minimize avoidable resource consumption and divert organic waste from conventional disposal. These initiatives are based on internal assessments, successful FY26 pilots, the proposed Water Neutrality Roadmap Study and the FY26 ZWtL Roadmap Study by Sustain Sarathi Private Limited, and will contribute towards the Company's targets of Net Zero Carbon Emissions, Water Neutrality and Zero Waste to Landfill.

Scope of Work

1. Grid-Connected Rooftop Solar: Installation of grid-connected rooftop solar systems at 30 PSS, with individual system capacities of 3 KWp, 5 KWp and 10 KWp, aggregating to a total proposed capacity of 300 KWp, subject to site feasibility.

2. Sensor-Based Resource Conservation: Implementation of sensor-based electricity and water conservation measures across 10 offices, comprising:
a. Motion/Occupancy Sensors: 800 nos.
b. Touchless Water-Saving Taps: 100 nos.
c. Touchless Automatic Urinal Flush Sensors: 100 nos.
d. Water Flow Meters: 100 nos.

3. Rainwater Harvesting: Installation of Rainwater Harvesting systems at 10 locations, with rainwater capture from approximately 11,000 sq. ft. of rooftop or catchment area per location, subject to site feasibility and study recommendations.

4. Decentralized Organic Waste Management: Installation of suitable composting pits, drum composters or composting machines at identified offices, operational locations based on waste generation, site feasibility and recommendations of the FY26 ZWtL Roadmap Study

Proposed Cost with Estimate Break-up

Table 1 Proposed Cost with estimate break-up for sustainable initiatives

Sl.	Items	Unit	Quantity	Unit Rate	Item Cost
1	Roof Top Solar. 30 Roofs of 1100 Sq. Ft.	KWp	300	75000	₹ 2,25,00,000
2	Sensors to save, monitor water, electricity in 10 offices.				
	a. Motion Sensors for automatic switching off lights.	Nos.	800	2000	₹ 16,00,000
	b. Touchless water saving taps	Nos.	100	10,000	₹ 10,00,000
	c. Touchless water urinal flush sensors.	Nos.	100	4,500	₹ 4,50,000
	d. Water Flow Meters	Nos.	100	5,000	₹ 5,00,000
3	Rain Water Harvesting. 10 Roofs of 1100 Sq. Ft	Sq. Ft.	11000	216	₹ 23,76,000
4	Installation of Composting system	Nos.	4	4,93,500	₹ 19,74,000
Grand Total					**₹ 3,00,00,000**

Cost Benefit Analysis

1. Grid-Connected Rooftop Solar

Table 95 : Cost Benefit Analysis for Solar Rooftop Installation

Sl.	Parameters	UoM	Values	Remarks
a	Proposed Installed Capacity	KWp	300	Proposed nameplate capacity
b	Age	Years	0	New installation
c	Capacity after 1 year of Installation	KWp	300	No degradation assumed in Year 1
d	Sunny Hours	PSH/ Day	4	Winter & Summer 5–7; Monsoon 2–4
e	Performance Ratio	%	1	Typical Indian rooftop system assumption.
f	Annual Generation	kWh	3,28,500	c × d × e × 365
g	ABR	₹/kWh	6.00	Assumed average billing rate
h	Yearly Saving	₹ Lakh	19.71	f × g / 10^5
i	Capex	₹ Lakh	225.00	300 KWp × ₹75,000/KWp
j	ROI / Payback	Years	11.42	i / h
k	Grid Emission Factor	kg CO_2e/ kWh	0.71	As per reference
l	Scope 2 Emission Neutralization	t CO_2e	233.24	f × k / 1000

2. Sensor-Based Resource Conservation, Rainwater Harvesting, Installation of Composting system

The proposed interventions for electricity and water conservation sensors, Rainwater Harvesting, and decentralized composting systems will provide long-term operational and environmental benefits.

Installation of 800 motion sensors will reduce avoidable electricity consumption by automatically controlling lighting in unoccupied areas, while 100 touchless water-saving taps, 100 automatic urinal flush sensors and 100 water flow meters will improve water-use efficiency and enable monitoring of consumption.
RWH systems at 10 locations will enhance rainwater capture and recharge, reducing dependence on freshwater sources.

The proposed 4 composting systems will facilitate decentralized treatment of biodegradable waste and dry leaves, reducing waste sent for conventional disposal.

Collectively, these interventions will reduce electricity, water and waste-management costs, improve resource efficiency and support TPCODL's Project Aalingana objectives of Net Zero carbon by 2045, Water Neutrality and Zero Waste to Landfill by 2030.

Completion Target

All proposed projects, including Rooftop Solar, Energy & Water Conservation Sensors, Rainwater Harvesting, and Installation of Composting Systems, are planned to be completed by March 2028.

Benefit to the System and Consumers

This initiative addresses several critical environmental and operational needs:

1. Reduction in Carbon Emissions: Rooftop solar and energy-efficient sensors will reduce dependence on grid electricity, contributing to reduction in Scope 2 emissions and supporting TPCODL's climate action goals.
2. Energy & Water Conservation: Motion sensors, touchless water-saving taps and automatic urinal flush sensors will minimize avoidable electricity and water consumption, while water flow meters will enable monitoring and identification of consumption patterns.
3. Promotion of Renewable Energy: Installation of 300 KWp rooftop solar at PSS will increase the share of renewable energy in TPCODL's operations and support the transition towards cleaner energy.
4. Water Security & Conservation: Rainwater Harvesting at 10 locations will improve rainwater utilization to recharge and reduce dependence on freshwater sources, supporting the Water Neutrality objective under Project Aalingana.
5. Zero Waste to Landfill: The proposed composting systems will enable decentralized treatment of biodegradable waste and dry leaves, reducing waste sent for conventional disposal and supporting TPCODL's ZWtL target by 2030.
6. Financial & Operational Benefits: The initiatives will reduce electricity, water and waste-management costs through improved resource efficiency, while making better use of existing rooftops and infrastructure.
7. Alignment with Sustainability Goals: Collectively, the interventions support Tata Power's Project Aalingana objectives to become Carbon Net Zero by 2045, Water Neutrality and Zero Waste to Landfill by 2030, while strengthening TPCODL's environmental performance

The cost estimate is based on quotation received from various vendors.

2.5.8 Backend Infrastructure for Smart Metering

Background

Since the inception of Smart Meter operations, TPCODL has undertaken extensive efforts to modernize its metering infrastructure in line with directives from the Hon’ble Commission and the Ministry of Power. The initiative began with the replacement of defective meters and the

installation of smart meters incl. new connection in compliance with national and state-level regulatory frameworks.

Smart metering is a cornerstone of the Loss Reduction strategy, enabling accurate billing, outage monitoring, Prepaid Billing, Energy audit, Solar implementation and improved consumer services. The deployment aligns with statutory mandates under:

- CEA (Installation and Operation of Meters) Amendment Regulations, 2022
- Electricity (Rights of Consumers) Rules, 2020
- MoP Notification 2021 & Amendment 2022
- OERC Distribution Supply Code, 2019
- OERC, Order on Net Metering/Bi-Directional Metering (2018), Amendment on 2025
- Other directives of the Hon'ble Commission

Status of Smart Meter Deployment:-
As of FY26, TPCODL has successfully installed 8.15 lakh smart meters, which increased to 9.79 lakh by August 2026. The deployment covers government, private (single and three-phase), DT, and feeder categories.

In line with the Hon'ble Commission's directive , the petitioner has made a phase/stage wise Smart Meter Installation plan as depicted in table below.

Table 96 : **Stage-wise Smart Meter Installation Projection**

Sl No	Stage	Financial Year	Yearly Projection	Cumulative Count
1	Base	**As on FY26**	**8,15,138**	
2	Stage-1	FY-27	6,65,000	I
3		FY-28	5,50,000	20,30,138
4		**Total**	**20,30,138**	
5	Stage-2	FY-29	6,50,000	26,80,138
6		FY-30	6,00,000	32,80,138
7		FY-31	4,50,000	37,30,138
8		FY-32	3,50,000	40,80,138
9		**Total**	**20,50,000**	
Grand Total			**40,80,138**	

Proposal

To upscale backend infrastructure Licences (Head End System & SAP AMI license) to handle 5.5 lakh smart meters in FY28.

While the physical deployment of smart meters has progressed significantly, to support the FY28 rollout of 5.5 lakh meters, substantial investment in Licences is required. This will ensure:

- Seamless data flow with MDMs, SAP, ADMS, ReVP, and consumer-facing applications (My Tata Power + App).
- Real-time data acquisition, prepaid/postpaid billing, outage detection, Solar Generation and theft monitoring.
- Compliance with statutory guidelines and readiness for future scalability (rooftop solar, net metering, demand-side management).

Thus, the proposed CAPEX investment is critical to sustain the momentum of smart meter deployment, reduce AT&C losses, and deliver enhanced consumer services.

Justification/ Need of the Proposal

The backend infrastructure of TPCODL, comprising applications hosted on in-premise servers such as the Head End System (HES) and SAP AMI licenses, extended designed to support approximately 14.8 lakh smart meters**.**

Without augmentation, the infrastructure will encounter bottlenecks in data acquisition, billing integration, and consumer interface services. This will result in delays in grievance redressal, Postpaid & prepaid billing inefficiencies, challenges in solar deployment, and reduced effectiveness in theft detection and outage management.

The proposed upgradation will not only strengthen operational capabilities but also ensure compliance with statutory regulations. In essence, the arrangement is not merely an infrastructure upgrade but a statutory and strategic necessity. It will secure adherence to regulatory mandates, enhance operational efficiency, empower consumers, and position TPCODL as a future ready utility capable of delivering reliable, transparent, and sustainable services.

Scope of Work

The proposed scope of work involves a comprehensive augmentation of TPCODL's backend application licences to support the FY28 rollout of smart meters, which will expand the installed base to more than 20 lakh meters.

This requires scaling both the Head End System (HES) and SAP AMI licences. Additional HES licences will be procured to cover 5.5 lakh meters, ensuring communication, firmware upgrades, and command execution across all consumer categories. Similarly, SAP AMI licences will be extended to cover 5.5 lakh meters, enabling prepaid and postpaid billing and seamless consumer account management.

Proposed Cost with Estimate Break-up

Cost Proposed to Hon'ble Commission for FY 27-28 is tabulated below.

Table 97 : **Capital Investment Cost Proposed for SAP AMI License of Smart Meters**

SL NO	Item Description	TYPE	Existing Quantity	By FY28			
				Add. Quantity	Unit Price incl GST	Total Cost (Cr.)	Remarks
1	HES License	LICENCE	1480000	550000	124	6.8	Recent Order rate
2	SAP License	LICENCE	1480000	550000	35	1.9	Recent Order rate

Cost Benefit Analysis

The smart metering initiative undertaken by TPCODL represents a strategic investment aimed at modernizing the power distribution infrastructure, improving operational efficiency, ensuring regulatory compliance to provide smart and consumer centric services to consumer..

Benefit to the System and Consumers

Other Tangible Benefits:-

- Cost Savings: Daily consumption data helps consumers optimize usage and lower bills; TOD benefits support peak load curtailment and system stabilization.
- Improved Accuracy: Automated readings eliminate human error, reduce disputes, and enable timely detection of faulty/slow meters or theft, saving MU losses.

- Better Planning: DISCOMs can optimize power procurement, reduce excess purchase costs, and improve load management.

- Reduced Meter Reading Cost: Automated data fetching eliminates manual meter reading, lowering operational expenses.

- Revenue Assurance: Tamper-proof automated readings minimize manipulation and theft.

- Remote Operations: Reduced site visits lower travel costs, enhance LTDB life, and improve employee safety by enabling remote disconnection/reconnection.

- Asset Management: Smart meters can be reconfigured remotely (net, prepaid, postpaid), saving replacement and installation costs.

- Asset Optimization: Accurate energy audits enable better equipment utilization, prevent premature failures, and support timely replacement with suitable ratings.

Intangible Benefits

- Regulatory Compliance: Ensures adherence to CEA, MoP, and state regulatory guidelines.

- Enhanced Reliability: Accurate outage tracking improves SAIFI/SAIDI indices and service benchmarking.

- Consumer Empowerment: Daily usage visibility builds trust and transparency in billing.

- Behavioral Change: Encourages responsible consumption, TOD monitoring, and adoption of smart home automation.

- Faster Fault Resolution: Remote diagnostics strengthen GIS performance and speed up restoration.

- Strategic Planning: Granular data supports demand forecasting, infrastructure planning, and CAPEX prioritization.

3 Time line

The applicant has proposed the project completion timelines where ever applicable. While Discoms will endeavour all efforts to complete the schedules as per the mentioned timeline for each projects, however the proposed timelines are subject to timely receipt of necessary permissions, approvals and clearances from the concerned authorities/agencies, including land/Right of Way (RoW), site clearance, Forest Department/agricultural field clearances and other statutory approvals, resolution of local/site-related issues and concerns, timely receipt of materials, availability of required outages from OPTCL, suitable weather conditions, and other factors beyond the reasonable control of the DISCOM. Accordingly, a broad tentative timeline is provided below.

Table 98

Head	Activity	Capex	FY 28	Q1 FY 29	Q2 FY 29	Q3 FY 29

Subject:- SEBA KMT/ Megger make Cable fault locating systems Cable Test Van (Force Traveler MH 02 ER 6726 and MH 02 ER 6725)
Model SPG40 (SN : 12798530001 & 12852490002).

Dear Sir,

We would like to inform you that the said systems were in service for more than 8 years. Please be informed that the complete life cycle of the Cable fault locating system is a maximum 10 years. Often after 10 years, the components used in such machines would not be available in the global market due to continuous innovation in the electronics sector. In this case, we are witnessing the non-availability of most of the components & spare, due to which further service and repair of this system are difficult.

In view of the above factors please be informed that it will be difficult to repair the instrument if it fails in the near future.

This information is for your kind reference and further action. We request you to kindly plan your future action plans accordingly.

Thanking you and assuring you best of our services and support.

for Megger (India) Private Limited

1.0 New 33/11kV Primary Substation at Gadakana to meet Network Reliability

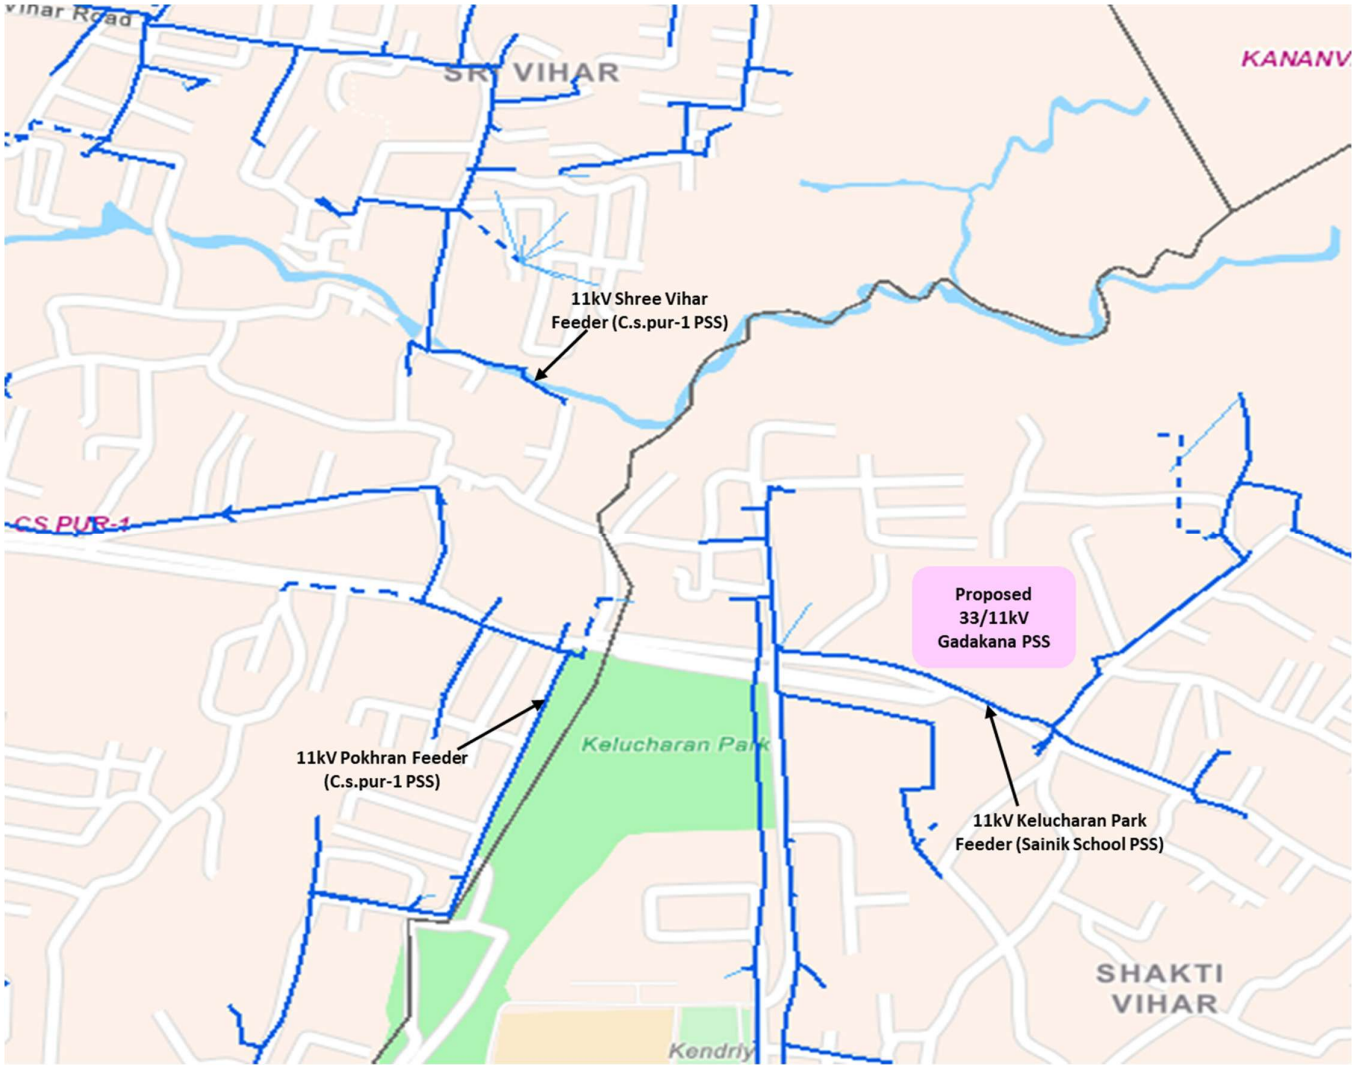
Proposal:

Construction of New 33/11kV Primary Substation at Gadakana under BCDD-2 division of BBSR-1 circle for enhancement of network reliability.

Requirement/ Need of the Proposal:

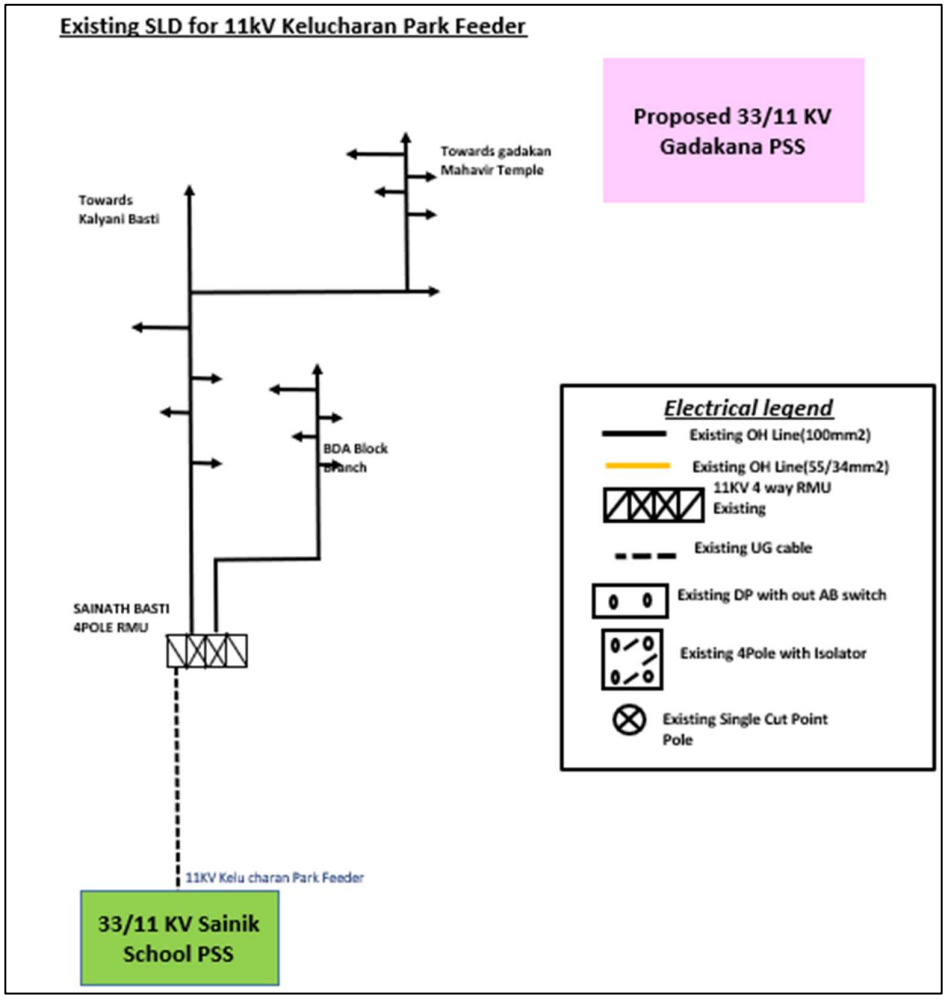
Existing Scenario:

- The Gadakana area is a rapidly developing urban load centre witnessing significant and sustained growth in load demand. At present, the load in the area is catered through the 11kV Kelucharan Park feeder from Sainik School PSS and the 11kV Pokharan and 11kV Shree Vihar feeders from C.S. Pur-I PSS, all of which are experiencing increasing loading levels and frequent trippings, adversely affecting supply reliability. Further, approximately 4MVA of additional load is expected to be connected in the near future. Considering the dense urban development, limited right-of-way availability and the presence of existing utility infrastructure on both sides of the roads, construction of new 11kV feeders from existing substations would require extensive underground cabling involving substantial capital expenditure, increased feeder lengths, higher technical losses and repeated future investments for load bifurcation and construction of new 11kV feeders. In this context, the construction of a new 33/11kV Gadakana Primary Substation (PSS) at the load centre along with associated network strengthening works is the most viable proposal.
- Loading of 11kV Kelucharan Park feeder (Sainik School PSS), 11kV Pokharan feeder and 11kV Shree Vihar feeder (C.s.pur-1 PSS) are 2.29MVA, 2.06MVA and 4.64MVA respectively at peak load condition of Summer'26. Considering load growth for 2years (15% load growth per year for 2years), the projected loading of Summer'28 for Kelucharan Park feeder (Sainik School PSS), Pokharan feeder and Shree Vihar feeder (C.s.pur-1 PSS) would be 3.02MVA, 2.72MVA and 6.14MVA respectively.
- Frequent tripping is observed in the 11kV feeders which result to frequent shutdowns affecting consumers in the urban area of the city.
  - Total 2298nos. consumers are connected to the 11kV Kelucharan Park feeder (Sainik School PSS). The no. of 11kV feeder tripping in FY'26 was 67nos. and 27nos. from April'26 till July'26.
  - Total 1251nos. consumers are connected to the 11kV Pokhran feeder (C.s.pur-1 PSS). The no. of 11kV feeder tripping in FY'26 was 77nos. and 50nos. from April'26 till July'26.
  - Total 3236nos. consumers are connected to the 11kV Shree Vihar feeder (C.s.pur-1 PSS). The no. of 11kV feeder tripping in FY'26 was 23nos. and 14nos. from April'26 till July'26.
- Further, the 11kV Shree Vihar feeder (C.s.pur-1) will be overloaded up to 118%, w.r.t the current carrying capacity of the conductor with 2years load growth (15% load growth per year) in Summer'28.



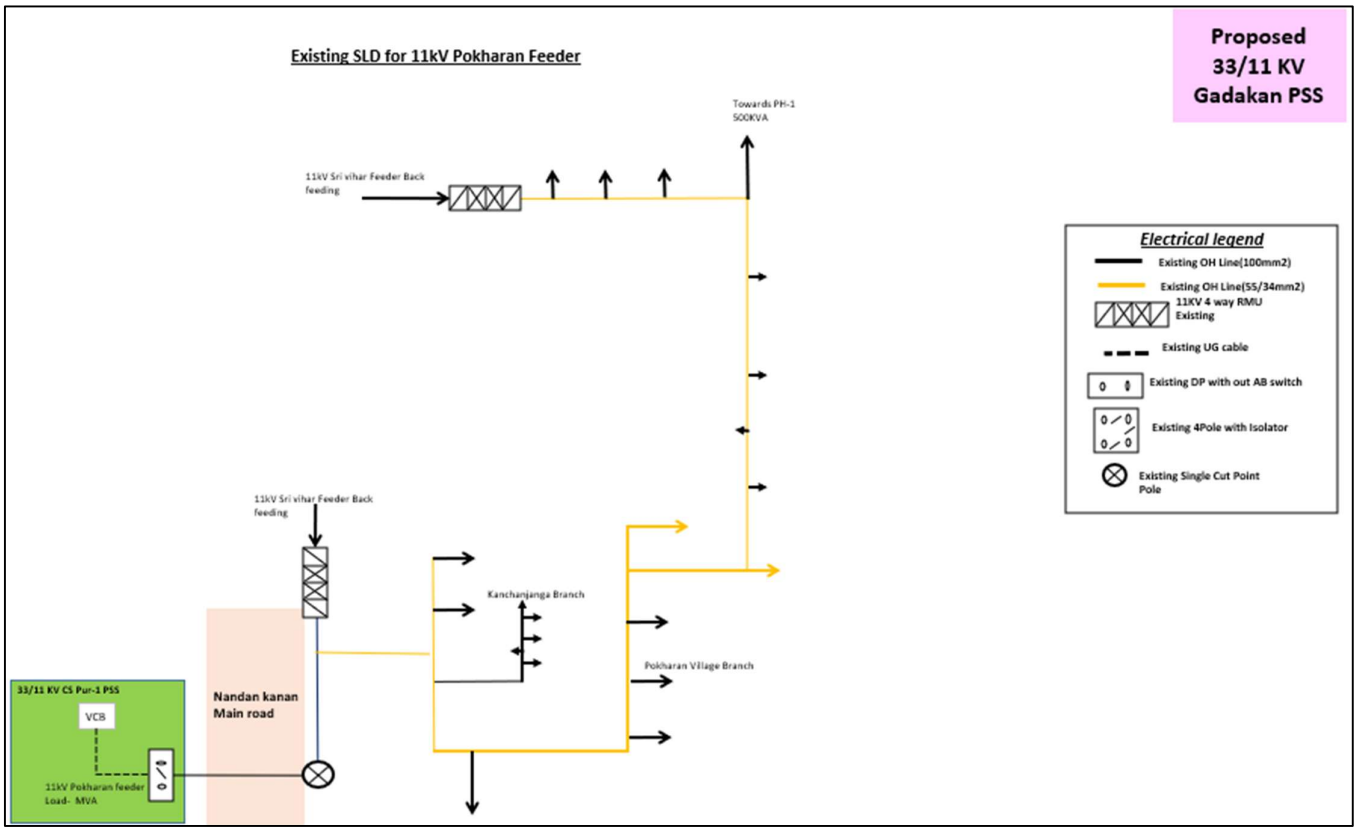
Existing Summer'26 Loading and projected load:

Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
Sainik School	Kelucharan Park	5.18	2.29	44%	3.02	58%

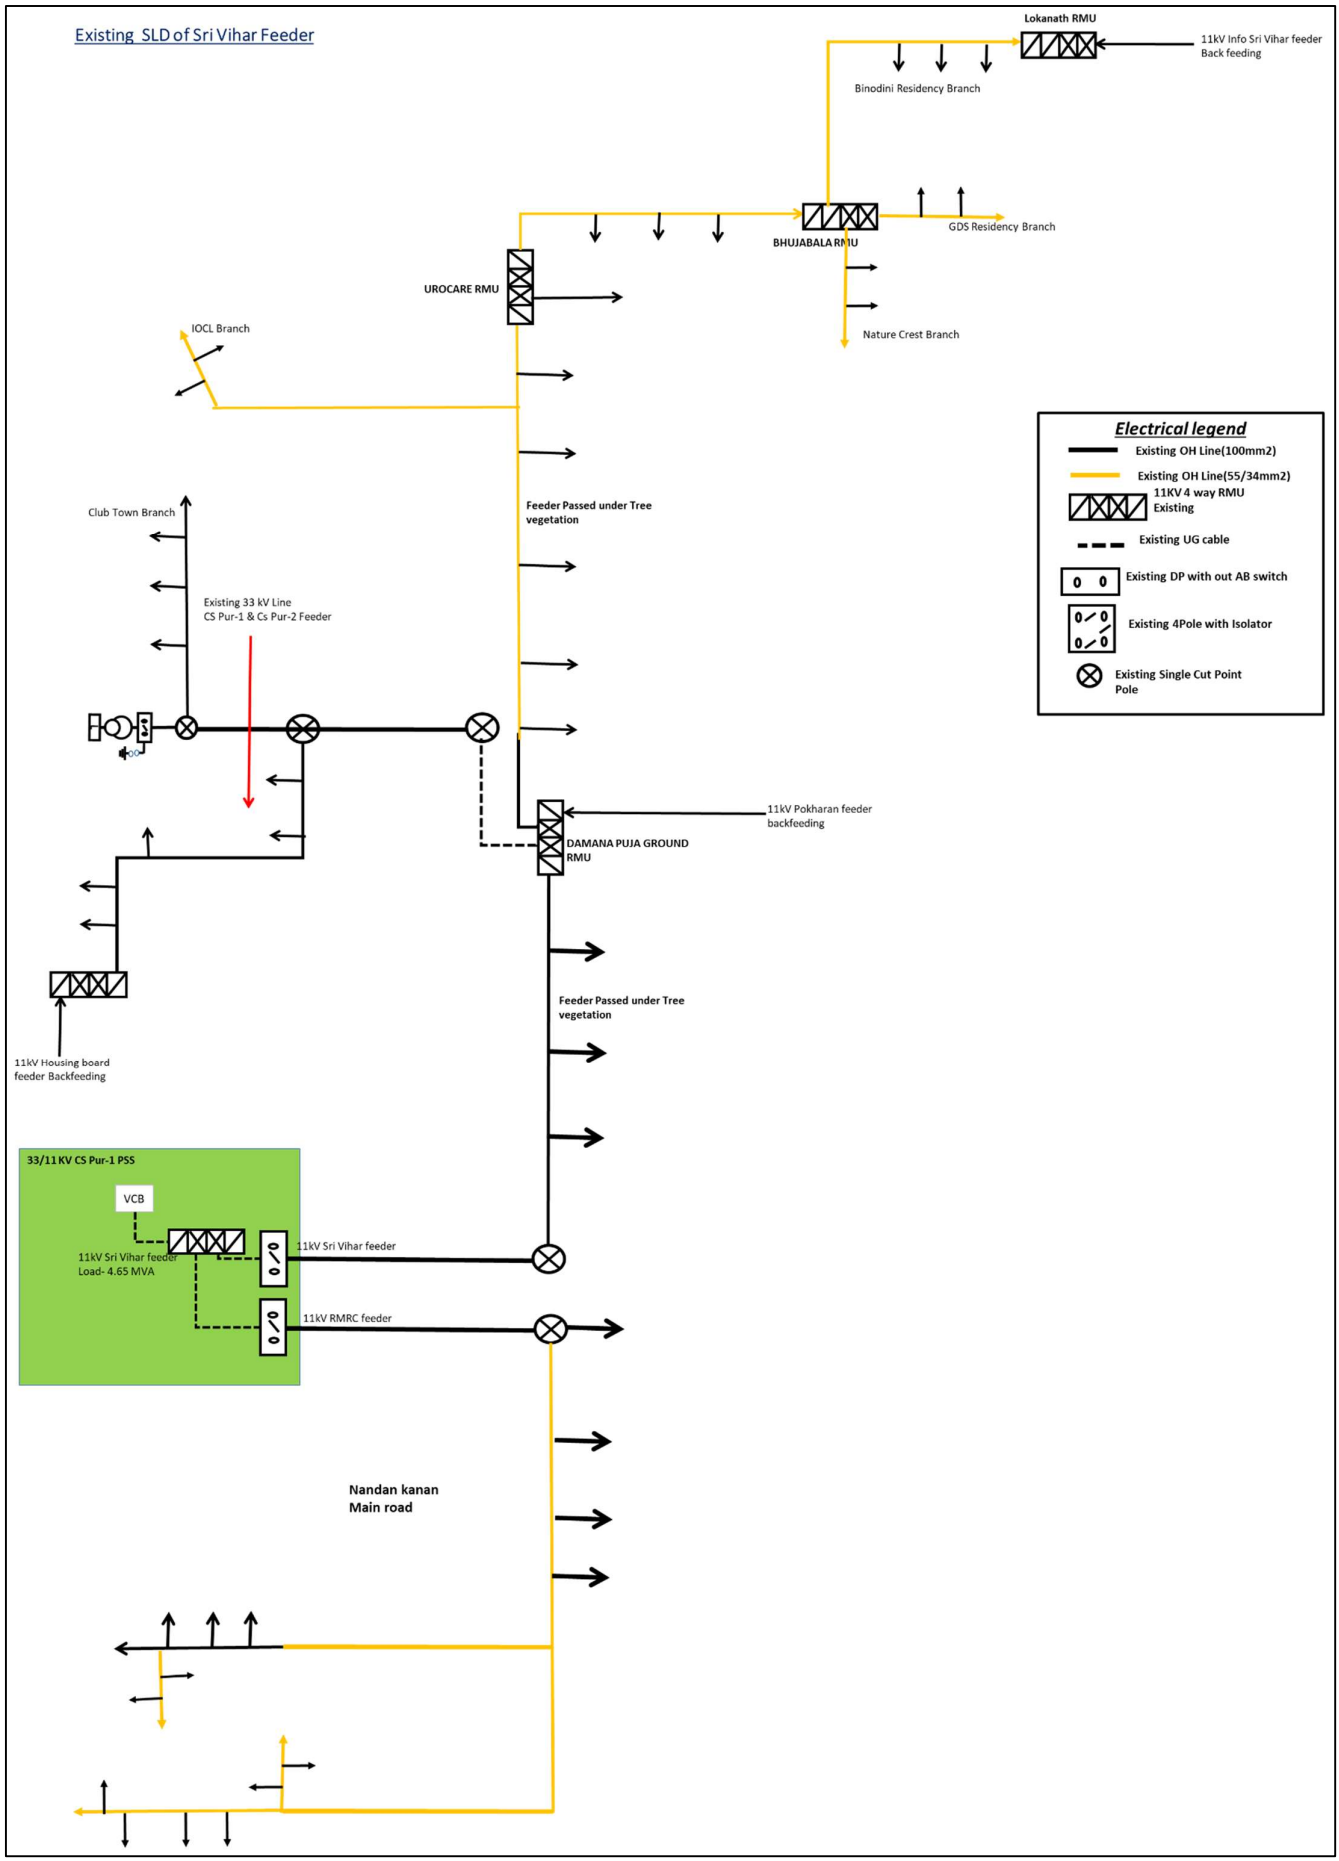


Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
C.s.pur-1	Pokharan	4.51	2.06	46%	2.72	60%

Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
C.s.pur-1	Shree Vihar	5.18	4.64	90%	6.14	118%



Existing Scenario (Gadakana area):



Existing SLD of 11kV Kelucharan Park feeder (Sainik School PSS):

Existing SLD of 11kV Pokharan feeder (C.s.pur-1 PSS):

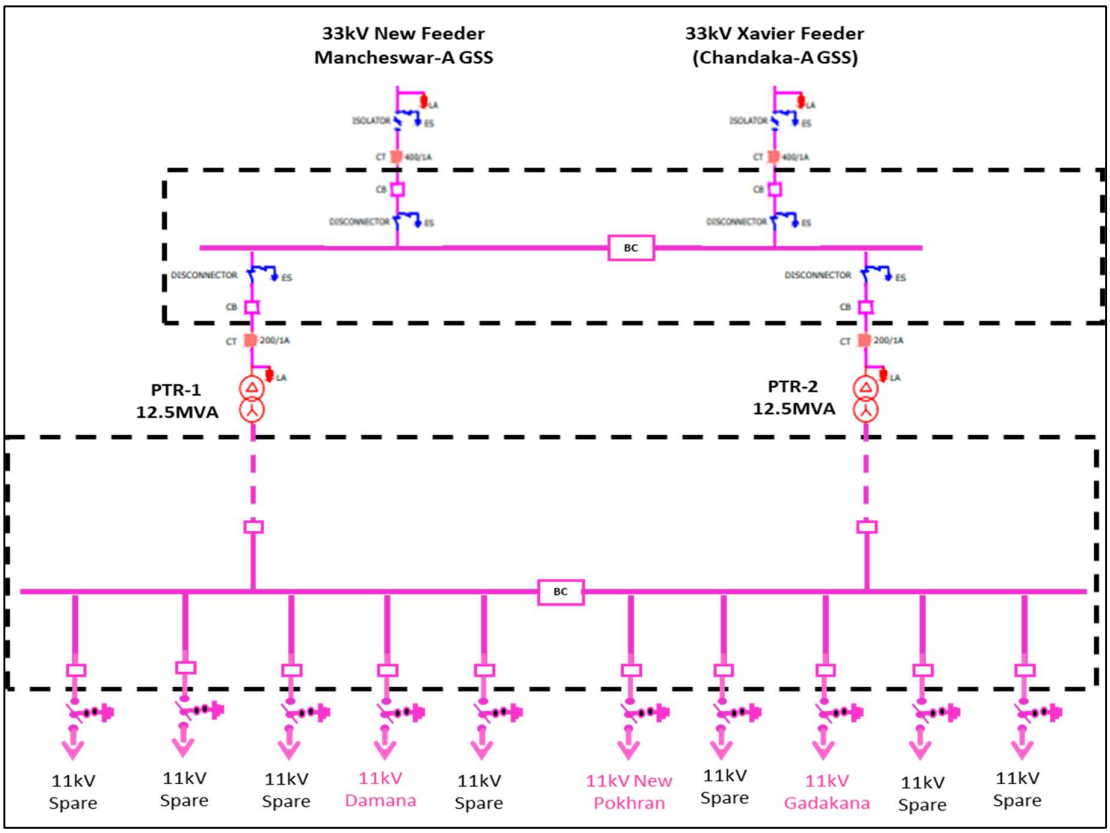
Existing SLD of 11kV Shree Vihar feeder (C.s.pur-1 PSS):

Priority and Timeline of the Project:

Priority: The existing 11kV feeders supplying the Gadakana area are experiencing substantial load growth, with feeder loading levels steadily approaching the current carrying capacity of the conductors. The feeders have already been constructed with optimum standard conductor sizes and any further augmentation of conductor capacity is neither technically practical nor financially viable. Construction of new 11kV feeders from the existing 33/11kV Primary Substations (PSS) would require significant capital investment and extensive network development, making the option economically less feasible. As a result, the existing network is increasingly stressed and vulnerable to reliability issues. Further, the PSS is proposed to address the frequent tripping of the 11kV feeders.

Further, approximately 4MVA of load has been released in the area during the last two years, and several additional loads are expected to be connected in the near future. The anticipated increase in demand will further aggravate feeder loading and network constraints. In the absence of suitable reliability enhancement measures and network strengthening initiatives, consumers connected to these feeders will continue to experience frequent and prolonged power supply interruptions. Therefore, implementation of an appropriate network reliability improvement scheme is essential to ensure reliable and uninterrupted power supply, accommodate future load growth, and enhance the overall operational performance of the distribution system in the Gadakana area.

Technical Justification



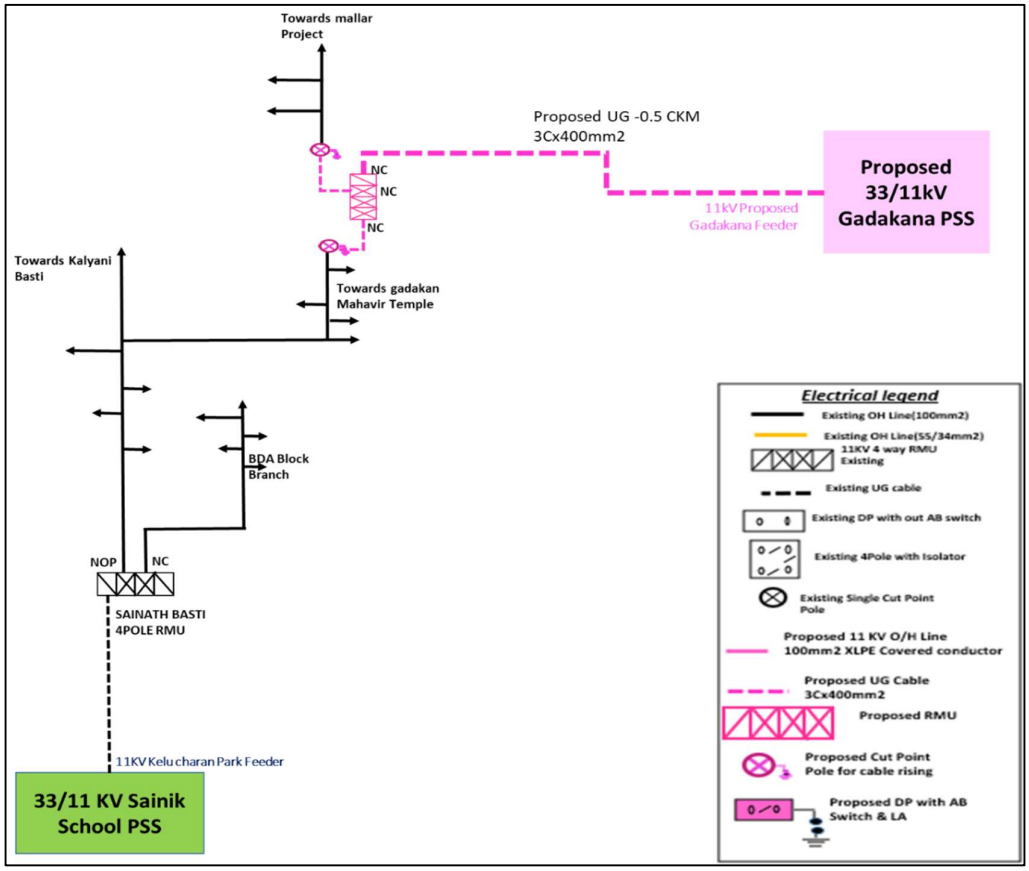
The existing 11kV feeders supplying the Gadakana area are experiencing sustained and significant load growth due to rapid urbanization and the continuous addition of consumers. Continued growth in demand is resulting in higher feeder loading, increased voltage drops, elevated technical losses and reduced operational margins, thereby adversely affecting network reliability and power quality. Although construction of additional 11kV feeders from the existing 33/11kV Primary Substations could partially address the loading issue, such an approach would require extensive underground cabling due to right-of-way constraints and the densely developed urban environment, involving substantial capital expenditure and the creation of long feeder corridors. Moreover, repeated feeder extensions and load bifurcation measures would provide only a short-term solution and would not adequately address the long-term load growth requirements of the area. In view of the existing network constraints, recurring feeder overloading and anticipated demand growth, the current distribution system is becoming increasingly stressed and vulnerable to frequent interruptions, making the establishment of a dedicated load centre through a new 33/11kV Primary Substation the most viable solution for ensuring reliable power supply and future network scalability in the Gadakana area.

Proposed Scenario:

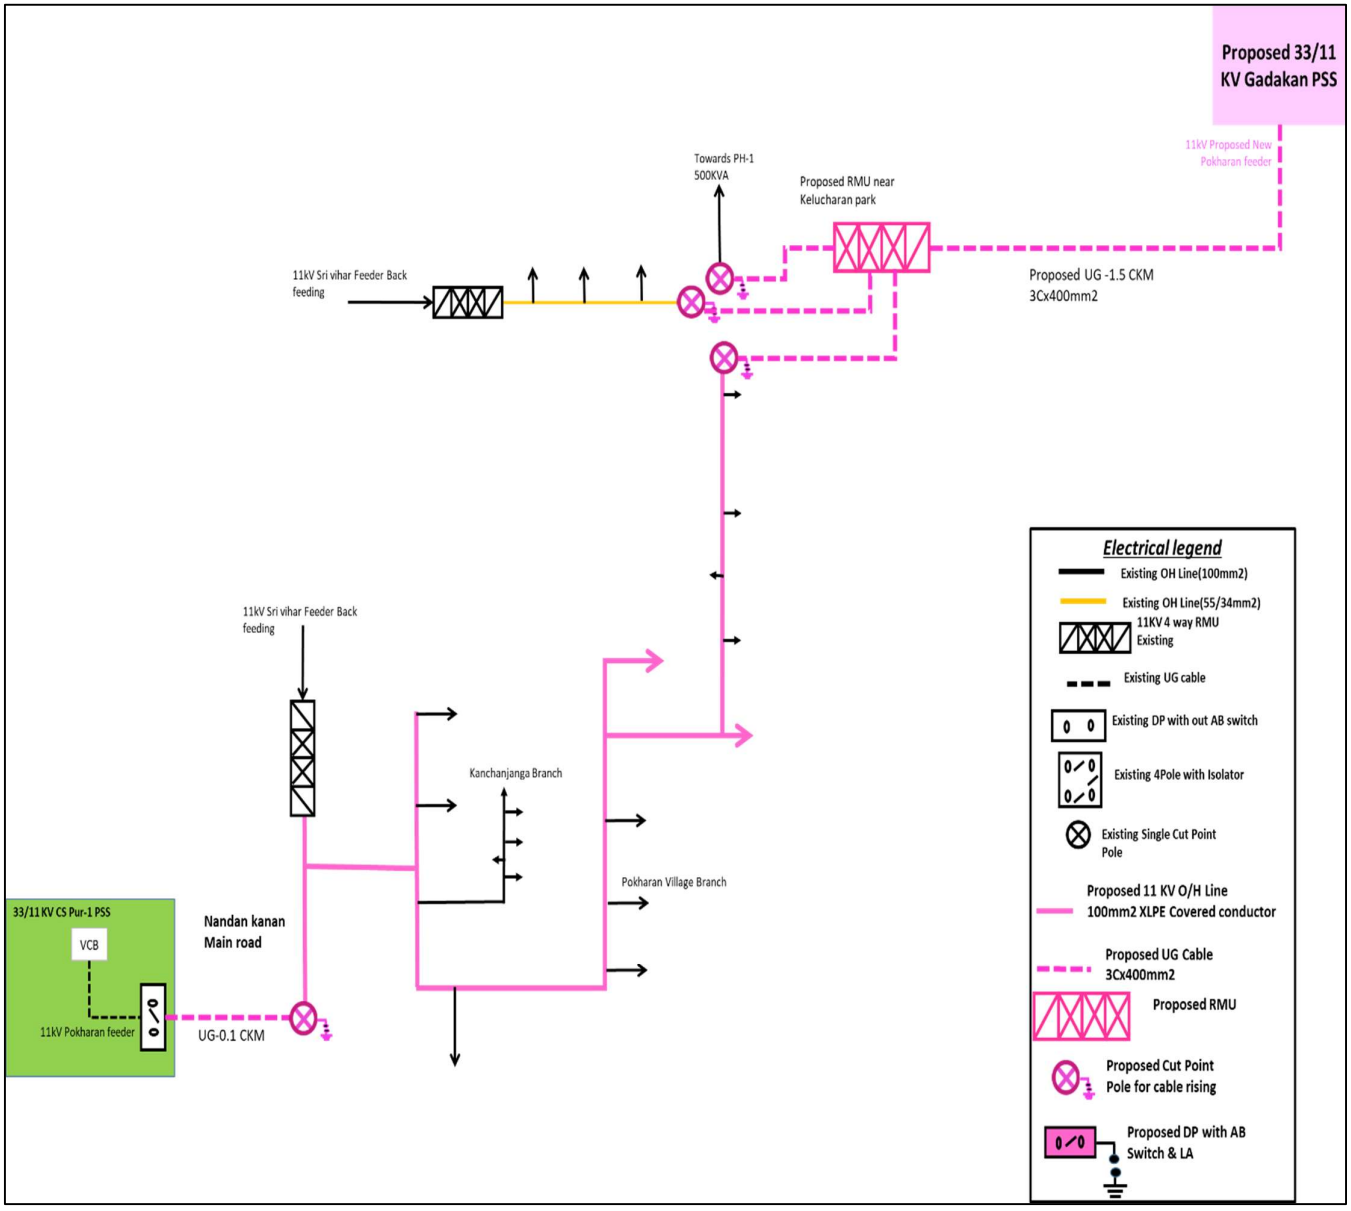
To address the growing load demand, improve network reliability and reduce frequent feeder interruptions in the Gadakana area, following works are proposed:

- Construction of 1no. 33/11kV primary substation at Gadakana and laying of 3.5Ckm 33kV 3C, 400sqmm underground cable from Mancheswar-A to proposed 33/11kV Gadakana PSS and tapping at 33kV Xavier feeder to proposed 33/11kV Gadakana PSS.
- Laying of 0.5Ckm 11kV UG cable from Proposed Gadakana PSS to linking with 11kV Kelucharan Park feeder.
- Laying of 0.95Ckm 11kV UG cable from Proposed Gadakana PSS to Kelucharan Park for linking with Pokhran feeder along with augmentation of 11kV Pokharan feeder of length 2Ckm.
- Laying of 1.5Ckm 11kV UG cable from Proposed Gadakana PSS to Damana Square for linking of Shree Vihar feeder along with augmentation of 11kV Shree Vihar feeder of length 4Ckm and 11kV Info-Shree Vihar feeder of length 1.5Ckm.
- Installation of 2nos. 12.5MVA Power Transformers (PTRs) at the proposed Gadakana PSS through swapping from 33/11kV Unit-8 PSS and 33/11kV Badagada PSS. The transformers are proposed to be made available following the PTR augmentation works planned under CAPEX FY 2027-28 at the respective substations.
- This PSS will cater 12MVA load out of which 4MVA is upcoming load and 8MVA load diversion from the existing 11kV nearby feeders of different PSS (C.s.pur-1 PSS, Sainik School PSS).
- The proposal will facilitate load bifurcation from the heavily loaded existing feeders, cater to the load growth of the area, improve voltage profile, reduce feeder trippings and outage duration and enhance the overall reliability and quality of power supply for existing as well as upcoming consumers.

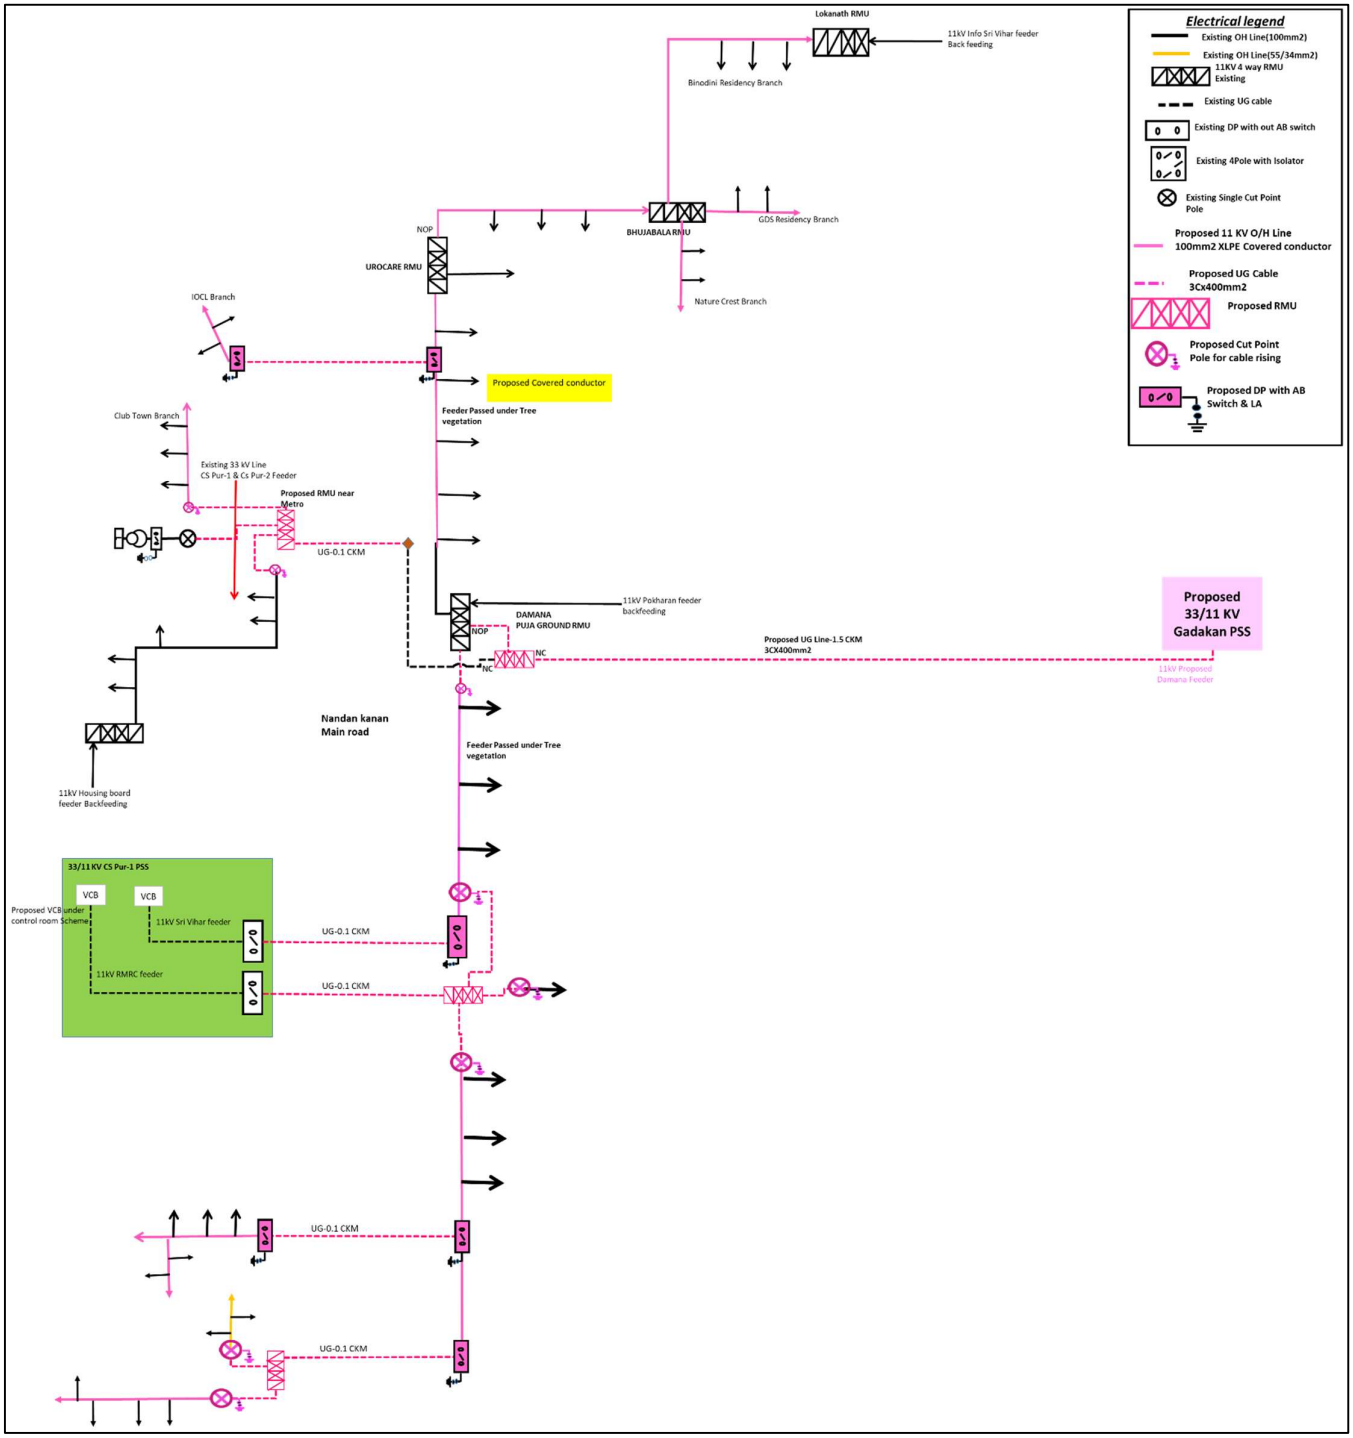
Proposed SLD of Proposed Gadakana 33/11kV PSS:



Existing 11kV feeder load diversion to New PSS (2X12.5MVA at Gadakana):



Name of the PSS	11 kV Feeder Name	Feeder Capacity (MVA)	Summer-28 Loading without Proposal	% Loading of feeder	Summer-28 loading after execution of proposals	% Loading in Summer-28
Sainik School	Kelucharan Park	5.18	3.02	58%	1.02	20%
Gadakana	Proposed Gadakana	5.18	_	_	2.00	39%



Name of the PSS	11 kV Feeder Name	Feeder Capacity (MVA)	Summer-28 Loading without Proposal	% Loading of feeder	Summer-28 loading after execution of proposals	% Loading in Summer-28
C.s.pur-1	Pokharan	5.18	2.72	53%	0.72	14%
Gadakana	Proposed New Pokharan	5.18	_	_	2.00	39%

Name of the PSS	11 kV Feeder Name	Feeder Capacity (MVA)	Summer-28 Loading without Proposal	% Loading of feeder	Summer-28 loading after execution of proposals	% Loading in Summer-28
C.s.pur-1	Shree Vihar	5.18	6.14	118%	2.14	41%
Gadakana	Proposed Damana	5.18	_	_	4.00	77%

Name of the Division :-	BCDD-2
Name of the Sub-Division : -	Nayapalli
Name of the Section : -	VSS Nagar
Name of the Work :-	1- Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS (Existing PTR of Unit-8 -12.5 MVA and Badagada- 12.5 MVA will be shifted to Gadakana PSS) along with Laying of 3.5km 33kV feeder with 3C, 400sqmm U/G Cable. 2- Laying of 11kV UG cable of length 0.5 CKM from Gadakan PSS to linking with 11kV kelucharan Park feeder long with installation of 1no. of RMU in Kelucharan park feeder. 3- Laying of 11kV UG cable of length0.85 CKM from Gadakan PSS to Kelucharan Park. Laying of 0.1 KM UG cable for road crossing in 11kV pokharan feeder along with installation of 1no. of RMU near Kelucharan park. Augmentation of 11kV Pokharan feeder of length 2Ckm 4- Laying of 11kV UG cable of length-0.7Ckm using 3Cx400sqmm XLPE UG cable for road crossing of 11kV Sri Vihar feeder. Laying of 1.5Ckm UG cable from Proposed Gadakan PSS to Damana Square along with installation of 4 Nos. of RMU near CS Pur-1 PSS, RMRC Chowk, near Metro Homes & Damana Square.
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)
Abstract of Estimate	
Description	**Total**

PART A:- Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS. PART B :- Supply & laying of 0.4 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders. PART- C :- Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS. PART- D :- Construction of 5 no. of 11 kV DP with Isolator and Earth Switch at PSS. PART E: Dismantling portion PART- F :- 1. Supply and Laying of 3.5 KM 33kV 3C, 400sqmm U/G Cable for Gadakana PSS. 2. Supply and Installation of 1 No. of 33 kV 4 Way RMU (LLVV+Aux. PT)	11,28,31,237.49
1. laying of 11kV UG cable of length 0.5 CKM from Gadakan PSS to linking with 11kV kelucharan Park feeder. 2. Installation of 1no. of RMU in Kelucharan park feeder.	51,94,221.51
1. Laying of 11kV UG cable of length0.85 CKM from Gadakan PSS to Kelucharan Park. 2. Laying of 0.1km UG cable for road crossing in 11kV pokharan feeder. 3. Installation of 1no. of RMU near Kelucharan park. 4. Augmentation of 11kV Pokharan feeder of length 2Ckm	1,25,40,261.10
1. Laying of 11kV UG cable of length-0.7 CKM using 3Cx400mm2 XLPE UG cable for road crossing of 11kV Sri Vihar feeder. 2. Laying of 11kV 1.5 CKM UG cable from Proposed Gadakan PSS to Damana Square. 3. Installation of 4 Nos. of RMU near CS Pur-1 PSS, RMRC Chowk, near Metro Homes & Damana Square. 4. Augmentation of 11kV Srivihar feeder Branch Line of length 4 CKM (1.6 CKM for Sri Vihar & 2.4 CKM for RMRC Branch Line) (Refer Proposed SLD) 5. Augmentation of backfeeding 11kV Info Srivihar feeder of length 1.5Ckm (Sri Vihar Branch, Nature Crest Breanch, GDS Residency Branch, Binodini Residency Branch)	3,23,10,943.46
Total Amount	**16,28,76,663.56**
Total Amount (in Cr.)	**₹ 16.29**
Total estimated cost is Rs. 16.29 Crore. (On TPCODL CAPEX Scheme)	

Cost Estimate: ₹ 16.29cr. (For detailed BoQ refer Annexure-14.1).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Enhanced network reliability and safety.

c) Compliance with load growth requirements.

d) Protection of electrical assets and personnel.

e) Maintain statutory voltage and quality standards.

Benefit to the System and Consumers:

- To improve reliability and quality of power supply.
- Create additional load centre with adequate transformation capacity to cater to the existing load, upcoming loads as well as future load growth in the area.
- To improve voltage profile.
- To improve operational flexibility and network redundancy.

2.0 New 33/11kV Primary Substation at Patharagadia to meet Network Reliability

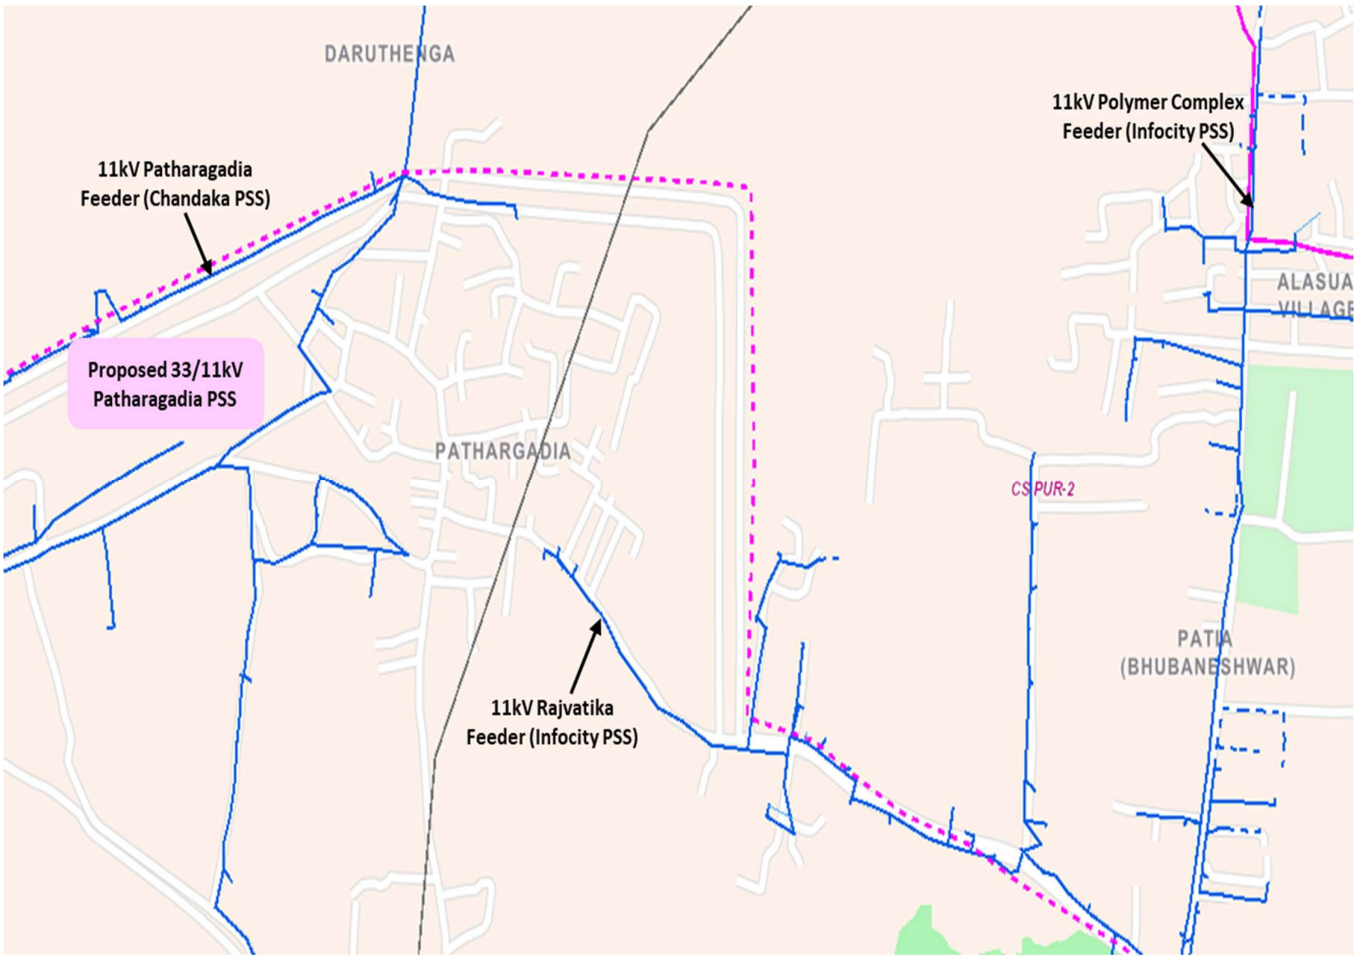
Proposal:

Construction of New 33/11kV Primary Substation at Patharagadia under BCDD-2 division of BBSR-1 circle for enhancement of network reliability.

Requirement/ Need of the Proposal:

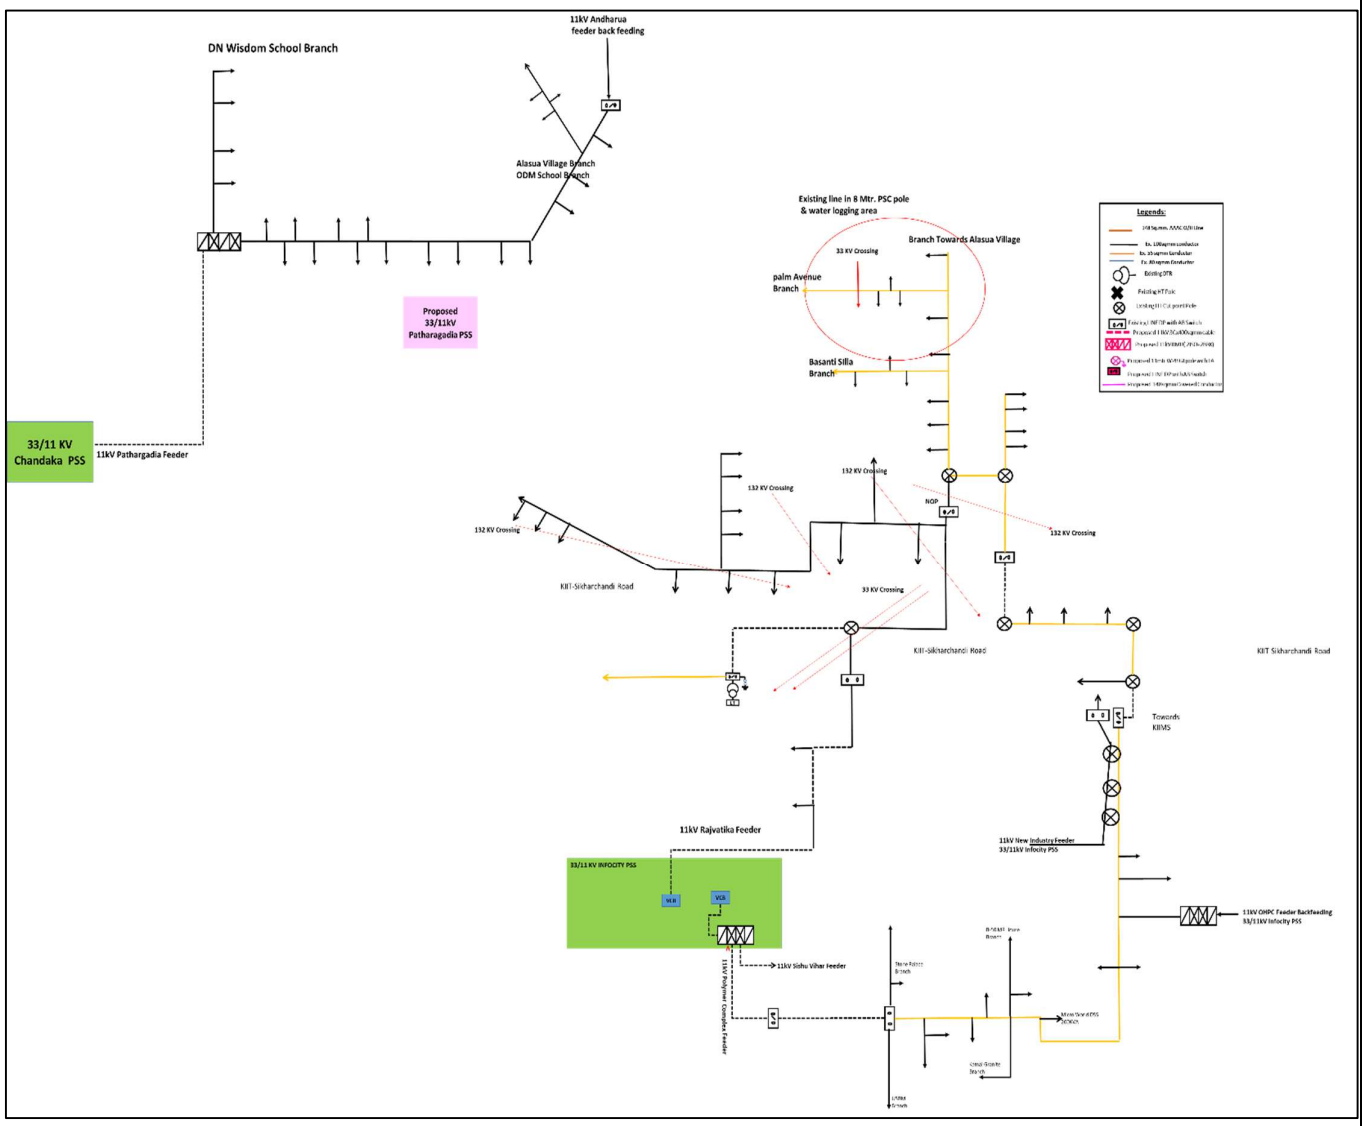
Existing Scenario:

- The Patharagadia area is a rapidly developing urban load centre witnessing significant and sustained growth in load demand. At present, the load in the area is catered through the 11kV Patharagadia feeder from Chandaka PSS and the 11kV Rajvatika and 11kV Polymer Complex feeders from Infocity PSS, all of which are experiencing increasing loading levels and frequent trippings, adversely affecting supply reliability. Further, approximately 3MVA of additional load is expected to be connected in the near future. Considering the dense urban development, limited right-of-way availability and the presence of existing utility infrastructure on both sides of the roads, construction of new 11kV feeders from existing substations would require extensive underground cabling involving substantial capital expenditure, increased feeder lengths, higher technical losses and repeated future investments for load bifurcation and construction of new 11kV feeders. In this context, the construction of a new 33/11kV Patharagadia Primary Substation (PSS) at the load centre along with associated network strengthening works is the most viable proposal.
- Loading of 11kV Patharagadia feeder (Chandaka PSS), 11kV Rajvatika feeder and 11kV Polymer Complex feeder (Infocity PSS) are 4.0MVA, 2.78MVA and 4.19MVA respectively at peak load condition of Summer'26. Considering load growth for 2years (15% load growth per year for 2years), the projected loading of Summer'28 for 11kV Patharagadia feeder (Chandaka PSS), 11kV Rajvatika feeder and 11kV Polymer Complex feeder (Infocity PSS) would be 5.29MVA, 3.68MVA and 5.54MVA respectively.
- Frequent tripping is observed in the 11kV feeders which result to frequent shutdowns affecting consumers in the urban area of the city.
  - Total 2625nos. consumers are connected to the 11kV Patharagadia feeder (Chandaka PSS). The no. of 11kV feeder tripping in FY'26 was 370nos. and 153nos. from April'26 till July'26.
  - Total 444nos. consumers are connected to the 11kV Rajvatika feeder (Infocity PSS). The no. of 11kV feeder tripping in FY'26 was 93nos. and 57nos. from April'26 till July'26.
  - Total 1360nos. consumers are connected to the 11kV Polymer Complex feeder (Infocity PSS). The no. of 11kV feeder tripping in FY'26 was 245nos. and 28nos. from April'26 till July'26.
- Further, the 11kV Patharagadia feeder (Chandaka PSS), 11kV Rajvatika feeder and 11kV Polymer Complex feeder (Infocity PSS) will be overloaded up to 102%, 104% and 123% respectively, w.r.t the current carrying capacity of the conductor with 2years load growth (15% load growth per year) in Summer'28.



Existing Summer'26 Loading and projected load:

Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
Chandaka	Patharagadia	5.18	4	77%	5.29	102%



Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
Infocity	Rajvatika	3.54	2.78	78%	3.68	104%

Name of the PSS	11kV Feeder Name	Feeder Capacity (MVA)	Peak Loading Summer'26 (MVA)	% Loading	Projected load Summer'28 (MVA)	% Loading
Infocity	Polymer Complex	4.51	4.19	93%	5.54	123%

Existing Scenario (Patharagadia area):

Existing SLD of 11kV Patharagadia feeder (Chandaka PSS), 11kV Rajvatika feeder and 11kV Polymer Complex feeder (Infocity PSS):

Priority and Timeline of the Project:

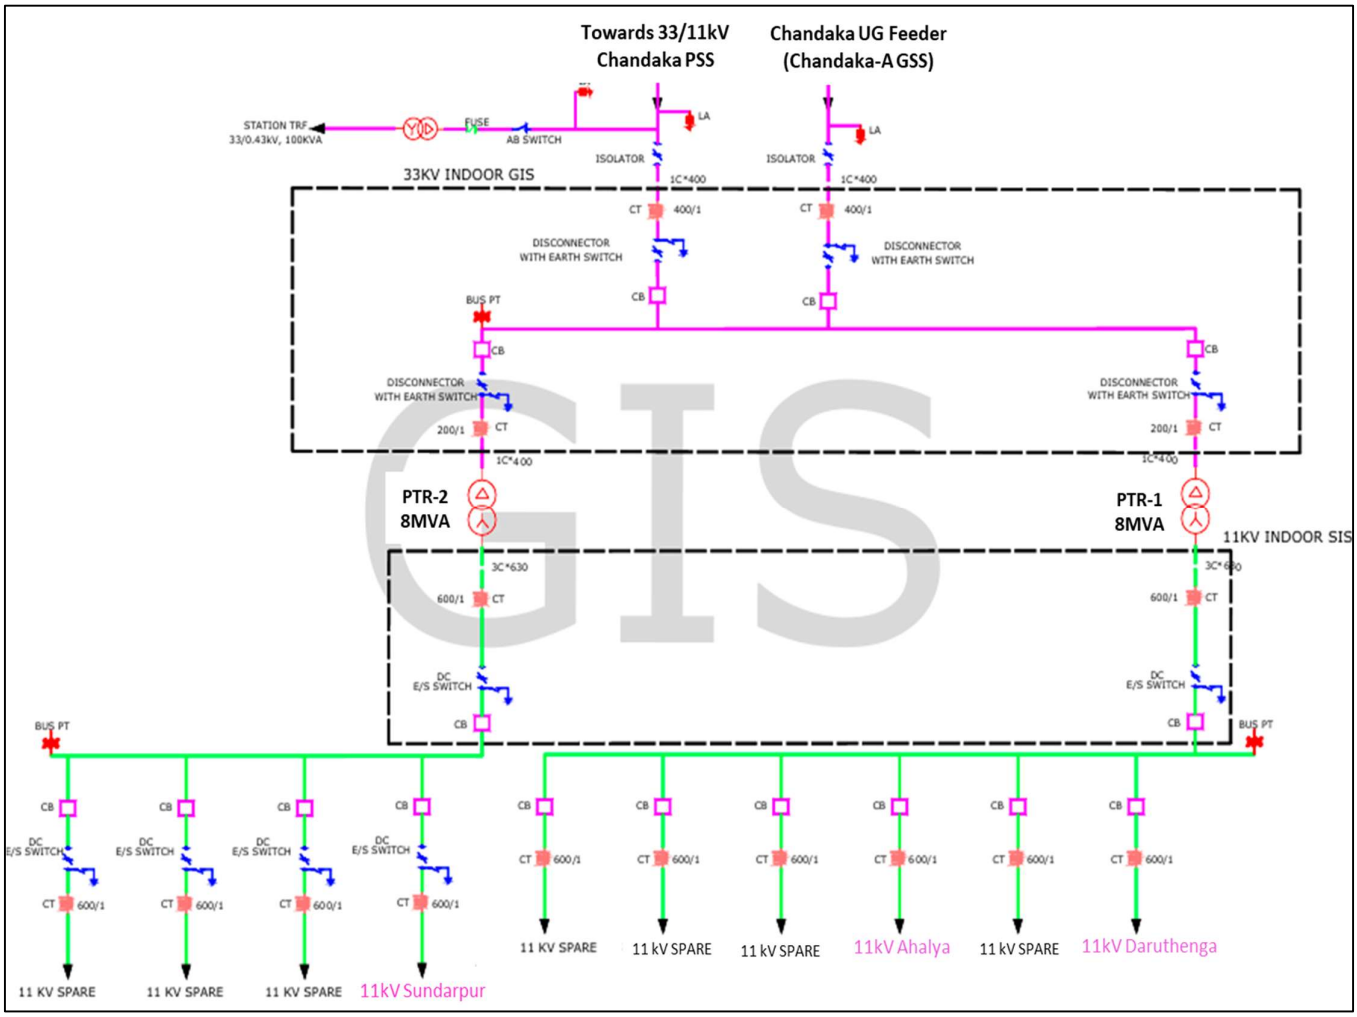
Priority: The existing 11kV feeders supplying the Patharagadia area are experiencing substantial load growth, with feeder loading levels steadily approaching the current carrying capacity of the conductors. The feeders have already been constructed with optimum standard conductor sizes and any further augmentation of conductor capacity is neither technically practical nor financially viable. Construction of new 11kV feeders from the existing 33/11kV Primary Substations (PSS) would require significant capital investment and extensive network development, making the option economically less feasible. As a result, the existing network is increasingly stressed and vulnerable to reliability issues. Further, the PSS is proposed to address the frequent tripping of the 11kV feeders.

Further, approximately 3MVA of load has been released in the area during the last two years, and several additional loads are expected to be connected in the near future. The anticipated increase in demand will further aggravate feeder loading and network constraints. In the absence of suitable reliability enhancement measures and network strengthening initiatives, consumers connected to these feeders will continue to

experience frequent and prolonged power supply interruptions. Therefore, implementation of an appropriate network reliability improvement scheme is essential to ensure reliable and uninterrupted power supply, accommodate future load growth, and enhance the overall operational performance of the distribution system in the Patharagadia area.

Technical Justification

The existing 11kV feeders supplying the Patharagadia area are experiencing sustained and significant load growth due to rapid urbanization and the continuous addition of consumers. Continued growth in demand is resulting in higher feeder loading, increased voltage drops, elevated technical losses and reduced operational margins, thereby adversely affecting network reliability and power quality. Although construction of additional 11kV feeders from the existing 33/11kV Primary Substations could partially address the loading issue, such an approach would require extensive underground cabling due to right-of-way constraints and the densely developed urban environment, involving substantial capital expenditure and the creation of long feeder corridors. Moreover, repeated feeder extensions and load bifurcation measures would provide only a short-term solution and would not adequately address the long-term load growth requirements of the area. In view of the existing network constraints, recurring feeder overloading and anticipated demand growth, the current distribution system is becoming increasingly stressed and vulnerable to frequent interruptions, making the establishment of a dedicated load center through a new 33/11kV Primary Substation the most viable solution for ensuring reliable power supply and future network scalability in the Patharagadia area.



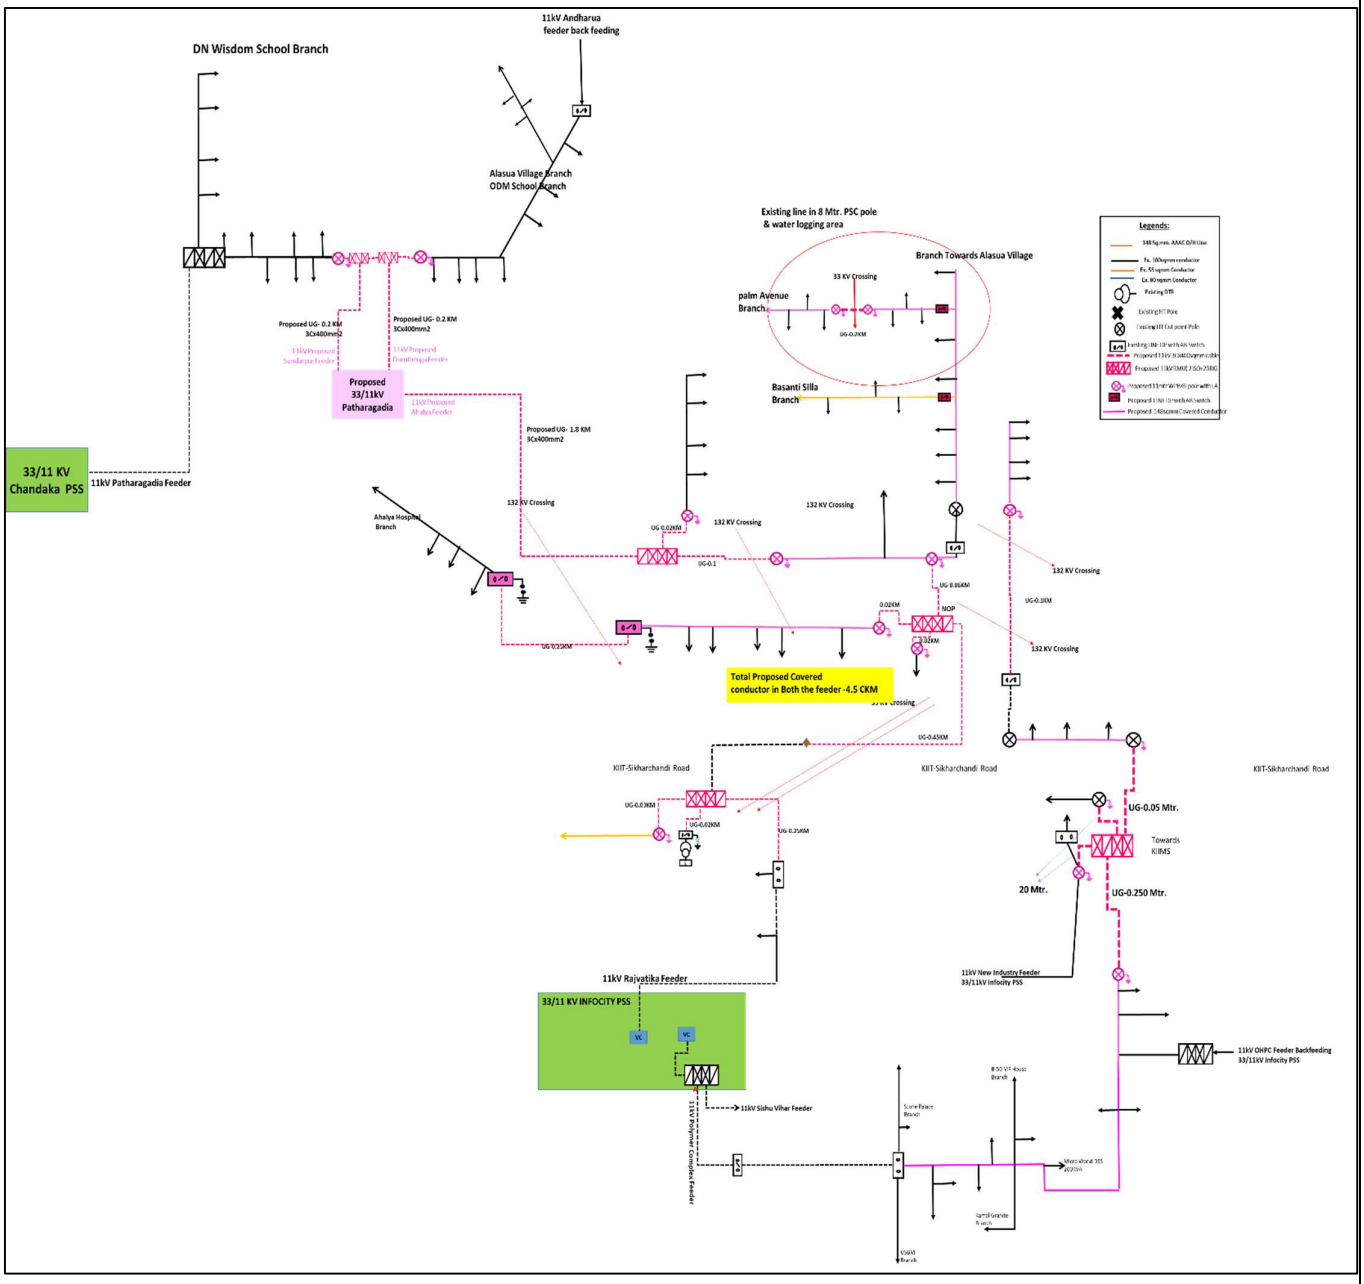
Proposed Scenario:

To address the growing load demand, improve network reliability and reduce frequent feeder interruptions in the Patharagadia area, following works are proposed:

- Construction of 1no. 33/11kV primary substation at Patharagadia and laying of 0.6Ckm 33kV 3C, 400sqmm underground cable for LILO of 33kV Chandaka UG feeder (Chandaka-A GSS) to proposed 33/11kV Patharagadia PSS.
- Laying of 4km UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia feeder for load diversion along with installation of 4 nos. of LVVV RMU & 2nos. of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder.
- Augmentation of 11kV Rajvatika & Polymer Complex feeder of length 4.5Ckm.
- Installation of E-House from 33/11kV Mulapadia substation.
- Installation of 2nos. 8MVA Power Transformers (PTRs) at the proposed Patharagadia PSS through swapping from 33/11kV Samanga PSS and 33/11kV Balugaon PSS. The transformers are proposed to be made available following the PTR augmentation works planned under CAPEX FY 2027-28 at the respective substations.
- This PSS will cater 7.5MVA load out of which 3MVA is upcoming load and 4.5MVA load diversion from the existing 11kV nearby feeders of different PSS (Chandaka PSS, Infocity PSS).

- The proposal will facilitate load bifurcation from the heavily loaded existing feeders, cater to the load growth of the area, improve voltage profile, reduce feeder trippings and outage duration and enhance the overall reliability and quality of power supply for existing as well as upcoming consumers.

Proposed SLD of Proposed Patharagadia 33/11kV PSS:



Existing 11kV feeder load diversion to New PSS (2X8MVA at Patharagadia):

Name of the PSS	11 kV Feeder Name	Feeder Capacity (MVA)	Summer-28 Loading without Proposal	% Loading of feeder	Summer-28 loading after execution of proposals	% Loading in Summer-28

Name of the Circle :-	BBSR-1
Name of the Division :-	BCDD-2
Name of the Sub-Division : -	Periphery
Name of the Section : -	CS Pur-2 & Baranga
Name of the Work :-	1- Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS (Existing PTR of Samanga -8 MVA and Balugaon- 8 MVA will be shifted to Patharagadia PSS) along with laying of 0.6km 33kV 3C, 400sqmm U/G Cable. 2- Laying of 4 KM UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia feeder for load diversion along with installation of 4 nos. of LVVV RMU & 2nos. Of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder. Augmentation of 11kV Rajvatika & Polymer Complex feeder of length 4.5Ckm
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)

Abstract of Estimate

Description	**Total**
PART A:- Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS. PART B:- Supply & laying of 0.4 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders. PART- C :- Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS. PART- D :- Construction of 5 no. of 11 kV DP with Isolator and Earth Switch at PSS. PART E: Dismantling portion PART- F :- Supply and Laying of 0.6 KM 33kV 3C, 400sqmm U/G Cable for Patharagadia PSS.	4,49,38,804.67

1. laying of 4 KM UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia Feeder for load diversion. 2. Installation of 4 nos. of LVVV RMU & 2nos. Of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder. 3. Augmentation of 11kV Rajvatika & Polymer Complex feeder of length 4.5Ckm	4,52,20,287.62
Total Amount	**₹ 9,01,59,092.30**
Total Amount (in Cr.)	**₹ 9.02**
Total estimated cost is Rs. 9.02 Crore. (On TPCODL CAPEX Scheme)	

Cost Estimate: ₹ 9.02cr. (For detailed BoQ refer Annexure-14.2).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Enhanced network reliability and safety.

c) Compliance with load growth requirements.

d) Protection of electrical assets and personnel.

e) Maintain statutory voltage and quality standards.

Benefit to the System and Consumers:

- To improve reliability and quality of power supply.
- Create additional load centre with adequate transformation capacity to cater to the existing load, upcoming loads as well as future load growth in the area.
- To improve voltage profile.
- To improve operational flexibility and network redundancy.

Name of the Circle :-	BBSR-1
Name of the Division :-	BCDD-2
Name of the Sub-Division : -	Nayapalli
Name of the Section : -	VSS Nagar
Name of the Work :-	1- Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS (Existing PTR of Unit-8 -12.5 MVA and Badagada- 12.5 MVA will be shifted to Gadakana PSS) along with Laying of 3.5km 33kV feeder with 3C, 400sqmm U/G Cable. 2- Laying of 11kV UG cable of length 0.5 CKM from Gadakan PSS to linking with 11kV kelucharan Park feeder long with installation of 1no. of RMU in Kelucharan park feeder. 3- Laying of 11kV UG cable of length0.85 CKM from Gadakan PSS to Kelucharan Park. Laying of 0.1 KM UG cable for road crossing in 11kV pokharan feeder along with installation of 1no. of RMU near Kelucharan park. Augmentation of 11kV Pokharan feeder of length 2Ckm 4- Laying of 11kV UG cable of length-0.7Ckm using 3Cx400sqmm XLPE UG cable for road crossing of 11kV Sri Vihar feeder. Laying of 1.5Ckm UG cable from Proposed Gadakan PSS to Damana Square along with installation of 4 Nos. of RMU near CS Pur-1 PSS, RMRC Chowk, near Metro Homes & Damana Square.
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)
Abstract of Estimate	
Description	**Total**
PART A:- Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS. PART B :- Supply & laying of 0.4 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders. PART- C :- Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS. PART- D :- Construction of 5 no. of 11 kV DP with Isolator and Earth Switch at PSS. PART E: Dismantling portion PART- F :- 1. Supply and Laying of 3.5 KM 33kV 3C, 400sqmm U/G Cable for Gadakana PSS. 2. Supply and Installation of 1 No. of 33 kV 4 Way RMU (LLVV+Aux. PT)	11,28,31,237.49
1. laying of 11kV UG cable of length 0.5 CKM from Gadakan PSS to linking with 11kV kelucharan Park feeder. 2. Installation of 1no. of RMU in Kelucharan park feeder.	51,94,221.51
1. Laying of 11kV UG cable of length0.85 CKM from Gadakan PSS to Kelucharan Park. 2. Laying of 0.1km UG cable for road crossing in 11kV pokharan feeder. 3. Installation of 1no. of RMU near Kelucharan park. 4. Augmentation of 11kV Pokharan feeder of length 2Ckm	1,25,40,261.10
1. Laying of 11kV UG cable of length-0.7 CKM using 3Cx400mm2 XLPE UG cable for road crossing of 11kV Sri Vihar feeder. 2. Laying of 11kV 1.5 CKM UG cable from Proposed Gadakan PSS to Damana Square. 3. Installation of 4 Nos. of RMU near CS Pur-1 PSS, RMRC Chowk, near Metro Homes & Damana Square. 4. Augmentation of 11kV Srivihar feeder Branch Line of length 4 CKM(1.6 CKM for Sri Vihar & 2.4 CKM for RMRC Branch Line)(Refer Proposed SLD) 5. Augmentation of backfeeding 11kV Info Srivihar feeder of length 1.5Ckm (Sri Vihar Branch,Nature Crest Breanch, GDS Residency Branch, Binodini Residency Branch)	3,23,10,943.46
Total Amount	**₹ 16,28,76,663.56**
Total Amount (in Cr.)	**₹ 16.29**
Total estimated cost is Rs. 16.29 Crore. (On TPCODL CAPEX Scheme)	

ANNEXURE -14.1

PART A:

Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Gadakana PSS

SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS (As per Technical Specification)					
Sl. No.	**DESCRIPTION OF ITEMS**	**UNIT**	**Quantity**	**Basic Unit price (In Rs.)**	**Total (In Rs.)**
1	**33 kV Indoor Switch Panel Board**				
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA	1.00	1,10,43,128.00	1,10,43,128.00
2	**Lightning Arrester**				-
2.1	Lightening arrester 33 kV, 10 kV, CL III. (with surge counter) For Transformers - Outdoor type	EA	9.00	13,781.00	1,24,029.00
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter For Transformers - Outdoor type	EA	6.00	1,960.16	11,760.96
3	**11 kV Indoor Switch Panel Board**				-
3.1	11kv 2000A VCB with 15 panel board Switchgear (2 incoming, 10 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA	1.00	1,16,19,630.00	1,16,19,630.00
4	**SCADA**		1.00		-
4.1	Pre-Wired RTU Panel	EA	1.00	2,72,297.17	2,72,297.17
4.2	Managed Layer2 Ethernet Switch (RTU Panel)	EA	2.00	1,43,000.00	2,86,000.00
4.3	Networking Accessories	Set	1.00	8,682.24	8,682.24
4.4	Signal Interface Panel (4G Modem cum Router)	EA	1.00	55,123.45	55,123.45
4.5	CMR with Mounting Base for Digital Inputs	EA	16.00	437.04	6,992.64
4.6	Interposing Relay for Digital Output	EA	8.00	437.04	3,496.32
4.7	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	200.00	150.01	30,002.00
4.8	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	50.00	184.93	9,246.50
4.9	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	50.00	200.18	10,009.00
4.10	4 C X 4 mm2 Copper cable for extension of CT & PT	M	60.00	161.23	9,673.80
4.11	2 C X 4 mm2 Cable for DC Power Supply	M	100.00	139.78	13,978.00
4.12	4P X 0.36 mm2, Armored Communication Cable for MFM	M	100.00	110.17	11,017.00
4.13	Armored CAT6 UTP Cable	M	100.00	73.97	7,397.00
4.14	Un-Armored CAT6 UTP Cable	M	200.00	33.35	6,670.00
4.15	Electronic Earthing and Earth Pit	Set	1.00	15,290.42	15,290.42
4.16	Multi Function Meter	EA	4.00	8,118.36	32,473.44
4.17	Industrial grade Serial Server	EA	1.00	50,591.61	50,591.61
5	**Transformer and Accessories**				-
6	12.5/16 MVA, 33/11kV Power Transformer DYn11 (Outdoor Installation) with Accessories including NIDS System	EA		1,92,15,911.00	-
7	100 KVA 33/0.433kV Energy efficient Station Transformer with HV & LV BOX	EA	1.00	5,00,997.00	5,00,997.00
6	**Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	Kg	20615.00	71.94	14,83,043.10
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	Kg	3600.00	71.94	2,58,984.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	1,300.00	52,000.00
7	**33, 11 and Station Trf Structure**				-
7.1	(125x70x5) mm GI joist 5Mtr (13.3kg / Mtr) (04 nos for one Power Transformer) for supporting of 33kV Cable & 11kV cable (Unit Wt=0.0665 MT) & 10 mm thick MS plate size 250X250 mm at the bottom of the RS Joist duly welded & the MS plate to be suitably grouted to the floor for the rigidity.	Kg	532.00	77.62	41,293.84

7.2	(100 x 50 x5) mm GI Channel (9.56kg / Mtr) (2Mtr - 06 nos for one Power Transformer) for supporting of 33kV & 11kV power Cable (Unit Wt=0.01912 MT)	Kg	229.44	77.62	17,809.13
7.3	GI Nuts & Bolts etc. for column and beam & Equipment Structures	Kg	500.00	90.00	45,000.00
7.4	High Density Polyethylene (HDPE) pipe 160 mm diameter.	M	10.00	613.86	6,138.60
7.5	LTDB for 100KVA, 33/0.433kV Station Transformer	EA	1.00	32,714.34	32,714.34
8	**33 and 11 kv Power and Control, XLPE cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	1,278.81	7,67,286.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	7,280.00	65,520.00
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	7,521.00	67,689.00
8.4	Supply of 33kV, 3Core, 95sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 9kA and SC rating of Armour in kA- 9kA) For Station Trf	M	50.00	1,757.00	87,850.00
8.5	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf	EA	2.00	2,060.00	4,120.00
8.6	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf (Touchproof)	EA	2.00	1,830.00	3,660.00
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	1,438.00	8,62,800.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,260.00	74,340.00
8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,518.00	76,662.00
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	200.00	126.69	25,338.00
9.2	7 Core x 2.5 mm^2	M	200.00	203.16	40,632.00
9.3	10 Core x 2.5 mm^2	M	200.00	273.73	54,746.00
9.4	12 Core x 2.5 mm^2	M	200.00	344.91	68,982.00
9.5	16 Core x 2.5 mm2	M	200.00	400.00	80,000.00
9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	200.00	147.00	29,400.00
10	**1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	50.00	805.08	40,254.00
10.2	XLPE 4 Core x 95 mm2	M	50.00	499.41	24,970.50
10.3	XLPE 4 Core x 35 mm2	M	50.00	268.02	13,401.00
10.4	XLPE 4 Core 16 mm2	M	50.00	125.29	6,264.50
10.5	XLPE 2 Core 16 mm2	M	50.00	62.53	3,126.50
11	**Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	Set	1.00	70,875.00	70,875.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	No	1.00	5,42,122.50	5,42,122.50
	Sub-Total for SUPPLY OF EQUIPMENT & MATERIALS (In Rs.)				**2,96,75,507.56**
ERECTION, TESTING & COMMISSIONING WORKS OF FOLLOWING EQUIPMENT (As per Technical Specification)					-
1	**Erection, Commissioning, Testing of 33kV Equipment for (INDOOR Sub-Station)**				-
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA	1.00	9,60,000.00	9,60,000.00
2	**Lightning Arrester**				-
2.1	30kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester (for 33kV Incoming Line, HT side of 2nos. Power Transformers and 33/0.433kV Station Transformer) - Outdoor Type with Surge Counter	EA	9.00	1,847.36	16,626.24
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter(For Transformers & Out Going Feeders) - Outdoor type	EA	6.00	1,350.00	8,100.00

3	**Erection, Commissioning, Testing of 11kV Equipment (Indoor Type)**				-
3.1	11kv 2000A VCB with 15 panel board Switchgear (2 incoming, 10 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA	1.00	11,55,000.00	11,55,000.00
4	**Erection, Commissioning, Testing of SCADA**				-
4.1	SCADA FOR Primary Substation	LUM	1.00	59,661.56	59,661.56
5	**Erection, Commissioning, Testing of Transformer and RMU**				-
5.1	12.5/16 MVA, 33/11kV Power Transformer (Outdoor Installation) with Accessories	EA	2.00	3,40,000.00	6,80,000.00
5.2	100 KVA 11/0.433kV Energy efficient Station Transformer along with HT & LT cable connection	EA	1.00	10,229.00	10,229.00
5.3	ITC RTCC UNIT DC 24-48V	EA	1.00	10,000.00	10,000.00
5.4	Services of FRTU Panel, Communication and Other Supplied System	EA	1.00	6,755.00	6,755.00
6	**Erection, Laying of Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	KM	3.50	43,660.00	1,52,810.00
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	KM	1.50	43,660.00	65,490.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	3,784.73	1,51,389.20
7	**Erection of System GI 33, 11 and Station Trf Structure**				-
7.1	(125x70x5) mm GI joist 5Mtr (13.3kg / Mtr) (04 nos for one Power Transformer) for supporting of 33kV Cable & 11kV cable (Unit Wt=0.0665 MT) & 10 mm thick MS plate size 250X250 mm at the bottom of the RS Joist duly welded & the MS plate to be suitably grouted to the floor for the rigidity.	Kg	532.00	13.50	7,182.00
7.2	(100 x 50 x6) mm GI Channel (9.56kg / Mtr) (2Mtr - 06 nos for one Power Transformer) for supporting of 33kV & 11kV power Cable (Unit Wt=0.01912 MT)	Kg	229.44	27.62	6,337.13
7.3	GI Nuts & Bolts etc. for column and beam & Equipment Structures	Kg	500.00	135.00	67,500.00
7.4	Supply & Erection of GI Pipe of dia. 150mm, Class-B	M	200.00	1,496.91	2,99,382.00
7.5	High Density Polyethylene (HDPE) pipe 160 mm diameter.	M	10.00	306.87	3,068.70
7.6	LTDB for 100KVA, 33/0.433kV Station Transformer along with all cable connection & fixing	EA	1.00	748.76	748.76
8	**Laying of 11kV 33 and 11 kv Power and Control cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	96.66	57,996.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	2,129.37	19,164.33
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	2,129.37	19,164.33
8.4	Laying, Commissioning & Testing of 33kV, 3Core, 1Run, 95sqmm, XLPE insulation (extruted type) UG cable with spare by open trench method.	M	50.00	100.17	5,008.50
8.5	Erection of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG cable kits	EA	2.00	1,944.33	3,888.66
8.6	Erection of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG cable kits	EA	2.00	1,944.33	3,888.66
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	96.66	57,996.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	2,129.37	19,164.34
8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	2,129.37	19,164.34
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.2	7 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.3	10 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.4	12 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.5	16 Core x 2.5 mm2	M	200.00	16.57	3,314.00

9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	200.00	47.87	9,574.00
10	**Laying of 1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	50.00	73.65	3,682.50
10.2	XLPE 4 Core x 95 mm2	M	50.00	47.87	2,393.50
10.3	XLPE 4 Core x 35 mm2	M	50.00	47.87	2,393.50
10.4	XLPE 4 Core 16 mm2	M	50.00	47.87	2,393.50
10.5	XLPE 2 Core 16 mm2	M	50.00	47.87	2,393.50
11	**Erection, Commissioning , Wiring & Testing of Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	EA	1.00	3,375.00	3,375.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	EA	1.00	4,050.00	4,050.00
12	**Erection, Commissioning , Wiring & Testing of Sub-station Lighting And Fire Fighting System**				-
12.1	SITC of 8way LDB with accessories	EA	1.00	9,898.28	9,898.28
12.2	SITC of Sub-Station Switchyard Lighting , Control Room Lighting (it includes supply of fixtures & Lamps (LED) with switch gear, GI Conduit etc.(Tentative qty. as 120Wx 4 sets and 100Wx6 sets out side the control room, 20 Watt CFL tube-10 sets inside control room. Control Room wiring to be done with Copper wires as per the requirement (Lighting fixtures are to be fixed rigidly on the Column at a suitable height with GI tubular pole so that the required lux as per the technical specification is maintained). Qty. of Lights shall be provided as per lux level calculations for both indoor & outdoor lighting	Lot	1.00	14,01,922.49	14,01,922.49
12.3	SITC of 1.5 Ton capacity Split Air Conditioning units with Remote control facility: Including supply of split Air conditioner 5 Star rated, voltage stabiliser, control boxes etc. for completing the A.C scheme. (As per specification) for control room.	No	1.00	89,707.51	89,707.51
12.4	SITC of 1400 mm sweep 250Volt A/C Celling Fan	No	3.00	3,128.69	9,386.07
12.5	SITC of 300 mm sweep 70W A/C Exhaust Fan (for Battery room and Toilet)	No	3.00	3,128.69	9,386.07
13	**Fire Detection Alarm System**				-
13.1	SITC of Main Fire ALARM Control Panel (Ul /FM /Ulc/Vds Approved),Intelligent Addressable Modular Fire Alarm Control Panel based on 32 bit microprocessors including the following as per specification.,A. Battery charger,B SMF Batteries for 72 Hrs. back-up,C Enclosure,D. min.240 character LCD display,(Other specification as mentioned),E. The panel should be modular,decentralized, with CPU /master control unit, loop cards, relay and interface card by means of duplicated electronics means hardware redundancy with full functionality.,,F. The panel must provide MODBUS/ RS485 port for integration with SCADA.G. The loop should be capable to have at least 50 elements / devices.,	EA	1.00	2,22,643.20	2,22,643.20
13.2	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For ceiling (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	6.00	3,980.66	23,883.96
13.3	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For trench (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	2.00	4,078.95	8,157.90
13.4	SITC of Response Indicator (Twin LED transparent type)	EA	2.00	200.11	400.22
13.5	SITC of Addressable manual Call Point (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved)	EA	1.00	4,207.05	4,207.05
13.6	SITC of Electronic Hooter/Multi tone sounder (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved) Indoor type.	EA	1.00	4,078.72	4,078.72
13.7	SITC of 2 Core X 1.5 sq.mm copper conductor, armored, RED colour FRLS PVC sheathed signal Cable confirming to IS standards and specifications	M	150.00	1,080.50	1,62,075.72
13.8	SITC of Supply & erection of 4C*2.5sqmm copper armoured FRLS cable confirming to IS standard with accessories (Gland, lug, saddle, etc.)	M	15.00	176.67	2,650.11
13.9	SITC of Supply & erection of steel wire reinforced flexible conduct pipe (16MM) with all accessories.	M	15.00	141.10	2,116.50

13.10	SITC of Supply & erection of Surge Arrester.	EA	1.00	5,457.90	5,457.90
13.11	SITC of Lightning arrester Rod in Top of PSS Building along with all accessories	EA	1.00	1,800.00	1,800.00
14	**Fire Fighting System (portable and wheel mounted sets for control room)**				-
14.1	SITC of Foam type- 5 Ltrs	No	3.00	9,406.83	28,220.49
14.2	SITC of CO_2 - 4.5 Kgs	No	3.00	9,335.53	28,006.59
14.3	SITC of Dry powder 4.5 Kg	No	3.00	9,406.83	28,220.49
14.4	SITC of Fire Bucket with GI Stand with GI Canopy arrangement (4nos. in one Stand=1 Set)	Set	3.00	4,202.27	12,606.81
15	**AC & DC System for Auxiliary supply**				-
15.1	**AC System**				-
15.2	SITC of ACDB as per specification	Lot	1.00	5,04,000.00	5,04,000.00
15.3	SITC of Main Lighting Distribution Board (as per specification)	Lot	1.00	7,86,076.16	7,86,076.16
15.4	SITC of Indoor Lighting Distribution Board as per specification	Lot	1.00	1,26,921.17	1,26,921.17
15.5	SITC of Receptable Panel near Power Transformer	No	1.00	1,37,772.32	1,37,772.32
16	**DC System**				-
16.1	SITC of 48 V DC Distribution Board as per specification .	No	1.00	85,200.00	85,200.00
16.2	SITC of Water Cooler with water purifier system as per Technical Specification	No	1.00	17,803.06	17,803.06
16.3	SITC of Maintenance Testing Equipment as per Technical Specification	Lot	1.00	3,59,498.62	3,59,498.62
16.4	SITC of Tools and Plants (T&P's) Requirement as per Technical Specification	Lot	1.00	25,825.66	25,825.66
16.5	SITC of Office Furniture as per Technical Specification	Lot	1.00	2,63,500.00	2,63,500.00
	Sub-Total for ERECTION,TESTING & COMMISSIONING WORKS (In Rs.)				**82,73,963.32**

ANNEXURE -14.1

PART B: Supply & laying of 0.4 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders.

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 11kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 11kV 3C, 400sqmm cable (open trench)***	***M***	***400***		
1.1	Supply of 11kV, 3Core, 400sqmm, XLPE insulation armoured UG cable (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA- 15kA)	M	400	2,375.00	9,50,000.00
1.2	Supply of Indoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	4	8,260.00	33,040.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	4	2,900.00	11,600.00
	Sub Total (Supply Portion) (in Rs.)				**9,94,640.00**

Erection Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Erection, Commissioning & Testing of 11kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 11kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by open trench method.	M	400	110.00	44,000.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, aluminium UG cable kits	EA	8	2,000.00	16,000.00
	Sub Total (Erection Portion) (in Rs.)				**60,000.00**

A1	**Sub Total (Supply Portion)**	**9,94,640.00**
A2	**Applicable Taxes to make it Landed Cost @18%**	**1,79,035.20**
A	**Total Landed Cost (A=A1 + A2)**	**11,73,675.20**
B	Stock, Storage & Insurance @ 3 % of A	35,210.26
C	**Sub Total (A+B)**	**12,08,885.46**
D	Contingency @ 3 % of C	36,266.56
E	Tools & Plants Charges @ 2% of C (considered for earthing items)	-
F	Transportation @ 7.5% of C	90,666.41
G	Erection Charges @ 10% of earthing items (With Applicable Taxes @ 18% to make it Landed Cost)	-
H	**Total (C+D+E+F+G)**	**13,35,818.43**
I1	Sub Total (Erection Portion + Civil Portion)	60,000.00
I2	**Applicable Taxes to make it Landed Cost @18%**	**10,800.00**
I	**Total landed Cost (I=I1+ I2)**	**70,800.00**
J	**Total Cost (H+I)**	**14,06,618.43**
K	Other Overhead /(including Supervision Charges) @ 6 % of J	
L	**Total Estimated Capital Cost i.e. (J+K)**	**14,06,618.43**
M	CESS 1% of L	14,066.18
N	**Grand Total (L+M)**	**14,20,684.61**
O	Inspection Fee of UG Line (HT) - Rs. 375 upto 1 KM.	375.00
P	Inspection Fee of UG Line (HT) - Rs. 225/ Additional Km	-
Q	Inspection Fee of RMU - Rs. 1500/ RMU	-
R	Inspection Fee of Drawing Checking and Approval	
S	Total Inspection Fees (O+P+Q+R)	**375.00**
T	GST @ 18% on Total Inspection Fees (S)	67.50
U	Total Inspection Fees including GST (S+T)	442.50
V	**Gross Total Material, Services and Inspection Fees (N+U)**	**14,21,127.11**

ANNEXURE -14.1

PART- C :-

Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS.

No. of 33 KV DP required With Isolator (Ref. Drawing No.- PD-1346-TPCODL-COM-LINE-8050)	2

MATERIALS FOR 33 KV DP With Isolator

Sl. No.	***Description of Materials***	***Unit***	***Unit Rate***	***Total Quantity***	***Total Amount***
1	WPB (GI) Pole 160x152 - 13 Mtr. long for DP	EA	33,970.00	4	1,35,880.00
2	GI Channel,angle & flat of different size	KG	78.00	1106.386	86,298.11
3	DMC Insulator for LA (70/10)	EA	113.50	16	1,816.00
4	Danger Plate	EA	180.00	4	720.00
5	H.T. Stay clamp	EA	260.00	8	2,080.00
6	H.T. Stay set (Complete)	SET	1,434.00	8	11,472.00
7	H.T. Stay Insulator Type-C	EA	87.00	16	1,392.00
8	7/8 SWG Stay Wire	KG	75.00	120	9,000.00
9	Gi Pipe Earthing 40mm. 3 Mtr. Long	EA	1,300.00	4	5,200.00
10	GI barbed wire anticlimbing device	KG	74.00	12	888.00
11	Lightning Arrester(30KV,10KA) (Station Class,class-2)	EA	4,443.00	6	26,658.00
12	33 kV 1250 AMP Double break (Turn & twist center rotating) Motorized isolator with earth switch (Based on the site requirement 48 V or 24 V Control Voltage will be provided)	EA	1,01,652.00	2	2,03,304.00
13	33KV pin insulator polymer	EA	398.00	6	2,388.00
14	H W fitting(B&S) 90KN,4 Bolt	EA	631.00	12	7,572.00
15	Disc insulator (B&S) 90 KN polymer	EA	289.00	12	3,468.00
16	Wedge connector for 232 sq.mm AAA conductor	EA	333.00	12	3,996.00
17	GI Nut , Bolt & Washer of different sizes	KG	74.00	44.456	3,289.74
18	POLYCARBONATE BIRD GUARD	EA	21.00	18	378.00
A1				**Total Cost of materials**	**5,05,799.85**
A2				**Applicable Taxes to make it Landed Cost @18%**	**91,043.97**
A				**Total landed Cost (A=A1 + A2)**	**5,96,843.83**
B				Stock, Storage & Insurance i.e 3% of A	17,905.31

B	**Other Overhead /(including Supervision Charges) @ 6 % of B**				
C	**Gross Total Estimated Cost i.e. (A+B)**				6,61,987.53
D	**CESS @ 1% of C**				6,619.88
E	**Grand Total (C+D)**				6,68,607.41

ANNEXURE -14.1

PART- F :-
1. Supply and Laying of 3.5 KM 33kV 3C, 400sqmm U/G Cable for Gadakana PSS.
2. Supply and Installation of 1 No. of 33 kV 4 Way RMU (LLVV+Aux. PT)

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 33kV 3C, 400sqmm cable (open trench)***	***M***	***1500***		
b	***Length of 33kV 3C, 400sqmm cable (HDD)***	***M***	***1000***		
1.1	Supply of 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA-20kA)	M	2500	3,165.00	79,12,500.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG Cable kits	EA	6	25,930.00	1,55,580.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA	2	11,900.00	23,800.00
1.5	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT U/G Cable kits (Touch Proof)	EA	2	71,915.00	1,43,830.00
1.6	Supply of materials for High Density Polyethelene **(HDPE) pipe 200mm** diameter, PE 80- PN8 for laying of 33kV UG cable	M	1500.00	812.00	12,18,000.00
2	**Supply of 33kV RMU**				
a	***No. of 33kV 4Way RMU LLVV(2ISO+2BKR)+ AUX.PT***	***EA***	***1***		
2.1	Supply of RMU 33KV 4W 630A LLVV(2ISO+2BKR)+ AUX.PT	EA	1	30,18,066.00	30,18,066.00
3	**Earthing**				
3.1	Earthing Conductor: 50X6 mm (2.4kg./mtr.) Flat(GI) for equipment, structure etc.)	KG	13.20	78.00	1,029.60
3.2	Pipe Earthing 40mm. GI Pipe	EA	2	1,300.00	2,600.00
4	**FRTU for RMU SCADA Automation**				
a	***No. of FRTU***	***EA***	***1***		
4.1	Pre-Wired FRTU Panel with FRTU	EA	1	1,56,247.00	1,56,247.00
4.2	Managed Layer2 Ethernet Switch (FRTU Panel)	EA	1	95,000.00	95,000.00
4.3	Networking Accessories	SET	1	72.00	72.00
4.4	CMR with Mounting Base for Digital Inputs	EA	32	275.00	8,800.00
4.5	Interposing Relay for Digital Output	EA	16	275.00	4,400.00
4.6	Battery Charger	EA	1	17,500.00	17,500.00
4.7	Battery	EA	1	12,500.00	12,500.00
4.8	4G Modem cum Router	EA	1	24,400.00	24,400.00
4.9	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	40	309.00	12,360.00
4.10	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	40	299.00	11,960.00
4.11	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	40	382.00	15,280.00
4.12	4 C X 4 mm2 Copper cable for extension of CT & PT	M	20	185.59	3,711.80
4.13	2 C X 4 mm2 Cable for DC Power Supply	M	10	210.00	2,100.00
4.14	4P X 0.36 mm2, Armored Communication Cable for MFM	M	20.0	229.00	4,580.00
4.15	Armored CAT6 SFTP Cable	M	20	107.00	2,140.00
4.16	Un-Armored CAT6 SFTP Cable	M	20	55.00	1,100.00

4.17	Multi Function Meter	EA	2	14,000.00	28,000.00
	Sub Total (Supply Portion) (in Rs.)				**1,28,75,556.40**
	Erection Portion				
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Erection, Commissioning & Testing of 33kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 33kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by **open trench method**.	M	2500	115.00	2,87,500.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG cable kits	EA	10	2,000.00	20,000.00
1.3	Laying of HDPE pipe (200mm dia, PN8 PE80) by HDD method including supply of HDPE Pipe.	M	2000	2,970.00	59,40,000.00
1.4	Laying of 200**mm dia** PE 80-PN8, **HDPE pipe** inside open trench.	M	1500.00	195.00	2,92,500.00
2	**Erection, Commissioning, Wiring and Testing of 33kV RMU**				
2.1	Erection of RMU 33KV 4W 630A LLVV(2ISO+2BKR)+ AUX.PT	EA	1	14,000.00	14,000.00
3	**FRTU and OFC for RMU SCADA Automation**				
3.1	Services of FRTU Panel, Communication and Other Supplied System	EA	1.0	6,755.00	6,755.00

ANNEXURE-14.1

Part-A:-

1. Laying of 11kV UG cable of length-0.7 CKM using 3Cx400mm2 XLPE UG cable for road crossing of 11kV Sri Vihar feeder.

2. Laying of 11kV 1.5 CKM UG cable from Proposed Gadakan PSS to Damana Square.

3. Installation of 4 Nos. of RMU near CS Pur-1 PSS, RMRC Chowk, near Metro Homes & Damana Square.

Standard BoQ and Estimate for 11kV 3C, 400sqmm UG Cable along with 11kV RMU

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 11kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 11kV 3C, 400sqmm cable (open trench)***	***M***	***1100***		
b	***Length of 11kV 3C, 400sqmm cable (HDD)***	***M***	***1100***		
1.1	Supply of 11kV, 3Core, 400sqmm, XLPE insulation armoured UG cable (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA- 15kA)	M	2200	2,375.00	52,25,000.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, aluminium UG Cable kits	EA	7	15,950.00	1,11,650.00
1.3	Supply of Indoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	16	8,260.00	1,32,160.00
1.4	Supply of Outdoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	16	2,900.00	46,400.00
1.5	Supply of materials for High Density Polyethelene (HDPE) pipe 200mm diameter, PE 80- PN8 for laying of 11kV UG cable	M	1100.00	812.00	8,93,200.00
2	**Supply of 11kV RMU**				
s	***No. of 11KV 4WAY RMU 630A LVVV(1I+3B)+FRTU+AUXPT***	***EA***	***4***		
2.19	Supply of 11KV 4WAY RMU 630A LVVV(1I+3B)+FRTU+AUXPT	EA	4	12,62,647.00	50,50,588.00
3	**Earthing**				
3.1	Earthing Conductor: 50X6 mm (2.4kg./mtr.) Flat(GI) for equipment, structure etc.)	KG	52.80	78.00	4,118.40
3.2	Pipe Earthing 40mm. GI Pipe	EA	8	1,300.00	10,400.00

ANNEXURE -14.2	
TP CENTRAL ODISHA DISTRIBUTION LTD.	
Name of the Circle :-	BBSR-1
Name of the Division :-	BCDD-2
Name of the Sub-Division : -	Periphery
Name of the Section : -	CS Pur-2 & Baranga
Name of the Work :-	1- Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS (Existing PTR of Samanga -8 MVA and Balugaon- 8 MVA will be shifted to Patharagadia PSS) along with laying of 0.6km 33kV 3C, 400sqmm U/G Cable. 2- Laying of 4 KM UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia feeder for load diversion along with installation of 4 nos. of LVVV RMU & 2nos. Of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder. Augmentation of 11kV Rajvatika & Polymer Complex feeder of length 4.5Ckm
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)
Abstract of Estimate	
Description	**Total**
PART A:- Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS. PART B:- Supply & laying of 0.4 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders. PART- C :- Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS. PART- D :- Construction of 5 no. of 11 kV DP with Isolator and Earth Switch at PSS. PART E: Dismantling portion PART- F :- Supply and Laying of 0.6 KM 33kV 3C, 400sqmm U/G Cable for Patharagadia PSS.	4,49,38,804.67
1. Laying of 4 KM UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia Feeder for load diversion. 2. Installation of 4 nos. of LVVV RMU & 2nos. Of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder. 3. Augmentation of 11kV Rajvatika & Polymer Complex feeder of length 4.5Ckm	4,52,20,287.62
Total Amount	**₹ 9,01,59,092.30**
Total Amount (in Cr.)	**₹ 9.02**
Total estimated cost is Rs. 9.02 Crore. (On TPCODL CAPEX Scheme)	

ANNEXURE-14.2

PART A:
Installation of E-House along with Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Patharagadia PSS

SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS (As per Technical Specification)					
Sl. No.	**DESCRIPTION OF ITEMS**	**UNIT**	**Quantity**	**Basic Unit price (In Rs.)**	**Total (In Rs.)**
1	**33 kV Indoor Switch Panel Board**				
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA		1,10,43,128.00	-
2	**Lightning Arrester**				-
2.1	Lightening arrester 33 kV, 10 kV, CL III. (with surge counter) For Transformers - Outdoor type	EA	9.00	13,781.00	1,24,029.00
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter For Transformers - Outdoor type	EA	6.00	1,960.16	11,760.96
3	**11 kV Indoor Switch Panel Board**				-
3.1	11kv 2000A VCB with 15 panel board Switchgear (2 incoming, 10 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA		1,16,19,630.00	-
4	**SCADA**		1.00		-
4.1	Pre-Wired RTU Panel	EA	1.00	2,72,297.17	2,72,297.17
4.2	Managed Layer2 Ethernet Switch (RTU Panel)	EA	2.00	1,43,000.00	2,86,000.00
4.3	Networking Accessories	Set	1.00	8,682.24	8,682.24
4.4	Signal Interface Panel (4G Modem cum Router)	EA	1.00	55,123.45	55,123.45
4.5	CMR with Mounting Base for Digital Inputs	EA	16.00	437.04	6,992.64
4.6	Interposing Relay for Digital Output	EA	8.00	437.04	3,496.32
4.7	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	200.00	150.01	30,002.00
4.8	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	50.00	184.93	9,246.50
4.9	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	50.00	200.18	10,009.00
4.10	4 C X 4 mm2 Copper cable for extension of CT & PT	M	60.00	161.23	9,673.80
4.11	2 C X 4 mm2 Cable for DC Power Supply	M	100.00	139.78	13,978.00
4.12	4P X 0.36 mm2, Armored Communication Cable for MFM	M	100.00	110.17	11,017.00
4.13	Armored CAT6 UTP Cable	M	100.00	73.97	7,397.00
4.14	Un-Armored CAT6 UTP Cable	M	200.00	33.35	6,670.00
4.15	Electronic Earthing and Earth Pit	Set	1.00	15,290.42	15,290.42
4.16	Multi Function Meter	EA	4.00	8,118.36	32,473.44
4.17	Industrial grade Serial Server	EA	1.00	50,591.61	50,591.61
5	**Transformer and Accessories**				-
6	12.5/16 MVA, 33/11kV Power Transformer DYn11 (Outdoor Installation) with Accessories including NIDS System	EA		1,92,15,911.00	-
7	100 KVA 33/0.433kV Energy efficient Station Transformer with HV & LV BOX	EA	1.00	5,00,997.00	5,00,997.00
6	**Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	Kg	20615.00	71.94	14,83,043.10
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	Kg	3600.00	71.94	2,58,984.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	1,300.00	52,000.00
7	**33, 11 and Station Trf Structure**				-

7.1	(125x70x5) mm GI joist 5Mtr (13.3kg / Mtr) (04 nos for one Power Transformer) for supporting of 33kV Cable & 11kV cable (Unit Wt=0.0665 MT) & 10 mm thick MS plate size 250X250 mm at the bottom of the RS Joist duly welded & the MS plate to be suitably grouted to the floor for the rigidity.	Kg	532.00	77.62	41,293.84
7.2	(100 x 50 x5) mm GI Channel (9.56kg / Mtr) (2Mtr - 06 nos for one Power Transformer) for supporting of 33kV & 11kV power Cable (Unit Wt=0.01912 MT)	Kg	229.44	77.62	17,809.13
7.3	GI Nuts & Bolts etc. for column and beam & Equipment Structures	Kg	500.00	90.00	45,000.00
7.4	High Density Polyethylene (HDPE) pipe 160 mm diameter.	M	10.00	613.86	6,138.60
7.5	LTDB for 100KVA, 33/0.433kV Station Transformer	EA	1.00	32,714.34	32,714.34
8	**33 and 11 kv Power and Control, XLPE cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	1,278.81	7,67,286.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	7,280.00	65,520.00
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	7,521.00	67,689.00
8.4	Supply of 33kV, 3Core, 95sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 9kA and SC rating of Armour in kA- 9kA) For Station Trf	M	50.00	1,757.00	87,850.00
8.5	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf	EA	2.00	2,060.00	4,120.00
8.6	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf (Touchproof)	EA	2.00	1,830.00	3,660.00
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	1,438.00	8,62,800.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,260.00	74,340.00
8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,518.00	76,662.00
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	200.00	126.69	25,338.00
9.2	7 Core x 2.5 mm^2	M	200.00	203.16	40,632.00
9.3	10 Core x 2.5 mm^2	M	200.00	273.73	54,746.00
9.4	12 Core x 2.5 mm^2	M	200.00	344.91	68,982.00
9.5	16 Core x 2.5 mm2	M	200.00	400.00	80,000.00
9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	200.00	147.00	29,400.00
10	**1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	50.00	805.08	40,254.00
10.2	XLPE 4 Core x 95 mm2	M	50.00	499.41	24,970.50
10.3	XLPE 4 Core x 35 mm2	M	50.00	268.02	13,401.00
10.4	XLPE 4 Core 16 mm2	M	50.00	125.29	6,264.50
10.5	XLPE 2 Core 16 mm2	M	50.00	62.53	3,126.50
11	**Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	Set	1.00	70,875.00	70,875.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	No	1.00	5,42,122.50	5,42,122.50
	Sub-Total for SUPPLY OF EQUIPMENT & MATERIALS (In Rs.)				**70,12,749.56**
ERECTION, TESTING & COMMISSIONING WORKS OF FOLLOWING EQUIPMENT (As per Technical Specification)					-
1	**Erection, Commissioning, Testing of 33kV Equipment for (INDOOR Sub-Station)**				-
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA		9,60,000.00	-

2	**Lightning Arrester**				-
2.1	30kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester (for 33kV Incoming Line, HT side of 2nos. Power Transformers and 33/0.433kV Station Transformer) - Outdoor Type with Surge Counter	EA	9.00	1,847.36	16,626.24
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter(For Transformers & Out Going Feeders) - Outdoor type	EA	6.00	1,350.00	8,100.00
3	**Erection, Commissioning, Testing of 11kV Equipment (Indoor Type)**				-
3.1	11kv 2000A VCB with 15 panel board Switchgear (2 incoming, 10 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA		11,55,000.00	-
4	**Erection, Commissioning, Testing of SCADA**				-
4.1	SCADA FOR Primary Substation	LUM	1.00	59,661.56	59,661.56
5	**Erection, Commissioning, Testing of Transformer and RMU**				-
5.1	12.5/16 MVA, 33/11kV Power Transformer (Outdoor Installation) with Accessories	EA	2.00	3,40,000.00	6,80,000.00
5.2	100 KVA 11/0.433kV Energy efficient Station Transformer along with HT & LT cable connection	EA	1.00	10,229.00	10,229.00
5.3	ITC RTCC UNIT DC 24-48V	EA	1.00	10,000.00	10,000.00
5.4	Services of FRTU Panel, Communication and Other Supplied System	EA	1.00	6,755.00	6,755.00
6	**Erection, Laying of Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	KM	3.50	43,660.00	1,52,810.00
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	KM	1.50	43,660.00	65,490.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	3,784.73	1,51,389.20
7	**Erection of System GI 33, 11 and Station Trf Structure**				-
7.1	(125x70x5) mm GI joist 5Mtr (13.3kg / Mtr) (04 nos for one Power Transformer) for supporting of 33kV Cable & 11kV cable (Unit Wt=0.0665 MT) & 10 mm thick MS plate size 250X250 mm at the bottom of the RS Joist duly welded & the MS plate to be suitably grouted to the floor for the rigidity.	Kg	532.00	13.50	7,182.00
7.2	(100 x 50 x6) mm GI Channel (9.56kg / Mtr) (2Mtr - 06 nos for one Power Transformer) for supporting of 33kV & 11kV power Cable (Unit Wt=0.01912 MT)	Kg	229.44	27.62	6,337.13
7.3	GI Nuts & Bolts etc. for column and beam & Equipment Structures	Kg	500.00	135.00	67,500.00
7.4	Supply & Erection of GI Pipe of dia. 150mm, Class-B	M	200.00	1,496.91	2,99,382.00
7.5	High Density Polyethylene (HDPE) pipe 160 mm diameter.	M	10.00	306.87	3,068.70
7.6	LTDB for 100KVA, 33/0.433kV Station Transformer along with all cable connection & fixing	EA	1.00	748.76	748.76
8	**Laying of 11kV 33 and 11 kv Power and Control cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	96.66	57,996.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	2,129.37	19,164.33
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	2,129.37	19,164.33
8.4	Laying, Commissioning & Testing of 33kV, 3Core, 1Run, 95sqmm, XLPE insulation (extruted type) UG cable with spare by open trench method.	M	50.00	100.17	5,008.50
8.5	Erection of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG cable kits	EA	2.00	1,944.33	3,888.66
8.6	Erection of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG cable kits	EA	2.00	1,944.33	3,888.66
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	600.00	96.66	57,996.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	2,129.37	19,164.34

8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	2,129.37	19,164.34
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.2	7 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.3	10 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.4	12 Core x 2.5 mm^2	M	200.00	16.57	3,314.00
9.5	16 Core x 2.5 mm2	M	200.00	16.57	3,314.00
9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	200.00	47.87	9,574.00
10	**Laying of 1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	50.00	73.65	3,682.50
10.2	XLPE 4 Core x 95 mm2	M	50.00	47.87	2,393.50
10.3	XLPE 4 Core x 35 mm2	M	50.00	47.87	2,393.50
10.4	XLPE 4 Core 16 mm2	M	50.00	47.87	2,393.50
10.5	XLPE 2 Core 16 mm2	M	50.00	47.87	2,393.50
11	**Erection, Commissioning , Wiring & Testing of Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	EA	1.00	3,375.00	3,375.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	EA	1.00	4,050.00	4,050.00
12	**Erection, Commissioning , Wiring & Testing of Sub-station Lighting And Fire Fighting System**				-
12.1	SITC of 8way LDB with accessories	EA	1.00	9,898.28	9,898.28
12.2	SITC of Sub-Station Switchyard Lighting , Control Room Lighting (it includes supply of fixtures & Lamps (LED) with switch gear, GI Conduit etc.(Tentative qty. as 120Wx 4 sets and 100Wx6 sets out side the control room, 20 Watt CFL tube-10 sets inside control room. Control Room wiring to be done with Copper wires as per the requirement (Lighting fixtures are to be fixed rigidly on the Column at a suitable height with GI tubular pole so that the required lux as per the technical specification is maintained). Qty. of Lights shall be provided as per lux level calculations for both indoor & outdoor lighting	Lot	1.00	14,01,922.49	14,01,922.49
12.3	SITC of 1.5 Ton capacity Split Air Conditioning units with Remote control facility: Including supply of split Air conditioner 5 Star rated, voltage stabiliser, control boxes etc. for completing the A.C scheme. (As per specification) for control room.	No	1.00	89,707.51	89,707.51
12.4	SITC of 1400 mm sweep 250Volt A/C Celling Fan	No	3.00	3,128.69	9,386.07
12.5	SITC of 300 mm sweep 70W A/C Exhaust Fan (for Battery room and Toilet)	No	3.00	3,128.69	9,386.07
13	**Fire Detection Alarm System**				-
13.1	SITC of Main Fire ALARM Control Panel (Ul /FM /Ulc/Vds Approved),Intelligent Addressable Modular Fire Alarm Control Panel based on 32 bit microprocessors including the following as per specification.,A. Battery charger,B SMF Batteries for 72 Hrs. back-up,C Enclosure,D. min.240 character LCD display,(Other specification as mentioned),E. The panel should be modular,decentralized, with CPU /master control unit, loop cards, relay and interface card by means of duplicated electronics means hardware redundancy with full functionality.,,F. The panel must provide MODBUS/ RS485 port for integration with SCADA.G. The loop should be capable to have at least 50 elements / devices.,	EA	1.00	2,22,643.20	2,22,643.20
13.2	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For ceiling (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	6.00	3,980.66	23,883.96

13.3	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For trench (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	2.00	4,078.95	8,157.90
13.4	SITC of Response Indicator (Twin LED transparent type)	EA	2.00	200.11	400.22
13.5	SITC of Addressable manual Call Point (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved)	EA	1.00	4,207.05	4,207.05
13.6	SITC of Electronic Hooter/Multi tone sounder (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved) Indoor type.	EA	1.00	4,078.72	4,078.72
13.7	SITC of 2 Core X 1.5 sq.mm copper conductor, armored, RED colour FRLS PVC sheathed signal Cable confirming to IS standards and specifications	M	150.00	1,080.50	1,62,075.72
13.8	SITC of Supply & erection of 4C*2.5sqmm copper armoured FRLS cable confirming to IS standard with accessories (Gland, lug, saddle, etc.)	M	15.00	176.67	2,650.11
13.9	SITC of Supply & erection of steel wire reinforced flexible conduct pipe (16MM) with all accessories.	M	15.00	141.10	2,116.50
13.10	SITC of Supply & erection of Surge Arrester.	EA	1.00	5,457.90	5,457.90

ANNEXURE-14.2

PART- F :-
Supply and Laying of 0.6 KM 33kV 3C, 400sqmm U/G Cable for Patharagadia PSS.

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 33kV 3C, 400sqmm cable (open trench)***	***M***	***300***		
b	***Length of 33kV 3C, 400sqmm cable (HDD)***	***M***	***300***		
1.1	Supply of 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA-20kA)	M	600	3,165.00	18,99,000.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG Cable kits	EA	6	25,930.00	1,55,580.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA	2	11,900.00	23,800.00
1.4	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA		11,340.00	-
1.5	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT U/G Cable kits (Touch Proof)	EA	2	71,915.00	1,43,830.00
1.6	Supply of materials for High Density Polyethelene **(HDPE) pipe 200mm** diameter, PE 80- PN8 for laying of 33kV UG cable	M	300.00	812.00	2,43,600.00
	Sub Total (Supply Portion) (in Rs.)				**24,65,810.00**

Erection Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Erection, Commissioning & Testing of 33kV new line by 3Core, 400sqmm, XLPE UG cable**

ANNEXURE-14.2

Part-A:-

1. laying of 4 KM UG cable from Proposed Pathargadia PSS to linking with 11kV Rajvatika, 11kV Polymer Complex & 11kV Pathargadia Feeder for load diversion.

2. Installation of 4 nos. of LVVV RMU & 2nos. Of 3 Way LVV RMU in different location of Pathargadia, Polymer Complex & Rajvatika Feeder.

Standard BoQ and Estimate for 11kV 3C, 400sqmm UG Cable along with 11kV RMU

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)

Annexure-16.1	
TP CENTRAL ODISHA DISTRIBUTION LTD.	
Name of the Circle :-	BBSR-II
Name of the Division : -	PED
Name of the Work :-	Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Atharnala PSS
Names of Schemes: -	Capex 27-28
Abstract of Estimate	
Description	**Total**
PART A: Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Atharnala PSS (Existing Power Transformer will be re-used and same is not considered in the estimate)	4,54,60,960.56
PART B: Supply & laying of 0.15 KM 11 kV 3C, 400sqmm U/G Cable without spare run for 11 kV O/G Feeders.	5,82,962.11
PART C: Dismantling portion	6,68,607.41
Total Estimated cost	**4,67,12,530.08**
Total Estimated Cost is Rs. 4.67 Cr.	

PART A:
Construction of Control Room Building with all Equipment Supply, Erection, Commissioning, Testing, Civil Works with supply of all materials, Labour, T&P etc. as per technical specification and scope of work for Atharnala PSS (Existing Power Transformer will be re-used and same is not considered in the estimate)

SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS (As per Technical Specification)					
Sl. No.	**DESCRIPTION OF ITEMS**	**UNIT**	**Quantity**	**Basic Unit price (In Rs.)**	**Total (In Rs.)**
1	**33 kV Indoor Switch Panel Board**				
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA	1.00	1,10,43,128.00	1,10,43,128.00
2	**Lightning Arrester**				-
2.1	Lightening arrester 33 kV, 10 kV, CL III. (with surge counter) For Transformers - Outdoor type	EA	9.00	13,781.00	1,24,029.00
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter For Transformers - Outdoor type	EA	6.00	1,960.16	11,760.96
3	**11 kV Indoor Switch Panel Board**				-
3.1	11kv 2000A VCB with 11 panel board Switchgear (2 incoming, 6 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA	1.00	86,04,870.00	86,04,870.00
4	**SCADA**		1.00		-
4.1	Pre-Wired RTU Panel	EA	1.00	2,72,297.17	2,72,297.17
4.2	Managed Layer2 Ethernet Switch (RTU Panel)	EA	2.00	1,43,000.00	2,86,000.00
4.3	Networking Accessories	Set	1.00	8,682.24	8,682.24
4.4	Signal Interface Panel (4G Modem cum Router)	EA	1.00	55,123.45	55,123.45
4.5	CMR with Mounting Base for Digital Inputs	EA	16.00	437.04	6,992.64
4.6	Interposing Relay for Digital Output	EA	8.00	437.04	3,496.32
4.7	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	200.00	150.01	30,002.00
4.8	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	50.00	184.93	9,246.50
4.9	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	50.00	200.18	10,009.00
4.10	4 C X 4 mm2 Copper cable for extension of CT & PT	M	60.00	161.23	9,673.80
4.11	2 C X 4 mm2 Cable for DC Power Supply	M	100.00	139.78	13,978.00
4.12	4P X 0.36 mm2, Armored Communication Cable for MFM	M	100.00	110.17	11,017.00
4.13	Armored CAT6 UTP Cable	M	100.00	73.97	7,397.00
4.14	Un-Armored CAT6 UTP Cable	M	200.00	33.35	6,670.00
4.15	Electronic Earthing and Earth Pit	Set	1.00	15,290.42	15,290.42
4.16	Multi Function Meter	EA	4.00	8,118.36	32,473.44
4.17	Industrial grade Serial Server	EA	1.00	50,591.61	50,591.61
5	**Transformer and Accessories**				-
6	12.5/16 MVA, 33/11kV Power Transformer DYn11 (Outdoor Installation) with Accessories including NIDS System	EA		1,92,15,911.00	-
7	100 KVA 33/0.433kV Energy efficient Station Transformer with HV & LV BOX	EA		5,00,997.00	-
6	**Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	Kg	20615.00	71.94	14,83,043.10
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	Kg	3600.00	71.94	2,58,984.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	1,300.00	52,000.00
8	**33 and 11 kv Power and Control, XLPE cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	150.00	1,278.81	1,91,821.50
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	7,280.00	65,520.00
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	7,521.00	67,689.00
8.4	Supply of 33kV, 3Core, 95sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 9kA and SC rating of Armour in kA- 9kA) For Station Trf	M	50.00	1,757.00	87,850.00
8.5	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf	EA	2.00	2,060.00	4,120.00
8.6	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf (Touchproof)	EA	2.00	1,830.00	3,660.00
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	150.00	1,438.00	2,15,700.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,260.00	74,340.00
8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,518.00	76,662.00
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	100.00	126.69	12,669.00
9.2	7 Core x 2.5 mm^2	M	100.00	203.16	20,316.00
9.3	10 Core x 2.5 mm^2	M	100.00	273.73	27,373.00
9.4	12 Core x 2.5 mm^2	M	100.00	344.91	34,491.00
9.5	16 Core x 2.5 mm2	M	100.00	400.00	40,000.00
9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	100.00	147.00	14,700.00
10	**1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	50.00	805.08	40,254.00
10.2	XLPE 4 Core x 95 mm2	M	50.00	499.41	24,970.50
10.3	XLPE 4 Core x 35 mm2	M	50.00	268.02	13,401.00
10.4	XLPE 4 Core 16 mm2	M	50.00	125.29	6,264.50
10.5	XLPE 2 Core 16 mm2	M	50.00	62.53	3,126.50
11	**Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	Set	1.00	70,875.00	70,875.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	No	1.00	5,42,122.50	5,42,122.50
	Sub-Total for SUPPLY OF EQUIPMENT & MATERIALS (In Rs.)				**2,46,44,681.15**

ERECTION, TESTING & COMMISSIONING WORKS OF FOLLOWING EQUIPMENT (As per Technical Specification)					-
1	**Erection, Commissioning, Testing of 33kV Equipment for (INDOOR Sub-Station)**				-
1.1	33 kV 1250 A Indoor AIS Panle Board with 10 nos. of Switchgear Panel (3 Nos. for incoming, 2 Nos. of PTR, 2 Nos. for Bus Coupler, 3 Nos. for Bus PT) as per technical specification	EA	1.00	9,60,000.00	9,60,000.00
2	**Lightning Arrester**				-
2.1	30kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester (for 33kV Incoming Line, HT side of 2nos. Power Transformers and 33/0.433kV Station Transformer) - Outdoor Type with Surge Counter	EA	9.00	1,847.36	16,626.24
2.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter(For Transformers & Out Going Feeders) - Outdoor type	EA	6.00	1,350.00	8,100.00
3	**Erection, Commissioning, Testing of 11kV Equipment (Indoor Type)**				-
3.1	11kv 2000A VCB with 11 panel board Switchgear (2 incoming, 6 Outgoing, 1 Bus coupler, 2 Bus PT) as per technical specification	EA	1.00	8,47,000.00	8,47,000.00
4	**Erection, Commissioning, Testing of SCADA**				-
4.1	SCADA FOR Primary Substation	LUM	1.00	59,661.56	59,661.56
6	**Erection, Laying of Substation Earthing System GI**				-
6.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	KM	3.50	43,660.00	1,52,810.00
6.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	KM	1.50	43,660.00	65,490.00
6.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	3,784.73	1,51,389.20
8	**Laying of 11kV 33 and 11 kv Power and Control cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	150.00	96.66	14,499.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	2,129.37	19,164.33
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	2,129.37	19,164.33
8.4	Laying, Commissioning & Testing of 33kV, 3Core, 1Run, 95sqmm, XLPE insulation (extruted type) UG cable with spare by open trench method.	M	50.00	100.17	5,008.50
8.5	Erection of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG cable kits	EA	2.00	1,944.33	3,888.66

11	**Erection, Commissioning , Wiring & Testing of Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	EA	1.00	3,375.00	3,375.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	EA	1.00	4,050.00	4,050.00
12	**Erection, Commissioning , Wiring & Testing of Sub-station Lighting And Fire Fighting System**				-
12.1	SITC of 8way LDB with accessories	EA	1.00	9,898.28	9,898.28
12.3	SITC of 1.5 Ton capacity Split Air Conditioning units with Remote control facility: Including supply of split Air conditioner 5 Star rated, voltage stabiliser, control boxes etc. for completing the A.C scheme. (As per specification) for control room.	No	3.00	89,707.51	2,69,122.53
12.4	SITC of 1400 mm sweep 250Volt A/C Celling Fan	No	3.00	3,128.69	9,386.07
12.5	SITC of 300 mm sweep 70W A/C Exhaust Fan (for Battery room and Toilet)	No	3.00	3,128.69	9,386.07
13	**Fire Detection Alarm System**				-
13.1	SITC of Main Fire ALARM Control Panel (UI /FM /Ulc/Vds Approved),Intelligent Addressable Modular Fire Alarm Control Panel based on 32 bit microprocessors including the following as per specification.,A. Battery charger,B SMF Batteries for 72 Hrs. back-up,C Enclosure,D. min.240 character LCD display,(Other specification as mentioned),E. The panel should be modular,decentralized, with CPU /master control unit, loop cards, relay and interface card by means of duplicated electronics means hardware redundancy with full functionality.,,F. The panel must provide MODBUS/ RS485 port for integration with SCADA.G. The loop should be capable to have at least 50 elements / devices.,	EA	1.00	2,22,643.20	2,22,643.20
13.2	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For ceiling (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	6.00	3,980.66	23,883.96
13.3	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For trench (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	2.00	4,078.95	8,157.90
13.4	SITC of Response Indicator (Twin LED transparent type)	EA	2.00	200.11	400.22
13.5	SITC of Addressable manual Call Point (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved)	EA	1.00	4,207.05	4,207.05
13.6	SITC of Electronic Hooter/Multi tone sounder (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved) Indoor type.	EA	1.00	4,078.72	4,078.72
13.7	SITC of 2 Core X 1.5 sq.mm copper conductor, armored, RED colour FRLS PVC sheathed signal Cable confirming to IS standards and specifications	M	150.00	1,080.50	1,62,075.72
13.8	SITC of Supply & erection of 4C*2.5sqmm copper armoured FRLS cable confirming to IS standard with accessories (Gland, lug, saddle, etc.)	M	15.00	176.67	2,650.11
13.9	SITC of Supply & erection of steel wire reinforced flexible conduct pipe (16MM) with all accessories.	M	15.00	141.10	2,116.50
13.10	SITC of Supply & erection of Surge Arrester.	EA	1.00	5,457.90	5,457.90
13.11	SITC of Lightning arrester Rod in Top of PSS Building along with all accessories	EA	1.00	1,800.00	1,800.00
14	**Fire Fighting System (portable and wheel mounted sets for control room)**				-
14.1	SITC of Foam type- 5 Ltrs	No	3.00	9,406.83	28,220.49

Annexure-16.2	
TP CENTRAL ODISHA DISTRIBUTION LTD.	
Name of the Division :-	BBSR-II
Name of the Sub-Division : -	PED
Name of the Work :-	Construction of Control Room Building and Installation of 33 kV and 11 kV Panel Board at Sunamuhi PSS.
Names of Schemes: -	Capex 27-28
Abstract of Estimate	
Description	**Total**
PART A: Construction of Control Room Building and Installation of 33 kV and 11 kV Panel Board at Sunamuhi PSS. (Rate of 33 kV Board is not considered in the estimate. Removed 33 kV Indoor GIS Panel Board from Lingipur PSS and 11 kV AIS Panel Board from Nayapalli PSS will be used at Sunamuhi PSS)	2,09,88,090.43
PART B: Supply & laying of 0.3 KM 11 kV 3C, 400sqmm U/G Cable with spare run for O/G Feeders.	10,86,285.91
PART- C Construction of 2 nos. of 33 kV DP with Isolator and Earth Switch at PSS.	8,12,293.79
PART- D Construction of 4 no. of 11 kV DP with Isolator and Earth Switch at PSS.	11,67,051.26
PART E: Dismantling portion	9,04,949.85
Total Estimated cost	**2,49,58,671.24**
Total Estimated Cost is Rs. 2.50 Cr.	

PART A:
Construction of Control Room Building and Installation of 33 kV and 11 kV Panel Board at Sunamuhi PSS.
(Rate of 33 kV Board is not considered in the estimate. Removed 33 kV Indoor GIS Panel Board from Lingipur PSS and 11 kV AIS Panel Board from Nayapalli PSS will be used at Sunamuhi PSS)

SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS (As per Technical Specification)					
Sl. No.	**DESCRIPTION OF ITEMS**	**UNIT**	**Quantity**	**Basic Unit price (In Rs.)**	**Total (In Rs.)**
1	**Lightning Arrester**				-
1.1	Lightening arrester 33 kV, 10 kV, CL III. (with surge counter) For Transformers - Outdoor type	EA	9.00	13,781.00	1,24,029.00
1.2	12kV, 10kA, Metal Oxide, Class-2 (Station Class), Surge Arrester with out surge counter For Transformers - Outdoor type	EA	9.00	1,960.16	17,641.44
2	**SCADA**		1.00		-
2.1	Pre-Wired RTU Panel	EA	1.00	2,72,297.17	2,72,297.17
2.2	Managed Layer2 Ethernet Switch (RTU Panel)	EA	2.00	1,43,000.00	2,86,000.00
2.3	Networking Accessories	Set	1.00	8,682.24	8,682.24
2.4	Signal Interface Panel (4G Modem cum Router)	EA	1.00	55,123.45	55,123.45
2.5	CMR with Mounting Base for Digital Inputs	EA	16.00	437.04	6,992.64
2.6	Interposing Relay for Digital Output	EA	8.00	437.04	3,496.32
2.7	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	200.00	150.01	30,002.00
2.8	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	50.00	184.93	9,246.50
2.9	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	50.00	200.18	10,009.00
2.10	4 C X 4 mm2 Copper cable for extension of CT & PT	M	60.00	161.23	9,673.80
2.11	2 C X 4 mm2 Cable for DC Power Supply	M	100.00	139.78	13,978.00
2.12	4P X 0.36 mm2, Armored Communication Cable for MFM	M	100.00	110.17	11,017.00
2.13	Armored CAT6 UTP Cable	M	100.00	73.97	7,397.00
2.14	Un-Armored CAT6 UTP Cable	M	200.00	33.35	6,670.00
2.15	Electronic Earthing and Earth Pit	Set	1.00	15,290.42	15,290.42
2.16	Multi Function Meter	EA	4.00	8,118.36	32,473.44
2.17	Industrial grade Serial Server	EA	1.00	50,591.61	50,591.61
3	**Transformer and Accessories**				-
3.1	RTCC UNIT DC 24-48V	EA	3.00	3,00,000.00	9,00,000.00
5	**Substation Earthing System GI**				-
5.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	Kg	20615.00	71.94	14,83,043.10
5.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	Kg	3600.00	71.94	2,58,984.00
5.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	40.00	1,300.00	52,000.00
8	**33 and 11 kv Power and Control, XLPE cables**				-
8.1	33kV, 1Core, 630sqmm Aluminium, XLPE insulation U/G Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	300.00	1,278.81	3,83,643.00
8.2	Indoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core (Touch Proof)	EA	9.00	7,280.00	65,520.00
8.3	Outdoor termination kits Heat Shrinkable type suitable for 33kV, 1Core, 630sqmm, HT U/G Cable kits for 1Core	EA	9.00	7,521.00	67,689.00
8.4	Supply of 33kV, 3Core, 95sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 9kA and SC rating of Armour in kA- 9kA) For Station Trf	M	50.00	1,757.00	87,850.00
8.5	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf	EA	2.00	2,060.00	4,120.00
8.6	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 95sqmm, HT UG Cable kits For Station Trf (Touchproof)	EA	2.00	1,830.00	3,660.00
8.7	11kV, 1Core, 1000sqmm Aluminium, XLPE insulation UG Cable (SC rating of cable in kA- 59.4kA and SC rating of Armour in kA-20kA)	M	450.00	1,438.00	6,47,100.00
8.8	Indoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,260.00	74,340.00
8.9	Outdoor termination kits Heat Shrinkable type suitable for 11kV, 1Core, 1000sqmm, HT UG Cable kits for 1Core	EA	9.00	8,518.00	76,662.00
9	**Control Cables (Copper Armoured)**				-
9.1	4 Core x 2.5 mm^2	M	100.00	126.69	12,669.00
9.2	7 Core x 2.5 mm^2	M	100.00	203.16	20,316.00
9.3	10 Core x 2.5 mm^2	M	100.00	273.73	27,373.00
9.4	12 Core x 2.5 mm^2	M	100.00	344.91	34,491.00
9.5	16 Core x 2.5 mm2	M	100.00	400.00	40,000.00
9.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	100.00	147.00	14,700.00
10	**1.1 kV XLPE Power Cables**				-
10.1	XLPE 4 Core x 150 mm2	M	100.00	805.08	80,508.00

11	**Erection, Commissioning , Wiring & Testing of Battery & Battery Charger**				-
11.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	EA	1.00	3,375.00	3,375.00
11.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	EA	1.00	4,050.00	4,050.00
13	**Fire Detection Alarm System**				-
13.1	SITC of Main Fire ALARM Control Panel (Ul /FM /Ulc/Vds Approved),Intelligent Addressable Modular Fire Alarm Control Panel based on 32 bit microprocessors including the following as per specification.,A. Battery charger,B SMF Batteries for 72 Hrs. back-up,C Enclosure,D. min.240 character LCD display,(Other specification as mentioned),E. The panel should be modular,decentralized, with CPU /master control unit, loop cards, relay and interface card by means of duplicated electronics means hardware redundancy with full functionality.,,F. The panel must provide MODBUS/ RS485 port for integration with SCADA.G. The loop should be capable to have at least 50 elements / devices.,	EA	1.00	2,22,643.20	2,22,643.20
13.2	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For ceiling (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	6.00	3,980.66	23,883.96
13.3	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For trench (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	2.00	4,078.95	8,157.90
13.4	SITC of Response Indicator (Twin LED transparent type)	EA	2.00	200.11	400.22
13.5	SITC of Addressable manual Call Point (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved)	EA	1.00	4,207.05	4,207.05
13.6	SITC of Electronic Hooter/Multi tone sounder (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved) Indoor type.	EA	1.00	4,078.72	4,078.72
13.7	SITC of 2 Core X 1.5 sq.mm copper conductor, armored, RED colour FRLS PVC sheathed signal Cable confirming to IS standards and specifications	M	150.00	1,080.50	1,62,075.72
13.8	SITC of Supply & erection of 4C*2.5sqmm copper armoured FRLS cable confirming to IS standard with accessories (Gland, lug, saddle, etc.)	M	15.00	176.67	2,650.11
13.9	SITC of Supply & erection of steel wire reinforced flexible conduct pipe (16MM) with all accessories.	M	15.00	141.10	2,116.50
13.10	SITC of Supply & erection of Surge Arrester.	EA	1.00	5,457.90	5,457.90
13.11	SITC of Lightning arrester Rod in Top of PSS Building along with all accessories	EA	1.00	1,800.00	1,800.00
	Sub-Total for ERECTION,TESTING & COMMISSIONING WORKS (In Rs.)				**41,89,546.44**
					-
Civil Works with supply of all materials like Cement, MS tor rod, Brick, Coarse & Fine Agregrates & Labour,T&P etc.					-

Civil & Services					
Sl. No.	**Description of Materials**	**Unit**	**Unit Rate**	**Total Quantity**	**Total Amount**
1	Construction Earthing chamber including installation of earthing pipe.Making earthing chamber including excavation , soil treatment with bentonide powder , calculation of earth resistance, including Installation of 3Mtr GI Pipe 40mm/50mm including welding of Flat(GI) around pipe .	No.	3,784.73	18	68,125.14
2	**VCB Foundation**				
2.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	14.56	7,178.66
2.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	8	1,760.00
2.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.6825	698.13
2.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.91	4,775.20
2.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.65	37,566.00
2.vi	Centring and shuttering including strutttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	26.5	8,159.09
2.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	280	31,220.00
3	**CT & PT Foundation**				
3.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	15.9375	7,857.83
3.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	9	1,980.00
3.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.726	742.63
3.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.726	3,809.67
3.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	4.725	31,415.82

3.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
3.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
4	**Column as per Drawing Schedule-**				
4.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	102.6195	50,595.52
4.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	48	10,560.00
4.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	4.2	22,039.40
4.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	28.35	1,88,494.90
4.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	179.28	55,198.52
4.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	1469.16	1,63,811.34
5	**Isolator**				
5.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	9.45	4,659.23
5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.567	2,975.32
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.7	37,898.45
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
6	**RCC Cable Trench :**				

6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	103.5	24,012.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	6.9	10,212.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	6.9	34,707.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	13.8	1,03,500.00
6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	12.6	94,500.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	168	45,360.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	2974.2	3,03,368.40
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	3.6	28,620.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	1590.6	1,65,422.40
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	43.2	28,080.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	14.4	43,200.00
K1				**Total Civil & Services**	**16,96,385.92**

TP CENTRAL ODISHA DISTRIBUTION LTD.	
Name of the Circle :-	Dhenkenal
Name of the Division : -	TED
Name of the Work :-	Construction of Control Room Building and associated Civil works at Parjang PSS.
Names of Schemes: -	Capex 27-28
Abstract of Estimate	
Description	**Total**
PART A: Construction of Control Room Building and associated civil works at Parjang PSS.	97,35,478.90
PART B: Supply & laying of 0.15 KM 11 kV 3C, 400sqmm U/G Cable with spare run for O/G Feeders.	5,83,386.91
PART C: Dismantling portion	2,17,922.85
Total Estimated cost	**1,05,36,788.65**
Total Estimated Cost is Rs. 1.05 Cr.	

PART A:
Construction of Control Room Building and associated civil works at Parjang PSS.

Sl. No.	DESCRIPTION OF ITEMS	UNIT	Quantity	Basic Unit price (In Rs.)	Total (In Rs.)
	SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS (As per Technical Specification)				
1	**Substation Earthing System GI**				-
1.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	Kg	1000.00	71.94	71,940.00
1.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	Kg	600.00	71.94	43,164.00
1.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	20.00	1,300.00	26,000.00
2	**Control Cables (Copper Armoured)**				-
2.1	4 Core x 2.5 mm^2	M	100.00	126.69	12,669.00
2.2	7 Core x 2.5 mm^2	M	100.00	203.16	20,316.00
2.3	10 Core x 2.5 mm^2	M	100.00	273.73	27,373.00
2.4	12 Core x 2.5 mm^2	M	100.00	344.91	34,491.00
2.5	16 Core x 2.5 mm2	M	100.00	400.00	40,000.00
2.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	100.00	147.00	14,700.00
3	**1.1 kV XLPE Power Cables**				-
3.1	XLPE 4 Core x 150 mm2	M	100.00	805.08	80,508.00
3.2	XLPE 4 Core x 95 mm2	M	100.00	499.41	49,941.00
3.3	XLPE 4 Core x 35 mm2	M	100.00	268.02	26,802.00
3.4	XLPE 4 Core 16 mm2	M	100.00	125.29	12,529.00
3.5	XLPE 2 Core 16 mm2	M	100.00	62.53	6,253.00
4	**Battery & Battery Charger**				-
4.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	Set	1.00	70,875.00	70,875.00
4.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	No	1.00	5,42,122.50	5,42,122.50
	Sub-Total for SUPPLY OF EQUIPMENT & MATERIALS (In Rs.)				**10,79,683.50**
	ERECTION, TESTING & COMMISSIONING WORKS OF FOLLOWING EQUIPMENT (As per Technical Specification)				-
2	**Erection, Laying of Substation Earthing System GI**				-
2.1	Earthing Conductor 75X10 mm (5.89 Kg/Mtr.) GI Flat for laying (spacing maximum **2m both ways**)	KM	0.17	43,660.00	7,527.59
2.2	Earthing Conductor: 50X6 mm (2.4Kg./Mtr.) **GI Flat** for Raiser from the burial earth mat to equipment, structure etc.)	KM	0.25	43,660.00	10,915.00
2.3	Earthing Device & Associated Accessories (Heavy duty GI Perforated Pipe of ID=40mm & OD=50mm with 3000mm long for treated Earth Pit) as per Drawing	EA	20.00	3,784.73	75,694.60
3	**Control Cables (Copper Armoured)**				-
3.1	4 Core x 2.5 mm^2	M	100.00	16.57	1,657.00
3.2	7 Core x 2.5 mm^2	M	100.00	16.57	1,657.00
3.3	10 Core x 2.5 mm^2	M	100.00	16.57	1,657.00
3.4	12 Core x 2.5 mm^2	M	100.00	16.57	1,657.00
3.5	16 Core x 2.5 mm2	M	100.00	16.57	1,657.00
3.6	1 Core x 16 mm2 Aluminium cable from Battery to Battery Charger & Battery Charger to DCDB	M	100.00	47.87	4,787.00
4	**Laying of 1.1 kV XLPE Power Cables**				-
4.1	XLPE 4 Core x 150 mm2	M	100.00	73.65	7,365.00
4.2	XLPE 4 Core x 95 mm2	M	100.00	47.87	4,787.00
4.3	XLPE 4 Core x 35 mm2	M	100.00	47.87	4,787.00
4.4	XLPE 4 Core 16 mm2	M	100.00	47.87	4,787.00
4.5	XLPE 2 Core 16 mm2	M	100.00	47.87	4,787.00
5	**Erection, Commissioning , Wiring & Testing of Battery & Battery Charger**				-
5.1	200 AH maintenance free VRLA Battery (Based on the site requirement 48V or 24V will be provided)	EA	1.00	3,375.00	3,375.00
5.2	Float cum Boost Battery Charger with DCDB (Based on the site requirement 48V or 24V will be provided)	EA	1.00	4,050.00	4,050.00
6	**Fire Detection Alarm System**				-
6.1	SITC of Main Fire ALARM Control Panel (UI /FM /Ulc/Vds Approved),Intelligent Addressable Modular Fire Alarm Control Panel based on 32 bit microprocessors including the following as per specification.,A. Battery charger,B SMF Batteries for 72 Hrs. back-up,C Enclosure,D. min.240 character LCD display,(Other specification as mentioned),E. The panel should be modular,decentralized, with CPU /master control unit, loop cards, relay and interface card by means of duplicated electronics means hardware redundancy with full functionality.,,F. The panel must provide MODBUS/ RS485 port for integration with SCADA.G. The loop should be capable to have at least 50 elements / devices.,	EA	1.00	2,22,643.20	2,22,643.20
6.2	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For ceiling (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	6.00	3,980.66	23,883.96
6.3	SITC of Intelligent Addressable multi sensor Detector- (Smoke + Fixed Tempt. + Rate of rise tempt.) For trench (UL /FM /ULC/Vds Approved) inclusive base and other installation accessories. (must have inbuilt short circuit isolator,)	EA	2.00	4,078.95	8,157.90
6.4	SITC of Response Indicator (Twin LED transparent type)	EA	2.00	200.11	400.22
6.5	SITC of Addressable manual Call Point (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved)	EA	1.00	4,207.05	4,207.05
6.6	SITC of Electronic Hooter/Multi tone sounder (must have inbuilt short circuit isolator,) (UL /FM /ULC/Vds Approved) Indoor type.	EA	1.00	4,078.72	4,078.72
6.7	SITC of 2 Core X 1.5 sq.mm copper conductor, armored, RED colour FRLS PVC sheathed signal Cable confirming to IS standards and specifications	M	150.00	1,080.50	1,62,075.72
6.8	SITC of Supply & erection of 4C*2.5sqmm copper armoured FRLS cable confirming to IS standard with accessories (Gland, lug, saddle, etc.)	M	15.00	176.67	2,650.11
6.9	SITC of Supply & erection of steel wire reinforced flexible conduct pipe (16MM) with all accessories.	M	15.00	141.10	2,116.50
6.10	SITC of Supply & erection of Surge Arrester.	EA	1.00	5,457.90	5,457.90
6.11	SITC of Lightning arrester Rod in Top of PSS Building along with all accessories	EA	1.00	1,800.00	1,800.00
	Sub-Total for ERECTION,TESTING & COMMISSIONING WORKS (In Rs.)				**5,78,618.47**
					-
	Civil Works with supply of all materials like Cement, MS tor rod, Brick, Coarse & Fine Agregrates & Labour,T&P etc.				-
1	CONTROL ROOM BUILDING ALONG WITH ALL INTERNAL SERVICE (Area 15mtrX12mtr)	EA	1.00	50,00,000.00	50,00,000.00
2	RCC CABLE TRENCH	RM	30.00	26,500.00	7,95,000.00

3	ROAD WORK	RM	30.00	11,500.00	3,45,000.00
7	Chainlink Fencing of Switchyard	RM	30.00	4,570.00	1,37,100.00
	Sub-Total for CIVIL WORKS (In Rs.)				**62,77,100.00**
A1	**Total Cost for SUPPLY OF EQUIPMENT & MATERIALS**				**10,79,683.50**
A2	**Applicable Taxes to make it Landed Cost @18%**				**1,94,343.03**
A	**Total landed Cost (A=A1 + A2)**				**12,74,026.53**
B	Stock , Storage & Insurance @ 3 % of A				**38,220.80**
C	Sub - Total (A+B)				**13,12,247.33**
D	Contingency @ 3 % of C				**39,367.42**
E	Tools &Plants Charges @ 2% of C (NOT CONSIDERED)				
F	Transportation @ 7.5% of C				**98,418.55**
G	**Sub - Total (C+D+E+F)**				**14,50,033.30**
H1	Total Cost for ERECTION,TESTING & COMMISSIONING WORKS				5,78,618.47
H2	Total Cost for CIVIL WORKS				62,77,100.00
H3	**Total Cost for Erection & Civil works (H1+H2)**				**68,55,718.47**
H4	**Applicable Taxes to make it Landed Cost @18%**				**12,34,029.32**
H	**Total landed Cost (H=H3 + H4)**				80,89,747.79
I	**Total Cost (G+H)**				95,39,781.08
J	Other Overhead /(including Supervision Charges) @ 6 % of I				
K	Total Estimated Capital Cost i.e. I+J				**95,39,781.08**
L	CESS @ 1% of K				95,397.81
M	**Total Cost (K+L)**				96,35,178.90
N	Inspection Charges (As per Gov. Notification)				85,000.00
O	GST @ 18% of N				15,300.00
P	Total Inspection Charges with GST (N+O)				1,00,300.00
Q	**Total Estimate to be deposit (M+P)**				**97,35,478.90**

PART B: Supply & laying of 0.15 KM 11 kV 3C, 400sqmm U/G Cable with spare run for O/G Feeders.

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 11kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 11kV 3C, 400sqmm cable (open trench)***	***M***	***150***		
b	***Length of 11kV 3C, 400sqmm cable (HDD)***	***M***			
1.1	Supply of 11kV, 3Core, 400sqmm, XLPE insulation armoured UG cable (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA- 15kA)	M	150	2,375.00	3,56,250.00
1.2	Supply of Indoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	4	8,260.00	33,040.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, HT UG Cable kits	EA	4	2,900.00	11,600.00
	Sub Total (Supply Portion) (in Rs.)				**4,00,890.00**

Erection Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Erection, Commissioning & Testing of 11kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 11kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by open trench method.	M	150	110.00	16,500.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 11kV, 3Core, 400sqmm, aluminium UG cable kits	EA	8	2,000.00	16,000.00
	Sub Total (Erection Portion) (in Rs.)				**32,500.00**

A1	**Sub Total (Supply Portion)**	**4,00,890.00**
A2	**Applicable Taxes to make it Landed Cost @18%**	**72,160.20**
A	**Total Landed Cost (A=A1 + A2)**	**4,73,050.20**
B	Stock, Storage & Insurance @ 3 % of A	14,191.51
C	**Sub Total (A+B)**	**4,87,241.71**
D	Contingency @ 3 % of C	14,617.25
E	Tools & Plants Charges @ 2% of C (considered for earthing items)	-
F	Transportation @ 7.5% of C	36,543.13
G	Erection Charges @ 10% of earthing items (With Applicable Taxes @ 18% to make it Landed Cost)	-
H	**Total (C+D+E+F+G)**	**5,38,402.09**
I1	Sub Total (Erection Portion + Civil Portion)	32,500.00
I2	**Applicable Taxes to make it Landed Cost @18%**	**5,850.00**
I	**Total landed Cost (I=I1+ I2)**	**38,350.00**
J	**Total Cost (H+I)**	**5,76,752.09**
K	Other Overhead /(including Supervision Charges) @ 6 % of J	
L	**Total Estimated Capital Cost i.e. (J+K)**	**5,76,752.09**
M	CESS 1% of L	5,767.52
N	**Grand Total (L+M)**	**5,82,519.61**
O	Inspection Fee of UG Line (HT) - Rs. 375 upto 1 KM.	375.00
P	Inspection Fee of UG Line (HT) - Rs. 225/ Additional Km	360.00
Q	Inspection Fee of RMU - Rs. 1500/ RMU	-
R	Inspection Fee of Drawing Checking and Approval	
S	Total Inspection Fees (O+P+Q+R)	**735.00**
T	GST @ 18% on Total Inspection Fees (S)	132.30
U	Total Inspection Fees including GST (S+T)	867.30
V	**Gross Total Material, Services and Inspection Fees (N+U)**	**5,83,386.91**

PART C: Dismantling portion

SL.No	Description	Unit	Quantity	Rate	Amount
1	Dismantling / Removal of MS Channel. from Double Pole Structure /pole	KG	5000	8.10	40,506.84
2	Demolishing stone rubble masonry manually/ RCC/BRICK WORK/ by mechanical means	M3	50	1,794.47	89,723.67
3	Dismantling of 11 kV /33KV GO/AB Switch/Isolator/DD fuse/fuse set	SET	17	1,200.00	20,400.00
4	Dismantling / Removal of 11KV/33KV CRP Pannel	EA	6	5,114.50	30,687.00
5	Dismantling of all sizes(All Core and all dia) control Cable	M	300	5.11	1,534.35
A1				**Sub Total (Civil Portion) (in Rs.)**	**1,82,851.86**
A2				**Applicable Taxes to make it Landed Cost @18%**	**32,913.34**
A				**Total landed Cost (A=A1+ A2)**	**2,15,765.20**
B				**Other Overhead /(including Supervision Charges) @ 6 % of B**	
C				**Gross Total Estimated Cost i.e. (A+B)**	2,15,765.20
D				**CESS @ 1% of C**	2,157.65
E				**Grand Total (C+D)**	2,17,922.85

Civil & Services

Sl. No.	*Description of Materials*	*Unit*	*Unit Rate*	*Total Quantity*	*Total Amount*
1	Construction Earthing chamber including installation of earthing pipe.Making earthing chamber including excavation , soil treatment with bentonide powder , calculation of earth resistance, including Installation of 3Mtr GI Pipe 40mm/50mm including welding of Flat(GI) around pipe .	No.	3,784.73	16	60,555.68
2	**VCB Foundation**				
2.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.28	3,589.33
2.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
2.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.34125	349.06
2.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.455	2,387.60
2.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.825	18,783.00
2.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	13.25	4,079.54
2.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	140	15,610.00
3	**CT & PT Foundation**				
3.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.96875	3,928.91
3.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4.5	990.00
3.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.363	371.31
3.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.363	1,904.83

3.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.3625	15,707.91
3.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	14.94	4,599.88
3.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	122.43	13,650.95
4	**Column as per Drawing Schedule-**				
4.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	51.30975	25,297.76
4.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	24	5,280.00
4.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	2.1	11,019.70
4.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	14.175	94,247.45
4.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	89.64	27,599.26
4.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	734.58	81,905.67
5	**Isolator**				
5.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	9.45	4,659.23
5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.567	2,975.32
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.7	37,898.45
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	103.5	24,012.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	6.9	10,212.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	6.9	34,707.00

6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	13.8	1,03,500.00
6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	12.6	94,500.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	168	45,360.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	2974.2	3,03,368.40
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	3.6	28,620.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	1590.6	1,65,422.40
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	21.6	14,040.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	7.2	21,600.00
K1				**Total Civil & Services**	**13,20,994.29**
K2				**Applicable Taxes to make it Landed Cost @18%**	**2,37,778.97**
K				**Total landed Cost (K=K1+ K2)**	**15,58,773.26**
L				**Total Material +services (J+K)**	**36,83,925.40**

4.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.825	18,783.00

4.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	13.25	4,079.54
4.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	140	15,610.00
5	**CT & PT Foundation**				
5.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.96875	3,928.91
5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4.5	990.00
5.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.363	371.31
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.363	1,904.83
5.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.3625	15,707.91
5.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	14.94	4,599.88
5.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	122.43	13,650.95
6	**RCC Cable Trench :**	Qty			
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	103.5	24,012.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	6.9	10,212.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	6.9	34,707.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	13.8	1,03,500.00
6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	12.6	94,500.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	168	45,360.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	2974.2	3,03,368.40
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	3.6	28,620.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	1590.6	1,65,422.40
8	**Land Leveling & Compaction/ Gravels sprading :**				
8.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	21.6	14,040.00

8.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	7.2	21,600.00

BoQ for Installation of LTDB for 100 kVA DTR along with DSS refurbishment

	No. of LTDB	1

Sl. No.	*Description of Materials*	*Unit*	*Unit Rate*	*Total Quantity*	*Total Amount*
	SUPPLY OF FOLLOWING EQUIPMENT & MATERIALS				
1	GI Channel, angle & flat of different size	KG	78.00	60	4,680.00
2	9 Mtr. long PSC Pole	EA	3,630.00	1	3,630.00
3	Pole clamp for EYE hook for (XLPE Aerial bunched Cable)	EA	240.00	2	480.00
4	EYE hook for XLPE Aerial bunched Cable	EA	75.00	2	150.00
5	Dead End Clamp suitable for messenger XLPE Aerial bunched Cable	EA	217.00	2	434.00
6	LT Stay set Complete	SET	736.00	1	736.00
7	7/12 SWG GI stay wire, Grade -2	KG	79.00	12	948.00
8	LT stay Clamp	EA	350.00	1	350.00
9	LT Stay insulator	EA	19.00	1	19.00
10	LT Distribution Box for 100 KVA S/S	EA	31,086.00	1	31,086.00
11	55 SQ.MM. AAAC XLPE Covered Conductor	M	101.00	30	3,030.00
12	4 Cx 150 mm2 LT XLPE Cable(Armoured) - FOR 100 KVA Trf.	M	850.00	15	12,750.00
13	1.1kV, 4Core, 150 sqmm, XLPE insulation armoured -Aluminium UG cable from LTDB to Pole	M	850.00	40	34,000.00
14	HDPE pipe of 110 mm diameter, PE 80- PN8	M	261.00	20	5,220.00
15	AB Switch(11KV,200A.3pole,50Hz)	SET	9,080.00	1	9,080.00
16	DO.Fuse(11KV.200A.3Pole)	SET	3,214.00	1	3,214.00
17	10 AMP Fuse Link	EA	40.00	3	120.00
18	WEDGE CONNECTOR FOR 55 SQMM.CONDUCTOR	EA	100.00	3	300.00
19	Lightning Arrester(12KV,10KA) Station Class 2	EA	1,960.00	3	5,880.00
20	DMC Insulator for LA (70/10)	EA	113.50	8	908.00
21	Gi Pipe Earthing 40mm. 3 Mtr. Long	EA	1,300.00	2	2,600.00
22	GI Nuts & Bolts of Assorted size	KG	74.00	10	740.00
23	SMART ENERGY METER, 3P4W, 11 KV/110V-/5A	EA	7,389.11	1	7,389.11
A1				**Total Cost of materials**	**1,27,744.11**
A2				**Applicable Taxes to make it Landed Cost @18%**	**22,993.94**
A				**Total landed Cost (A=A1 + A2)**	**1,50,738.05**
B				Stock, Storage & Insurance i.e 3% of A	4,522.14
C				**Sub Total (A+B)**	**1,55,260.19**
D				Contigency @ 3% of C	4,657.81
E				Tools & Plants @ 2% of C (except Stay/HDPE Pipe/Earthing/Cable)	1,728.81
F				Transportation @ 7.5% of C	11,644.51
G				Erection Charges @ 5% on Trf/Breaker/WPB/ H-Pole (With Applicable Taxes @ 18% to make it Landed Cost)	-
H				Erection Charges @ 10% of C (except Trf/Breaker/WPB/ H-Pole/HT stay set/HDPE Pipe/PSC pole/GI Pipe earthing) (With Applicable Taxes @ 18% to make it Landed Cost)	8,202.87
I				Erection Charges @ 20% of PSC pole (With Applicable Taxes @ 18% to make it Landed Cost)	882.38
J				**Sum of (C to I)**	**1,82,376.57**
	Civil and Services Works				
1	PCC ratio 1:3:6(M-10 Grade) For DSS Area	M3	5,247.48	1.745	9,156.85
2	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate	M3	3,000.00	1.745	5,235.00
3	Fixing of LT complete Stay Set with all accessories and civil works	EA	2,301.53	1	2,301.53
4	Construction of Earthing chamber incuding earthing pipe and civil works	EA	3,784.73	2	7,569.46
5	LTDB Plinth	EA	11,354.57	1	11,354.57
6	Laying of 110mm dia PE 80-PN8, HDPE pipe inside open trench.	M	195.00	20	3,900.00
7	Laying of 4 Cx 150 mm2 LT XLPE Cable	M	60.00	55	3,300.00
8	Concreting ratio 1:1.5:3(M-20 Grade)-For PSC Pole	M3	6,648.85	0.375	2,493.32
9	SITC of Aluminium Lugs suitable for 150 sq mm cable/conductor	EA	156.50	24.000	3,756.00
10	SITC of termination kit of 1.1kV 3.5C/4C 150-240 sqmm	EA	4,920.00	2.000	9,840.00
11	SITC of double Compression Flameproof Type Glanding for armored Cable 3.5/4C 120-185sqmm	EA	2,230.00	3.000	6,690.00
12	**Earth work excavation of soil -Route Length**	M			
12.i	Earth work excavation of **soil**	M3	716.03	2.100	1,503.66
12.ii	Earth work excavation of **hard rock**	M3	1,759.39	0.900	1,583.45
12.iii	Back filling with excavated soil outside and above the trench	M3	220.00	3.000	660.00
13	Painting of Pole in Black & Yellow strips/Zebra	EA	283.34	2.000	566.68
14	GIS coordinate mapping, drawing preparation and submission of the same for DSS.	EA	1,000.00	1.000	1,000.00
15	Dismantling of AB Switch	SET	1,200.00	1.000	1,200.00
16	Dismantling HG Fuse	EA	668.75	1.000	668.75
K1				**Total Civil & Services**	**72,779.26**
K2				Applicable Taxes to make it Landed Cost @18%	13,100.27
K				**Total landed Cost (K=K1+ K2)**	**85,879.53**
L				**Total (J+K)**	2,68,256.10
M				Other overheads (Including 6% supervision charges) of L	
N				**Sub-Total (L+M)**	**2,68,256.10**
O				CESS 1% of N	2,682.56
P				**Gross Total Material +Services (N+O)**	**2,70,938.66**

ANNEXURE-19

T-Off removal from 33kV Network

ANNEXURE-19	
Description	**Cost (in Cr.)**
Supply and installation of 33 kV (LLVV+Aux. PT) RMU with FRTU	0.62

ANNEXURE-19

Supply and installation of 33 kV (LLVV+Aux. PT) RMU with FRTU					
Supply Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Supply of materials for 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 33kV 3C, 400sqmm cable (open trench)***	***M***	***48***		
b	***Length of 33kV 3C, 400sqmm cable (HDD)***	***M***			
1.1	Supply of 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA-20kA)	M	48	3,165.00	1,51,920.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG Cable kits	EA		25,930.00	-
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA	3	11,900.00	35,700.00
1.4	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA		11,340.00	-
1.5	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT U/G Cable kits (Touch Proof)	EA	3	71,915.00	2,15,745.00
1.6	Supply of materials for High Density Polyethelene **(HDPE) pipe 200mm** diameter, PE 80- PN8 for laying of 33kV UG cable	M	48.00	812.00	38,976.00
2	**Supply of 33kV RMU**				
e	***No. of 33kV 4Way RMU LLVV(2ISO+2BKR)+ AUX.PT***	***EA***	***1***		
2.5	Supply of RMU 33KV 4W 630A LLVV(2ISO+2BKR)+ AUX.PT	EA	1	30,18,066.00	30,18,066.00
3	**Earthing**				
3.1	Earthing Conductor: 50X6 mm (2.4kg./mtr.) Flat(GI) for equipment, structure etc.)	KG	13.20	78.00	1,029.60
3.2	Pipe Earthing 40mm. GI Pipe	EA	2	1,300.00	2,600.00
4	**FRTU for RMU SCADA Automation**				
a	***No. of FRTU***	***EA***	***1***		
4.1	Pre-Wired FRTU Panel with FRTU	EA	1	1,56,247.00	1,56,247.00
4.2	Managed Layer2 Ethernet Switch (FRTU Panel)	EA	1	95,000.00	95,000.00
4.3	Networking Accessories	SET	1	72.00	72.00
4.4	CMR with Mounting Base for Digital Inputs	EA	32	275.00	8,800.00
4.5	Interposing Relay for Digital Output	EA	16	275.00	4,400.00
4.6	Battery Charger	EA	1	17,500.00	17,500.00
4.7	Battery	EA	1	12,500.00	12,500.00
4.8	4G Modem cum Router	EA	1	24,400.00	24,400.00
4.9	Instrumentation Cable 12 C X 0.5 mm2, Armored cable for Status and Indications	M	40	309.00	12,360.00
4.10	Instrumentation Cable 7 C X 1.5 mm2, Armored for Control Output	M	40	299.00	11,960.00
4.11	Twisted Pair Shielded & Over all shielded Instrumentation Cable 5 P X 1.0 mm2, Armored for Analog Input	M	40	382.00	15,280.00
4.12	4 C X 4 mm2 Copper cable for extension of CT & PT	M	20	185.59	3,711.80
4.13	2 C X 4 mm2 Cable for DC Power Supply	M	10	210.00	2,100.00
4.14	4P X 0.36 mm2, Armored Communication Cable for MFM	M	20.0	229.00	4,580.00
4.15	Armored CAT6 SFTP Cable	M	20	107.00	2,140.00
4.16	Un-Armored CAT6 SFTP Cable	M	20	55.00	1,100.00
4.17	Multi Function Meter	EA	2	14,000.00	28,000.00
	Sub Total (Supply Portion) (in Rs.)				**38,64,187.40**

Erection Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Erection, Commissioning & Testing of 33kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 33kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by **open trench method**.	M	48	115.00	5,520.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG cable kits	EA	6	2,000.00	12,000.00
1.3	Laying of HDPE pipe (200mm dia, PN8 PE80) by HDD method including supply of HDPE Pipe.	M	0	2,970.00	-
1.4	Laying of 200**mm dia** PE 80-PN8, **HDPE pipe** inside open trench.	M	48.00	195.00	9,360.00
2	**Erection, Commissioning, Wiring and Testing of 33kV RMU**				
2.5	Erection of RMU 33KV 4W 630A LLVV(2ISO+2BKR)+ AUX.PT	EA	1	14,000.00	14,000.00
3	**FRTU and OFC for RMU SCADA Automation**				
3.1	Services of FRTU Panel, Communication and Other Supplied System	EA	1.0	6,755.00	6,755.00
	Sub Total (Erection Portion) (in Rs.)				**47,635.00**
Civil Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**

			Total Cost for 33kV Overloading Mitigation (Cr.)			**₹ 20.00**	

Mitigation of 33kV Feeder Overloading Issue

1. Proposal for overloading mitigation of 33kV Old Danpur Feeder:

Proposal:

Proposal for augmentation of 13 CKM 33 kV O/H line of Old Danpur feeder from Kendrapara GSS to Danpur PSS for feeder overloading mitigation and reliability improvement.

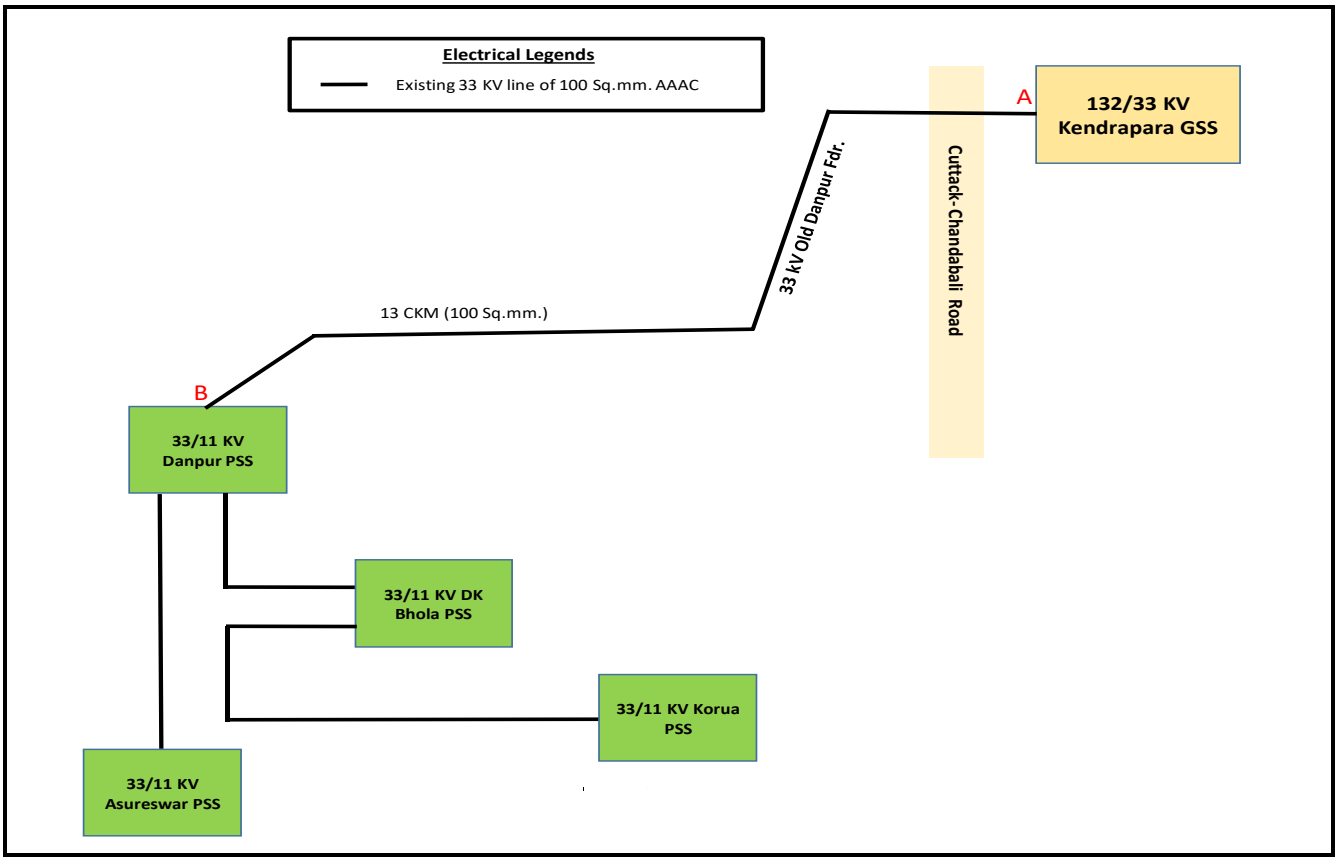
Requirement/ Need of the proposal:

Objective:

To ensure reliable power supply by mitigating feeder overloading.

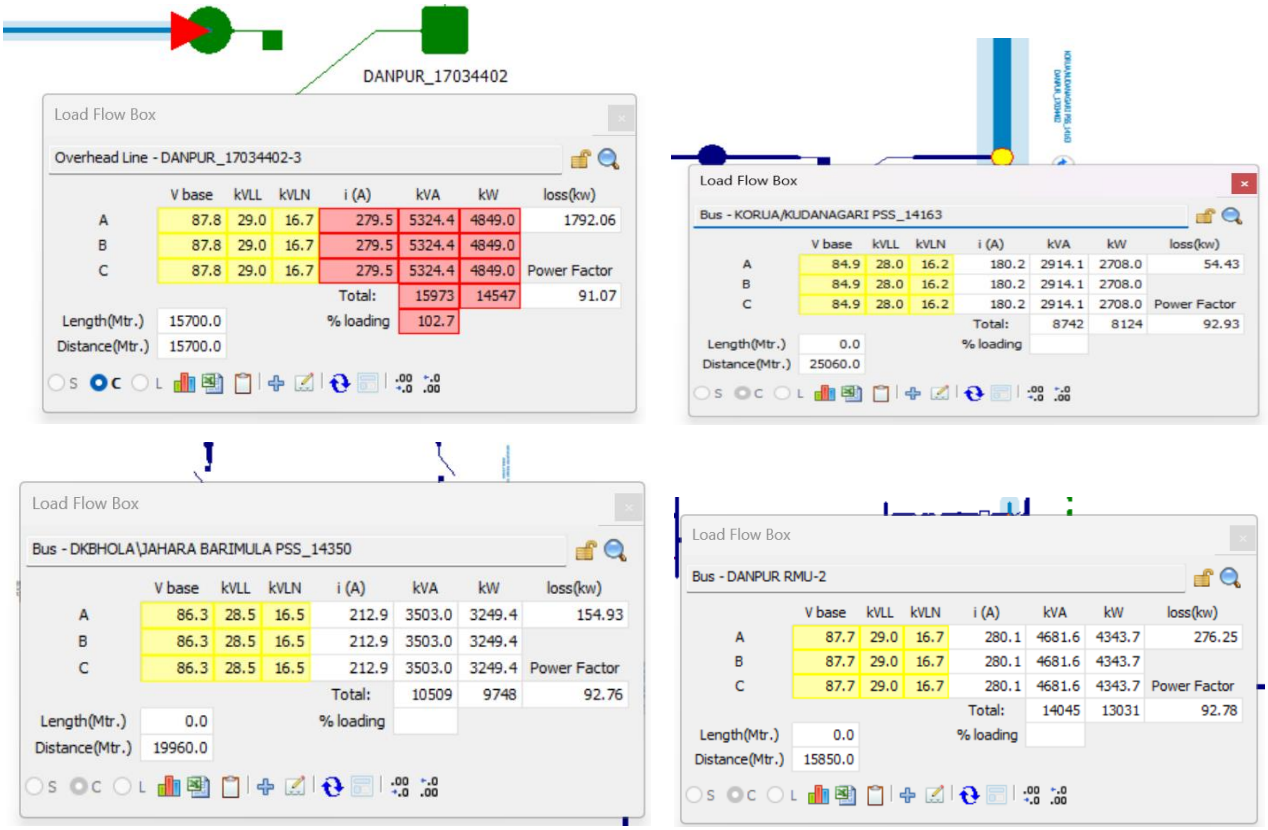
Existing Scenario:

- At present, 33kV Old Danpur feeder is emanating from Kendrapara GSS and feeding power supply to Danpur, DK Bhola & Korua/Kudanagari PSS. Feeder having conductor size of 100 sq.mm, with a peak load of 13.50 MVA.
- Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently.
- In addition, minimum ground clearance has not been maintained in several places over the feeder due to encroachment and due to increase of the existing soil level.
- Considering load growth for 2years @11% per year, 33kV Old Danpur feeder will be overloaded.



Existing Summer'26 Loading and projected load at 33kV Old Danpur Feeder:

Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer '28 (kW)**
Kendrapara	Old Danpur	15.54	13.50	87%	OK	16.63	107%	Overload	1792
Total Loss (kW)									**1792**



Existing Summer'26 voltage and projected voltage at PSS end:

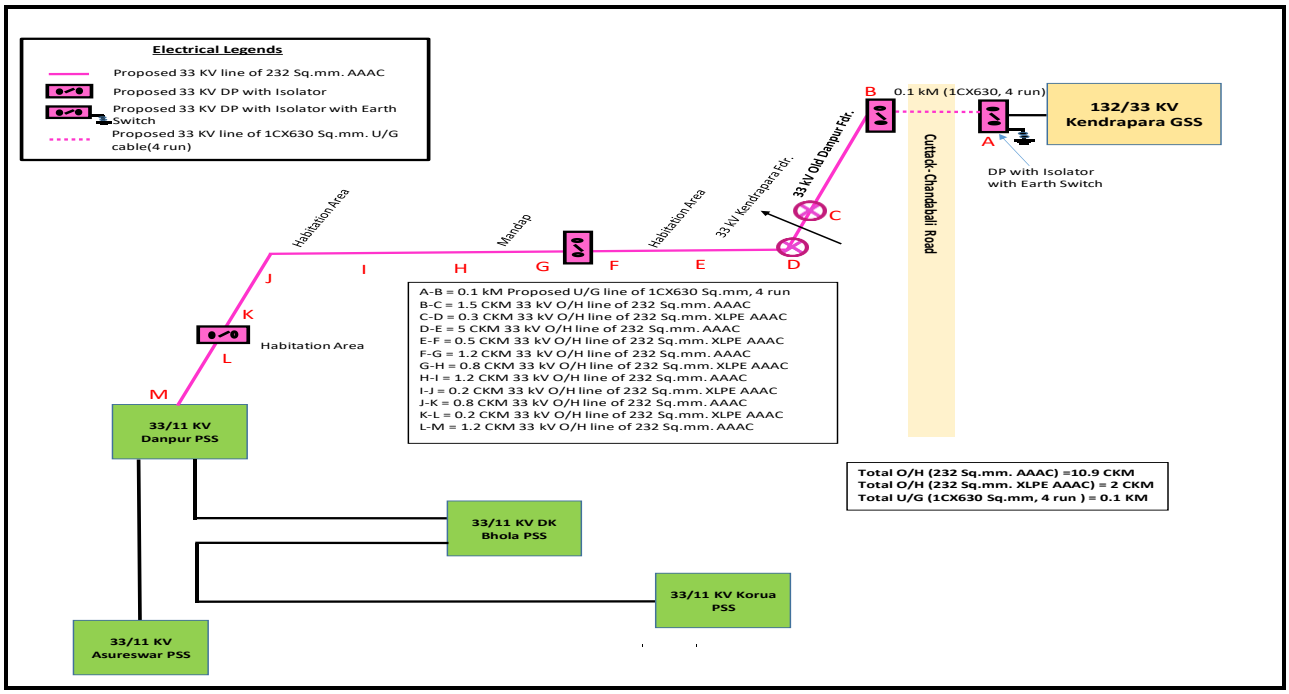
33/11kV PSS Name	Voltage in kV in Summer '26	Projected Voltage with 2YR LG in kV in Summer '28 (Before Proposal)
Danpur	29.7	29
DK Bola	28.6	28.5
Korua	28.2	28

Existing SLD:

Network analysis using load flow software with 2 year load growth:

Priority and Timeline of the Project:

Priority: Since the feeder loading has reached 87% loading in ASIS scenario, with load growth In Summer'28, the feeder loading will reach 107%. In case the issue is not addressed, there will be load shedding of 27056 nos. consumers for prolonged period. No of 33 KV feeder tripping in FY26 is 89 No's. In existing scenario all the PSS are facing low voltage issue which will be further down in next two year with load growth if not attended.



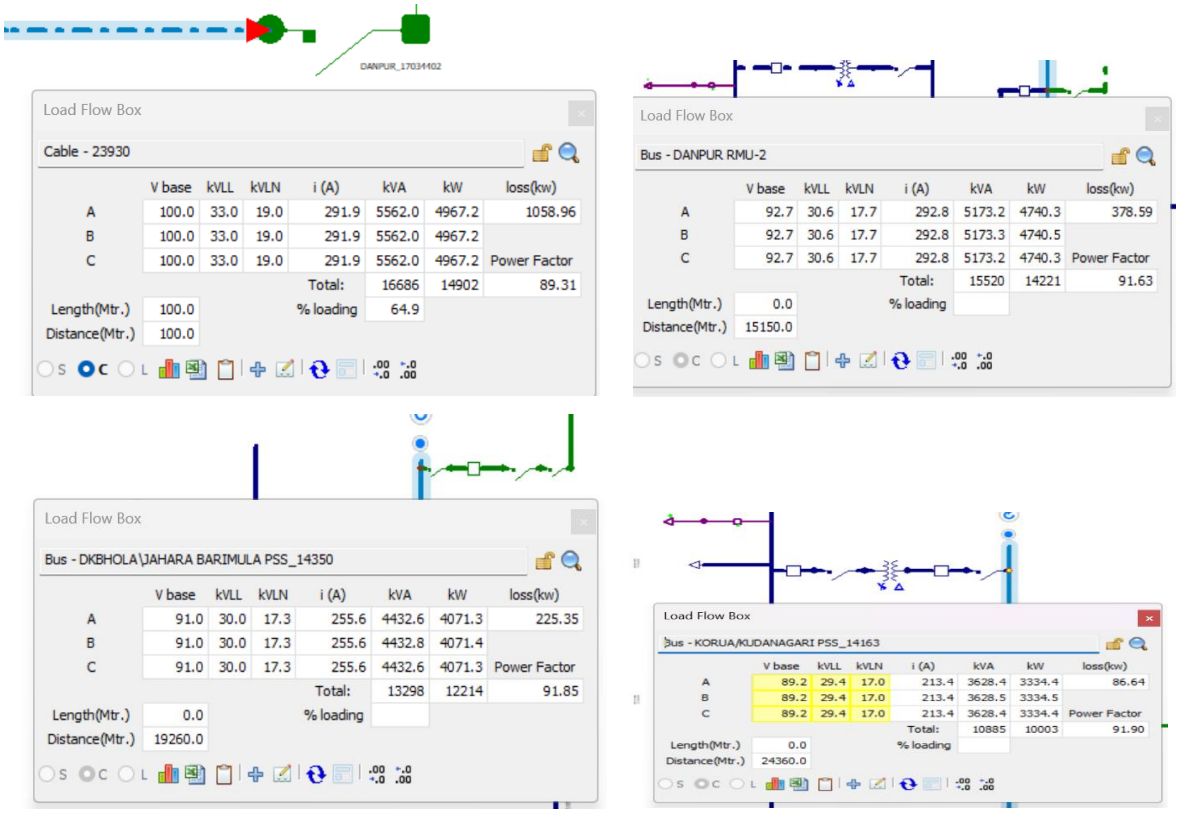
Technical Justification

- The current carrying capacity as per CEA Distribution Planning Manual for recommended current carrying capacity. As per IS: 398-4 (1994) or OEM recommendation for AAAC conductors.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, feeder loaded more than 70% without N-1 condition is required for augmentation / new feeder.
- In AS IS scenario, the feeder is 87% loaded w.r.t the current carrying capacity and will be overloaded to 107% with two-year load growth @ 11% per year.

Proposed Scenario:

- Augmentation proposed for 12.9 CKM 33 kV O/H line from Kendrapara GSS to Danpur PSS using 232 Sq.mm. AAAC/ 232 Sq.mm. XLPE AAAC & 13 Mtr. H-Pole for mitigation of overloading issue.
- Since the feeder is in within 0-60 kM of coastal area for cyclone resilient H-Pole has been considered.
- 33 kV U/G line proposed of 0.1 kM for SH (Cuttack Chandbali) crossing.
- 08 Nos 33 kV line protecting guarding proposed for road crossing.

Proposed SLD:



Proposed loading after execution of proposals:

Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'28 (kW)**
Kendrapara	Old Danpur	26.51	16.63	63%	OK	1059
Total Loss (kW)						**1059**

Proposed Voltage at the PSS end after execution of proposal in Summer'28 with 2YR LG

33/11kV PSS Name	Projected Voltage with 2YR LG in kV in Summer '28 (After Proposal)
Danpur	30.6
DK Bola	30
Korua	29.4

Network analysis using load flow software with 2 year load growth with proposal:

Scope of Work:

1. Augmentation & refurbishment of 33 kV feeder from Kendrapara GSS to Danpur PSS
2. Scope of work covers 10.9 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. AAAC and 2 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. XLPE AAAC
3. Installation of 01 No. of 33 kV DP with Isolator with earth switch near Kendrapara GSS.

4. Installation of 12 Nos of 14 Mtr. H-Pole for 11 kV line crossing to maintain required safety clearances as per CEA guidelines.
5. Supply & laying of 0.1 kM 33 kV 1CX630 Sq.mm. XLPE U/G cable (4 run) in HDD method.
6. Installation of 8 Nos 33 kV cuddle guard arrangement in road crossing having span 40 Mtr. each.

Proposed Cost with Estimate Break-up:

Name of the Division: -	KED-I	
Name of the Sub-Division: -	Kendrapara	
Name of the Section: -	Danpur	
Name of the Work: -	Proposal for augmentation/refurbishment of 13 CKM line of 33 kV Danpur Old Fdr. from 80/100 Sq.mm. AAAC to 232 Sq.mm. AAAC to mitigate overloading issue.	
Names of Schemes: -	**CAPEX 27-28**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 10.9 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. AAAC (Refer PSLD)	37,578,507.73
2	PART B: 1. Construction of 2 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. XLPE AAAC (Refer PSLD) 2. Installation of 01 No. of 33 kV DP with Isolator with earth switch (Refer PSLD)	7,767,483.76
3	PART C: Installation of 12 Nos of 14 Mtr. H-Pole for 11 kV & 33 kV line crossing	1,813,284.54
4	PART D: Supply & laying of 0.1 kM 33 kV 1CX630 Sq.mm. XLPE U/G cable (4 run) in HDD method (Refer PSLD)	1,850,322.36
5	PART E: Installation of 8 Nos guarding having span 40 Mtr.	243,497.51
6	PART F: Dismantling portion	723,208.37
8	**Total Gross**	**49,976,304.28**
Total estimated cost is Rs. 5.00 Cr.		

Cost Estimate: ₹ 5.00 Cr. (For detailed BoQ refer Annexure-20.1).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026
ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Reduction of electrocution risk and public safety hazards.
c) Safe operation and isolation of the feeder.
d) Protection of electrical assets against lightening and surge related failure.
e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

Revenue Return Sheet				
Sl. No.	**Description**	**Formula**	**New Value**	**UoM**
A	Total cost of scheme	-	5.00	RS Cr
B	Additional load due to load growth	-	3133.35	kVA
C	Total kW due to load growth	BXPF (power factor)	2976.68	kW
D	Total units consumed yearly (Load x days x Hrs x load factor)	CX365X24XLF	2607574	kWH
E	Power Purchase cost per unit	-	3.55	Rs.
F	Avg. Power Sale cost per unit	-	5.94	Rs.
G	Diff. (Sale-purchase)	F-E	2.39	Rs.
H	Revenue owing to serving additional load	(GXD)/10^7	0.62	RS Cr
I	Revenue owing to tech. loss reduction	from Technical Loss Calculation	0.79	RS Cr
J	Net Revenue Collected	H+I	1.41	RS Cr
K	% revenue return	(J/A)X100	28.3	%
L	Pay Back Period	100/K	3.54	Years

Benefit to the system and consumers:

- Overloading mitigation of 33kV Old Danpur Feeder.
- Reduction in technical loss of network and improve the voltage profile.
- Ensure reliable & improved voltage supply to the consumers at Danpur, DK Bhola & Korua area.
- Annual average technical loss saving will be 253 kW.
- Improving the vertical clearances and other safety statutory requirements complying to CEA safety guidelines.

2. Proposal for overloading mitigation of 33kV New Rajnagar Feeder:

Proposal:

Proposal for augmentation of 7.1 CKM 33 kV O/H line of New Rajnagar feeder from Rajnagar GSS to Danpur PSS for feeder overloading mitigation and reliability improvement.

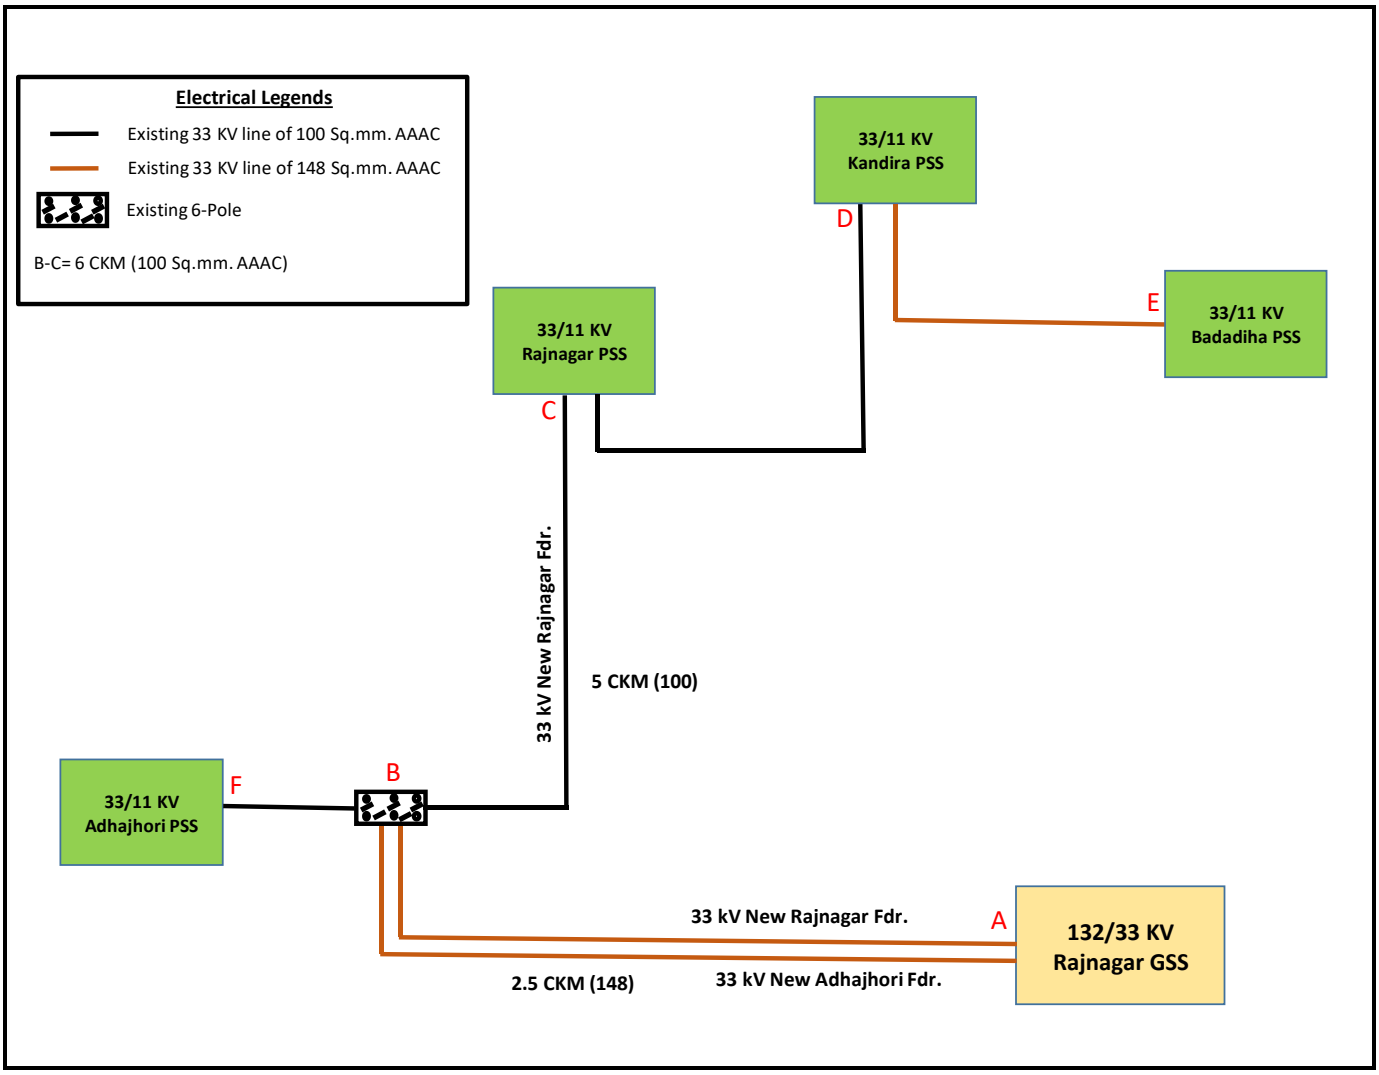
Requirement/ Need of the proposal:

Objective:

To ensure reliable power supply by mitigating feeder overloading.

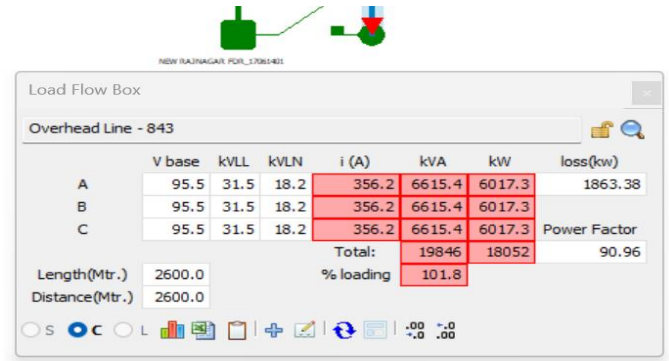
Existing Scenario:

- At present, 33kV Old New Rajnagar feeder is emanating from Rajnagar GSS and feeding power supply to Rajnagar, Kandira & Badadia PSS. Feeder having conductor size of 100/148 sq.mm, with a peak load of 17 MVA.
- 2.5 CKM 33 kV O/H line (double circuit) from Rajnagar GSS to 6-pole is of 148 Sq.mm. AAAC & 13 Mtr. H-Pole and from 6-Pole to Rajnagar PSS is of 100 Sq.mm. AAAC which has very old conductor with multiple joint & short height pole.
- In addition, minimum ground clearance has not been maintained in several places over the feeder due to encroachment and due to increase of the existing soil level in the part of 6-Pole to Rajnagar PSS over the feeder.
- Considering load growth for 2years @11% per year, 33kV New Rajnagar feeder will be overloaded.



Existing Summer'26 Loading and projected load at 33kV New Rajnagar Feeder:

Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer' 26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer' 28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer' 28**	**Loss Summer' 28 (kW)**
Rajnagar	New Rajnagar	15.54	17.00	109%	Overload	20.95	135%	Overload	1863
Total Loss (kW)									**1863**



Existing Summer'26 voltage and projected voltage at PSS end:

33/11kV PSS Name	Voltage in kV in Summer '26	Projected Voltage with 2YR LG in kV in Summer '28 (Before Proposal)
Rajnagar	30.5	29.9
Kandira	28.3	27.3
Badadia	27.2	25.9

Benefit to the system and consumers:

- Overloading mitigation of 33kV New Rajnagar Feeder.
- Reduction in technical loss of network and improve the voltage profile.
- Ensure reliable & improve voltage supply to the consumers at Rajnagar, Balarampur,Talchua & Bhitarkanika area.
- Annual average technical loss saving will be 177 kW.
- Improving the vertical clearances and other safety statutory requirements complying to CEA safety guidelines.

3. Proposal for overloading mitigation and Reliability improvement for Dhekanal Town area:

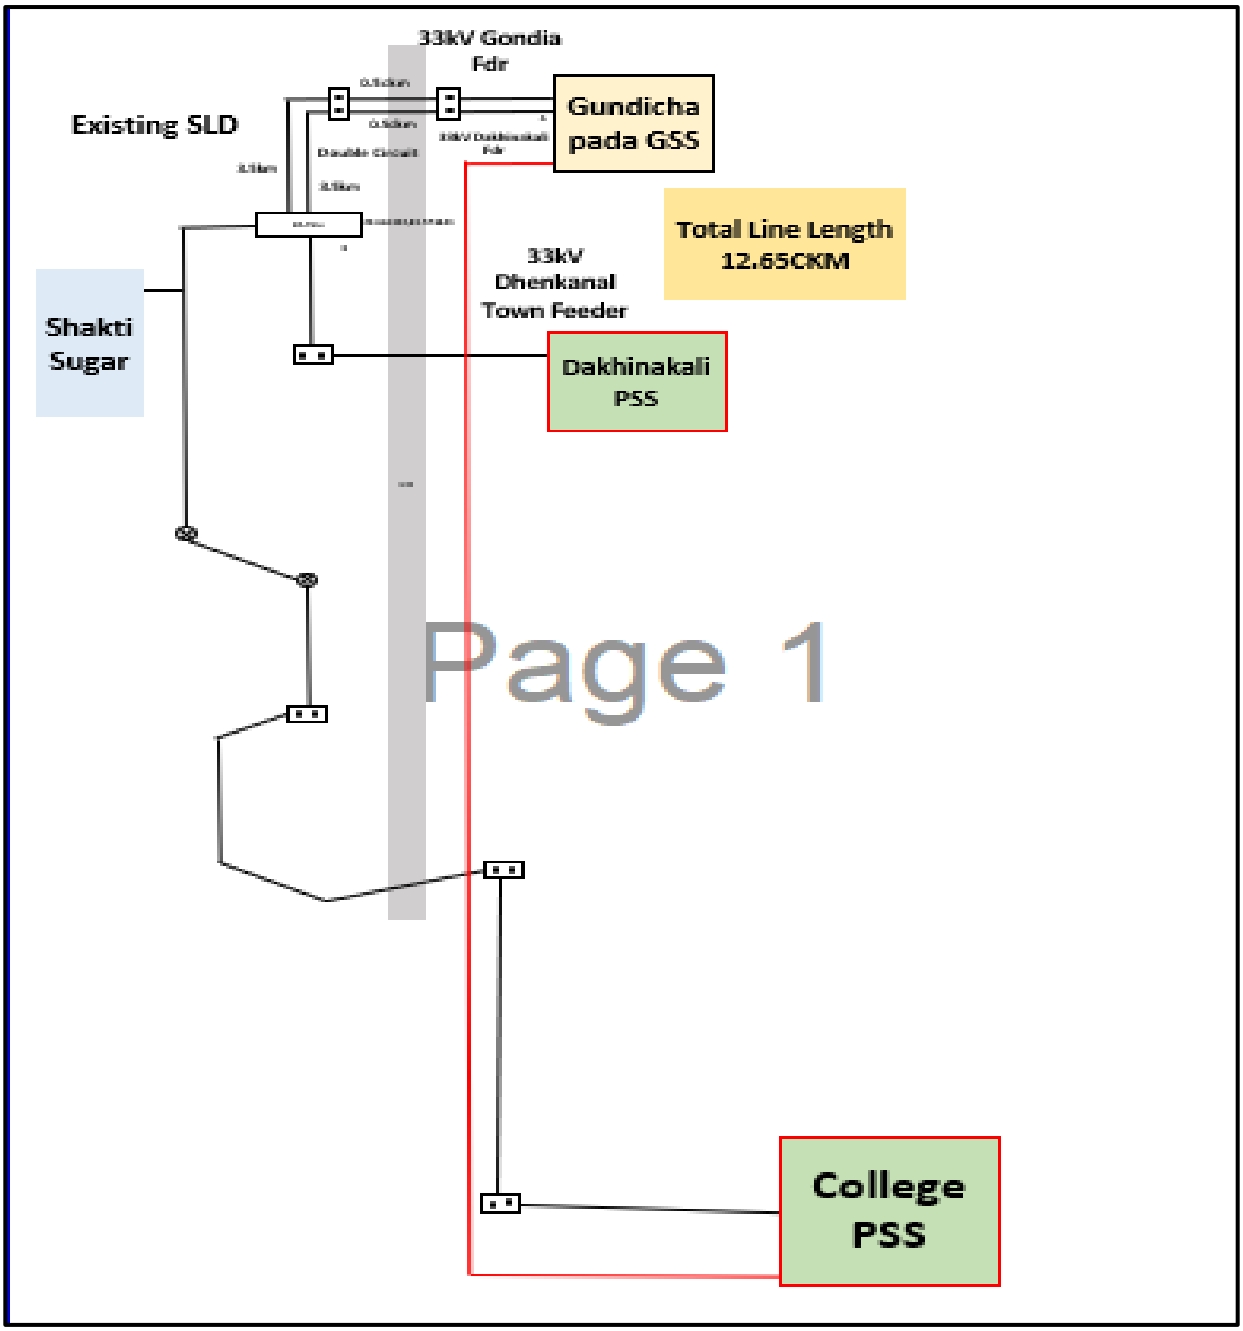
Proposal:

Proposal for Augmentation of 33kV Gondia feeder to mitigate overloading of 33kV Dhenkanal Town feeder and provide 2nd source for Dakhinakali PSS to improve 33kV network reliability.

Requirement/ Need of the proposal:

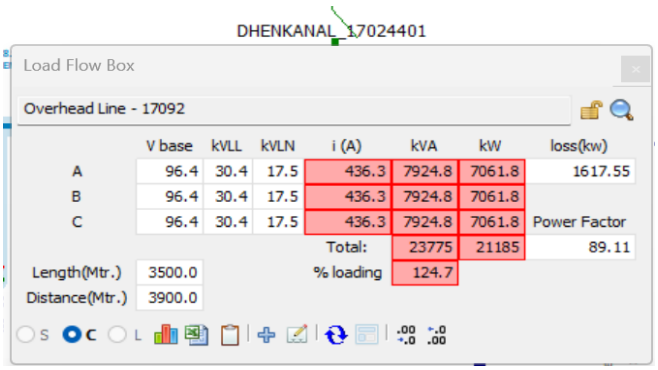
Objective:

To ensure reliable power supply by Overload mitigation and providing ring connectivity for College PSS & Dakhinakali PSS.

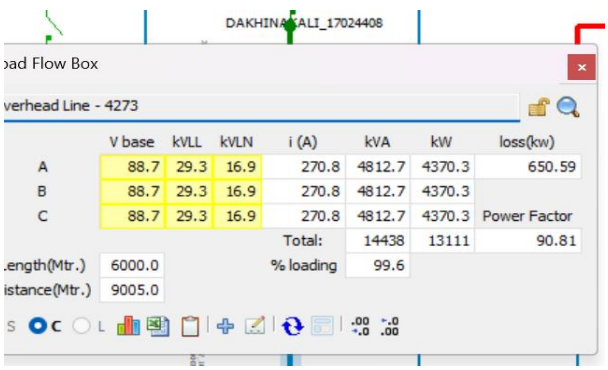


Existing Scenario:

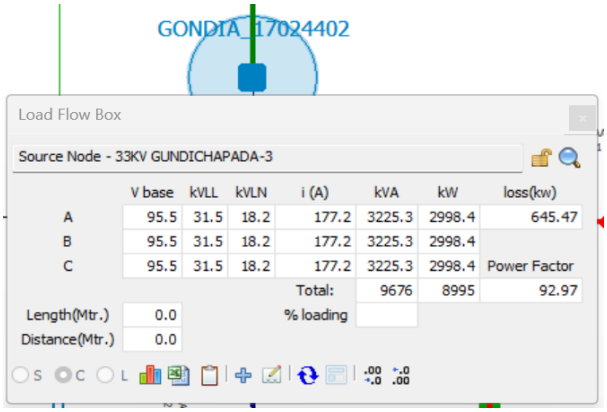
- At present, 33kV Gondia feeder is emanating from Gundichapada GSS, and feeding Bhapur and Ghatipidi PSS. The 33kV Gondia feeder having length is 33Ckm with conductor size of 100 sq.mm and the peak load demand at summer'26 is 8MVA.
- 33kV Dhenkanal Town feeder is emanating from Gundichapada GSS, and feeding College PSS. The feeder having length of 13.5Ckm with conductor size of 148/232 sq.mm and the peak load demand at summer'26 is 21MVA.
- 33kV Dakhinakali feeder is emanating from Gundichapada GSS, and feeding Dakhinakali PSS. The feeder is radial, having length of 9Ckm with conductor size of 100 sq.mm and the peak load demand at summer'26 is 12MVA.
- Considering 2Yrs load growth @8% per year, the 33kV Dhenkanal Town feeder will be overload.
- Most of the part of these feeders passing overhead network arrangement in Forest area and unsafe clearance from households.



Existing Summer'26 Loading and projected load at 33kV Gondia Feeder:



Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer' 26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer' 28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer' 28 (kW)**
Gundichapada	Gondia	15.54	8	48%	OK	9	56%	OK	646
	Dhenkanal Town	20.00	21	103%	Overload	24	120%	Overload	1618
	Dakhinakali	15.54	12	77%	OK	14	90%	OK	651
Total Loss (kW)									**2915**

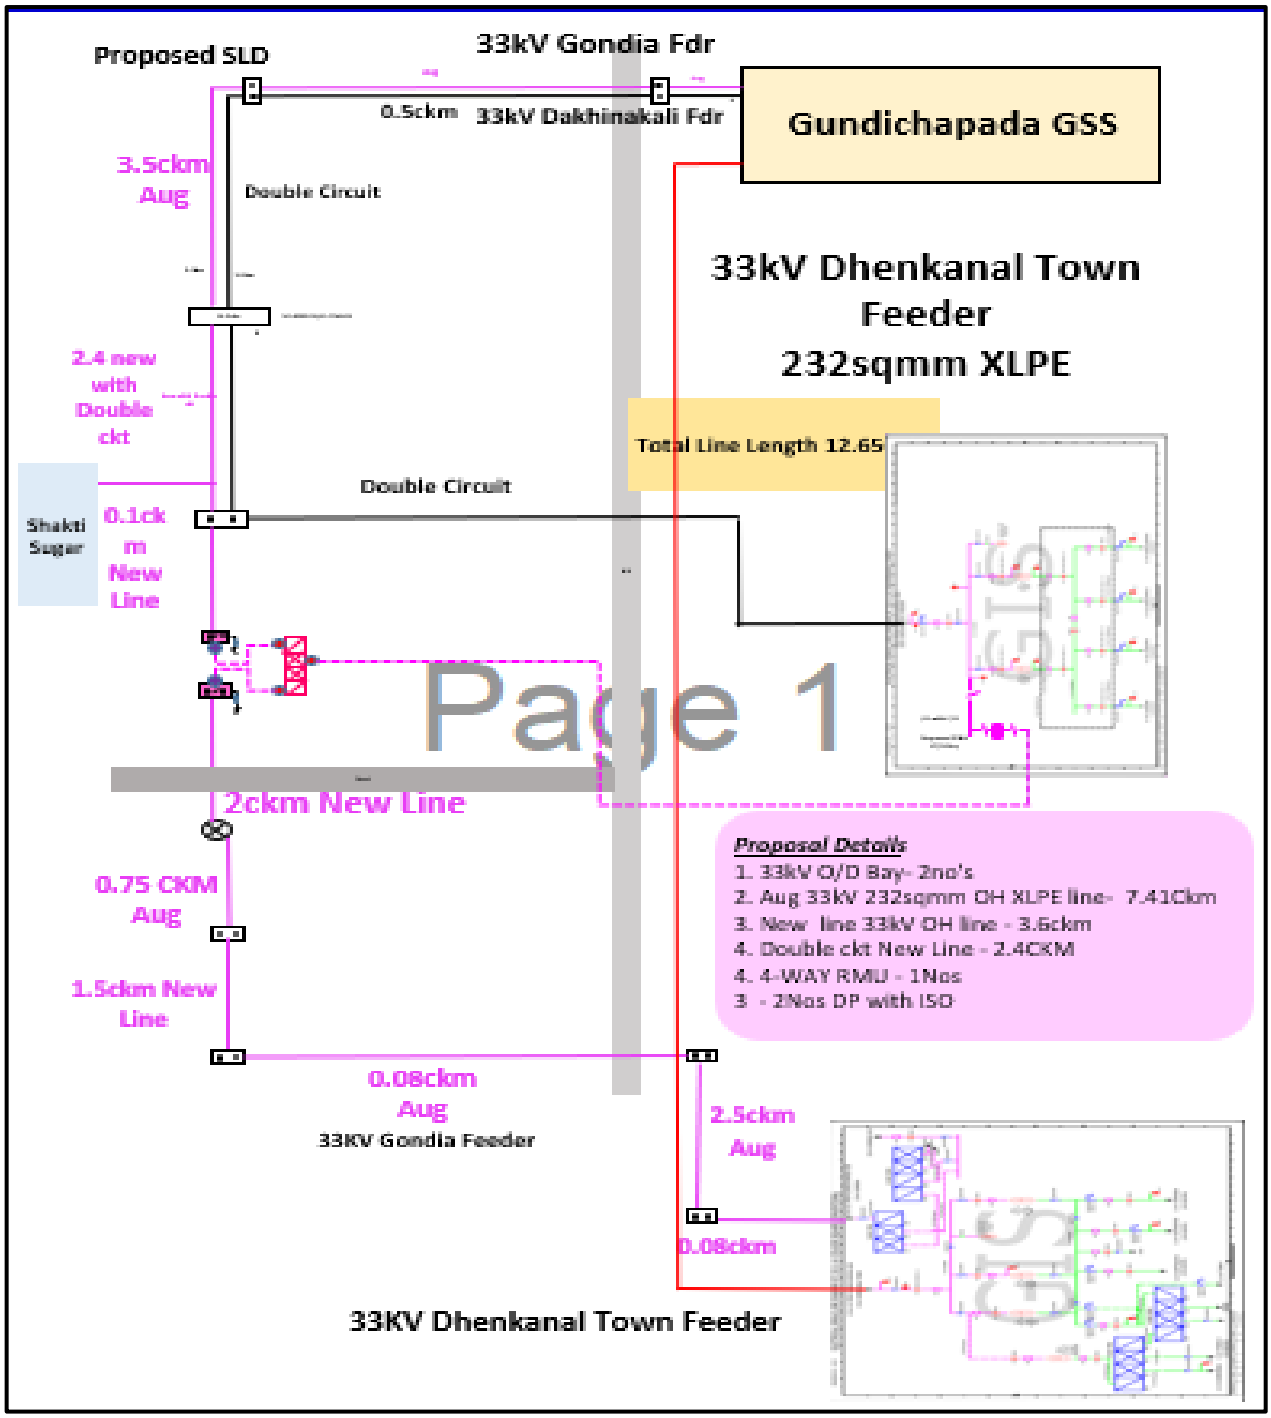


Existing SLD:

Network analysis using load flow software with 2year load growth

Priority and Timeline of the Project:

Priority: Since the Dhenkanal Town feeder loading has reached 103% loading in ASIS scenario, with load growth In Summer'28, the feeder loading will reach 120%. In case the issue is not addressed, there will be load shedding of 22153 nos. consumers for prolonged period.

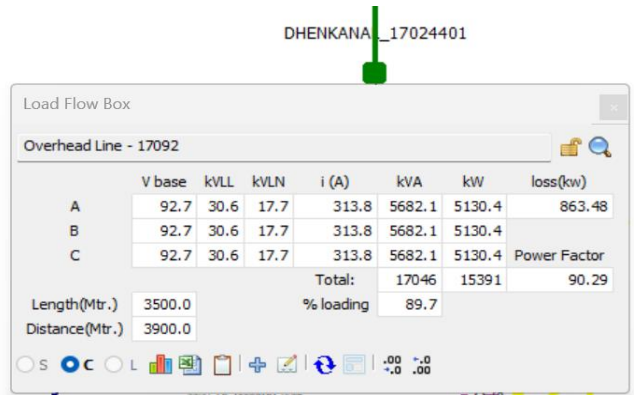


Technical Justification

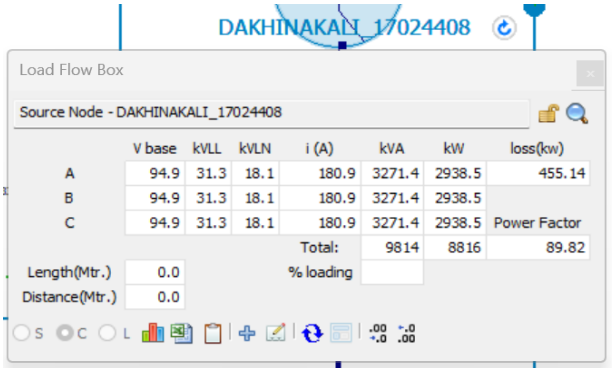
- The current carrying capacity as per CEA Distribution Planning Manual for recommended current carrying capacity. As per IS:398-4 (1994) or OEM recommendation for AAAC conductors.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, feeder loaded more than 70% without N-1 condition is required for augmentation / new feeder.
- In AS IS scenario, the 33kV Dhenkanal Town feeder is 103% loaded w.r.t the current carrying capacity. The feeder loading is not N-1 complaint.

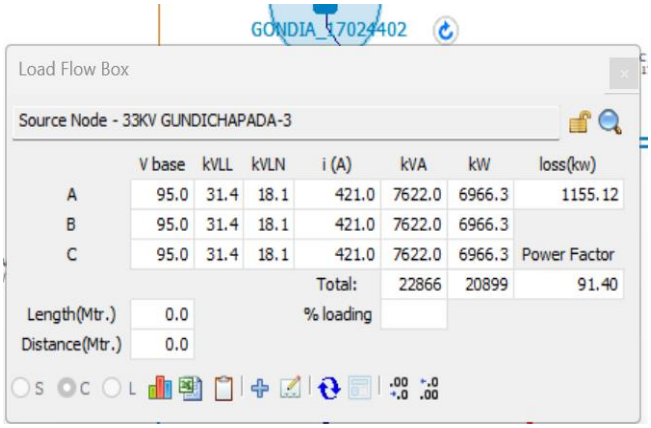
Proposed Scenario:

- Augmentation of 33kV Gondia Feeder from Gundichapada Grid to 33/11kV College PSS.
- After execution of proposal, College PSS load will be able to take on 33kV Gondia Feeder.
- The proposal will enable 2nd source connectivity to Dakhinakali and College PSS and mitigate feeder overloading by Augmentation of 33kV Gondia feeder.



Proposed SLD:





Proposed loading in Summer'28 after execution of proposals:

Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'28 (kW)**
Gundichapada	Gondia	26.51	22	81%	OK	1156
	Dhenkanal Town	20.00	16	80%	OK	864
	Dakhinakali	15.54	9	58%	OK	456
Total Loss (kW)						**2476**

Network analysis using load flow software with 2year load growth with proposal

Scope of Work:

1. Augmentation of 33kV Gondia Feeder- 15.91ckm.

Proposed Cost with Estimate Break-up:

Name of the Division :-	**DED (Dhenkanal)**
Name of the Work :-	Proposal for augmentation of 33kV Gondia feeder from Gundichapada GSS to College PSS, to mitigate college feeder overloading, providing 2nd source to PSS and improve network reliability.
Scope of work:-	Proposal Details 1. 33kV O/D Bay- 2no's 2. Aug 33kV 232sqmm OH XLPE line- 7.41Ckm 3. New line 33kV OH line - 3.6ckm 4. Double ckt New Line - 2.4CKM 4. 4-WAY RMU - 1Nos 3 - 2Nos DP with ISO 2 - 3Cx400sqmm (2.5Ckm) without spare
Names of Schemes: -	***TPCODL CAPEX (FY 27-28)***
ABSTRACT OF ESTIMATE	

Sl. No.	Part	Description	Amount
1	A	Part-A Construction of New Line 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-3.6ckm	₹ 1,23,00,775.65
2	B	Part-B Construction of Double ckt 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-2.4ckm	₹ 1,24,72,839.16
3	C	Part-C Aug 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-7.41ckm	₹ 1,65,28,908.54
4	D	Part-D Construction of Two No of 33 KV Outdoor Bay (Transformer & Line Bay) One is Dakhinakali PSS and College PSS	₹ 47,33,688.76
5	E	Part-E Supply and Laying of 33kV 3C, 400sqmm UG Cable without spare along with 33kV RMU-2.2km	₹ 2,39,15,013.68
		Total Amount	**₹ 6,99,51,225.79**
		Total Amount (In Cr)	**₹ 7.00**

Cost Estimate: ₹ 7.0 Cr. (For detailed BoQ refer Annexure-20.3).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

Revenue Return Sheet				
Sr. No.	**Description**	**Formula**	**Value**	**UoM**
A	Total cost of scheme	-	7.00	RS Cr
B	Additional load due to load growth	-	6400.00	kVA
C	Total kW due to load growth	BXPF(power factor)	6080.00	kW
D	Total units consumed yearly (Load x days x Hrs x load factor)	CX365X24XLF	5326080	kWH
E	Power Purchase cost per unit	-	3.55	Rs.
F	Avg. Power Sale cost per unit	-	5.94	Rs.
G	Diff. (Sale-purchase)	F-E	2.39	Rs.
H	Revenue owing to serving additional load	(GXD)/10^7	1.27	RS Cr
I	Revenue owing to tech. loss reduction	from Technical Loss Calculation	0.47	RS Cr
J	Net Revenue Collected	H+I	1.75	RS Cr
K	% revenue return	(J/A)X100	25.0	%
L	Pay Back Period	100/K	4.01	Years

Benefit to the system and consumers:

- Overloading mitigation of 33kV College Feeder.
- Provide 2nd source for 33/11kV College and Dakhinakali PSS.
- Reduction in technical loss of network and improve the voltage profile.
- Improving N-1 with ring connectivity for 33 Dhenkanal Town feeder.
- Ensure reliable & safe power supply to the consumers at Dhenkanal Area.
- Improving the vertical clearances and other safety statutory requirements complying to CEA safety guidelines.

4. Proposal for Overload mitigation and Reliability improvement for Dayanabili & MK Gola Area:

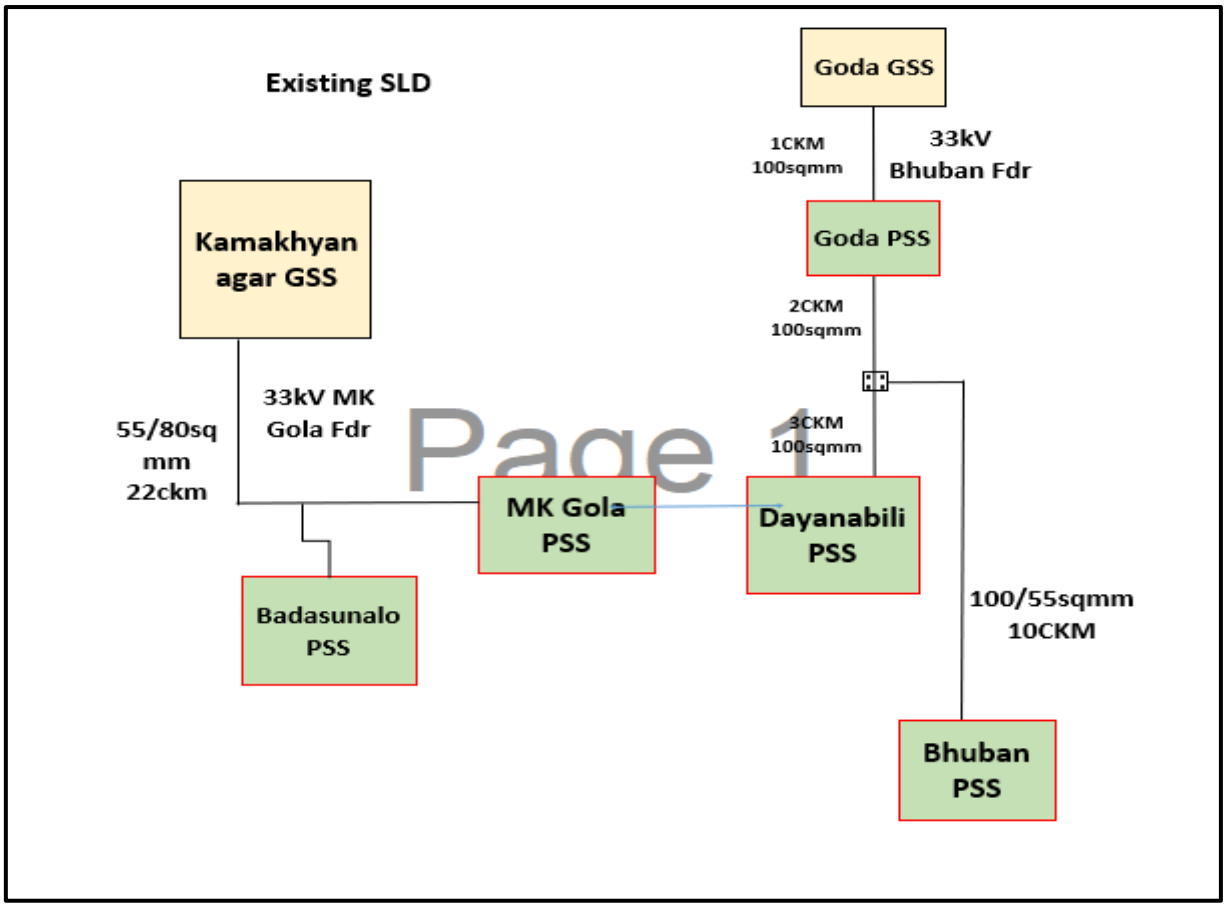
Proposal:

Proposal of new 33kV linking line from 33/11kV MK Gola PSS to 33/11kV Dayanabili PSS, which improve network reliability at Dayanabili & MK Gola by provide additional source and mitigating overloading.

Requirement/ Need of the proposal:

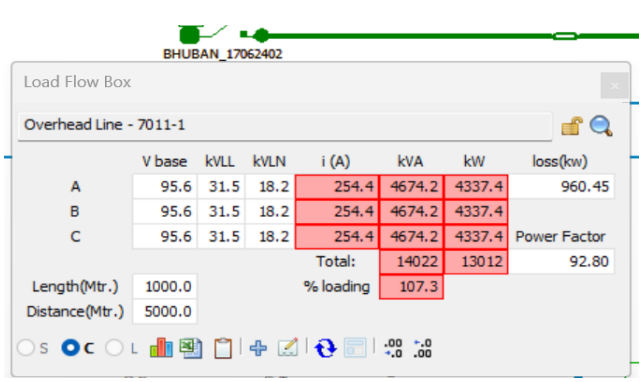
Objective:

To ensure reliable power supply by mitigation Overload of 33kV Bhuban feeder and providing ring connectivity for Dayanabili & MK Gola PSS.

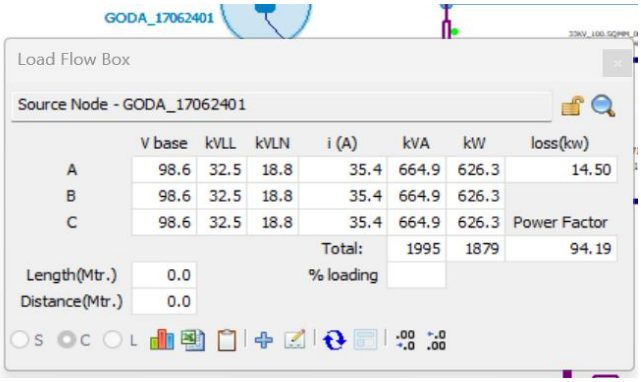


Existing Scenario:

- At present, 33kV MK Gola feeder is emanating from Kamakhyanagar GSS, and feeding Badasunao, MK Gola and Jiral PSS. The feeder is radial, having length of 27Ckm with conductor size of 100 sq.mm and the peak load demand at summer'26 is 6MVA.
- 33kV Goda feeder is emanating from Goda GSS, and feeding Goda, Dayanabil, Bhuban and Mahulpal PSS. The feeder is radial, having length of 32Ckm with conductor size of 148/100/80/55 sq.mm and the peak load demand at summer'26 is 13MVA. 33kV Bhbuan feeder from Goda Grid is under Execution which will further bifurcate load of 33kV Goda Feeder. Considering 2Yrs load growth @8% per year the feeder will be overload.
- Most of the part of these feeders passing overhead network arrangement in Forest area and this is length feeder. During any breakdown or maintenance work very difficult to restoration, which affect reliability of high value consumers.



Existing Summer'26 Loading and projected load at 33kV Feeder:



Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer'28 (kW)**

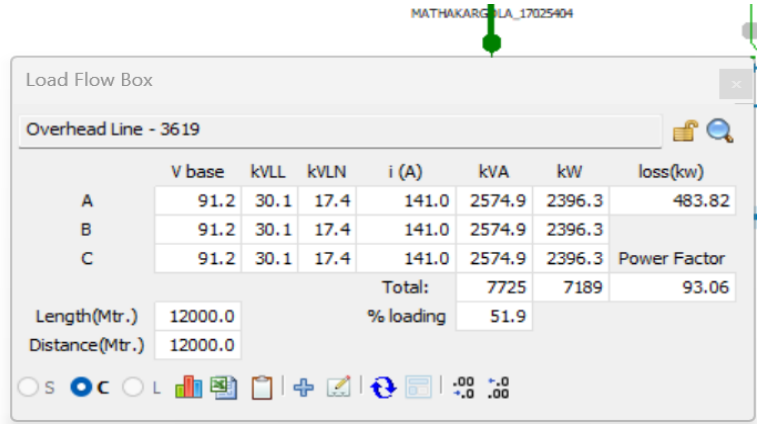
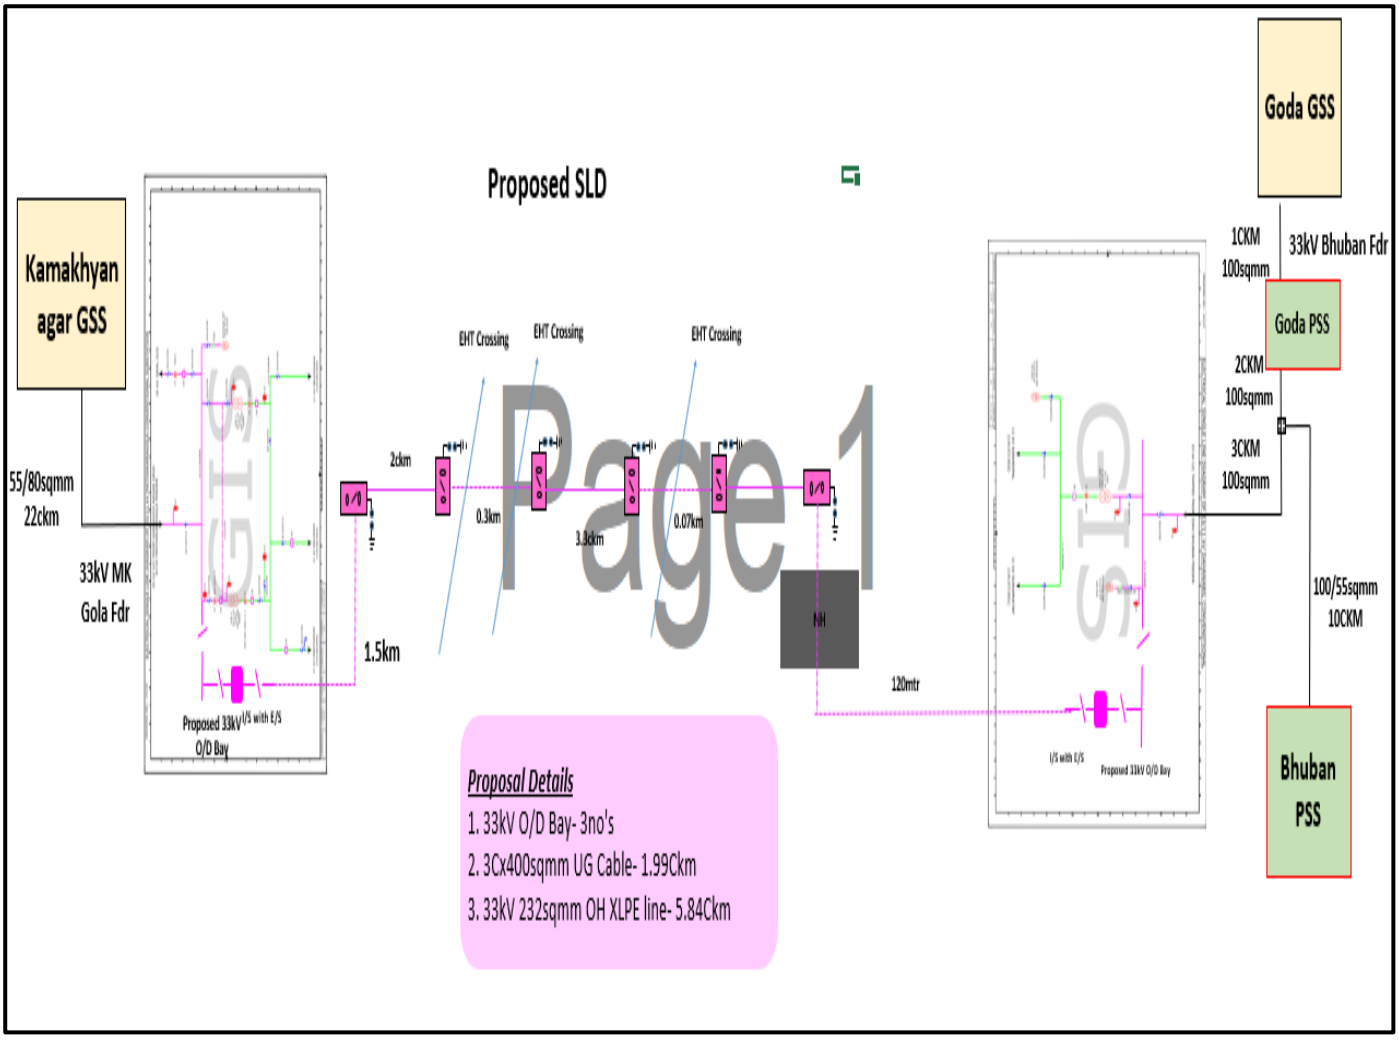
Goda	Bhuban	13.54	0	0%	OK	14	101%	Overload	960
Kamakhyanagar	M.K Gola	15.54	6	39%	OK	7	45%	OK	484
Total Loss (kW)									**1459**



Existing SLD:

Network analysis using load flow software with 2Year load growth:

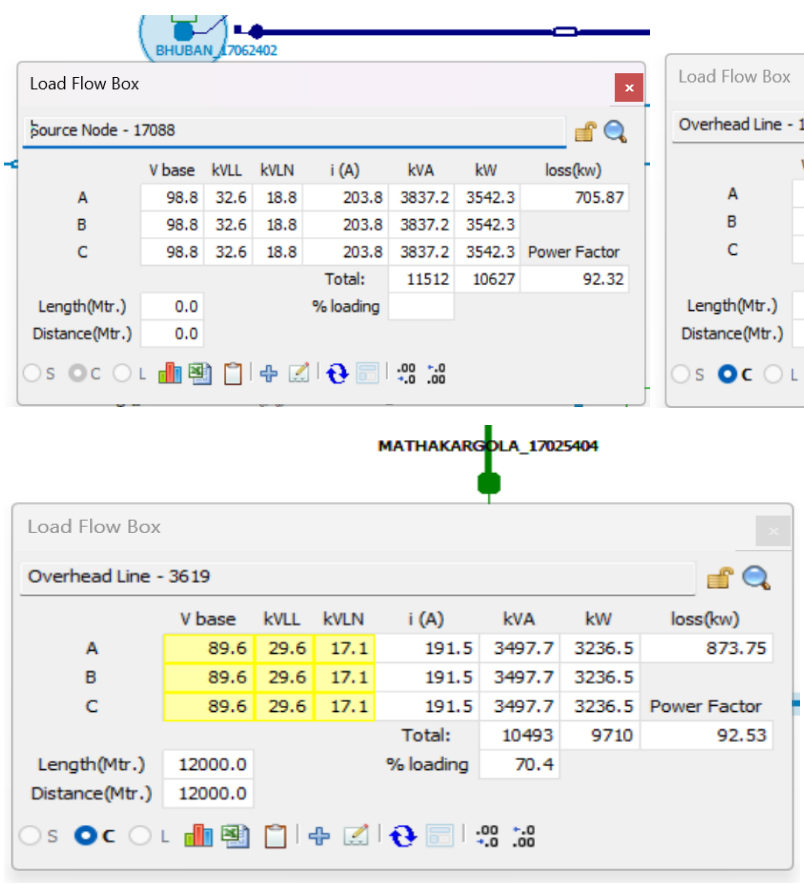


Priority and Timeline of the Project:

Priority: Since at present, the 33kV MK GOLA Feeder emanating from Kamakhyanagar GSS are serving 5657nos. consumers through existing network having lower-size conductors and further due to the ageing of conductors, multiple joints, frequent faults and conductor snapping incidents are being observed, affecting the reliability of power supply. The no. of trippings during the last year was _11_nos. Additionally, inadequate ground clearance at several locations and vegetation encroachment along the feeder corridor pose safety concerns for the public as well as personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Proposed Scenario:

- Construction of new 33kV linking line will provide addition 33kV source from Goda GSS to MK Gola & Dayanabili Area.
- After execution of proposal, during any breakdown or maintenance of existing 33kV feeders part load of the industrial area will restore which will improve network reliability of power supply.



Proposed SLD:

Proposed loading in Summer'28 after execution of proposals:

Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'28 (kW)**
Goda	Goda	20.00	2	10%	OK	15
Goda	Bhuban	13.54	10	75%	OK	706
Kamakhyanagar	M.K Gola	15.54	11	68%	OK	874
Total Loss (kW)						**1595**

Network analysis using load flow software with 2Year load growth with proposal:

Scope of Work:

1. Construction of 33kV line using 232sqmm XLPE conductor- 5.84Ckm.
2. Installation of 33kV RMU -1 No.
3.Construction 33kV Outdoor Bay – 3Nos
3. Supply & laying of 33kV 1R,3CX400 Sq.mm. XLPE U/G cable- 1.99Ckm.

Proposed Cost with Estimate Break-up:

Name of the Division :-	**DED (Dhenkanal)**
Name of the Work :-	Proposal for New 33kV linking line from 33/11kV MK Gola PSS to 33/11kV Dayanabili PSS, to enabling ring connectivity and provide 2nd 33kV source to PSS, mitigate overloading and improve network reliability.
Scope of work:-	Proposal Details 1. 33kV O/D Bay- 3no's 2. 3Cx400sqmm UG Cable- 1.99Ckm 3. 33kV 232sqmm OH XLPE line- 5.84Ckm
Names of Schemes: -	***TPCODL CAPEX (FY 27-28)***

ABSTRACT OF ESTIMATE

Sl. No.	Part	Description	Amount
1	A	Part-A Construction of 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-5.84ckm	₹ 2,18,03,190.36
2	B	Part-B Supply and Laying of UG cable 3C, 400sqmm UG Cable without spare-1.99km	₹ 2,02,77,764.04
3	C	Part-C-Construction of 3 No of 33 KV Outdoor Bay (Transformer & Line Bay) One Nos MK Gola PSS and 2Nos Dayanabil PSS	₹ 1,79,22,622.19
		Total Amount	**₹ 6,00,03,576.59**
		Total Amount (In Cr)	**₹ 6.00**

Cost Estimate: ₹ 6.00 Cr. (For detailed BoQ refer Annexure-20.4).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

Revenue Return Sheet				
Sr. No.	**Description**	**Formula**	**Value**	**UoM**
A	Total cost of scheme	-	6.00	RS Cr

ANNEXURE-20.2		
TPCODL		
Name of the Division :-	KED-I	
Name of the Sub-Division : -	Rajnagar	
Name of the Section : -	Rajnagar-I	
Name of the Work :-	Proposal for augmentation of 7.1 CKM line of 33 kV New Rajnagar Fdr. from 100 Sq.mm./148 Sq.mm. AAAC to 232 Sq.mm.AAAC / XLPE AAAC to mitigate overloading issue.	
Names of Schemes: -	**CAPEX 27-28**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: 1. Construction of 4.6 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. XLPE AAAC (Refer PSLD) 2. Augmentation of 2.5 CKM 33 kV O/H line using 232 Sq.mm. AAAC (Existing pole will be re used) (Refer PSLD)	18,053,053.73
2	PART B: Installation of 4 Nos of 14 Mtr. H-Pole for 11 kV & 33 kV line crossing	604,428.18
3	PART C: Installation of 15 Nos of 11 Mtr. WPB Pole (interposing) in existing line (Refer PSLD)	945,503.79
4	PART D: Installation of 03 Nos guarding having span 30 Mtr.	88,032.94
5	PART E : Dismantling portion	283,925.70
6	**Total Gross**	**19,974,944.34**
Total estimated cost is Rs. 2.00 Cr.		

PART A:

1. Construction of 4.6 CKM 33 kV O/H line using 13 Mtr. H-Pole & 232 Sq.mm. XLPE AAAC (Refer PSLD)

2. Augmentation of 2.5 CKM 33 kV O/H line using 232 Sq.mm. AAAC (Existing pole will be re used) (Refer PSLD)

ANNEXURE-20.3			
TP CENTRAL ODISHA DISTRIBUTION LIMITED			
Name of the Division :-	**DED (Dhenkanal)**		
Name of the Work :-	Proposal for augmentation of 33kV Gondia feeder from Gundichapada GSS to College PSS, to mitigate college feeder overloading, providing 2nd source to PSS and improve network reliability.		
Scope of work:-	Proposal Details 1. 33kV O/D Bay- 2no's 2. Aug 33kV 232sqmm OH XLPE line- 7.41Ckm 3. New line 33kV OH line - 3.6ckm 4. Double ckt New Line - 2.4CKM 4. 4-WAY RMU - 1Nos 3 - 2Nos DP with ISO 2 - 3Cx400sqmm (2.5Ckm) without spare		
Names of Schemes: -	***TPCODL CAPEX (FY 27-28)***		
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	Part-A Construction of New Line 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-3.6ckm	₹ 12,300,775.65
2	B	Part-B Construction of Double ckt 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-2.4ckm	₹ 12,472,839.16
3	C	Part-C Aug 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-7.41ckm	₹ 16,528,908.54
4	D	Part-D Construction of Two No of 33 KV Outdoor Bay (Transformer & Line Bay) One is Dakhinakali PSS and College PSS	₹ 4,733,688.76
5	E	Part-E Supply and Laying of 33kV 3C, 400sqmm UG Cable without spare along with 33kV RMU-2.2km	₹ 23,915,013.68
		Total Amount	**₹ 69,951,225.79**
		Total Amount (In Cr)	**₹ 7.00**

Part-A Construction of New Line 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-3.6ckm

No. of 33 KV DP required Without Isolator (Ref. Drawing No.- PD-1346-TPCODL-33 kV-OH-8003)	2

6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	69	16,008.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	4.6	6,808.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	4.6	23,138.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	9.2	69,000.00
6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	8.4	63,000.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	112	30,240.00

6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	1982.8	202,245.60
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	2.4	19,080.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	1060.4	110,281.60

Civil & Services

Sl. No.	***Description of Materials***	***Unit***	***Unit Rate***	***Total Quantity***	***Total Amount***
1	Construction Earthing chamber including installation of earthing pipe.Making earthing chamber including excavation , soil treatment with bentonide powder , calculation of earth resistance, including Installation of 3Mtr GI Pipe 40mm/50mm including welding of Flat(GI) around pipe .	No.	3,784.73	48	181,667.04
2	**VCB Foundation**				
2.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	21.84	10,767.99
2.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	12	2,640.00
2.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	1.02375	1,047.19

2.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	1.365	7,162.81
2.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	8.475	56,349.00
2.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	39.75	12,238.63
2.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	420	46,830.00
3	**CT & PT Foundation**				
3.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	23.90625	11,786.74
3.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	13.5	2,970.00
3.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	1.089	1,113.94
3.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	1.089	5,714.50

3.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	7.0875	47,123.72
3.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	44.82	13,799.63
3.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	367.29	40,952.84
4	**Column as per Drawing Schedule-**				
4.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	153.9293	75,893.28
4.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	72	15,840.00
4.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	6.3	33,059.11
4.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	42.525	282,742.35
4.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	268.92	82,797.78
4.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	2203.74	245,717.01
5	**Isolator**				

5.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	28.35	13,977.68
5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	12	2,640.00
5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	1.701	8,925.96
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	17.1	113,695.34
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	89.64	27,599.26
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	734.58	81,905.67
6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	1035	240,120.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	69	102,120.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	69	347,070.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	138	1,035,000.00

6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	126	945,000.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	1680	453,600.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	29742	3,033,684.00
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	36	286,200.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	15906	1,654,224.00
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	64.8	42,120.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	21.6	64,800.00
K1				**Total Civil & Services**	**9,630,895.46**
K2				**Applicable Taxes to make it Landed Cost @18%**	**1,733,561.18**

ANNEXURE-24

DTR/CSS (NEW & AUG.)
TO MEET LOAD GROWTH

Summary of Scope					
New CSS					
Sl. No.	**Description**	**Unit**	**Unit Cost (in Cr.)**	**Qty**	**Cost (in Cr.)**
1	Installation of 1 No. 11/0.4 KV, 1000 KVA CSS along with accessories.	EA	0.60	20	12.01
A	**Total (In Cr.)**				**12.01**
New DT					
Sl. No.	**Description**	**Unit**	**Unit Cost (in Cr.)**	**Qty**	**Cost (in Cr.)**
1	Installation of 1 No. 11/0.4 KV, 250 KVA DTR (Cu) alongwith accessories.	EA	0.17	9	1.56
2	Installation of 1 No. 11/0.4 KV, 500 KVA DTR (Cu) alongwith accessories.	EA	0.35	105	36.73
3	Construction of 1 CKM 11kV Line using 100 SQ.MM. -AAA XLPE Conductor and 11 Mtr. WPB pole.	CKM	0.23	9.0	2.08
4	Construction of 11 kV line using 3C, 400sqmm U/G Cable	KM	1.38	0.3	0.41
5	Construction of 1 CKM LT line using 9 Mtr. PSC pole and 4C×95 mm² (P)+1C×95 mm²(M)+1CX16 mm²(Street Light) LT AB Cable	KM	0.12	5.00	0.59
6	Construction of LT Line using - LT ABC 4C×70 mm² (P)+1C×70 mm²(M)+1CX16 mm²(Street Light) and 9 Mtr. PSC pole	KM	0.10	24.40	2.45
B	**Total (In Cr.)**				**43.83**
DT Augmentation (DTR Swapping- Existing DTR to be re-used)					
Sl. No.	**Description**	**Unit**	**Unit Cost (in Cr.)**	**Qty**	**Cost (in Cr.)**
1	Augmentation of DTR from 11/0.4 KV, 100 kVA to 250 kVA DTR (Cu) alongwith accessories. (DTR cost not considered in estimate, Existing DTR to be re-used in swapping)	EA	0.064	121	7.76
2	Augmentation of DTR from 11/0.4 KV, 250 kVA to 500 kVA DTR (Cu) alongwith accessories. (DTR cost not considered in estimate, Existing DTR to be re-used in swapping)	EA	0.182	16	2.92
C	**Total (In Cr.)**				**10.68**
New DSS (DTR Swapping- Existing DTR to be re-used)					
Sl. No.	**Description**	**Unit**	**Unit Cost (in Cr.)**	**Qty**	**Cost (in Cr.)**
1	Installation of 11/0.4 kV 100 kVA New DSS alongwith accessories. (DTR cost not considered in estimate, Existing DTR to be re-used in swapping)	EA	0.063	55	3.49
D	**Total (In Cr.)**				**3.49**
E= A+B+C+D	**Total Amount (In Cr.)**				**70.00**

1.0 Proposal for technical loss reduction of 33kV Kakatpur Feeder and 33kV Bangurigaon feeder

Proposal:

Proposal for construction of 2 Nos. 33 kV Feeders from Upcoming OPTCL Betanda GSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement

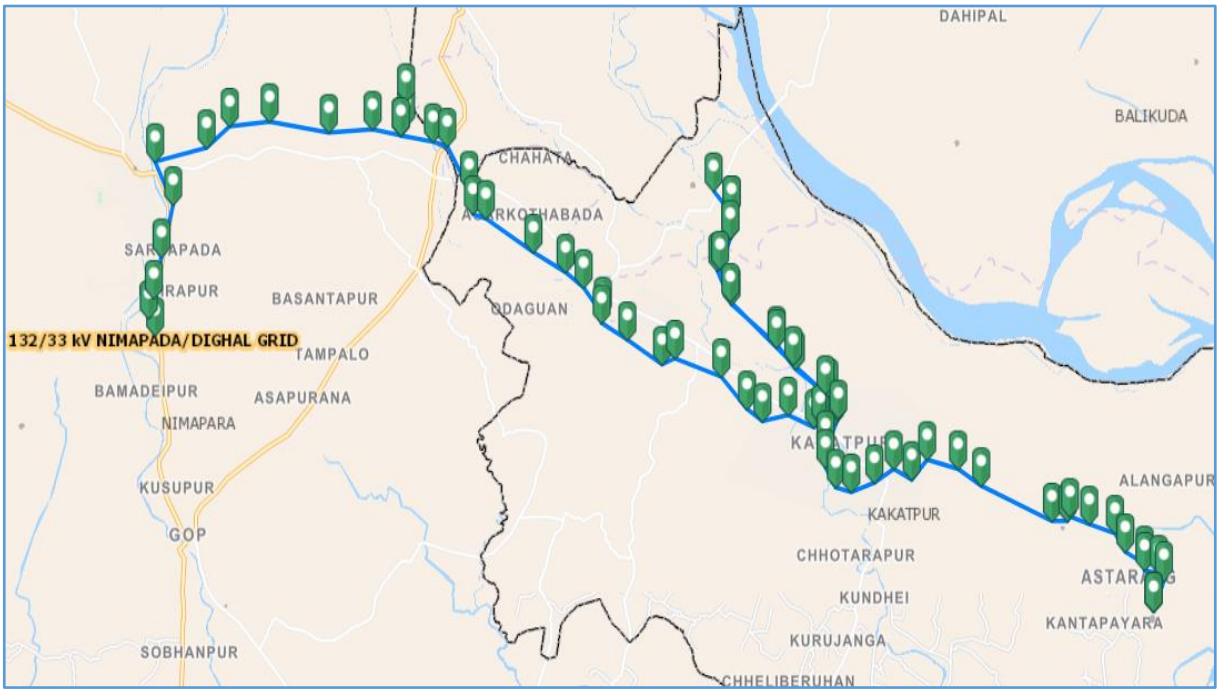
Requirement/ Need of the proposal:

Objective:

To ensure network loss reduction, through length reduction and load bifurcation of 33kV Kakatpur feeder.

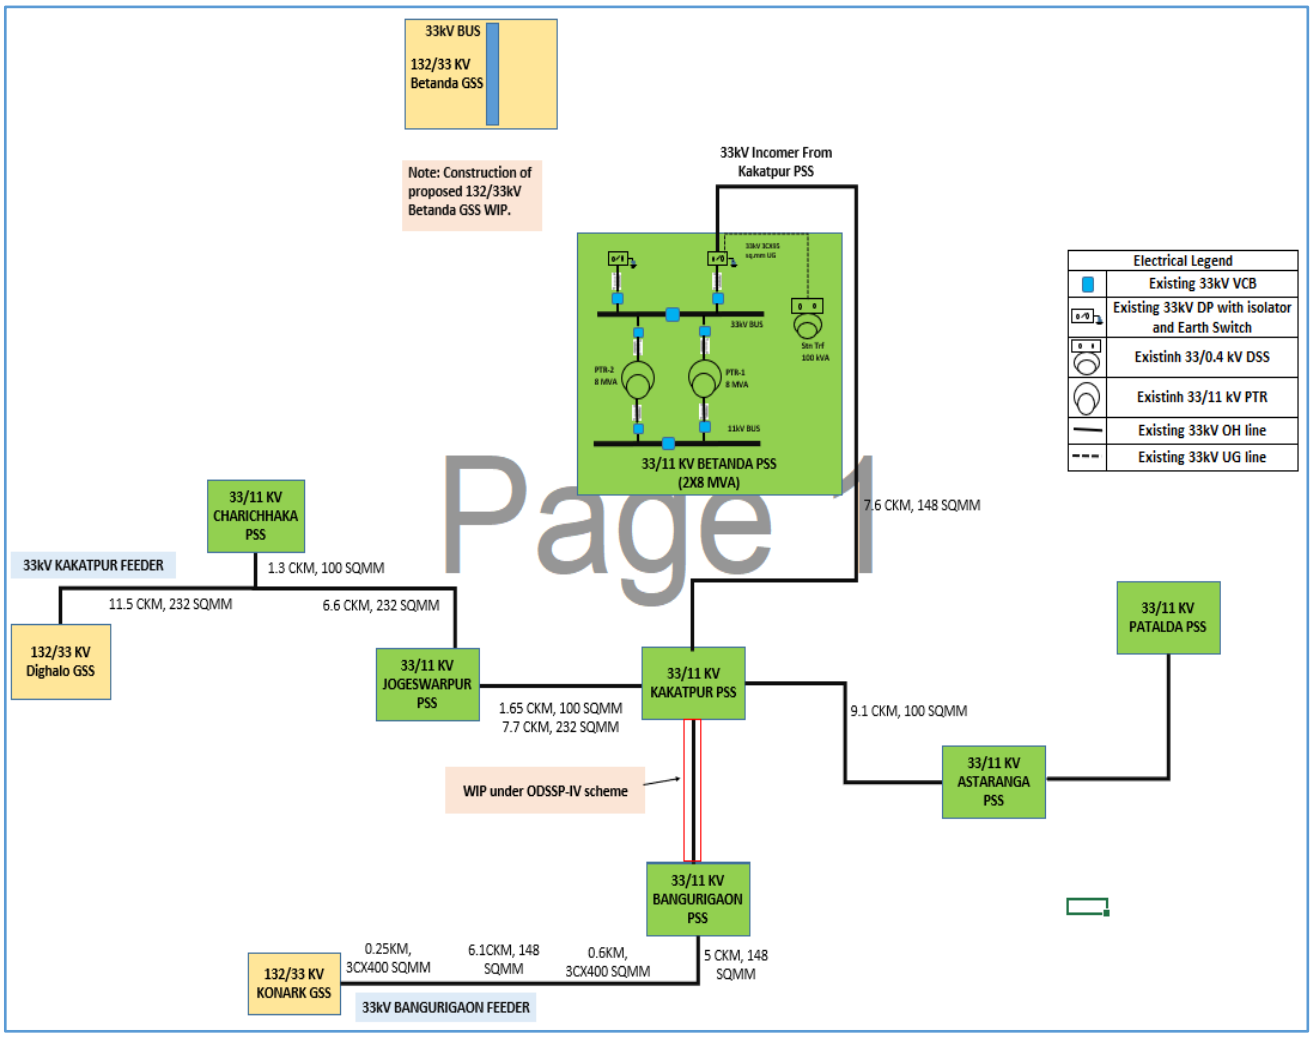
Existing Scenario:

- At present, 33kV Kakatpur feeder is emanating from Dighalo GSS and feeding power to Charichhaka, Jogeswarpur, Kakatpur, Astaranga, Patalda and Betanda PSS. The feeder having length of 57Ckm with conductor size of 232/100 sq.mm and the peak load demand at summer'26 is 23.77MVA.
- The Feeder is interlinked with 33kV Bangurigaon Feeder emanating from Konark GSS at Kakatpur PSS.
- 33kV Kakatpur feeder is lengthy, considering present scenario the feeder is overload and the voltage experienced at some PSS is below the permissible limit of -9% of 33kV i.e.; 30.03kV.
- With 2Yrs load growth @13% per each year the feeder will be overloaded.
- Since the feeder is having optimally loaded and having higher the feeder is facing low voltage issue at tail end as well as high technical losses.



Existing Summer'26 Loading and projected load at 33kV Feeder:

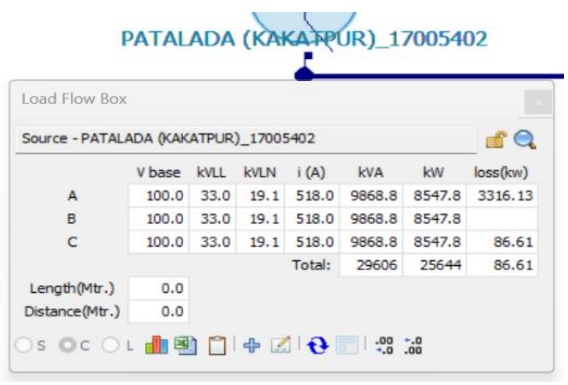
Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer'28 (kW)**
Dighalo	Kakatpur	26.51	23.80	90%	OK	29	109%	Overload	3316
Konark	Bangurigaon	17.49	8.50	49%	OK	10	59%	OK	718
Total Loss (kW)									**4034**

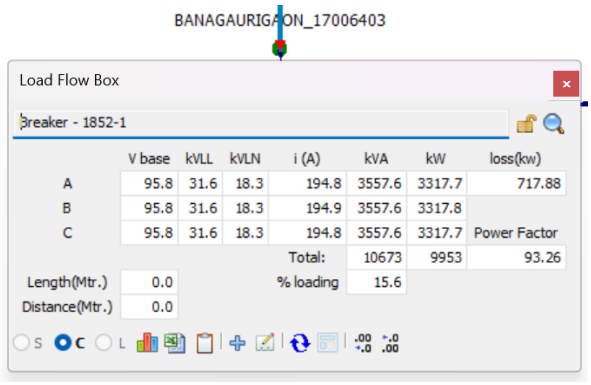


Existing Summer'26 voltage and projected voltage at PSS end:

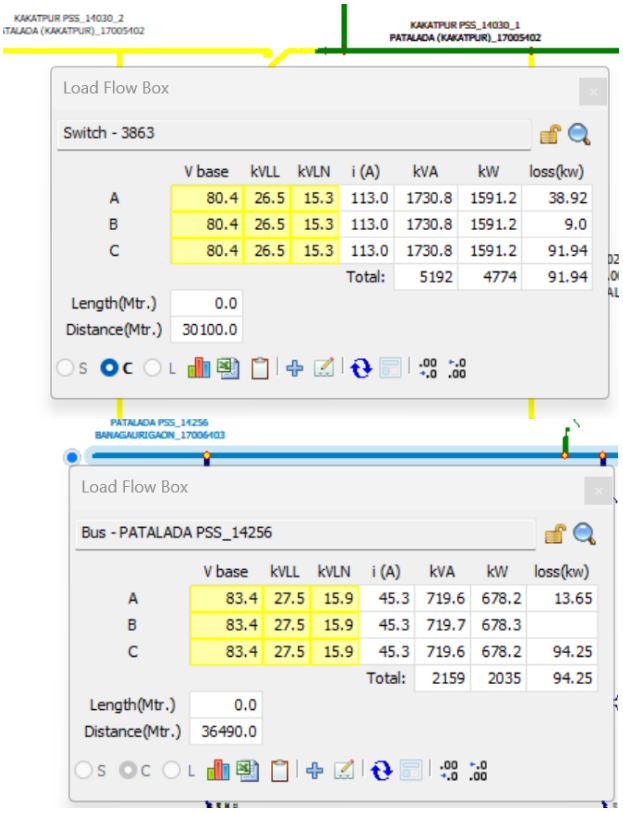
33/11kV PSS Name	Voltage in kV in Summer '26	Projected Voltage with 2YR LG in kV in Summer '28 (Before Proposal)
Kakatpur	27.5	26.5
Betanda	29.6	28.6
Astarang	28.5	28
Patalda	28.4	27.8

GIS Map:

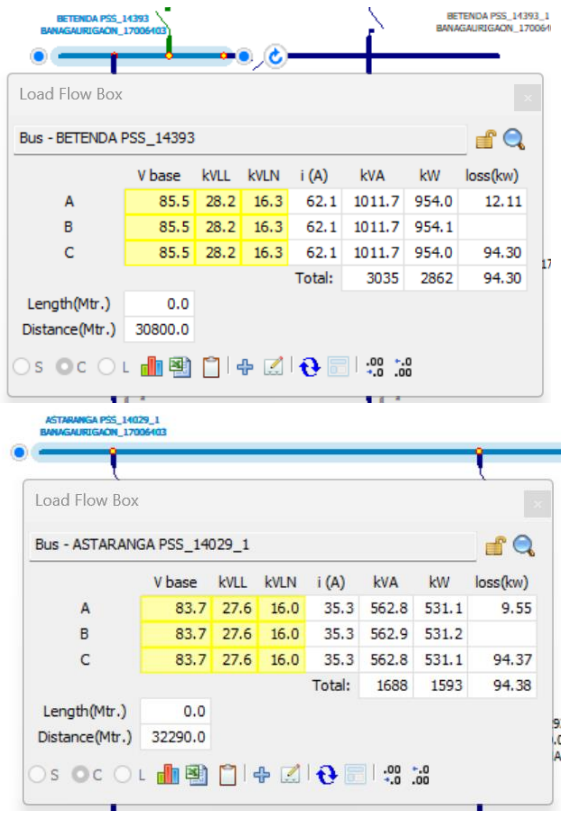




Existing SLD:



Load flow details with 2YR load growth without proposal:



Loading details at GSS end:

Voltage details at PSS end:

Priority and Timeline of the Project:

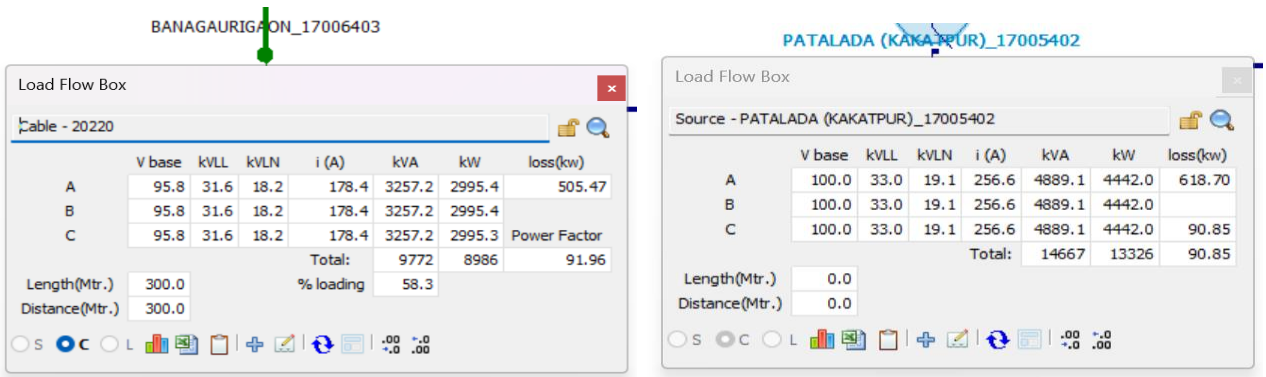
Priority: Since at present, the 33kV Kakatpur feeder emanating from Dighalo GSS are serving 47050nos. consumers through existing network , frequent faults are being observed due to feeder lengthy and passes through dense vegetation , affecting the reliability of power supply. The no. of tripping's during the last year was 104 nos. In the absence of reliability enhancement measures, consumers connected

to the feeder will continue to face frequent and prolonged power supply interruptions. Moreover, the feeder is also facing severe low voltage issue and high technical losses due to lengthy.

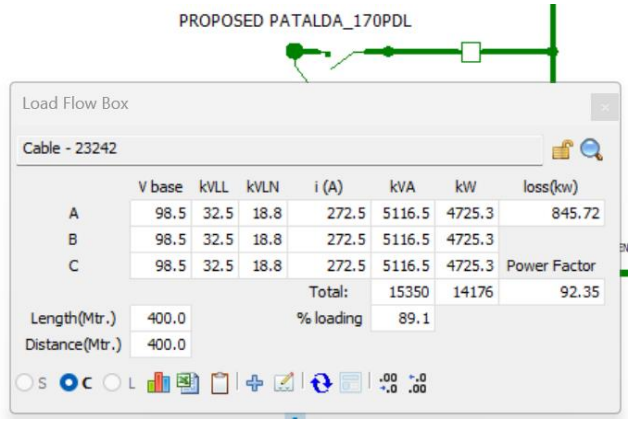
Proposed Scenario:

- New 2 nos. 33kV feeders is proposed from upcoming Betanda GSS to Betanda PSS, to evacuate power from upcoming Betanda GSS.
- Proposed 33kV New Betanda feeder emanating from OPTCL Betanda GSS will feed Betanda PSS and 33kV Astaranga Feeder will feed Astaranga and Patalda PSS.
- Betanda PSS will have dual sources.

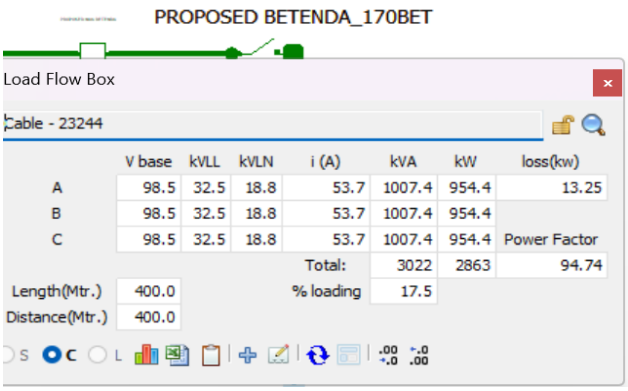
Proposed loading in Summer'28 after execution of proposals:



Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'27 (kW)**
Dighalo	Kakatpur	26.51	14.00	53%	OK	619
Konark	Bangurigaon	17.49	9.00	51%	OK	506
Betanda	Betanda	17.49	3.00	17%	OK	13
Betanda	Astarang	17.49	14.00	80%	OK	846
Total Loss (kW)						**1984**

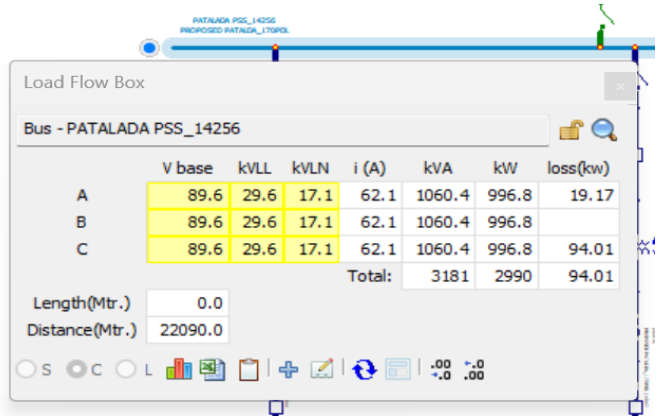


Proposed Voltage at the PSS end after execution of proposal in Summer'28 with 2YR LG

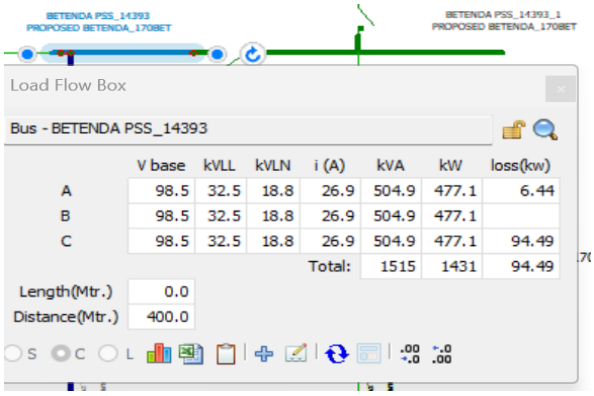


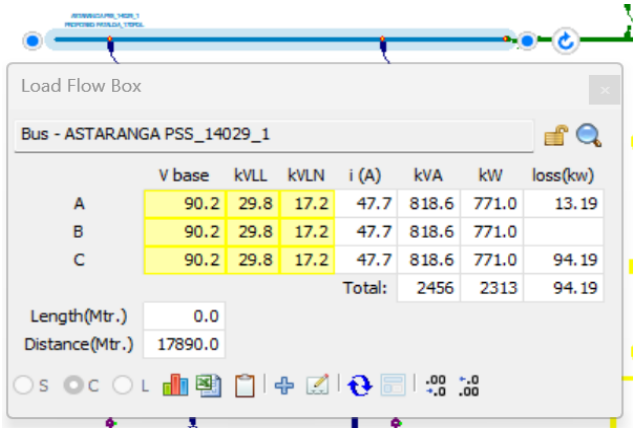
33/11kV PSS Name	Projected Voltage with 2YR LG in kV in Summer '28 (After Proposal)
Kakatpur	31
Betanda	32.5
Astarang	29.8
Patalda	29.6

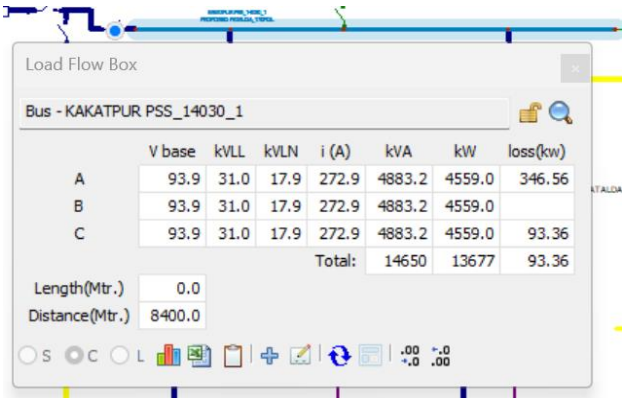
Load flow details with 2YR load growth with proposal:



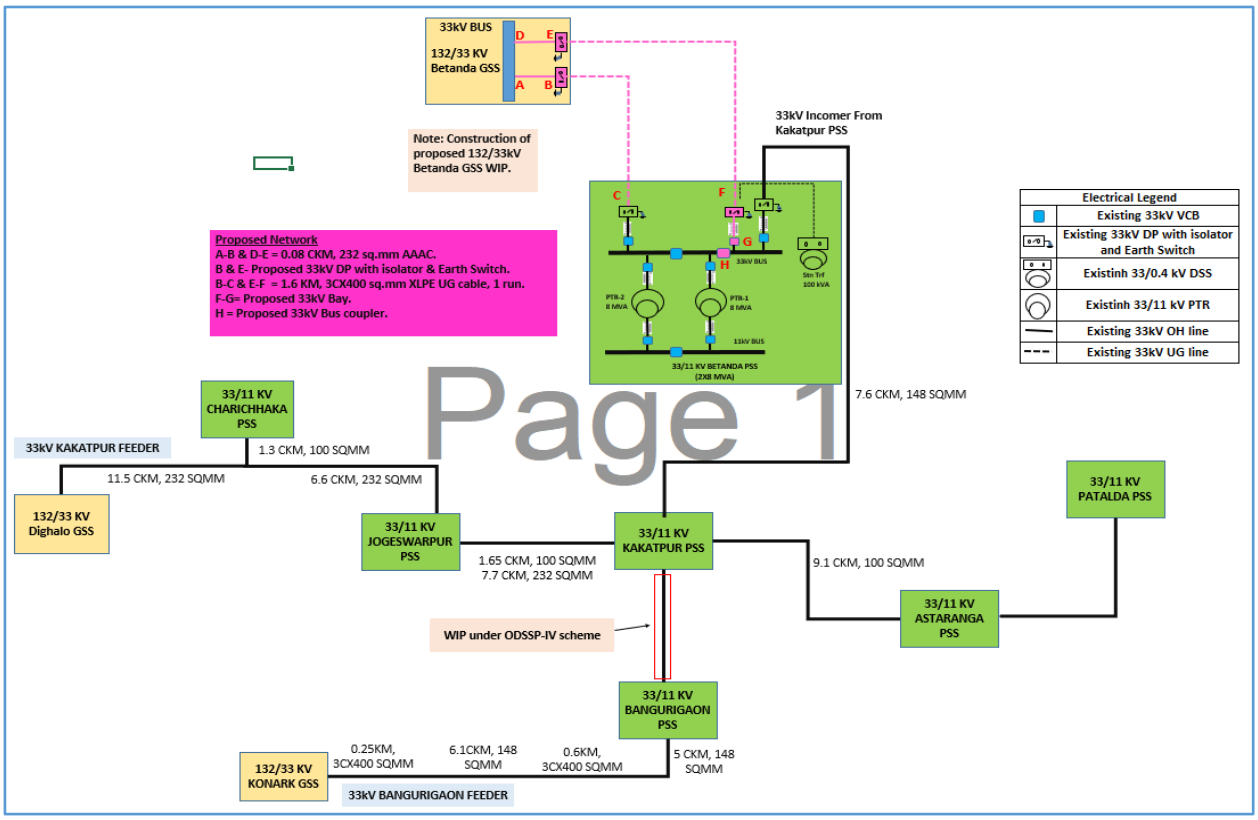
Loading details at GSS end:







<u>Voltage details at PSS end after execution of proposal:</u>



Proposed SLD:

Page 1

Scope of Work:

1. Laying of 2Nos. 33kV feeder from OPTCL Betanda GSS to Betanda PSS.
2. Construction of 2 Nos. 33kV indoor bay along with necessary accessories at Betanda PSS.
3. Supply & laying of 33kV,3CX400 Sq.mm. XLPE U/G cable- 1.6km for 2 nos. of feeders.

Proposed Cost with Estimate Break-up:

ANNEXURE- 6.1			
TP CENTRAL ODISHA DISTRIBUTION LIMITED			
	Name of the Division :-	**NED**	
	Name of the Sub-Division : -	Kakatpur	
	Name of the Work :-	Construction of 2 Nos. New 33kV feeder for power evacuation from proposed Betanda GSS.	
	Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	PART A: Construction of 3Nos. 33kV DP with Isolator & earth switch.	₹ 21,01,912.10
2	B	PART B: Supply & laying of 33kV, 3CX400 sq.mm XLPE UG Cable length = 1.6 kM without spare run.	₹ 1,89,95,290.83
3	C	PPART C: Extension of 33kV Bay using buscoupler & construction of one new 33kV Bay.	₹ 76,46,977.05

4	D	PART D: Supply & Laying of 33kV 1CX400 sq.mm XLPE UG Cable of length = 0.08 kM , 3 Run.	₹ 6,85,007.06
		Total Amount	**₹ 2,94,29,187.04**
		Total Amount (In Cr)	**2.94**
Total estimated cost is Rs. 2.94 Crore. (On TPCODL Capex Scheme)			

Cost Estimate: ₹2.94Cr. (For detailed BoQ refer Annexure-6.1)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

Revenue Return Sheet				
Sr. No.	**Description**	**Formula**	**New Value**	**UoM**
A	Total cost of scheme	-	2.94	RS Cr
B	Additional load due to load growth	-	7700.00	kVA
C	Total kW due to load growth	BXPF(power factor)	7315.00	kW
D	Total units consumed yearly (Load x days x Hrs x load factor)	CX365X24XLF	6407940	kWH
E	Power Purchase cost per unit	-	3.55	Rs.
F	Avg. Power Sale cost per unit	-	5.94	Rs.
G	Diff. (Sale-purchase)	F-E	2.39	Rs.
H	Revenue owing to serving additional load	(GXD)/10^7	1.53	RS Cr
I	Revenue owing to tech. loss reduction	From Technical Loss Calculation	2.21	RS Cr
J	Net Revenue Collected	H+I	3.74	RS Cr
K	% revenue return	(J/A)X100	127.0	%
L	Pay Back Period	100/K	0.79	Years

Benefit to the system and consumers:

- Reduction in feeder length and technical loss of 33kV network.
- Improve the voltage profile of the 33kV network.
- Enable ring connectivity with N-1 for 33 Kakatpur feeder.
- Ensure reliable & safe power supply to the consumers of Betanda and Kakatpur Area.
- Avg. technical loss savings after execution of this proposal will be 709 kW.

2.0 Proposal for Loss reduction of Nayapalli Area and Mitigation of load from 33kv Xavier-Nayapalli feeders and 33kV Nayapalli-1,2,3 feeder

Proposal:

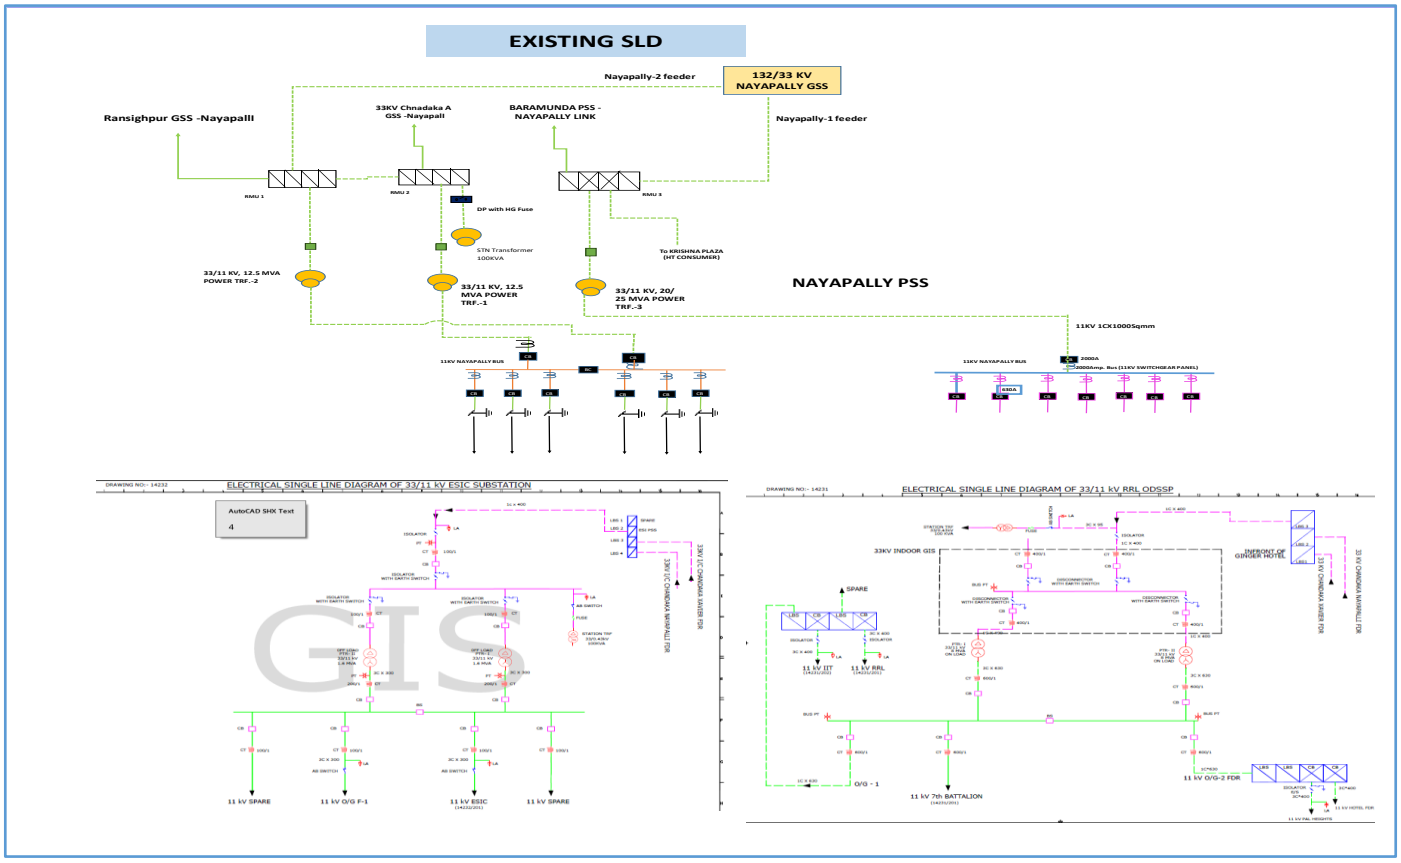
Construction of New 33 kV AIS Switchgear Panel at Nayapally PSS along with AIS Panel Board and New Underground Feeders for Interconnection of ESIC PSS and RRL PSS.

Requirement/ Need of the proposal:

Objective:

To enable reliable power supply by providing second source connectivity with underground cable and power supply from other GSS to BBSR City Urban Area.

Existing Scenario:



- At present, Nayapally PSS is getting power supply from 3 different OPTCL grids i.e., Ransinghpur , Chandaka-A and Nayapalli GSS through 5 different feeders i.e., Ranasinghpur – Nayapalli feeder, Chandaka- Nayapally feeder, Nayapally -1 and Nayapally-2 feeder and Link line of Nayapally - Baramunda. The O/H network is not reliable during inclined whether like Kalbaisakhi and cyclone.
- 33 kV bay are proposed from Nayapalli GSS; however, no additional 33 kV bay is available at the existing Nayapalli GSS for accommodating the proposed feeder. However, no spare/additional 33 kV bay is presently available at Nayapalli GSS, and due to space constraints within the existing GSS premises, construction of a new additional 33 kV bay is not feasible. The existing arrangement therefore limits the provision of additional 33 kV feeder connectivity and associated protection infrastructure from the GSS.
- At present, the 33 kV feeder at Nayapalli PSS is protected through existing 33 kV RMU arrangement. In view of the constraints at Nayapalli GSS and the requirement for a reliable and comprehensive protection arrangement for the 33 kV feeder, it is proposed to replace the existing 33 kV RMU with a new 33 kV Indoor AIS Switchgear Panel at Nayapalli PSS, equipped with a breaker and Protection Relay.
- While this arrangement serves immediate operational requirements, it is not a sustainable long-term solution for a strategically important urban substation catering to critical loads and major public events.
- 33/11kV ESIC PSS is getting supply from 33kv Nayapally and Xavier feeder emanating from Chandaka-A grid. The Nayapally and Xavier feeders are running on same NBLS Tower. During maintenance on either feeder, supply is hampered to ESIC PSS as both circuits needed to be shut down. The ESIC being critical hospital remains without supply during maintenance in NBLS towers.

- Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently.
- During any breakdown of feeder, the PSS shuts down thereby power failure to all the consumers on the feeder.
- 33 kV bay are proposed from Nayapalli GSS; however, no additional 33 kV bay is available at the existing Nayapalli GSS for accommodating the proposed feeder. However, no spare/additional 33 kV bay is presently available at Nayapalli GSS, and due to space constraints within the existing GSS premises, construction of a new additional 33 kV bay is not feasible. The existing arrangement therefore limits the provision of additional 33 kV feeder connectivity and associated protection infrastructure from the GSS.

Existing Summer'26 Loading and projected load at 33kV Nimapada Feeder:

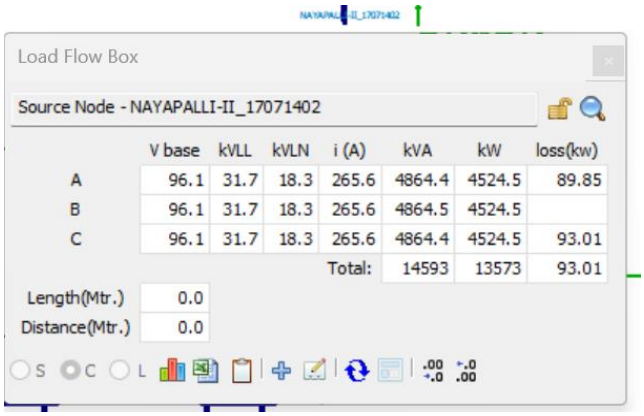
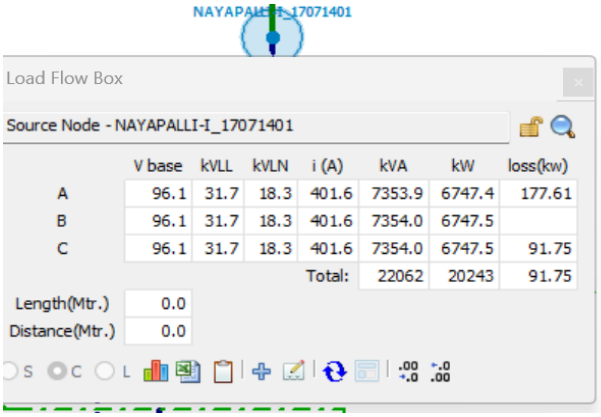
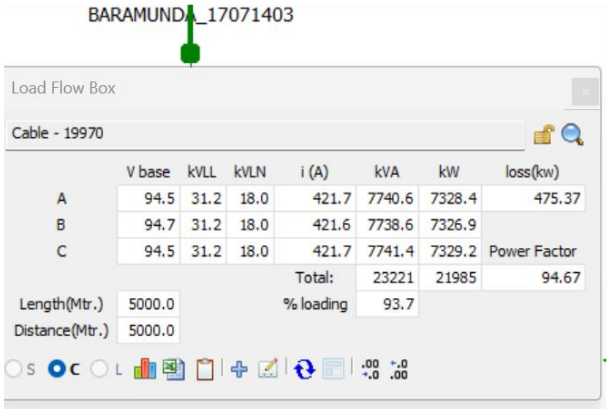
Existing SLD:





Load flow details with 2YR load growth without Proposal:



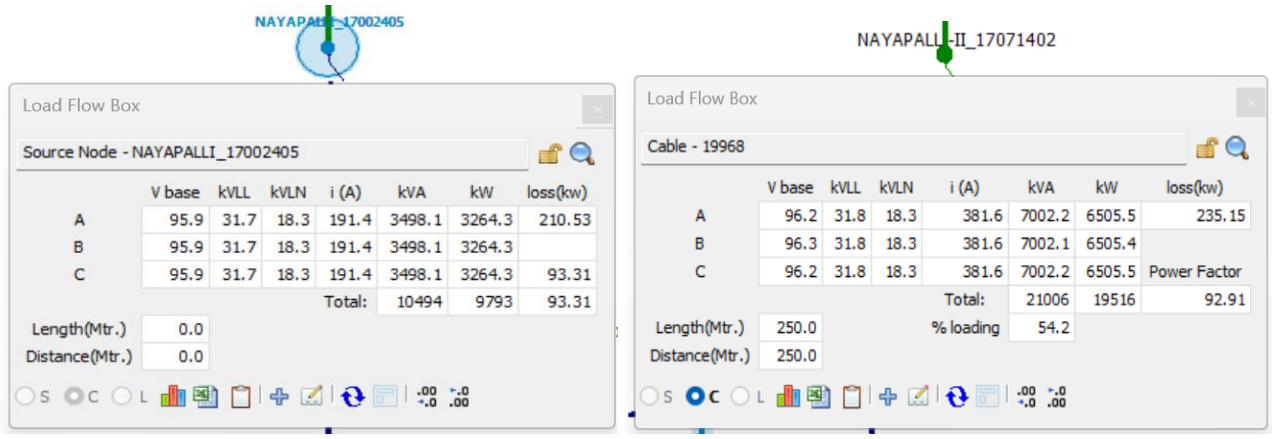
Loading details at GSS end:

Priority and Timeline of the Project:

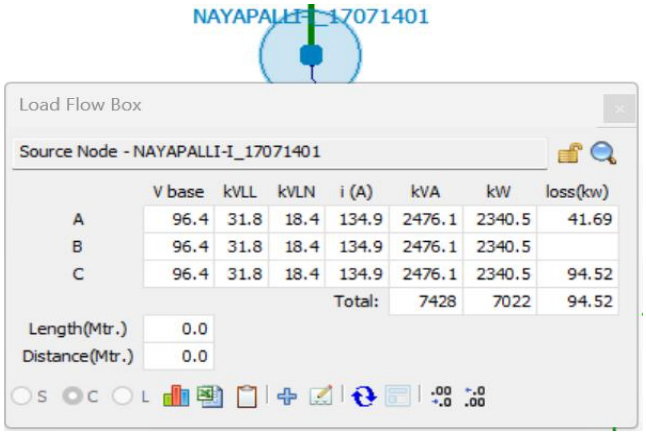
Priority: Since at present, the 33kV feeders emanating from Nayapally GSS are serving 22093 nos. consumers through existing network having mixed conductors and further due to the ageing of conductors, multiple joints, frequent faults and conductor snapping incidents are being observed, affecting the reliability of power supply. The no. of tripping's during the last year was 179 nos. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions. In existing scenario RRL & ESIC PSS are getting

power supply from 33 kV Xavier & Nayapalli feeder. Both these feeders are constructed on single NBLS tower with double circuit arrangement. In case of any fault on any of the line both the feeder shutdown is required to address the defect. To address this challenge one 33 kV feeder is proposed from Nayapalli PSS to RRL PSS via ESIC to maintain uninterrupted and reliable power supply.

Proposed Scenario:



The proposed Indoor AIS Switchgear Panel will provide enhanced and selective protection, improved protection coordination, reliable fault isolation, greater operational flexibility, and ease of maintenance compared to the existing RMU arrangement. Further, the numerical protection system will facilitate advanced monitoring, event and fault recording, flexibility in protection settings, and future SCADA integration. The proposed arrangement will therefore improve the overall safety, reliability, maintainability, and operational performance of the 33 kV distribution network. Existing 33 kV Nayapalli-1 & 2 feeders will be augmented from 630 Sq.mm. to 1000 Sq.mm. cable to cater the future load growth in Nayapalli area. Apart to augmentation of these feeders one additional feeder is proposed from Nayapalli GSS to Nayapalli PSS.



Proposed loading in Summer'28 after execution of proposals:

Proposed SLD:

Scope of Work:

- Part-A : Construction of 33 kV Indoor AIS Switchgear Panel at Nayapally PSS
- It is proposed to upgrade existing Nayapalli -1 & 2 feeder from 630 Sq.mm. to 1000 Sq.mm. cable and additional 33 kV feeder(Nayapalli-3) is proposed from Nayapalli GSS to Nayapalli PSS.
- Part-A : 1. Supply and laying of 33kv 1CX1000sqmm from Nayapally Grid GSS for 33kv Nayapally -1 and Nayapally -2 feeder upto 33kV New Switchgear Panel- (Length 200 mtr -3runX1CX1000sqmm)
- Supply and laying of 33kv 1CX630sqmm from 33kV Switchgear panel to Trf. Primary side.- (Length 40 mtr X3). Supply and laying of 33kv 1CX630sqmm from 33kv I/C to 33kv Panel . (Length - 40 mtr X 5)
- Construction of 33kv interlinking line- 1.9KM with 3CX400 sq.mm. from Nayapally PSS to ESIC PSS and RRL PSS.

Proposed Cost with Estimate Break-up:

ANNEXURE-6.2			
TP CENTRAL ODISHA DISTRIBUTION LIMITED

		Total Amount	**₹ 6,14,05,164.80**
		Total Amount (In Cr)	**₹ 6.14**
Total estimated cost is Rs. 6.14 Crore. (On TPCODL CAPEX Scheme)			

Cost Estimate: ₹ 6.14 Cr. (For detailed BoQ refer Annexure-6.2).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

L	Pay Back Period	100/K	1.43	Years

Benefit to the system and consumers:

- Overloading mitigation of 33kV Nayapally-1,2,3 Feeder with higher capacity cables.
- Provide additional source for 33/11kV RRL and ESIC PSS.
- Reduction in technical loss of network and improve the voltage profile.
- Ensure reliable & safe power supply to the consumers at Nayapalli Area.
- Avg. technical loss savings after execution of this proposal will be 71.26 kW.

3.0 Proposal for loss reduction of 33kV Binodpada Feeder:

Proposal:

Proposal for construction of a New 33 kV Feeder from Upcoming OPTCL Hatabasta GSS for Power Evacuation, Ring Connectivity, Technical Loss Reduction, and Network Reliability Improvement

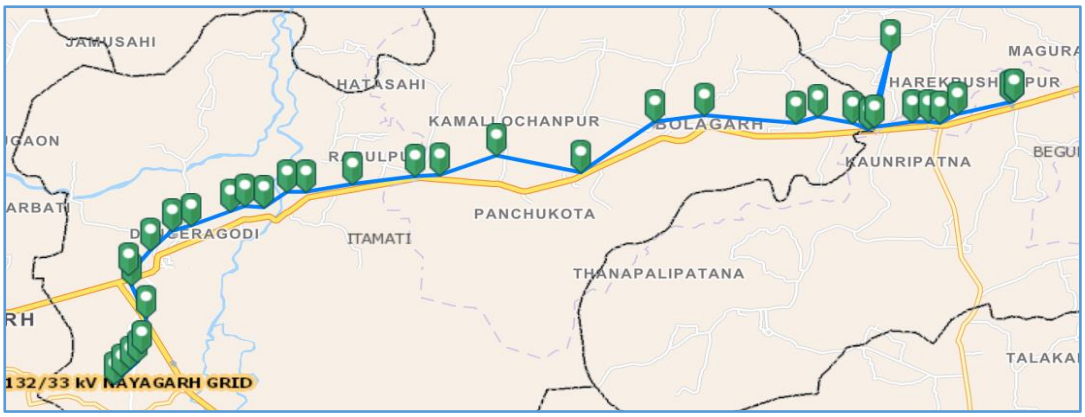
Requirement/ Need of the proposal:

Objective:

To ensure network loss reduction, through length reduction and load bifurcation of 33kV Binodpada feeder.

Existing Scenario:

- At present, 33kV Binodpada feeder is emanating from Nayagarh GSS and feeding power to Itamati, Bolagarh and Hatabasta PSS. The feeder is radial, having length of 55 Ckm with conductor size of 100/ 80 sq.mm and the peak load demand at summer'26 is 18.29MVA.
- The Feeder is interlinked with 33kV Baghamari-2 Feeder emanating from Atri GSS at Binodpada PSS.
- 33kV Binodpada feeder is lengthy, considering present scenario the feeder is overload and the voltage experienced at some PSS is below the permissible limit of -9% of 33kV i.e.; 30.03kV.
- With 2Yrs load growth @13% per each year the feeder will be overloaded.
- Since the feeder is having optimally loaded and having higher the feeder is facing low voltage issue at tail end as well as high technical losses.



Existing Summer'26 Loading and projected load at 33kV Feeder:

Existing Loading									
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer'28 (kW)**

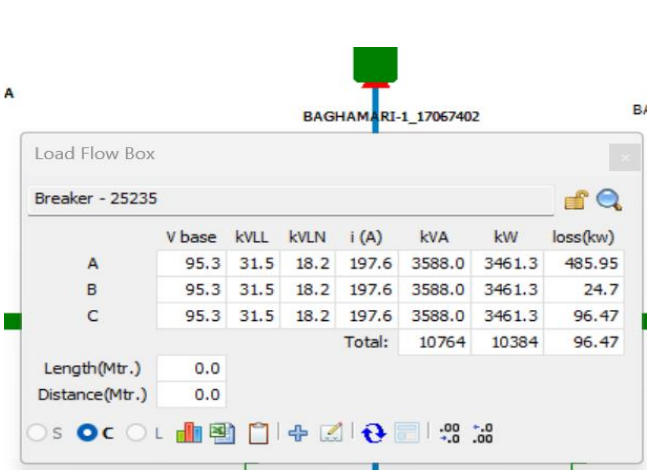
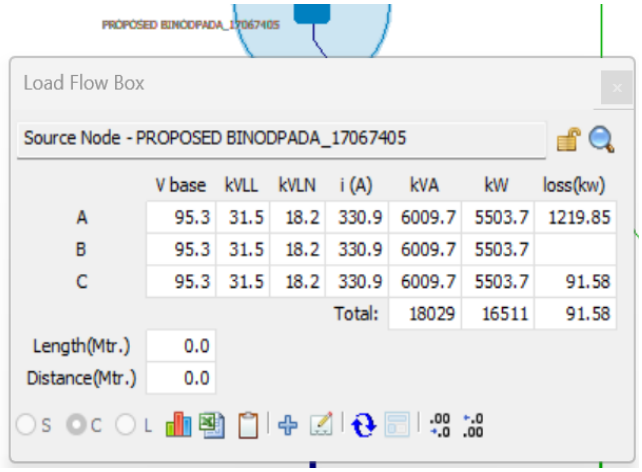
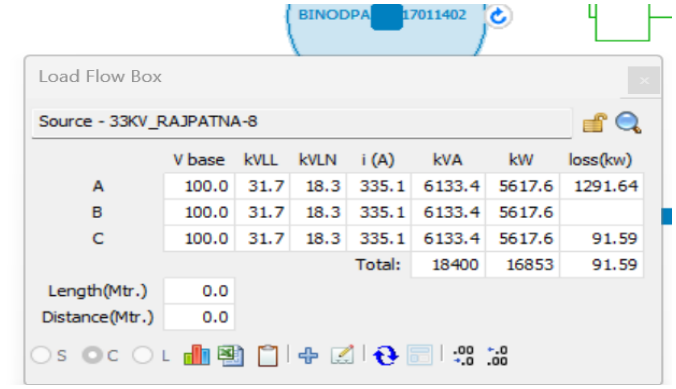
Binodpada	28.3	28.5
Hatabasta	26.7	28.1
Parichala	29.3	29.5

GIS Map:

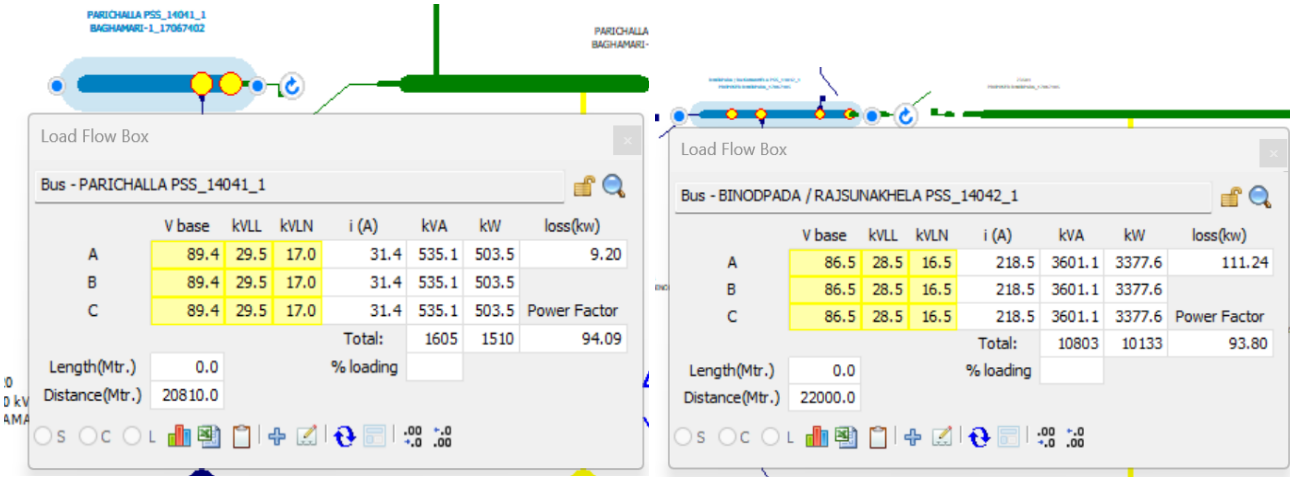




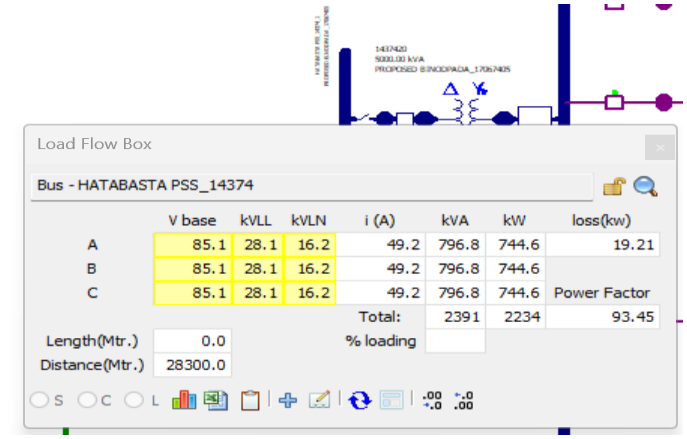
Existing SLD:



Load flow details with 2YR load growth without Proposal:



Loading details at GSS end:



Voltage details at PSS end:

Priority and Timeline of the Project:

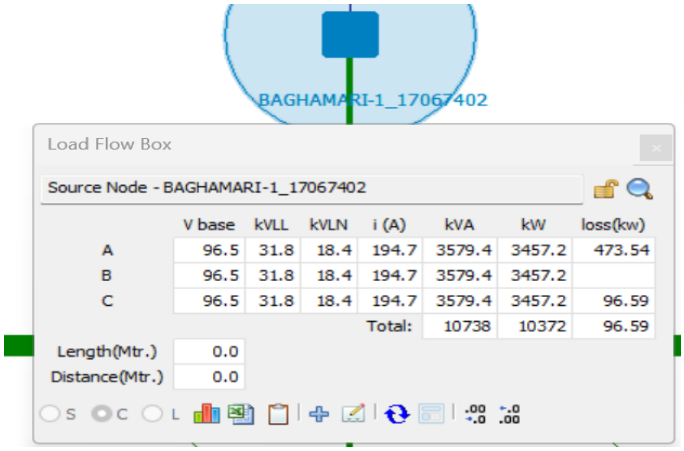
Priority: Since at present, the 33kV Binodpada feeder emanating from Rajpatna GSS are serving 45873 nos. consumers through existing network having lower-size conductors and further due to the ageing of conductors, multiple joints, frequent faults and conductor snapping incidents are being observed, affecting the reliability of power supply. The no. of tripping's during the last year was 31 nos. Additionally, inadequate ground clearance at several locations and vegetation encroachment along the feeder corridor pose safety concerns for the public as well as personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and

prolonged power supply interruptions. Moreover, the feeder is also facing severe low voltage issue and high technical losses due to lengthy.

Proposed Scenario:

- One New 33kV feeder is proposed from upcoming Hatabasta GSS to Binodpada PSS, to evacuate power from upcoming OPTCL Hatabasta GSS.
- Proposed 33kV New Hatabasta feeder emanating from OPTCL Hatabasta GSS will feed Binodpada PSS and Hatabasta PSS. Existing 33kV Binodpada PSS will feed to Itamati PSS and Bolagarh PSS.

Proposed loading in Summer'28 after execution of proposals:



Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'27 (kW)**

Benefit to the system and consumers:

- Reduction in feeder length and technical loss of 33kV network.
- Improve the voltage profile of the 33kV network.
- Enable ring connectivity with N-1 for 33 Hatabasta feeder.
- Ensure reliable & safe power supply to the consumers of Hatabasta and Binodpada Area.
- Avg. technical loss savings after execution of this proposal will be 392.7 kW.

4.0 Proposal for technical loss reduction of 33kV Niali feeder

Proposal:

Proposal for construction of 01 No. 33 kV Feeder from Upcoming OPTCL Betanda GSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement

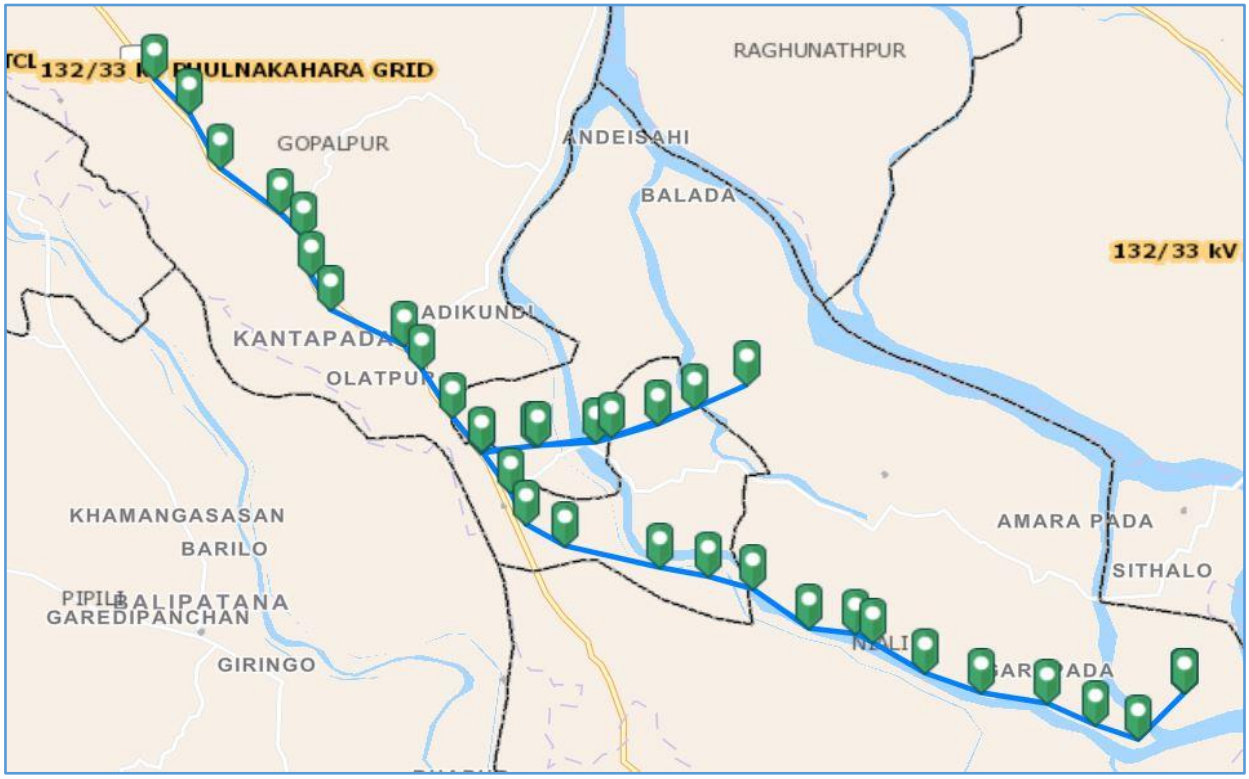
Requirement/ Need of the proposal:

Objective:

To ensure network loss reduction, through length reduction and load bifurcation of 33kV Niali feeder.

Existing Scenario:

- At present, 33kV Niali feeder is emanating from Phulnakhra GSS and feeding power to Kasarda, Niali and Kulakapasi PSS. The feeder having length of 46 Ckm with conductor size of 232/100 sq.mm and the peak load demand at summer'26 is 21.9 MVA.
- The Feeder is interlinked with 33kV Damodarpur Feeder emanating from Phulnakhra GSS at Adaspur PSS.
- 33kV Niali feeder is lengthy, considering present scenario the feeder is overload and the voltage experienced at some PSS is below the permissible limit of -9% of 33kV i.e.; 30.03kV.
- With 2Yrs load growth @7% per each year the feeder will be overloaded.
- Since the feeder is having optimally loaded and having higher the feeder is facing low voltage issue at tail end as well as high technical losses.



Existing Summer'26 Loading and projected load at 33kV Feeder:

Existing Loading

Benefit to the system and consumers:

- Reduction in feeder length and technical loss of 33kV network.
- Improve the voltage profile of the 33kV network.
- Enable ring connectivity with N-1 for 33 Niali feeder.
- Ensure reliable & safe power supply to the consumers of Kulakapasi and Niali Area.
- Avg. technical loss savings after execution of this proposal will be 368.14 kW.

5.0 Proposal for Technical loss reduction of 33kV Jarapada Feeder:

Proposal:

Proposal for construction of 1 Nos. 33 kV Feeders from Upcoming OPTCL Chhendipada GSS for Power Evacuation, Technical Loss Reduction, Ring Connectivity, and Network Reliability Improvement

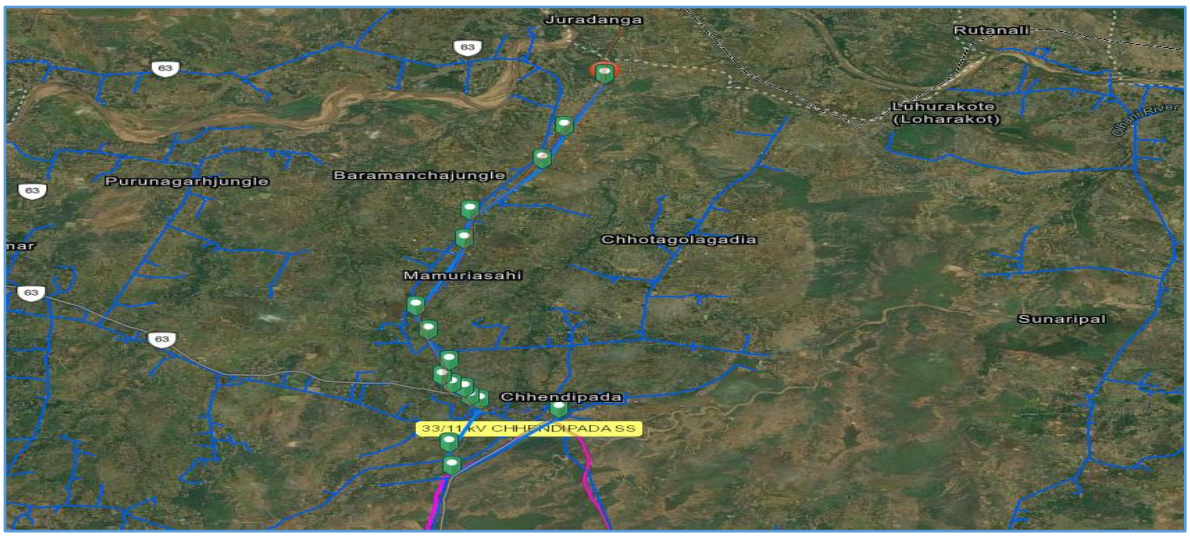
Requirement/ Need of the proposal:

Objective:

To ensure network loss reduction, through length reduction and load bifurcation of 33kV Jarapada feeder.

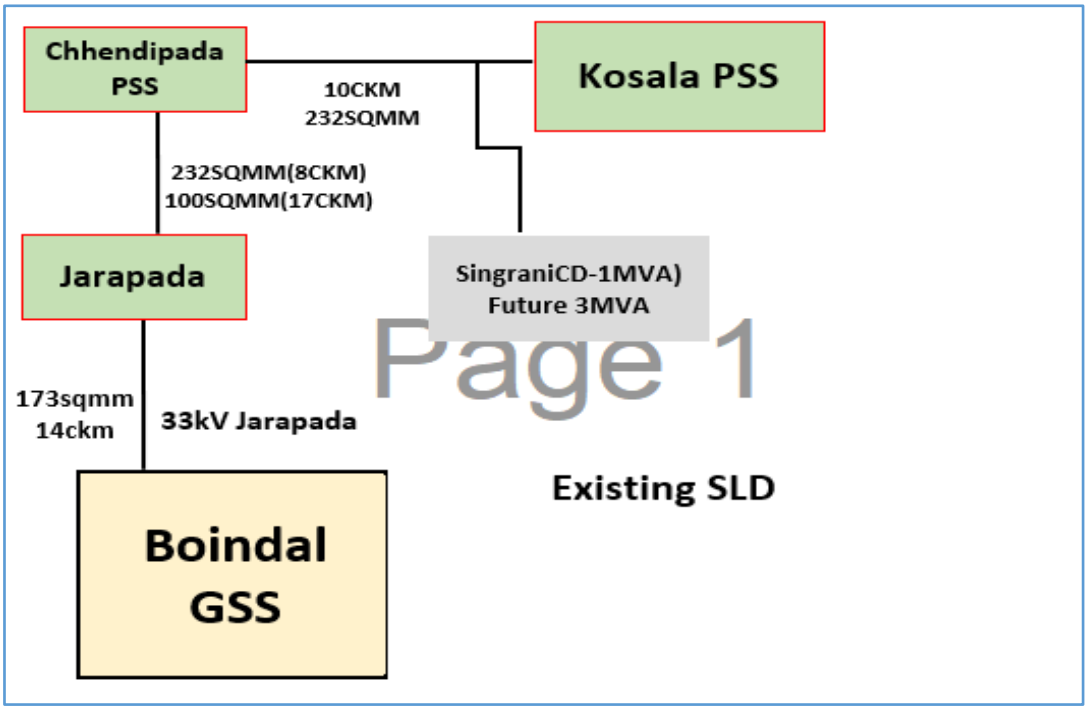
Existing Scenario:

- At present, 33kV Jarapada feeder is emanating from Boinda GSS and feeding power to Jarapada, Chhendipada & Kosala PSS. The feeder is radial, having length of 41Ckm with conductor size of 100/ 80 sq.mm and the peak load demand at summer'26 is 17.8MVA.
- 33kV Jarapada feeder is radial and lengthy, considering present scenario the feeder is overload and the voltage experienced at some PSS is below the permissible limit of -9% of 33kV i.e.; 29.1kV.
- In existing scenario, the conductor augmentation work in progress Jarpada PSS to Chhendipada PSS under deposit scheme, which will mitigate the feeder overloading issue. However low voltage issue will be still persisted.
- 2Yrs load growth @10% each year has been considered.
- The feeders also having high technical loss.



Existing Summer'26 Loading and projected load at 33kV Feeder:

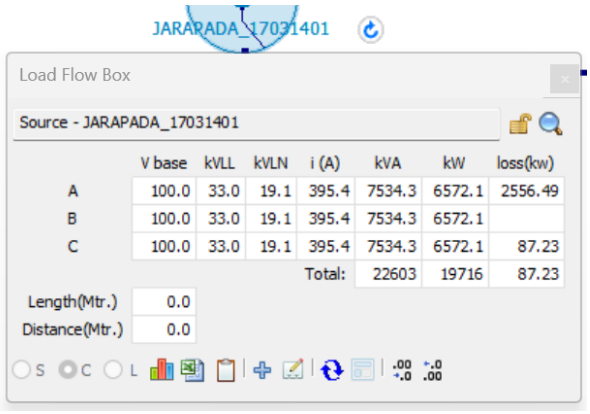
Existing Loading										
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Feeder Overloading Status (AS IS)**	**Projected load Summer'28 (MVA)**	**Feeder Capacity Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status Summer'28**	**Loss Summer'28 (kW)**
Boinda	Jarapada	15.54	17.80	115%	Overload	22	24	91%	OK	2557
Total Loss (kW)										**2557**



Existing Summer'26 voltage and projected voltage at PSS end:

33/11kV PSS Name	Voltage in kV in Summer '26	Projected Voltage with 2YR LG in kV in Summer '28 (Before Proposal)
Jarapada	29.1	29.4
Chhendipada	25.2	24.7
Kosala	24.7	24.1

GIS Map:



Existing SLD:

Length(Mtr.)	0.0
Distance(Mtr.)	0.0

Voltage details at PSS end in as is Scenerio with 2 Year Load growth:

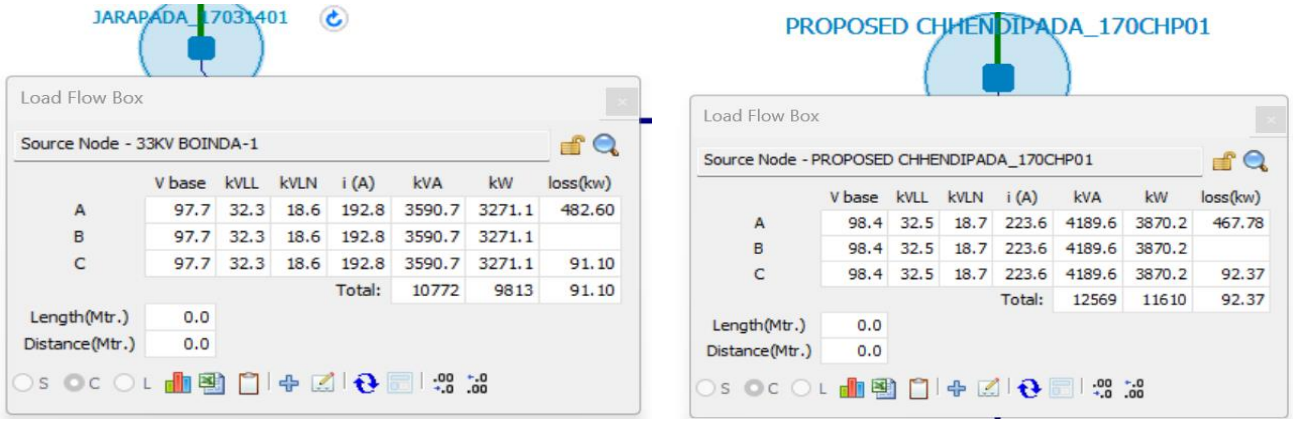
Priority and Timeline of the Project:

Priority: Since at present, the 33kV Jarapada feeders emanating from Boinda GSS are serving 43162 nos. consumers through existing network , frequent faults are being observed due to feeder lengthy and passes through dense vegetation , affecting the reliability of power supply. The no. of tripping's during the last year was 51 nos. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions. Moreover the feeder is also facing severe low voltage issue and high technical losses due to lengthy.

Proposed Scenario:

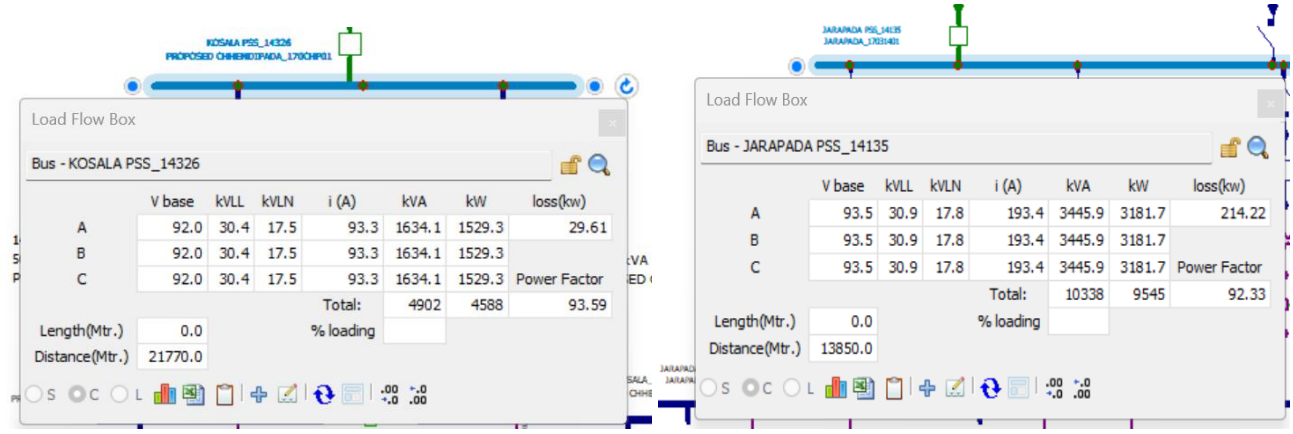
- New 33kV feeder is proposed from upcoming OPTCL Chhendipada GSS to Chhendipada PSS for evacuation of power.
- After execution of the proposal, proposed Chhendipada feeder will feed Chendipada PSS . Existing Jarapada feeder will feed Jarapada PSS and Kosala PSS.
- The proposal will bifurcate, 33kV Jarapada feeder load and reduce the overall technical loss of the 33kV network.

Proposed loading in Summer'28 after execution of proposals:

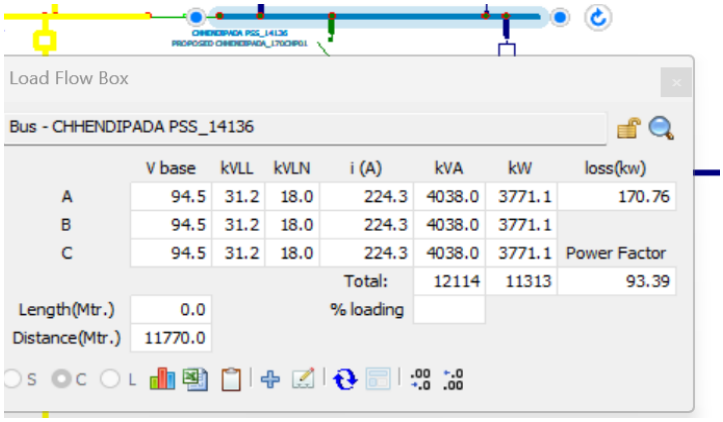


Loading after Proposal (Summer'28)						
GSS Name	**33kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load (MVA)**	**% Loading**	**Feeder Overloading Status**	**Loss Summer'28 (kW)**
Boinda	Jarapada	26.51	10.000	38%	OK	483
Jarapada	Chhedipada	26.51	12.00	45%	OK	468
Total Loss (kW)						**951**

Proposed Voltage at the PSS end after execution of proposal in Summer'28 with 2YR LG:

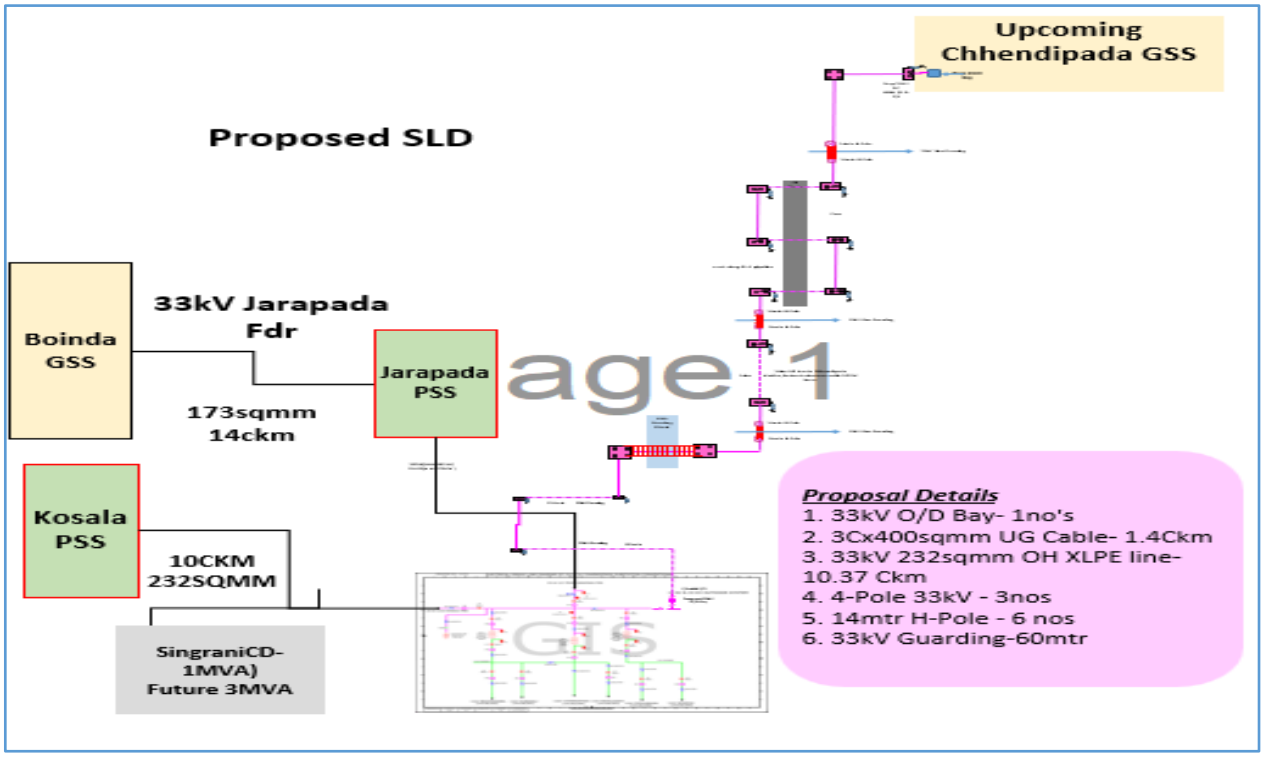


33/11kV PSS Name	Projected Voltage with 2YR LG in kV in Summer '28 (After Proposal)
Jarapada	30.9
Chhendipada	31.2
Kosala	30.4



Load flow details with 2YR load growth with Proposal:

Loading details at GSS end:



Voltage details at PSS end after execution of proposal:

Proposed SLD:

Scope of Work:

1. Construction of 33kV Outdoor Bay (Line Bay) at Chhendipada PSS- 1no's.
2. Supply & laying of 33kV 1R,3CX400 Sq.mm. XLPE U/G cable- 1.4Ckm.
3. Construction of 33kV OH line 232sqmm XLPE covered conductor-10.37ckm

Proposed Cost with Estimate Break-up:

ANNEXURE-6.5	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division :-	**ANED (Dhenkanal)**
Name of the Work :-	***Loss reduction of 33kV Jarapada feeder by New 33kV Feeder from Chhendipada GSS :*** New 33kV feeder for power evacuation from Upcoming Chhendipada GSS, to enabling ring connectivity for 33kV Jarapada feeder which will provide 2nd 33kV source to PSS on existing feeder, improve network reliability by improve voltage profile, reduction in feeder length and reduction technical loss of network.

Scope of work:-		Proposal Details 1. 33kV O/D Bay- 1no's 2. 3Cx400sqmm UG Cable- 1.4Ckm 3. 33kV 232sqmm OH XLPE line- 10.37 Ckm 4. 4-Pole 33kV - 3nos 5. 14mtr H-Pole - 6 nos	
Names of Schemes: -		TPCODL CAPEX (FY 2027-28)	
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-10.37ckm	₹ 4,00,37,854.96
2	B	Standard BoQ and Estimate for 33kV 3C, 400sqmm UG Cable 1.4km	₹ 1,28,08,532.03
3	C	Standard BOQ for Line Protecting Guarding on Double Pole for Road Crossing	₹ 1,06,385.33
4	D	Standard BoQ and Estimate for 33 KV 4 Pole using WPB GI Pole 160x152 (13Mtr. Long) with One No. of Isolator and LA Set	₹ 16,19,136.26
5	E	14 Mtr. H-Pole	₹ 8,10,761.82
		Total Amount	**₹ 5,53,82,670.39**
		Total Amount (In Cr)	**₹ 5.54**
Total estimated cost is Rs. 5.54Crore. (On TPCODL CAPEX Scheme)			

Cost Estimate: ₹5.54Cr. (For detailed BoQ refer Annexure-6.5.).

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Cost Benefit Analysis:

Revenue Return Sheet				
Sr. No.	**Description**	**Formula**	**New Value**	**UoM**

ANNEXURE-6.2			
TP CENTRAL ODISHA DISTRIBUTION LIMITED			
Name of the Division :-		**BCDD-2 (BBSR-I)**	
Name of the Work :-		***Reliability Improvement of BBSR City Area by installation of new 33kv Switchgear Panel at Nayapally PSS***	
Scope of work:-		1. Construction of 33 kV Indoor AIS Switchgear Panel at Nayapally PSS 2. Construction of 33kv interlinking line- 1.8KM with 3CX400sqmm without spare from Nayapally GSS to ESIC PSS and RRL PSS.	
Names of Schemes: -		***TPCODL CAPEX (FY 27-28)***	
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	Part-A : Construction of 33 kV Indoor AIS Switchgear Panel at Nayapally PSS.	₹ 2,60,16,822.48
2	B	Part-B : 1. Supply and laying of 33kv 1CX1000sqmm from Nayapally Grid GSS for 33kv Nayapally -1 and Nayapally-2 feeder upto 33kv New Switchgear Panel- (Length 300 mtr -3runX1CX1000sqmm)	₹ 53,30,170.12
3	C	Part-C : 1. Supply and laying of 33kv 1CX630sqmm from 33kv Switchgear panel to Trf Primary side.- (Length 40 mtr X3) 2. Supply and laying of 33kv 1CX630sqmm from 33kv I/C to 33kv Panel . (Length - 40 mtr X 5)	₹ 37,57,276.98
4	D	Part-D Construction of 33kv interlinking line- 1.8KM with 3CX400sqmm without spare from Nayapally GSS to ESIC PSS and RRL PSS.	₹ 2,58,82,361.04
5	E	Part-E -Dismantling of Materials	₹ 4,18,534.18
		Total Amount	**₹ 6,14,05,164.80**
		Total Amount (In Cr)	**₹ 6.14**
Total estimated cost is Rs. 6.14 Crore. (On TPCODL CAPEX Scheme)			

Part-A : Construction of 33 kV Indoor AIS Switchgear Panel at Nayapally PSS.

ANNEXURE- 6.3			
TP CENTRAL ODISHA DISTRIBUTION LIMITED			
Name of the Division :-		**Khurdha (BBSR-II)**	
Name of the Work :-		***Loss reduction of 33kV Binodpada feeder by New 33kV Feeder from Hatabasta GSS :*** New 33kV feeder for power evacuation from Upcoming Hatabasta GSS, to enabling ring connectivity for 33kV Binodpada feeder which will provide 2nd 33kV source to PSS on existing feeder, improve network reliability by improve voltage profile, reduction in feeder length and reduction technical loss of network.	
Scope of work:-		PART A: Construction of 1 no. of 33 KV Outdoor Bay at Binodpada PSS. (Line Bay) PART B: Modification and extension of Control room at Binodpada PSS. PART C: Supply & Laying of 5 km 33kV 3CX400sqmm U/G Cable without spare run. PART D: Construction of 2 nos. 33 KV DP With Isolator and Earth Switch for U/G Cable Raising.	
Names of Schemes: -		***TPCODL CAPEX (FY 27-28)***	
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	PART A: Construction of 1 no. of 33 KV Outdoor Bay at Binodpada PSS. (Line Bay)	₹ 92,30,003.19
2	B	PART B: Supply & Laying of 5 km 33kV 3CX400sqmm U/G Cable without spare run. (Refer PSLD point A-B)	₹ 5,22,15,454.84
3	C	PART C: Construction of 2 nos. 33 KV DP With Isolator and Earth Switch for U/G Cable Raising. (Refer PSLD point A & B)	₹ 8,44,316.39
		Total Amount	**₹ 6,22,89,774.41**
		Total Amount (In Cr)	**₹ 6.23**
Total estimated cost is Rs. 6.23 Crore. (On TPCODL Capex Scheme)			

PART A: Construction of 1 no. of 33 KV Outdoor Bay at Binodpada PSS. (Line Bay)

3	**CT & PT Foundation**				
3.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.96875	3,928.91

3.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4.5	990.00
3.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.363	371.31
3.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.363	1,904.83
3.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.3625	15,707.91
3.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	14.94	4,599.88
3.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	122.43	13,650.95
4	**Column as per Drawing Schedule-**				
4.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	51.30975	25,297.76
4.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	24	5,280.00
4.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	2.1	11,019.70
4.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	14.175	94,247.45

4.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	89.64	27,599.26
4.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	734.58	81,905.67
5	**Isolator**				
5.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	9.45	4,659.23
5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.567	2,975.32
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.7	37,898.45
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	172.5	40,020.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	11.5	17,020.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	11.5	57,845.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	23	1,72,500.00

6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	21	1,57,500.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	280	75,600.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	4957	5,05,614.00
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	6	47,700.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	2651	2,75,704.00
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	21.6	14,040.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	7.2	21,600.00
8	Modification and extension of Control Room along with other civil works	LS	41,00,000.00	1	41,00,000.00

PART B: Supply & Laying of 5 km 33kV 3CX400sqmm U/G Cable without spare run. (Refer PSLD point A-B)					
Supply Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Supply of materials for 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 33kV 3C, 400sqmm cable (open trench)***	***M***	***2000***		
b	***Length of 33kV 3C, 400sqmm cable (HDD)***	***M***	***3000***		
1.1	Supply of 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA-20kA)	M	5000	3,165.00	1,58,25,000.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG Cable kits	EA	19	25,930.00	4,92,670.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA	2	11,900.00	23,800.00
1.4	Supply of Indoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT U/G Cable kits (Touch Proof)	EA	2	71,915.00	1,43,830.00
1.5	Supply of materials for High Density Polyethelene **(HDPE) pipe 200mm** diameter, PE 80- PN8 for laying of 33kV UG cable	M	2000.00	812.00	16,24,000.00
	Sub Total (Supply Portion) (in Rs.)				**1,81,09,300.00**
Erection Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Erection, Commissioning & Testing of 33kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 33kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by **open trench method**.	M	5000	115.00	5,75,000.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG cable kits	EA	23	2,000.00	46,000.00
1.3	Laying of HDPE pipe (200mm dia, PN8 PE80) by HDD method including supply of HDPE Pipe.	M	3000	2,970.00	89,10,000.00
1.4	Laying of 200**mm dia** PE 80-PN8, **HDPE pipe** inside open trench.	M	2000.00	195.00	3,90,000.00
	Sub Total (Erection Portion) (in Rs.)				**99,21,000.00**
Civil Portion					
Sl. No.	**Description of items**	**Unit**	**Quantity**	**Rate (in Rs.)**	**Amount (in Rs.)**
1	**Civil works for U/G Cable laying in Open Trench**				
1.1	Earth work excavation of soil (1mtr. width X 1.2mtr. depth)-Route Length	M	1884		
1.1.a	Earth work excavation of **soil**	M3	1582.56	716.03	11,33,160.44
1.1.b	Earth work excavation of **hard rock**	M3	678.24	1,759.39	11,93,288.67
1.2	Back filling with excavated soil outside and above the trench	M3	2260.8	220.00	4,97,376.00
1.3	Road Repair and restoration charges	KM	0.92	92,94,727.82	85,51,149.59

ANNEXURE-6.4		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	**CED**	
Name of the Sub-Division : -	Niali	
Name of the Work :-	Proposal for construction of 33 kV line from Proposed 132/33 kV Nua Betenda GSS to 33/11 kV Kulakapasai PSS to N-1 connectivity of 33 kV Niali feeder	
Names of Schemes: -	TPCODL CAPEX (FY 27-28)	
ABSTRACT OF ESTIMATE		
Sl. No.	**Description**	**Amount**
1	Part- A:- Construction of 33 kV line of 7 Ckm using 232 Sq.mm. AAA Conductor and 13 Mtr. WPB Pole. (Refer PSLD)	1,95,99,556.94
2	Part- B:- Construction of 33 kV line of 3 Ckm using 232 Sq.mm. XLPE AAA Conductor and 13 Mtr. WPB Pole. (Refer PSLD)	1,09,15,780.98
3	Part-C :- Installation of 33 kV line protecting road crossing guarding on DP (5 locations).	1,52,185.94
4	Part-D :- Supply and Laying of 0.5 Ckm 33kV 3CX400 Sq.mm. U/G cable (with Back to Back arrangement) for 33 kV line crossing and road crossing near Grid.	78,87,759.85
5	Part-E :- Construction of 1 No. of 33 kV Line Bay Kulakapasai PSS.	29,18,365.81
	Total Amount	**4,14,73,649.53**
	Total Amount (In Cr.)	**4.15**
Total estimated cost is Rs.4.15 Crore. (On TPCODL Capex Scheme)		

Part- A:-
Construction of 33 kV line of 7 Ckm using 232 Sq.mm. AAA Conductor and 13 Mtr. WPB Pole. (Refer PSLD)

No. of 33 KV DP required Without Isolator (Ref. Drawing No.- PD-1346-TPCODL-33 kV-OH-8003)	14

MATERIALS FOR 33 KV DP Without Isolator

Part-D :-
Supply and Laying of 0.5 Ckm 33kV 3CX400 Sq.mm. U/G cable (with Back to Back arrangement) for 33 kV line crossing and road crossing near Grid.

Supply Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Supply of materials for 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with accessories**				
a	***Length of 33kV 3C, 400sqmm cable (open trench)***	***M***	***500***		
1.1	Supply of 33kV, 3Core, 400sqmm Aluminium, XLPE insulation UG Cable with spare (SC rating of cable in kA- 37.7kA and SC rating of Armour in kA-20kA)	M	1000	3,165.00	31,65,000.00
1.2	Supply of Straight through jointing kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG Cable kits	EA	2	25,930.00	51,860.00
1.3	Supply of Outdoor termination kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, HT UG Cable kits	EA	4	11,900.00	47,600.00
1.4	Supply of materials for High Density Polyethelene **(HDPE) pipe 200mm** diameter, PE 80- PN8 for laying of 33kV UG cable	M	1000.00	812.00	8,12,000.00
	Sub Total (Supply Portion) (in Rs.)				**40,76,460.00**

Erection Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Erection, Commissioning & Testing of 33kV new line by 3Core, 400sqmm, XLPE UG cable**				
1.1	Laying, Commissioning & Testing of 33kV, 3Core, 400sqmm, XLPE insulation (extruted type) UG cable by **open trench method**.	M	1000	115.00	1,15,000.00
1.2	Erection of Straight through jointing Kits/Outdoor termination kits/Indoor termination Kits Heat Shrinkable type suitable for 33kV, 3Core, 400sqmm, aluminium UG cable kits	EA	6	2,000.00	12,000.00
1.4	Laying of 200**mm dia** PE 80-PN8, **HDPE pipe** inside open trench.	M	1000.00	195.00	1,95,000.00
	Sub Total (Erection Portion) (in Rs.)				**3,22,000.00**

Civil Portion

Sl. No.	Description of items	Unit	Quantity	Rate (in Rs.)	Amount (in Rs.)
1	**Civil works for U/G Cable laying in Open Trench**				
1.1	Earth work excavation of soil (1mtr. width X 1.2mtr. depth)-Route Length	M	468		
1.1.a	Earth work excavation of **soil**	M3	393.12	716.03	2,81,485.71
1.1.b	Earth work excavation of **hard rock**	M3	168.48	1,759.39	2,96,422.03
1.2	Back filling with excavated soil outside and above the trench	M3	561.6	220.00	1,23,552.00
1.3	Road Repair and restoration charges	KM	0.1	92,94,727.82	9,29,472.78
2	Supply and Erection of Cable Route Marker along the cable route at an interval of 30mtrs with civil works	EA	17	1,035.17	17,597.89
3	GIS coordinate mapping, drawing preparation and submission of the same for New/Existing line	CKM	0.5	10,470.00	5,235.00
	Sub Total (Civil Portion) (in Rs.)				**16,53,765.41**
A1	**Sub Total (Supply Portion)**				**40,76,460.00**
A2	**Applicable Taxes to make it Landed Cost @18%**				**7,33,762.80**

5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.567	2,975.32
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.7	37,898.45
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	17.25	4,002.00
6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	1.15	1,702.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	1.15	5,784.50
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	2.3	17,250.00

6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	2.1	15,750.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	28	7,560.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	495.7	50,561.40
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	0.6	4,770.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	265.1	27,570.40
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	21.6	14,040.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	7.2	21,600.00
K1				**Total Civil & Services**	**6,46,242.79**
K2				**Applicable Taxes to make it Landed Cost @18%**	**1,16,323.70**

ANNEXURE-6.5			
TP CENTRAL ODISHA DISTRIBUTION LIMITED			
Name of the Division :-		**ANED (Dhenkanal)**	
Name of the Sub Division :-		**Chhendipada**	
Name of the Work :-		***Loss reduction of 33kV Jarapada feeder by New 33kV Feeder from Chhendipada GSS :*** New 33kV feeder for power evacuation from Upcoming Chhendipada GSS, to enabling ring connectivity for 33kV Jarapada feeder which will provide 2nd 33kV source to PSS on existing feeder, improve network reliability by improve voltage profile, reduction in feeder length and reduction technical loss of network.	
Names of Schemes: -		***TPCODL CAPEX (FY 27-28)***	
ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	PART A: Construction of 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. - XLPE AAA Covered Conductor-10.37ckm.	₹ 4,00,37,854.96
2	B	PART B: Laying of 33kV 3C, 400sqmm UG Cable 1.4km	₹ 1,28,08,532.03
3	C	PART C: Construction of 3 Nos. Line Protecting Guarding on Double Pole for Road Crossing.	₹ 1,06,385.33
4	D	PART D: Construction of 3 Nos. 33 KV 4 Pole using WPB GI Pole 160x152 (13Mtr. Long) with One No. of Isolator and LA Set.	₹ 16,19,136.26
5	E	PART E: Installation of 14 Mtr. H-Pole for 11kV line crossing.	₹ 8,10,761.82
		Total Amount	**₹ 5,53,82,670.39**
		Total Amount (In Cr)	**₹ 5.54**
Total estimated cost is Rs. 5.54 Crore. (On TPCODL CAPEX Scheme)			

PART A: Construction of 33kV Line Length with 40 Mtr. Span using 232 SQ.MM. -XLPE AAA Covered Conductor-10.37ckm.

No. of 33 KV DP required Without Isolator (Ref. Drawing No.- PD-1346-TPCODL-33 kV-OH-8003)	10

MATERIALS FOR 33 KV DP Without Isolator

Sl. No.	Description of Materials	Unit	Unit Rate	Total Quantity	Total Amount

1	Construction Earthing chamber including installation of earthing pipe.Making earthing chamber including excavation , soil treatment with bentonide powder , calculation of earth resistance, including Installation of 3Mtr GI Pipe 40mm/50mm including welding of Flat(GI) around pipe .	No.	3,784.73	16	60,555.68
2	**VCB Foundation**				
2.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.28	3,589.33
2.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
2.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.34125	349.06

2.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.455	2,387.60
2.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.825	18,783.00
2.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	13.25	4,079.54
2.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	140	15,610.00
3	**CT & PT Foundation**				
3.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	7.96875	3,928.91
3.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4.5	990.00
3.iii	Supplying and spreading, filling other works with fine sand under floors,ground etc as per EIC instruction. Scope of work also includes watering, ramming, consolidating and dressing complete and other works if required at site .	Cum	1,022.90	0.363	371.31
3.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.363	1,904.83

3.v	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	2.3625	15,707.91
3.vi	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	14.94	4,599.88
3.vii	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	122.43	13,650.95
4	**Column as per Drawing Schedule-**				
4.i	BA will excavate & remove the debris. BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	493.04	51.30975	25,297.76
4.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	24	5,280.00
4.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	2.1	11,019.70
4.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	14.175	94,247.45

4.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	89.64	27,599.26
4.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	734.58	81,905.67
5	**Isolator**

5.ii	BA will Back fill the excvated site with same earth.BA will provide necessary Tools,Machinery & Manpower for the activity.	Cum	220.00	4	880.00
5.iii	Providing and laying Plain Cement Concrete (PCC) of proportion (1:3:6(M-10 Grade)) in foundations, Trench and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	5,247.48	0.567	2,975.32
5.iv	Providing and laying Plain Cement Concrete (PCC) of proportion (1:1.5:3(M-20 Grade)) in foudations and plinths using approved quality of cement, 20mm size hard crusher broken granite stone metal and screened, washed sharp sand for mortar of approved quality and from approved quarry, including hoisting, lowering, laying concrete, ramming, watering and curing etc. complete to required levels in layers not exceeding 15cm thick in each layer including cost, conveyance, loading, unloading, royalties and taxes, cess, of all materials & cost of all labours, sundries, T&P and all other machinaries required for the work etc., as directed by Engineer-in-Charge.	Cum	6,648.85	5.7	37,898.45
5.v	Centring and shuttering including struttting , propping etc.and removal of form for Foundations, footings, bases of columns etc. for mass concrete	Sqm	307.89	29.88	9,199.75
5.vi	Reinforcement for R.C.C. work including straightening, cutting, bending, placing in position and binding all copmplete, cold twisted bars/TMT as per TPCODL specification (Scope also include supply of material)	Kg	111.50	244.86	27,301.89
6	**RCC Cable Trench :**				
6.i	Earth work in excavation in ordinary soil,soft/weathered rock by mechanical (Hydraulic excavator) /manual means in foundation, trenches or drains including dressing of sides and ramming of bottoms, lift upto 1.5 m, including vegetation removal, getting out the excavated soil, back filling layer of 230-300 mm in depth, compacting and disposal of surplus excavated soil as directed, within a lead of 50 mas per direction of Engineer-in-charge.	Cum	232.00	34.5	8,004.00

6.ii	Supplying and filling in plinth with River sand under floors including, watering, ramming, consolidating and dressing complete.	Cum	1,480.00	2.3	3,404.00
6.iii	Providing and laying in position cement concrete of specified grade excluding the cost of centring and shuttering- All work upto plinth level: 1:3:6 (1 cement : 3 coarse sand (zone-III) : 6 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	5,030.00	2.3	11,569.00
6.iv	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	4.6	34,500.00
6.v	Providing and laying in position specified grade of reinforced cement concrete excluding the cost of centring, shuttering and reinforcement- All work upto plinth level 1:1.5:3 (1 cement: 1.5 coarse sand (zone-III) : 3 graded stone aggregate 20 mm nominal size) as directed by EIC.	Cum	7,500.00	4.2	31,500.00
6.vi	Centring and shuttering including struttting , propping etc.and removal of form with proper finishing for : Walls (any thickness) including attached plaster, buttresses, plinth and string courses etc as directed by EIC.	M2	270.00	56	15,120.00
6.vii	Steel reinforcement for R.C.C. work including Shifting, straightening, cutting, bending, placing in position and binding all complete upto plinth level. Cold twisted bars / Thermo-Mechanically Treated bars of approved make as directed by EIC.	Kg	102.00	991.4	1,01,122.80
6.viii	Providing and fixing precast reinforced concrete cable trench covers, drain covers, fencing post, etc. of class M25 concrete w/c 0.5 (max) leaving cut-outs/ pockets, placing of inserts/ embedments,etc.,complete all as per drawing including shuttering, vibrating, machine mixing, providing lifting arrangements, placing inserts curing handling, transporting, etc. complete but excluding the cost of providing reinforcement, inserts / embedments, with 30 mm downgraded aggregates as directed by EIC. (Cement consumption 7.9 Bag/M3)	Cum	7,950.00	1.2	9,540.00
6.ix	Structural steel work in single section, fixed with or without connecting plate including cutting, hoisting, fixing in position and applying a priming coat of approved steel primer all complete.	Kg	104.00	530.2	55,140.80
7	**Land Leveling & Compaction/ Gravels sprading :**				
7.i	BA will supply all materials required for backfilling and has to carry out the job of backfilling with earth, as per TPCODL standards	Cum	650.00	21.6	14,040.00
7.ii	Supplying, Laying, spreading and compacting with hand roller stone aggregate of specified sizes: 63 mm to 45 mm size stone aggregate to WBM specifications in uniform thickness, hand picking to proper grade and camber, applying and brooming requisite type of screening / binding material to fill up interstices of coarse aggregate, watering and compacting to the required density . .Scope of work also includes of jungle such as grass,small tree,plant etc.	Cum	3,000.00	7.2	21,600.00

11kV Network Infrastructure

ANNEXURE-12

Summary of proposal details for 11kV Reliability Improvement:

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
1	BBSR-I	BED	Lingipur	Gangua	Proposal for augmentation for 3kms O/H line from Gangotri Nagar Lane-3 to Airtel Tower to Improve reliability.	₹ 0.46	Annexure -12.1
2	BBSR-I	BED	Uttara	KEC,Sardeipur,Dhauli	Proposal for construction 1.1km U/G from Uttara PSS to near Aastha Highway due to unsafe condition to improve reliability.	₹ 1.08	Annexure -12.2
3	BBSR-I	BED	Mulapadia	Mahavir Cottage	Proposal for construction of an interlinking line and installation of 2 Nos. of RMUs in the 11 kV Mahavir Cottage Feeder to improve network reliability .	₹ 0.76	Annexure -12.3
4	BBSR-I	BED	Lingipur	Kua Khai	Proposal for Augmentation of 3KM line strengthening for improving reliability of 11kV Shakti Nagar Feeder and installation of 1 no RMU for backfeeding of 11kV Sai and Sishupalagada feeder with Kuakhai Feeder	₹ 1.98	Annexure -12.4
5	BBSR-I	BED	Pradhan Sahi	Panchagaon	Proposal for augmentation and strengthening of the 11 kV Panchagaon Feeder for a length of 1.5 CKM to improve network reliability, along with the installation of 1 No. RMU for back-feeding arrangement .	₹ 0.59	Annexure -12.5
6	BBSR-I	BED	Pradhan Sahi	Kalyani Plaza	Proposal for augmentation and refurbishment of the 11 kV Kalyani Plaza Feeder for a length of 2.5 CKM using 100 sq. mm AAAC XLPE covered conductor, considering the dense vegetation along the feeder route, to improve network reliability and reduce vegetation-related interruptions.	₹ 0.25	Annexure -12.6
7	BBSR-I	BED	Pandra	Mangaraj	Proposal for augmentation and strengthening of the 11 kV Mangaraj Point Feeder for a length of 0.8 CKM to improve network reliability and ensure better supply continuity.	₹ 0.14	Annexure -12.7
8	BBSR-I	BCDD-I	Unit-2	Ashok Nagar	Proposal for bifurcation of the 11 kV Ashok Nagar Feeder by construction of a new 11 kV feeder from Kharvel Nagar to mitigate the existing feeder overloading issue, reduce feeder loading, and improve network reliability.	₹ 2.53	Annexure -12.8

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
9	BBSR-II	PED	Kacheri PSS	Swargadwar-1	Proposal for construction of a new 11 kV feeder of 0.82 CKM length, to bifurcate the load of the 11 kV Swargadwar-1 Feeder to enhance the reliability as well as to mitigate the overloading issue.	₹ 2.14	Annexure -12.9
10	BBSR-I	BCD D-I	Board Colony	JP RMU-37	Proposal for bifurcation of the 11 kV JPRMU-37 Feeder by construction of a new 11 kV feeder from Shanti Pali to mitigate the existing feeder overloading issue, reduce feeder loading, and improve network reliability.	₹ 1.56	Annexure -12.10
11	BBSR-I	BCD D-I	Unit-6	Unit-6	Proposal for augmentation of the 11 kV Medical OH Feeder using 100 sq. mm XLPE covered conductor and interlinking it with the 11 kV Unit-6 Feeder to improve the reliability and supply continuity of the Unit-6 Feeder.	₹ 0.84	Annexure -12.11
12	BBSR-I	BCD D-II	Ranasingh Pur	Aigenia	Proposal for bifurcation of 11 kV Aigenia Feeder by laying of new UG Line from Ranasingh Pur PSS to Ranasingh Pur Village 250 KVA DTR.	₹ 2.58	Annexure -12.12
13	BBSR-I	BCD D-II	Bharat Pur	Bharatpur	Proposal for bifurcation of 11 kV Bharat Pur Feeder by laying of new UG Line from Bharat Pur PSS to Lokayukta Bhawan Near GA Colony.	₹ 4.00	Annexure -12.13
14	BBSR-I	BCD D-II	Khandagiri	Kolthia	Proposal for bifurcation of 11 kV Kolathia Feeder by laying of new UG Line from Bharat Pur PSS to Manipal Hospital.	₹ 4.00	Annexure -12.14
15	BBSR-I	BCD D-II	Bharat Pur	PHD	Proposal for augmentation of existing 11kV PHD feeder using 100mm2 XLPE covered conductor.	₹ 3.58	Annexure -12.15
16	BBSR-I	BCD D-II	CS Pur-2	HB-3	Proposal for augmentation of 11 kV HB-3 Feeder using 100mm2 XLPE covered conductor & installation of RMU in T-off for reliability improvement.	₹ 1.24	Annexure -12.16
17	BBSR-I	NED	Kaktpur	Kaktpur-2	Construction of new 11kV Feeder from Astaranga PSS to bifurcate Kaktpur-2 Feeder	₹ 3.02	Annexure -12.17
18	BBSR-I	NED	Nimapada	Patapur	Proposal for line augmentation of 1 CKM line	₹ 1.15	Annexure -12.18
19	BBSR-II	PED	Sunamuhin	Brahmagiri	Proposal for refurbishment and augmentation of 11kV Brahmagiri feeder 3 CKM in Dadra kund and Gada rodanga by using 100 SQ.MM. AAA to enhance reliability.	₹ 1.06	Annexure -12.19

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
20	BBSR-II	PED	Sakhigopal	Sakhigopal Bajar	Proposal for augmentation of the 11 kV Sakhigopal Bajar Feeder to enhance reliability including to mitigate the overloading issue.	₹ 0.92	Annexure -12.20
21	BBSR-II	BAED	Balugaon	Singheswar	Proposal for refurbishment and augmentation of existing 11 KV Singheswar Feeder from Lambodarpur to khandewallkot to enhance reliability.	₹ 0.51	Annexure -12.21
22	BBSR-II	KHD	Tirimal	Taraboi	Proposal for refurbishment and augmentation of the existing 11 kV Taraboi Feeder for a length of 3.4 CKM near Anlajodi and Samantaraypur villages to improve feeder reliability.	₹ 0.50	Annexure -12.22
23	BBSR-II	KHD	Sunadeimundia	Rajiba	Proposal for refurbishment and augmentation of 11kV Rajiba Feeder 3.5 CKM by using 100 SQ.MM. AAA from Khandiabandha line AB switch to Kurum chain Line AB switch to improve reliability .	₹ 0.50	Annexure -12.23
24	BBSR-II	NYED	Gania	Koska	Proposal for construction of a new 11 KV Feeder from 33/11 KV Gania PSS and interlink with existing 11kV Kuska Feeder to bifurcate the length of the 11 KV Kuska Feeder.	₹ 0.60	Annexure -12.24
25	BBSR-II	NYED	Similisahi	Similisahi	Proposal for construction of a 0.04 CKM interlinking line between the 11 kV Similisahi Feeder and the 11 kV Old Town Feeder for reliability improvement and length reduction.	₹ 0.04	Annexure -12.25
26	Cuttack	CDD-1	Jobra PSS	College square UG	Proposal for refurbishment of 1 CKM O/H line of 11 kV collage square Fd	₹ 0.12	Annexure -12.26
27	Cuttack	CDD-1	DRDA PSS	GANESH GHAT	Proposal for refurbishment of1 .4 CKM O/H line of 11 kV ganeshghat Fdr	₹ 0.19	Annexure -12.27
28	Cuttack	CDD-2	Kandarpur PSS	AIR	Proposal for refurbishment of 1.8 CKM O/H line of 11 kV AIR Fdr. along with construction of 2.26 CKM new line for reliability improvement & safety issue mitigation	₹ 0.76	Annexure -12.28
29	Cuttack	AED	Badamba PSS	BADAMBA TOWN	Proposal for refurbishment of 0.5 CKM O/H line of 11 kV Badamba town Fdr. along with construction of 0.08 CKM U/G line for N-1 connectivity between 11 kV Badamba town & Badabarsingha FDR	₹ 0.15	Annexure -12.29

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
30	Cuttack	AED	Tigiria PSS	PANCHAGAON	Proposal for refurbishment of 3 CKM O/H line of 11 kV panchgaon Fdr from 55 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC	₹ 0.41	Annexure -12.30
31	Cuttack	SED	Erkana PSS	LAXMINARAYANPUR	Proposal for bifurcation of 11 kV Laxminarayanpur Fdr by construction of 01 No. of new 11 kV Indoor Bay at 33/11 kV Erkana PSS	₹ 0.34	Annexure -12.31
32	Cuttack	SED	Bahubram-1 PSS	BAHUGRAM GOPINATHPUR	Proposal for refurbishment of 1.5 CKM O/H line of 11 kV Bahugram Gopinathpur Fdr. Along with construction of 1.4 CKM new line for reliability improvement.	₹ 0.54	Annexure -12.32
33	Cuttack	SED	Orikanta PSS	GOPINATHPUR	Proposal for refurbishment of 4 CKM O/H line of 11 KV Orikanta Gopinathpur Fdr. using 100 Sq.mm AAA Conductor along with construction of 1 CKM 11 kV new line to improve reliability	₹ 0.62	Annexure -12.33
34	Cuttack	CED	Balikuda PSS	BARANGA	Proposal for refurbishment of 1.2 CKM O/H line of 11 kV Barang fdr . along with construction of 1.74 CKM new line for reliability improvement	₹ 1.12	Annexure -12.34
35	Cuttack	CED	Choudwar PSS	LOCAL	Proposal for refurbishment of 0.5 CKM O/H line of 11 kV choudwar local Fdr. along with construction of 0.68 CKM U/G line for reliability improvement & safety issue mitigation.	₹ 0.67	Annexure -12.35
36	Cuttack	SED	Orikanta PSS	Bilahata	Proposal for augmentation of of 5 CKM O/H line of 11 kV Bilahata Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole (interposing)	₹ 0.68	Annexure -12.36
37	Cuttack	AED	MARDMUKHA PSS	KAMALADIHA OLD	Proposal for interlinking line of 1.2 CKM between 11 kV Kamaladiha and Kamaladiha Old feeder for length reduction of length of 11 kV Kamaladiha Old Fdr.	₹ 0.28	Annexure -12.37
38	Dhenkanal	DED	Nuabag	Naukhiyari	Construction of 1.4 CKM interlinking line between the 11 kV Naukiari Feeder and 11 kV Kalanga Feeder, connecting Alusingha to Sani Mandap and Kadalipal to CSC Centre, to improve network reliability and reduce the feeder length.	₹ 0.43	Annexure -12.38

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
39	Dhenkanal	ANED	Boinda	Handapa	Proposal for augmentation of the 11 kV Nakchi Feeder for a length of 4 CKM and construction of a 1.77 CKM interlinking line between the 11 kV Nakchi Feeder and 11 kV Handapa Feeder, to improve network reliability and reduce the feeder length.	₹ 1.05	Annexure -12.39
40	Dhenkanal	ANED	Daurapalli	Raniakata	Construction of a 2 CKM interlinking line between the 11 kV Raniakata Feeder and 11 kV Kadalimunda Feeder from Sanahula to Mundabeda, to improve network reliability and reduce the feeder length.	₹ 0.58	Annexure -12.40
41	Dhenkanal	DED	Bhapur	Bhapur	Proposal for refurbishment and augmentation of the 11 kV Bhapur Feeder for a length of 1 CKM from Sarakapatna Primary School to Chandrasekhar Prasad, to improve network reliability.	₹ 0.15	Annexure -12.41
42	Dhenkanal	TED	Khama	Sankhmur	Proposal for construction of a new 1.5 CKM interlinking line between the 11 kV Sankhmur Feeder and 11 kV Odaus Feeder from Hotel Kalia to Eknatala, to reduce feeder length and improve network reliability.	₹ 0.49	Annexure -12.42
43	Dhenkanal	TED	Banarpal	Banarpal Hindol	Proposal for construction of a new 2.5 CKM interlinking line between the 11 kV Banrapal-hindol Feeder and 11 kV Phulapada Feeder from Kusuna to Santapur, to reduce feeder length and improve network reliability.	₹ 0.55	Annexure -12.43
44	Paradeep	PDP	Garadpur	Garadpur-I	2.6 CKM interlinking line required between 11 kV Postal Fdr. and Garadpur-1 Fdr. for bifurcation of load of Garadpur-1 feeder.(At present Garadpur-1 Fdr. of KED-2 division feeding part load of PDP which made difficulties during maintenance)	₹ 0.69	Annexure -12.44
45	Paradeep	KED-II	Thauri PSS	Ortaghat	Proposal for diversion of existing O/H line of 11 kV Ortaghat Fdr. from Waterlogging area/dense forest area and construction of 2.3 CKM new 11 kV line to improve reliability.	₹ 0.63	Annexure -12.45

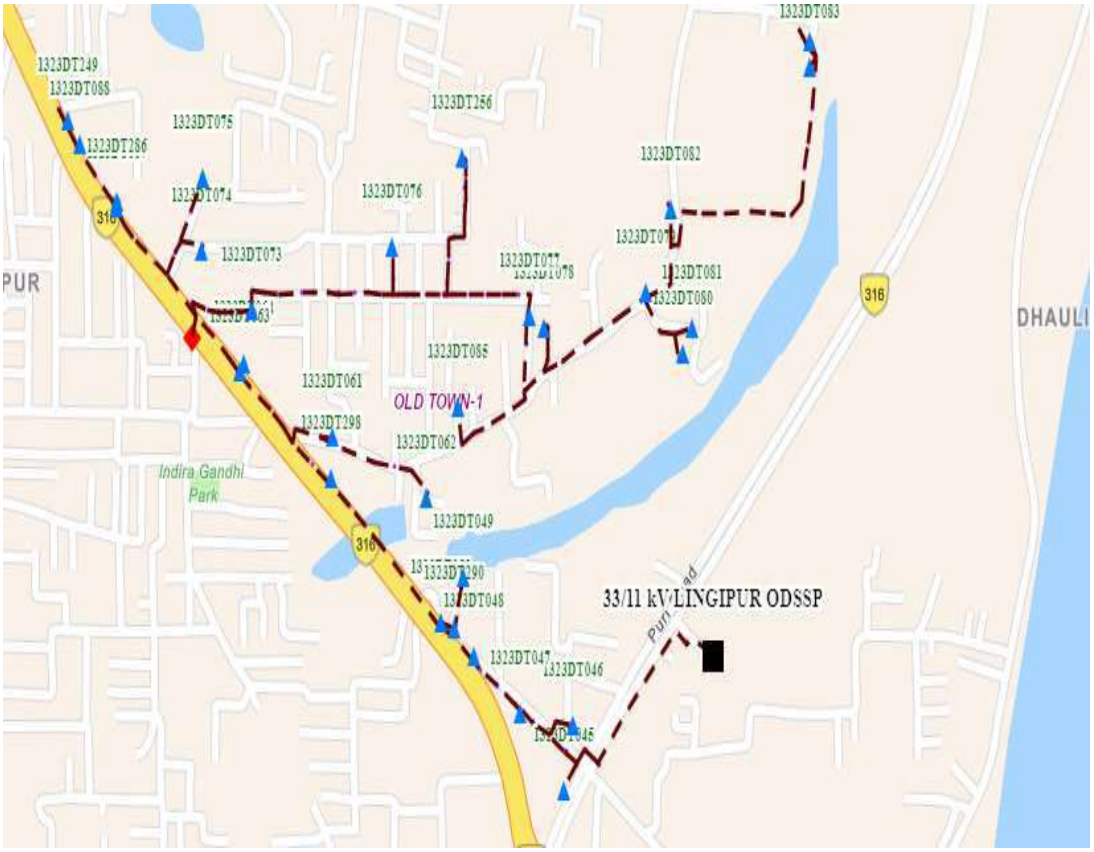
Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
46	Paradeep	KED-II	Marsaghai PSS	Angulai & Kurtunga	Proposal for Augmentation of 3 CKM line of 11 Kv Angulai Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. AAAC along with construction of 2.5 CKM linking line for N-1 reliability with 11 kV Kurtanga Fdr.	₹ 0.78	Annexure -12.46
47	Paradeep	KED-II	Badhi/Babar PSS	Jamboo	Proposal for construction of 0.9 CKM 11 KV line using 100 Sq.mm AAA Conductor for N-1 connectivity between 11 kV Jamboo & Marine Fdr. and reduction of length of 11 kV Jamboo Fdr.	₹ 0.34	Annexure -12.47
48	Paradeep	KED-I	Ayatan PSS	Jaynagar	Proposal for refurbishment of 6 CKM O/H line of 11 kV Jaynagar Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole. (Aged conductor)	₹ 0.92	Annexure -12.48
49	Paradeep	KED-I	Indupur PSS	Bairi	Proposal for refurbishment of 7.5 CKM 11 KV line of 11 kV Bairi Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole for reliability improvement. (Aged conductor)	₹ 1.16	Annexure -12.49
50	BBSR-I	BCD D-II	Dumduma	Asian Plaza	Proposal for augmentation of existing 11kV Asian Plaza feeder using 100mm2 XLPE covered conductor & Linking with nearby Feeder for Load Diversion.	₹ 0.73	Annexure -12.50
51	Paradeep	KED-I	Kendrapada PSS	Thakurpatna& Chhata	Proposal for construction of 1.1 CKM 11 KV line using 100 Sq.mm XLPE AAA Conductor for N-1 connectivity between 11 kV Thakurpatna & Chhata Fdr	₹ 0.42	Annexure -12.51
52	Paradeep	KED-I	Rajnagar PSS	Rajnagar	Proposal for construction of 2 CKM 11 kV new line for N-1 reliability between 11 kV Rajnagar & Balarampur Fdr. along with installation of 01 No. of 11 kV 4-way RMU (LVVV) at Kurundi for improvement of reliability.	₹ 1.02	Annexure -12.52
53	Paradeep	PDP	Trilochanpur PSS	Sandhakuda	Proposal for Augmentation of 4.1 CKM O/H line of 11 kV Sandhakuda Fdr. from 80 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC along with shifting of 1 CKM 11 kV line from water logging area.	₹ 0.99	Annexure -12.53
54	Paradeep	PDP	Kujang PSS	Santara	Proposal for conversion of 11 kV O/H line to U/G line using 3CX400 Sq.mm. XLPE U/G cable for the length of 0.57 kM for unsafe to safe.	₹ 0.49	Annexure -12.54

Sl. No	*Circle*	*Division*	*PSS Name*	*11kV Feeder Name*	*Proposals*	*Estimated Cost (In Cr)*	*Annexure*
55	Paradeep	PDP	Paradeepgarh PSS	Rangiagarh	Proposal for Augmentation of 1 CKM line of 11 kV Rangiagarh Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC. (short height pole & aged conductor)	₹ 0.18	Annexure -12.55
56	Paradeep	PDP	Erasma PSS	Ersama Bazar	Proposal for refurbishment of 1.2 CKM line of 11 kV Erasama Bazar Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC.(short height pole & aged conductor)	₹ 0.24	Annexure -12.56
57	Paradeep	JED	Balikuda PSS	Dengapola	Proposal for refurbishment of 11.5 CKM O/H line of 11 kV Dengapola Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. AAAC along with construction of 1.5 CKM 11 kV line for N-1 connectivity between 11 kV Govindpur and Dengapola Fdr. for improvement of reliability.	₹ 2.36	Annexure -12.57
58	Paradeep	JED	Jagatsinghpur PSS	Chhapada	Proposal for refurbishment of 6.1 CKM line of 11 kV Chhapada Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC. (Rusted conductor due to aging effect)	₹ 0.97	Annexure -12.58
59	Paradeep	JED	Sova PSS	Macchegaon	Proposal for refurbishment of 6.12 CKM O/H line of 11 kV Machegaon Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. AAAC. (Rusted conducter due to aging effect)	₹ 0.94	Annexure -12.59
60	Paradeep	JED	Nabapatna PSS	Mansadahi	Proposal for refurbishment of 7.5 CKM 11 KV line of 11 kV Mandasahi Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole along with construction of 1 CKM 11 kV line for N-1 connectivity between 11 kV Mandasahi & Jankothi Fdr. for length reduction of Mandasahi Fdr.	₹ 1.29	Annexure -12.60
61	Paradeep	JED	Nabapatna PSS	Tarikund	Proposal for refurbishment of 4.5 CKM O/H line of 11 kV Tarikund Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole for reliability improvement.	₹ 0.65	Annexure -12.61
62	Paradeep	PDP	Bijaychandrapur PSS	Atharbanki Medical	Proposal for refurbishment of 0.5 CKM line of 11 kV Atharabanki Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC for unsafe to safe.	₹ 0.19	Annexure -12.62
Total						**60**	

1.0 Proposal for Reliability improvement of 11kV Gangua Feeder:

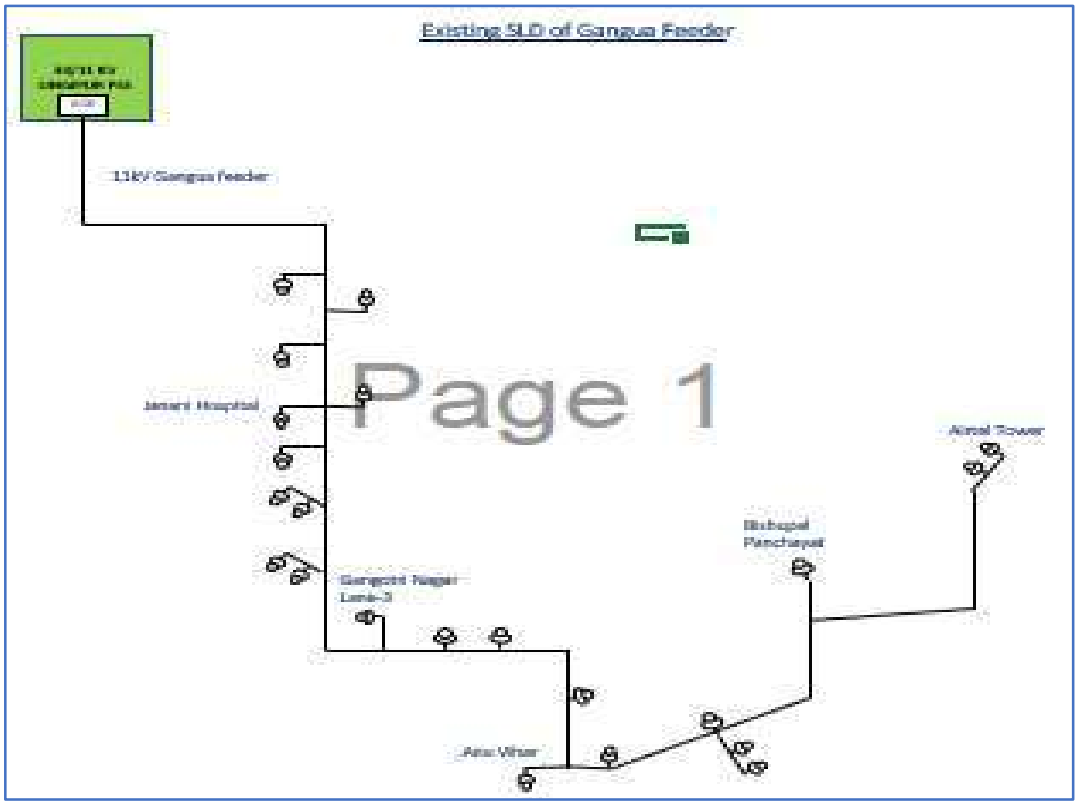
Proposal:

Proposal for augmentation for 3kms O/H line from Gangotri Nagar Lane-3 to Airtel Tower.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Gangua Feeder.

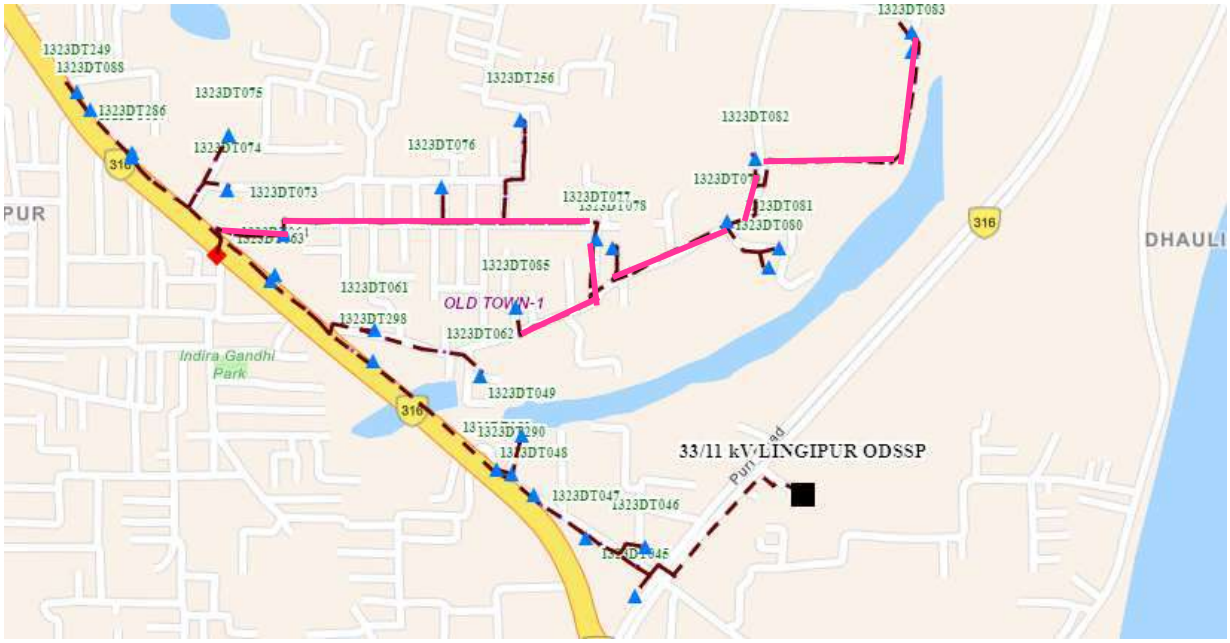


Existing Scenario:

- 11kV Gangua feeder is emanating from 33/11kV Lingipur PSS. The total length of the feeder including spur feeders is 4.4 CKM with peak load of 2.28 MVA.
- The trunk conductor size of 11 kV Gangua feeder is 100 sq.mm AAAC is bare & have multiple tripping because of vegetation & transient faults
- Because of tripping/maintenance activities major commercial consumers remains out of service

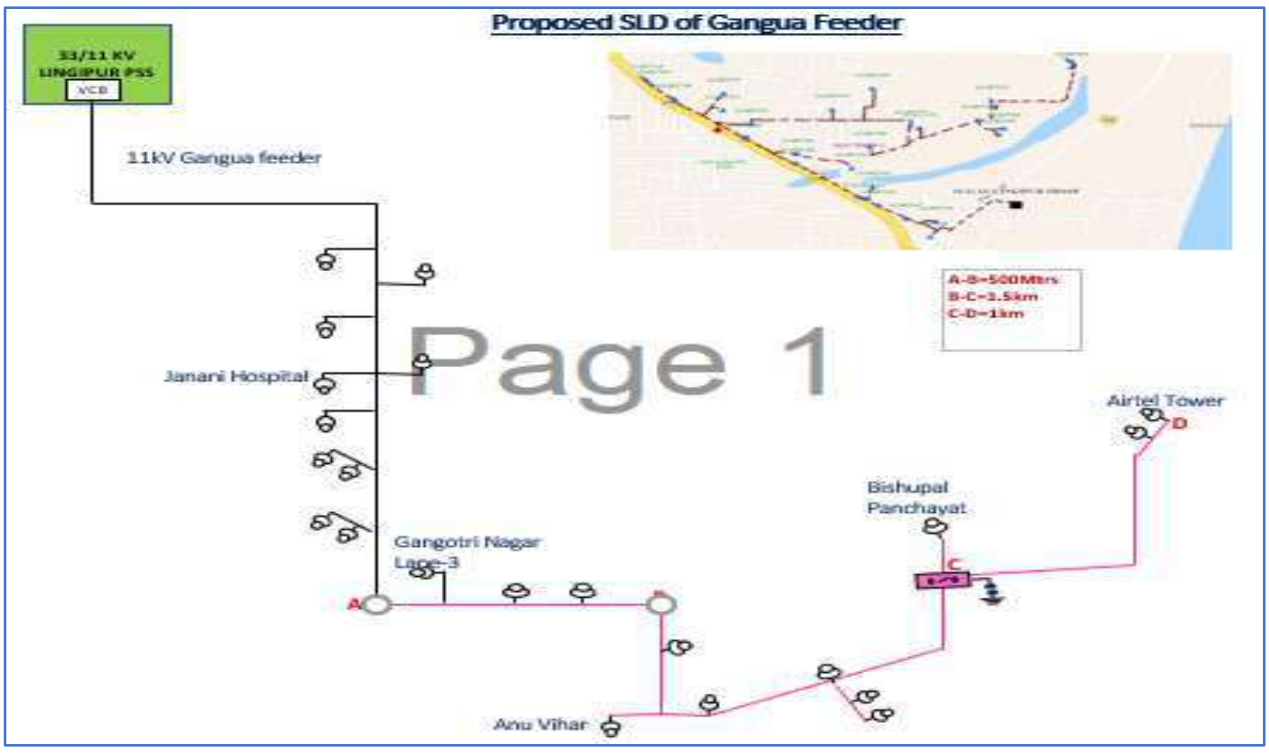
GIS MAP

Existing SLD:



Priority of the Project:

Priority: Since the 11kV Gangua feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last two year was 101 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Augmentation for 3km using 100sqmm Covered Conductor for 11kV O/H line strengthening from Gangotri Nagar Lane-3 to Airtel
- Covered conductor is proposed in order to reduce transient tripping.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation.

GIS Map Proposed:-

Proposed SLD:

Page 1

Scope of Work:

- Augmentation of 3Kms O/H line due to dense vegetation area and damaged conductor.
- Installation of 2 no. of Line DP with AB Switch.

Proposed Cost with Estimate Break-up:

Annexure- 12.1		
TPCODL		
Name of the Division :-		BED
Name of the Sub-Division : -		TEMPLE
Name of the Section : -		OT-1
Name of the Feeder: -		11kV Gangua Feeder
Name of the Work :-		Proposal for augmentation for 3kms O/H line from Gangotri Nagar Lane-3 to Airtel Tower
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART-A:- 1. Installation of 2 no. of Line DP with AB Switch 2. Augmentation of 3Kms O/H line due to dense vegetation area and damaged conductor.	45,34,974.47
2	PART-C:- Dismantling	1,02,850.61
3	**Total Gross**	**46,37,825.08**
Total estimated cost is Rs. 0.46Cr.		

Cost Estimate: ₹ 0.46Cr. (For detailed BoQ refer Annexure-12.1)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

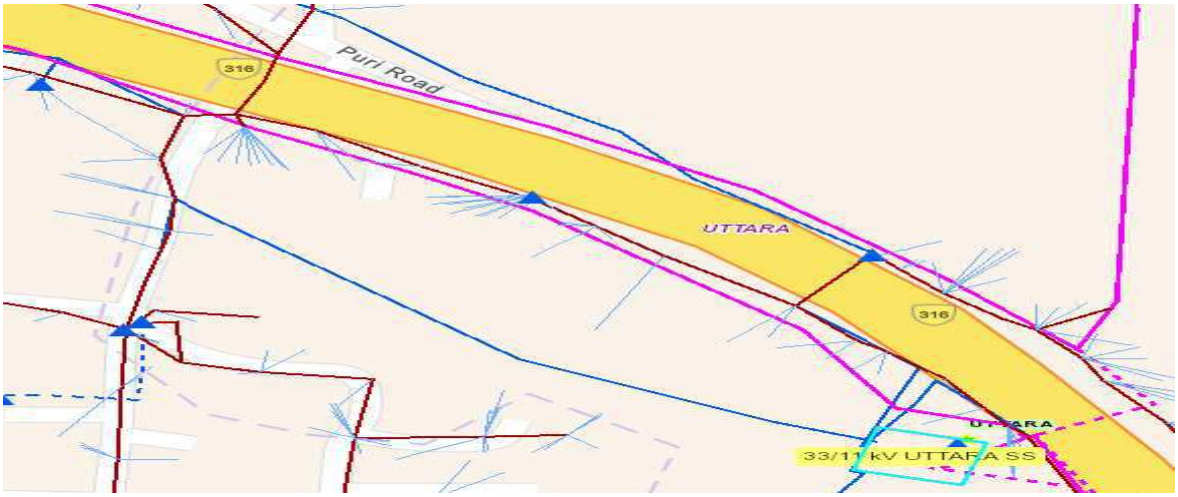
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Gangua feeder.
- Augmented with Covered conductor to aviod transient tripping.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

2.0 Proposal for Reliability improvement of 11kV Dhauli Feeder:

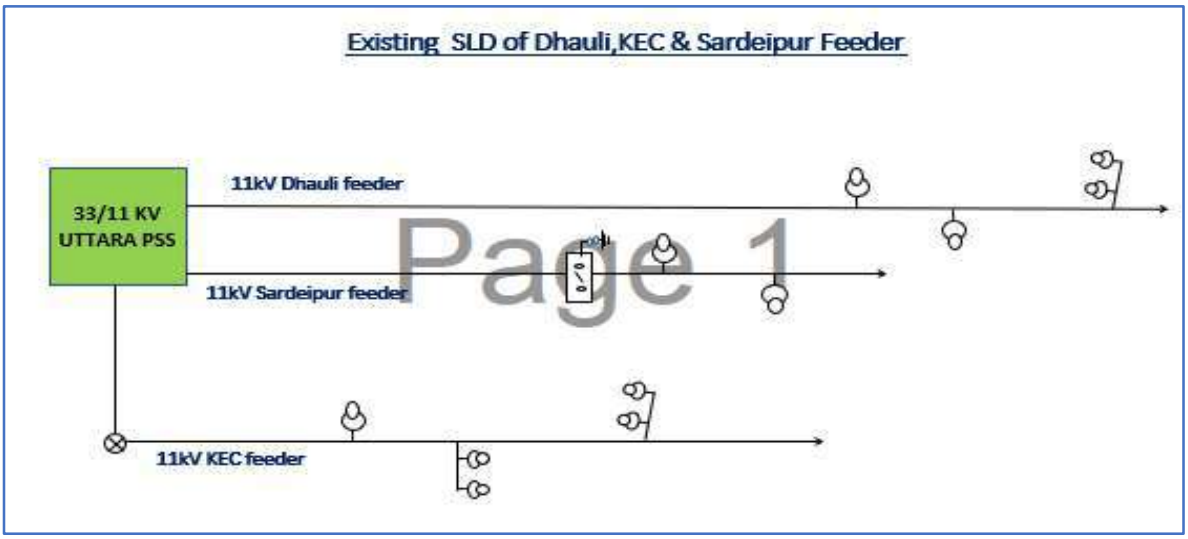
Proposal:

Proposal for construction 1.1km U/G from Uttara PSS to near Aastha Highway due to unsafe condition



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV KEC,Dhauli and Sardeipur Feeders.

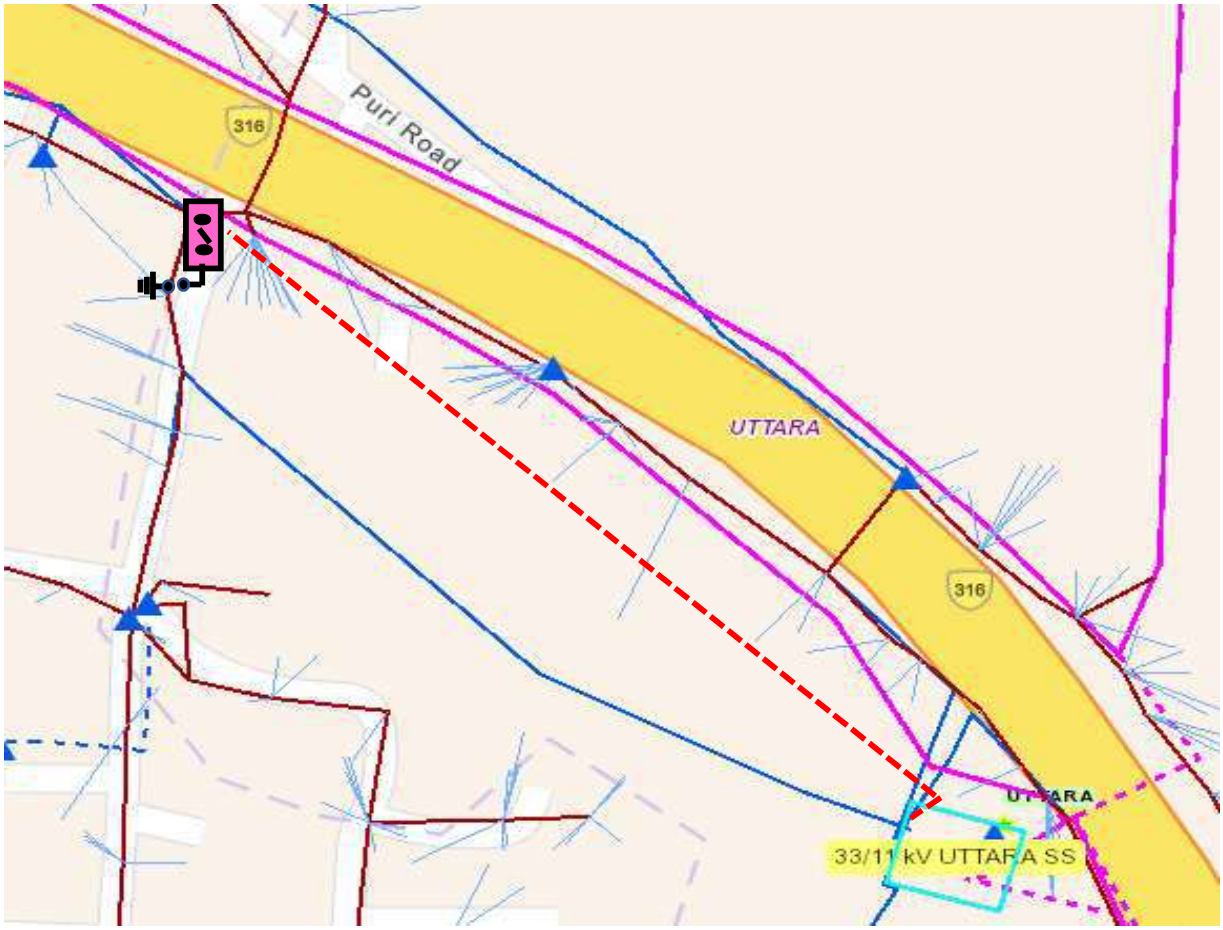


Existing Scenario:

- At present, the 11 kV KEC, Dhauli, and Sardeipur feeders are emanating from 33/11 kV Uttara PSS.
- The existing feeders are overhead (O/H) lines passing through areas in the vicinity of Uttara PSS.
- Due to the construction of buildings near Uttara PSS, the existing O/H feeders are in an unsafe and vulnerable condition.
- The proximity of the buildings to the O/H lines poses safety risks and potential operational hazards.
- To ensure safe and reliable power supply, conversion of the existing overhead network to underground (U/G) cable is proposed.

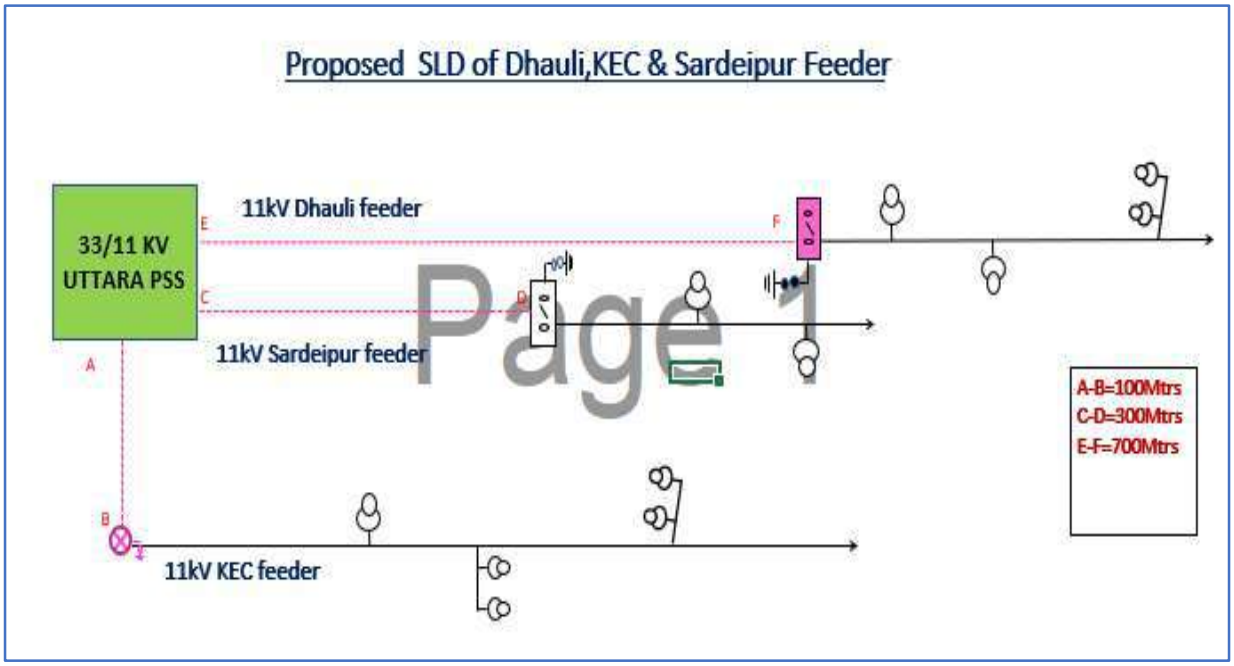
GIS MAP

Existing SLD:



Priority of the Project:

Priority: Since the 11 kV Dahuli, 11 kV KEC, and 11 kV Sardeipur feeders cater to urban consumers and are presently passing through an unsafe condition, with buildings being constructed in close proximity to Uttara PSS, the existing overhead network poses a potential safety risk to the public and operating personnel. The no. of trippings during the last two year was 352 nos for 11kV Dhauli Feeder,108 nos for 11kV KEC feeder and 167 nos for 11kV Sardeipur Feeder. In addition, the existing overhead arrangement remains vulnerable to faults and accidental contact with nearby structures, which may result in supply interruptions and safety incidents. Therefore, undergrounding of the affected 11 kV feeders is proposed to eliminate the safety risk associated with the existing overhead network and improve the reliability and continuity of power supply to the connected urban consumers.



Proposed Scenario:

- It is proposed to Construct 1.1 km of 11 kV U/G cable from Uttara PSS to near Aastha Highway to avoid any accident due to unsafe condition of existing OH Line which are adjacent to buildings.
- To Installation of 1 No. DP structure near Aastha Highway for rising of UG Cable.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 1.1 km of 11 kV U/G cable from Uttara PSS to near Aastha Highway.
- Installation of 1 No. DP structure near Aastha Highway and Installation of 1no of DP with Isolator with Earth Switch at Uttara PSS.

Proposed Cost with Estimate Break-up:

Annexure- 12.2		
TPCODL		
Name of the Division :-		BED
Name of the Sub-Division : -		TEMPLE
Name of the Section : -		Uttara
Name of the Feeder: -		11kV Dhauli Feeder
Name of the Work :-		Proposal for construction 1.1km U/G from Uttara PSS to near Aastha Highway due to unsafe condition
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART-A:- Installation of 1no of DP with Isolator with Earth Switch at Uttara PSS.	10,30,036.56
2	PART-B:- Proposed 1.1km U/G cable for 11kV KEC,Sardeipur and Dhauli feeder due to unsafe condition	94,00,713.31
3	PART-C:- Installation of 1 no 11 KV DP With AB Switch for U/G Cable Raising	2,51,873.57
4	PART-D:- Installation of 1no cable rising pole	1,19,198.11
5	PART-E:- Dismantling	47,052.42
6	**Total Gross**	**1,08,48,873.97**
Total estimated cost is Rs. 1.08Cr.		

Cost Estimate: ₹ 1.08Cr. (For detailed BoQ refer Annexure-12.2)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Improved safety by replacing the existing unsafe O/H network with U/G cable.
- Reduced risk of faults and outages due to external interference.
- Reduced maintenance requirements and operational hazard
- Improved reliability and continuity of power supply.

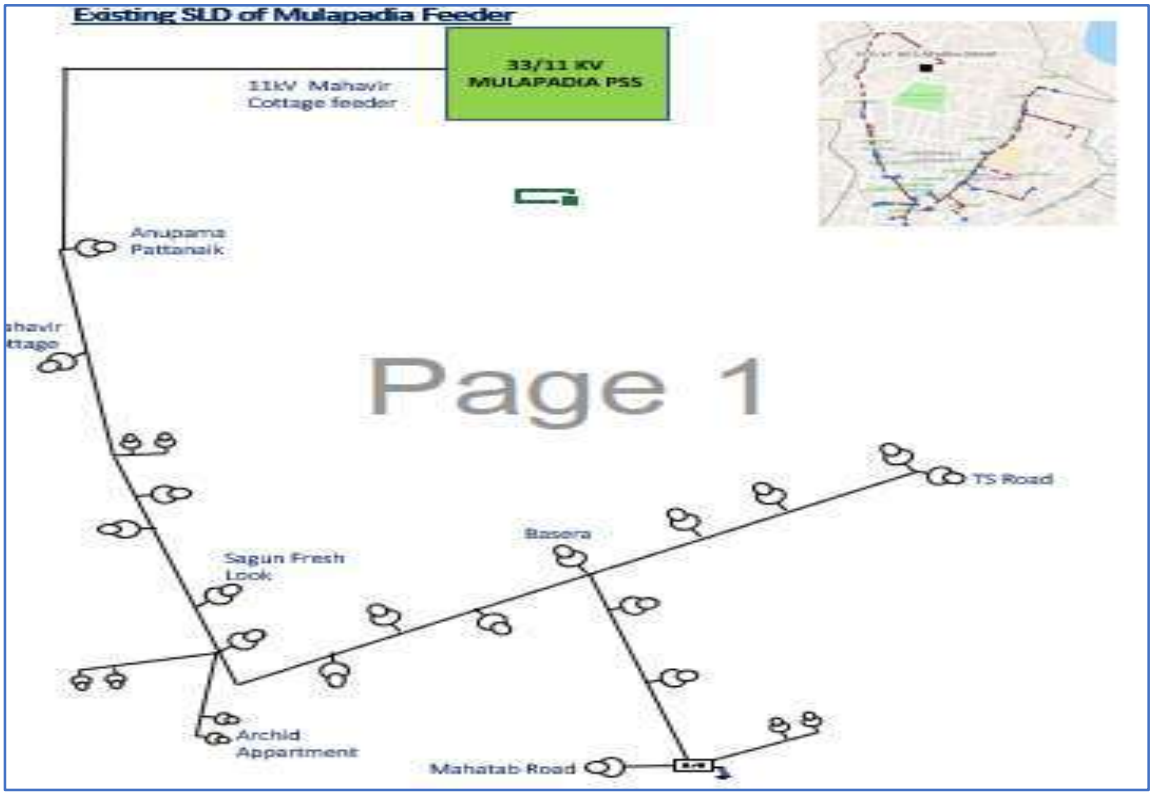
3.0 Proposal for Reliability improvement of 11kV Mahavir Cottage Feeder:

Proposal:

Proposal for installation of 2nos of RMU for reliability improvement of 11kV Mahavir cottage feeder

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Mahavir Cottage Feeder.



Existing Scenario:

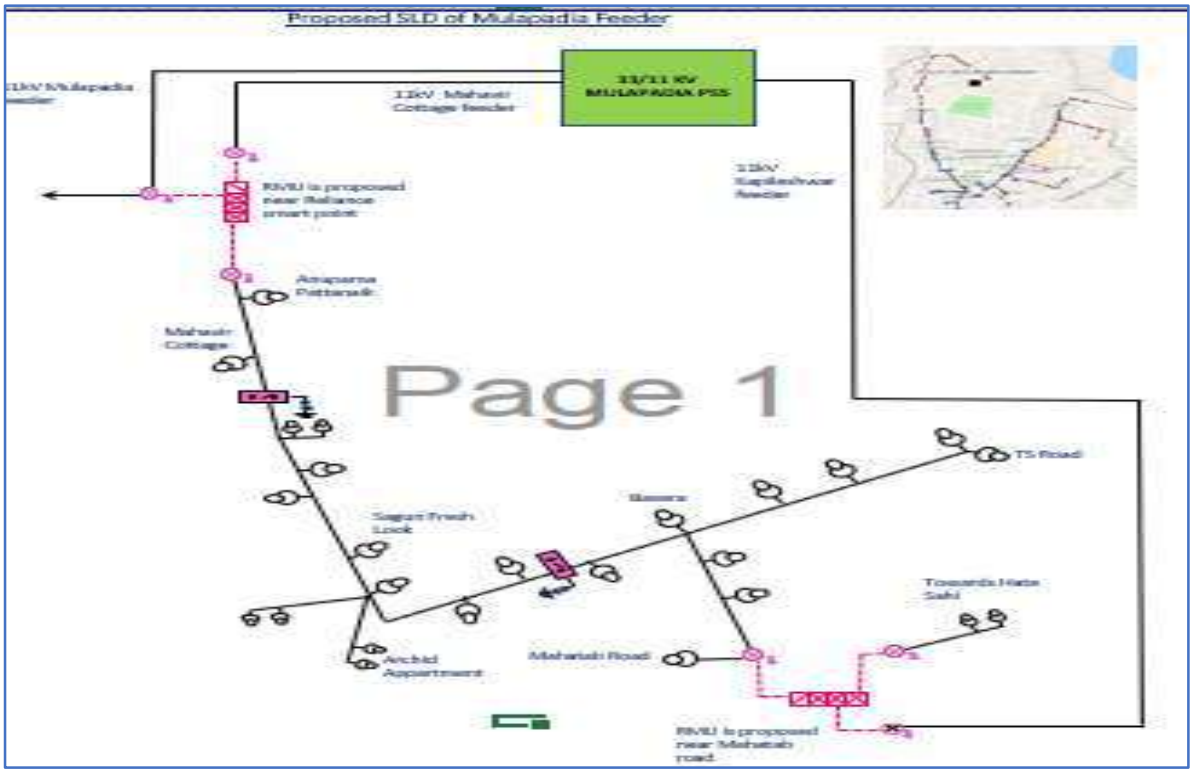
- At present, 11kV Mahavir Cottage feeder is emanating from 33/11kV Mulapadia PSS. The total trunk length of 11kV Mahavir Cottage is 3.14 km and peak load is 2.62 MVA.
- The trunk conductor size of 11 kV feeder is 100 sq.mm AAAC
- At present frequent shutdowns are required for maintaining this feeder & there is no bifurcation/isolation arrangements while maintaining feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service.

- **GIS MAP**

Existing SLD:

Priority of the Project:

Priority: Since the 11kV Mahavir Cottage feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last two year was 95 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for connecting 11KV Mahavir Cottage feeder with 11 kV Mulapadia Feeder and Kapileshwar Feeder to share load as well N-1 Connectivity to improve reliability.
- Installation of 2nos of RMU for reliability near Reliance Fresh and Mahatab Road to establish ring connectivity.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Installation of 11kV 4way RMU- 2 Nos near Reliancemart and Mahatab road for linking of Mahavir Cottage feeder with Mulapadia and Kapileshwar feeder for back feeding purpose.
- Installation of 2nos of DP with AB switch near Mahavir Cottage and Premlata Apartment

Proposed Cost with Estimate Break-up:

Annexure- 12.3		
TPCODL		
Name of the Division :-		BED
Name of the Sub-Division : -		TEMPLE
Name of the Section : -		OT-3
Name of the Feeder: -		11kV Mahavir Cottage Feeder
Name of the Work :-		Proposal for installation of 2nos of RMU for reliability
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART-A:- Installation of 11kV 4way RMU- 2 Nos near Reliancemart and Mahatab road for linking of Mahavir Cottage feeder with Mulapadia and Kapileshwar feeder for back feeding purpose	65,58,367.70
2	PART-B:- Installation of 2nos of DP with AB switch near Mahavir Cottage and Premlata Apartment	10,19,118.20
3	Part-C:- Dismantling	3,291.55
4	**Total Gross**	**75,80,777.45**
Total estimated cost is Rs. 0.76Cr.		

Cost Estimate: ₹ 0.76Cr. (For detailed BoQ refer Annexure-12.3)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

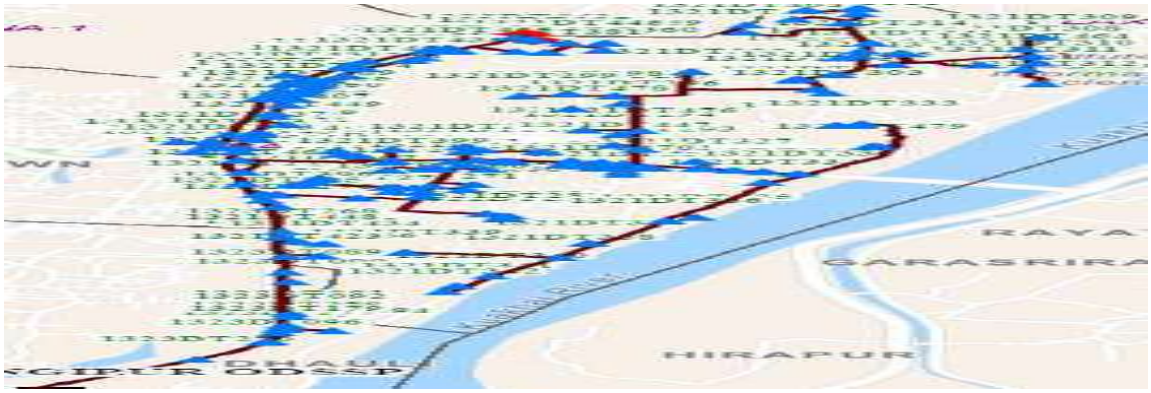
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Mahavir Cottage feeder.
- Feeder tripping will be reduced as the feeder is linked with other
- Enables easier switching operations during faults or planned outages.
  The above arrangement will help to release power supply to upcoming potential commercial consumers.

4.0 Proposal for Reliability improvement of 11kV Kuakhai Feeder:

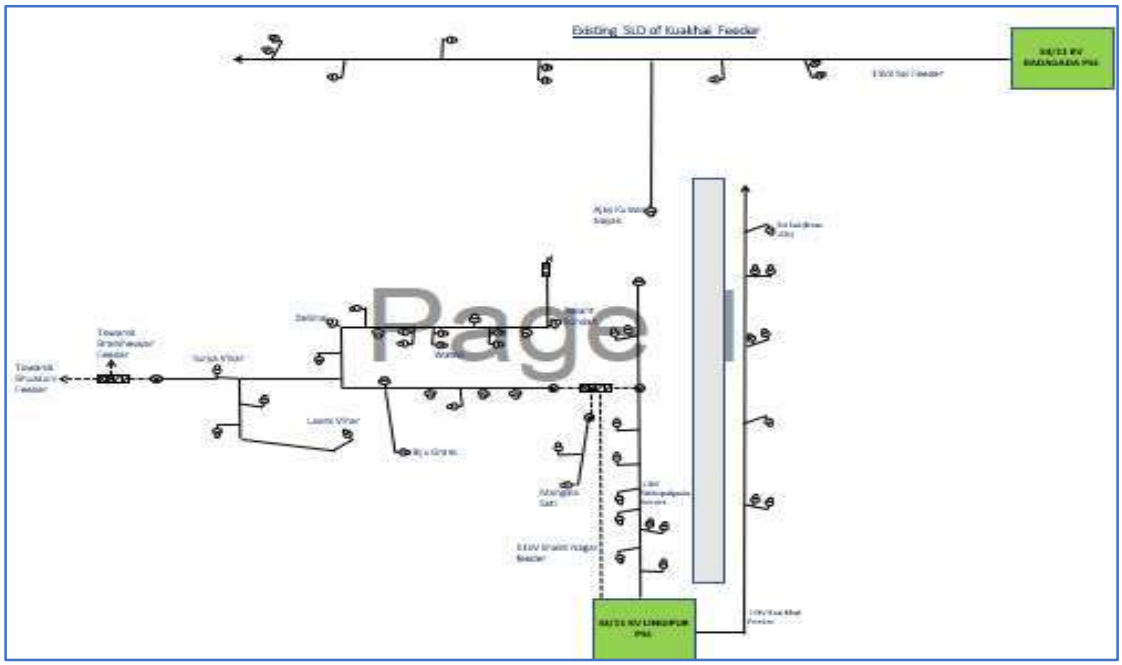
Proposal:

Proposal for Augmentation of 3 KM line strengthening for improving reliability of 11kV Shakti Nagar Feeder and installation of 1 no RMU for backfeeding of 11kV Sai and Sishupalagada feeder with Kuakhai Feeder.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Kuakhai Feeder.



Existing Scenario:

- 11kV Kuakhai Village feeder is emanating from 33/11kV Lingipur PSS.Total length of this feeder is 2.5CKM and the peak load is 3.54 MVA.
- The trunk conductor size of 11 kV feeder is 3CX300sqmm & have multiple tripping because of vegetation & transient faults
- Frequent shutdowns are required for maintaining this feeder & there is no bifurcation/isolation arrangements while maintaining feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service.

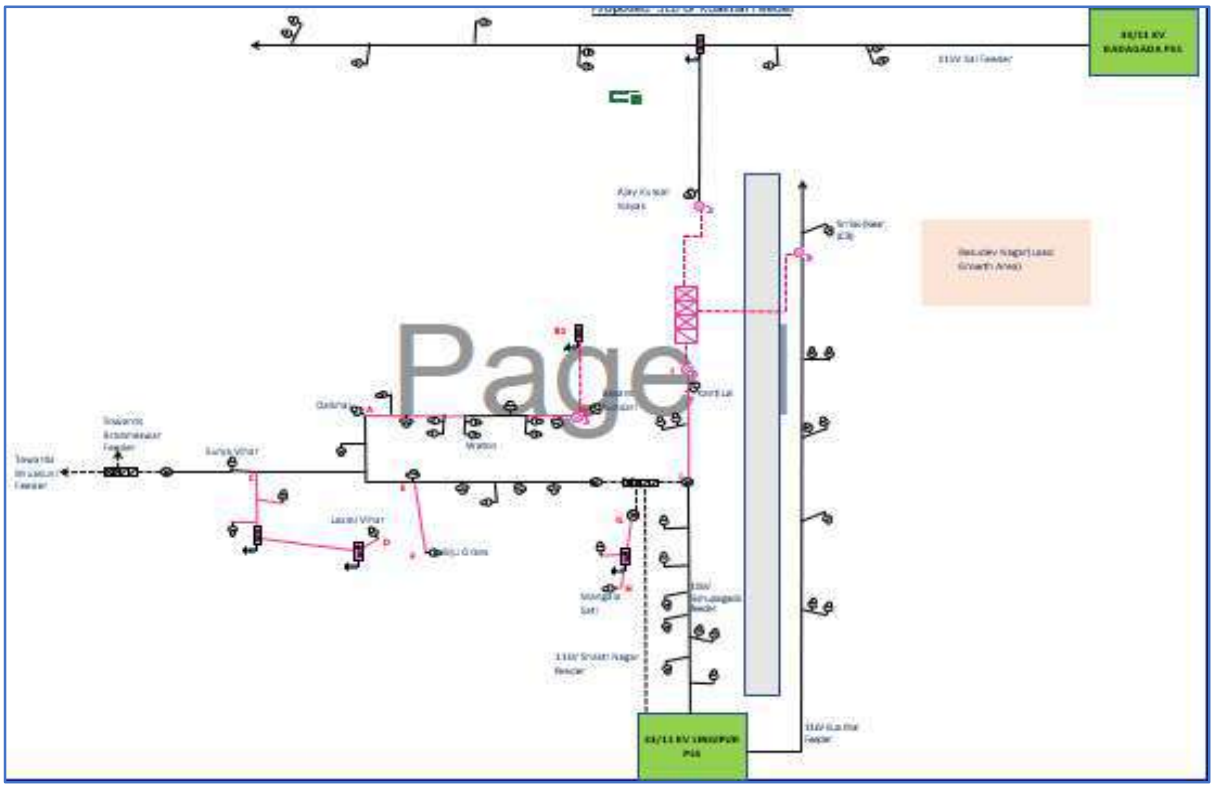
- **GIS MAP**

- **Existing SLD:**

Priority of the Project:

Priority: Since the 11 kV Kuakhai feeder,11kV Shakti Nagar feeder, 11kV Sai feeder and 11kV Sishupalagada feeder cater to urban consumers and are experiencing frequent interruptions due to repeated feeder tripping, they have recorded 516, 153, 116 and 72 trippings respectively, during the last two years. The frequent tripping result in repeated supply interruptions and restoration activities, affecting the reliability of supply.

To improve system reliability, load diversion from the 11 kV Kuakhai feeder to the 11 kV Sishupalagada feeder and conductor augmentation of the 11 kV Shakti Nagar feeder are proposed. These measures will reduce feeder loading, minimize trippings and improve continuity of supply to consumers.



Proposed Scenario:

- Proposal of connecting 11KV Kuakhai feeder with 11 kV Sishupalagada Feeder and 11kV Sai Feeder so as to share load as well N-1 Connectivity.
- Installation of 1no of RMU for establishing ring connectivity.
- Covered conductor is proposed in order to reduce transient tripping.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Installation of 1 no 11kV 4way RMU near Kantilal DSS to divert Basudev Nagar Load under 11kV Kuakhai Feeder to 11kV Sishupalgada Feeder and linking with 11kV Sai feeder for backfeeding.
- Installation of 4 nos. of Line DP with AB Switch
- Augmentation of 3Kms O/H line due to dense vegetation area and damaged conductor.

Proposed Cost with Estimate Break-up:

4	**Total Gross**	**1,98,25,510.63**
Total estimated cost is Rs. 1.98Cr.(On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 1.98Cr. (For detailed BoQ refer Annexure-12.4)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Reduction of electrocution risk and public safety hazards.
c) Safe operation and isolation of the feeder.
d) Protection of electrical assets against lightening and surge related failure.
e) Improvement in operational safety for maintenance personnel and public.

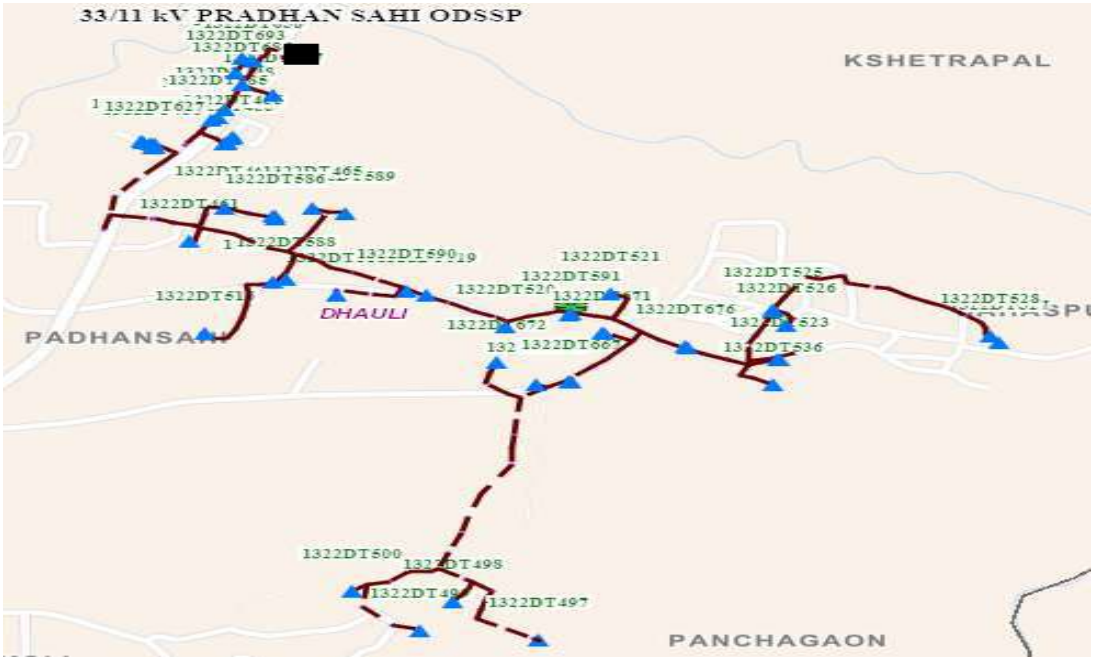
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Panchagaon feeder.
- Feeder tripping will be reduced as the feeder is linked with other PSS and augmented with Covered conductor to aviod transient tripping.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

5.0 Proposal for Reliability improvement of 11kV Panchagaon Feeder:

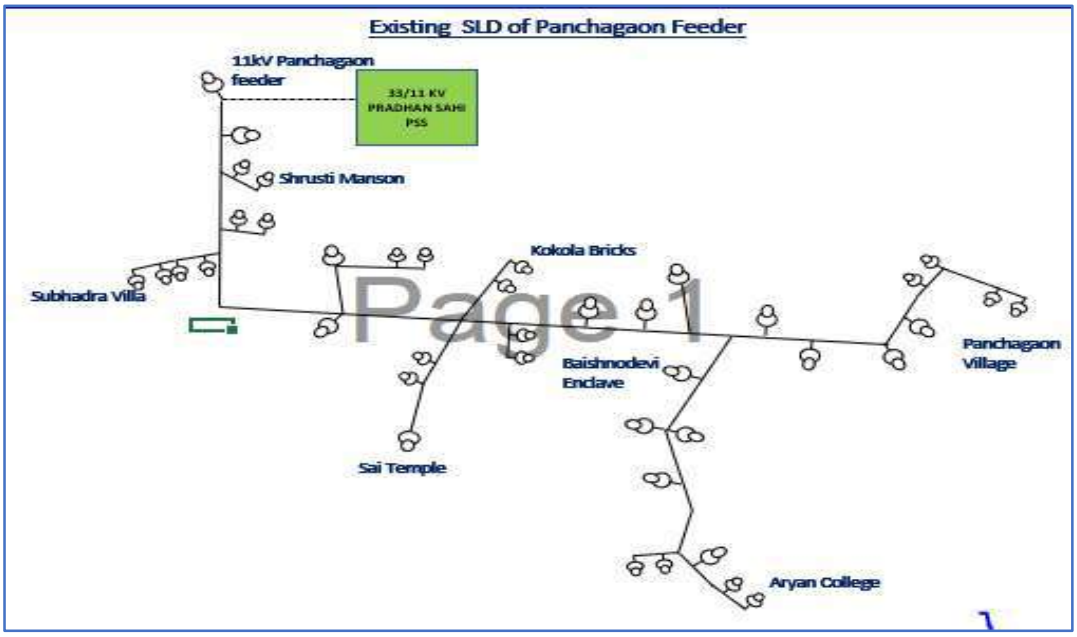
Proposal:

Proposal for Augmentation of 1.5KM line strengthening for improving reliability and installation of 1 no RMU for backfeeding



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Panchagaon Feeder.

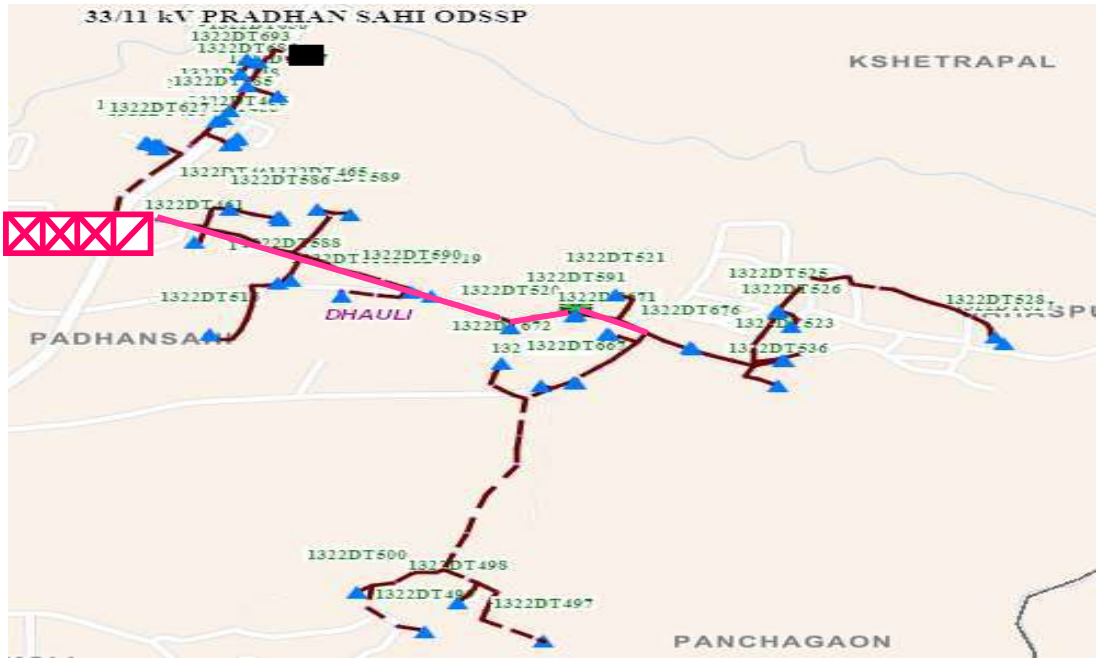


Existing Scenario:

- At present, 11kV Panchagaon feeder is emanating from 33/11kV Pradhan Sahi PSS. The total trunk length of 11kV Panchagaon is 7.3 km and peak load is 1.15 MVA.
- The trunk conductor size of 11 kV feeder is 3CX300sqmm & have multiple tripping because of vegetation & transient faults
- Frequent shutdowns are required for maintaining this feeder & there is no bifurcation/isolation arrangements while maintaining feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service

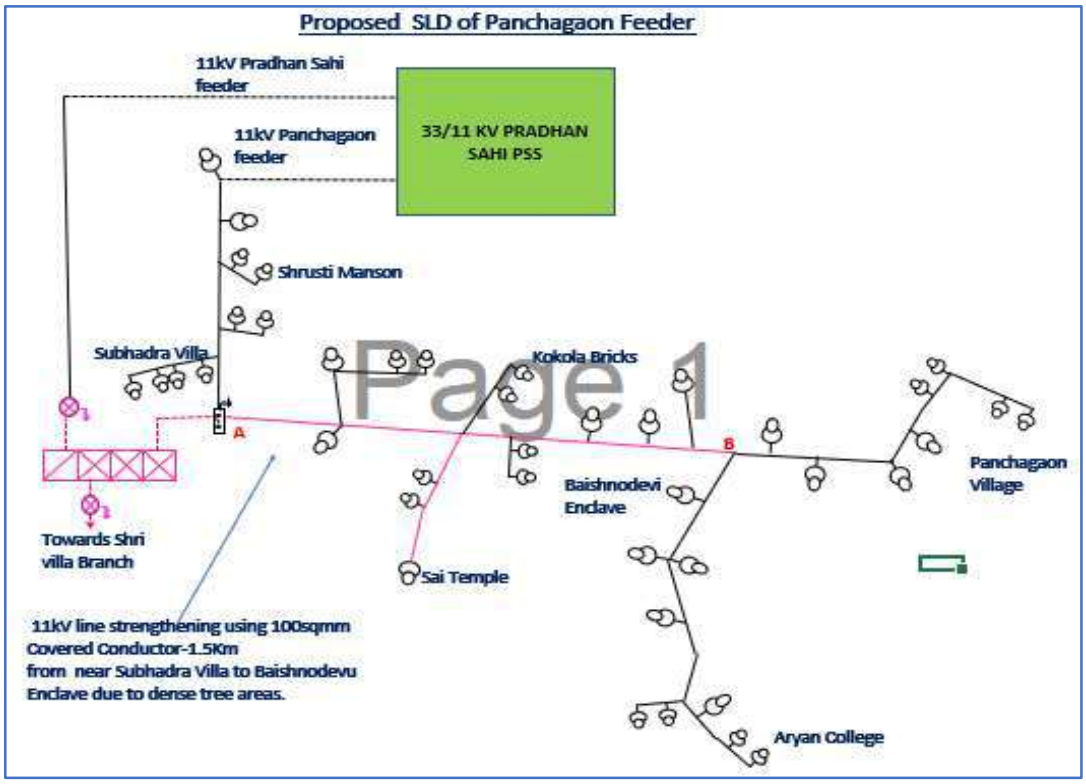
- **GIS MAP**

Existing SLD:



Priority of the Project:

Priority: Since the 11kV Panchagaon feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last two year was 130 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for connecting 11KV Panchagaon feeder with 11 kV Pradhan Sahi Feeder so as to share load as well N-1 Connectivity.
- It is proposed for Installation of 1no of RMU for reliability to establish ring connectivity.
- Covered conductor is proposed in order to reduce transient tripping.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Installation of 11kV 4way RMU- 1Nos near Sumitra Realcon for linking of Panchagaon feeder with Pradhan Sahi feeder for backfeeding purpose
- Installation of 2 nos. of Line DP with AB Switch
- Augmentation of 1.5Kms O/H line due to dense vegetation area and damaged conductor

Proposed Cost with Estimate Break-up:

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

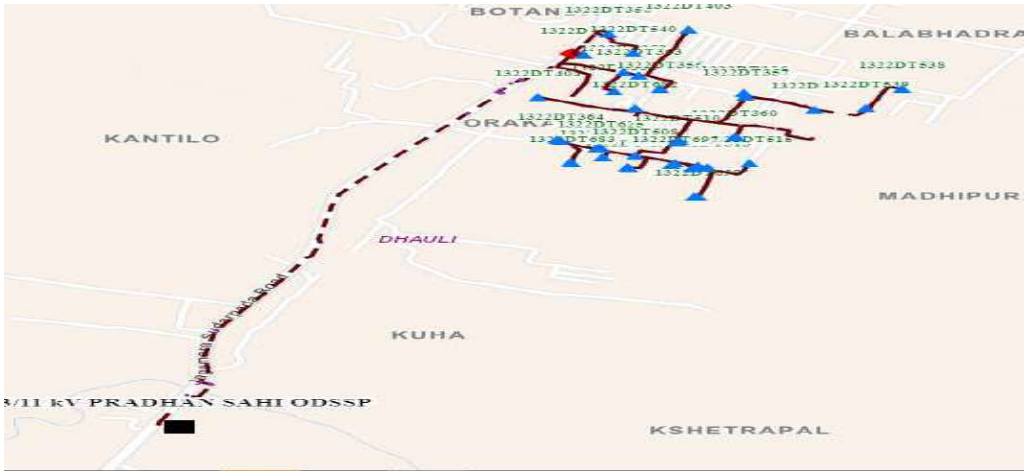
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Panchagaon feeder.
- Feeder tripping will be reduced as the feeder is linked with other PSS and augmented with Covered conductor to aviod transient tripping.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers

6.0 Proposal for Reliability improvement of 11kV Kalyani Plaza Feeder:

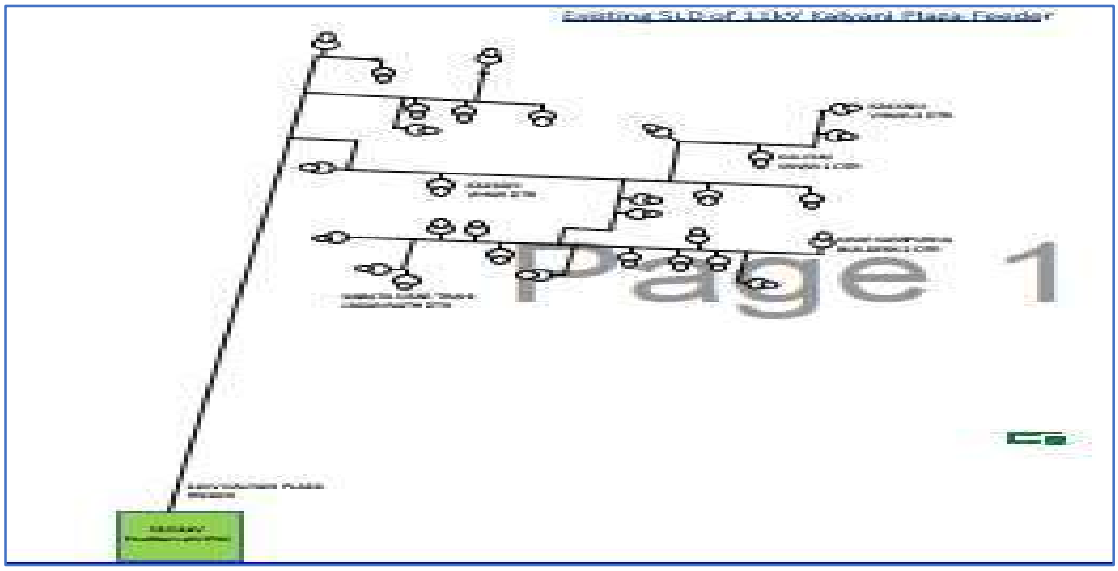
Proposal:

Augmentation of 11KV line using 100Sq.mm AAAC XLPE covered conductor for 2.5CKM due to dense vegetation areas.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Kalyani Plaza Feeder.

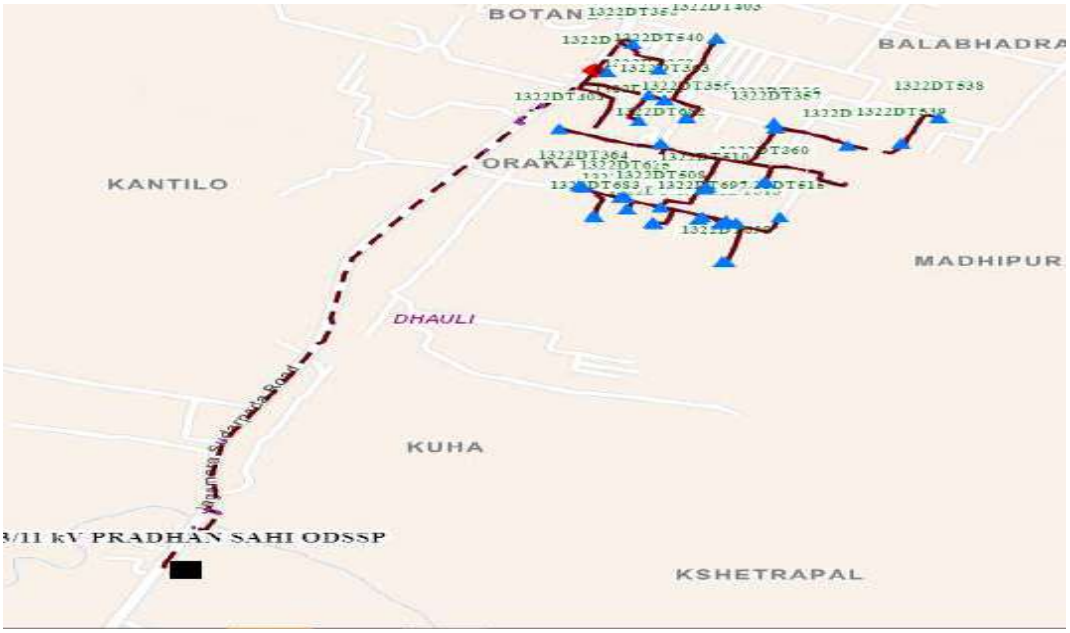


Existing Scenario:

- At present, 11kV Kalyani Plaza feeder is emanating from 33/11kV Pradhan Sahi PSS. The total trunk length of 11kV Kalyani Plaza is 6.5 Ckm and peak load is 2.05 MVA.
- The trunk conductor size of 11 kV Kalyani feeder is 3CX300sqmm & have multiple tripping because of vegetation & transient faults
- Frequent shutdowns are required for maintaining this feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service

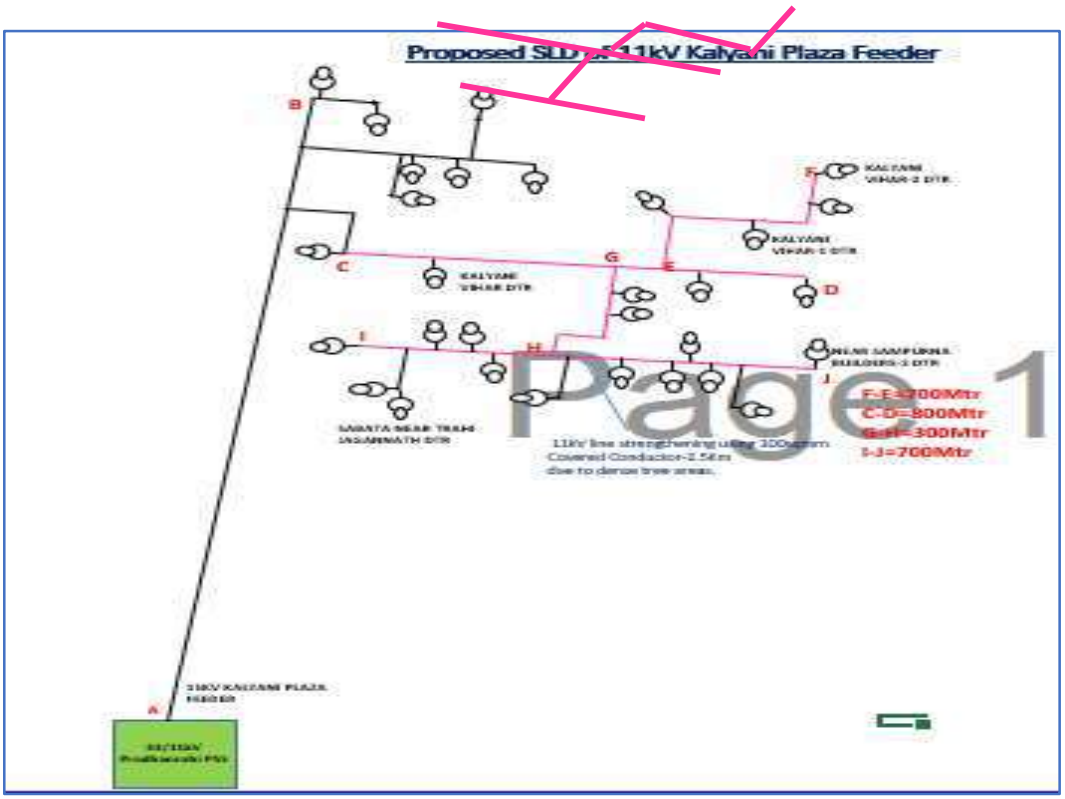
- **GIS MAP**

Existing SLD:



Priority of the Project:

Priority: Since the 11kV Kalyani Plaza feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder tripping, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping during the last two year was 98 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for Augmentation for 1km using 100sqmm Covered Conductor for 11kV O/H line strengthening from Kalyani Vihar to near Sampurna DSS.
- Covered conductor is proposed in order to reduce transient tripping.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 11KV line using 100Sq.mm AAAC XLPE covered conductor for 2.5CKM due to dense tree areas.

Proposed Cost with Estimate Break-up:

Annexure-12.6		
TPCODL

1	PART-A:- Augmentation of 11KV line using 100Sq.mm AAAC XLPE covered conductor for 2.5CKM due to dense tree areas.	24,75,733.55
	PART-B:- Dismantling of Materials	70,316.20
4	**Total Gross**	**25,46,049.75**
Total estimated cost is Rs. 0.25Cr.		

Cost Estimate: ₹ 0.25Cr. (For detailed BoQ refer Annexure-12.6)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Reduction of electrocution risk and public safety hazards.
c) Safe operation and isolation of the feeder.
d) Protection of electrical assets against lightening and surge related failure.
e) Improvement in operational safety for maintenance personnel and public.

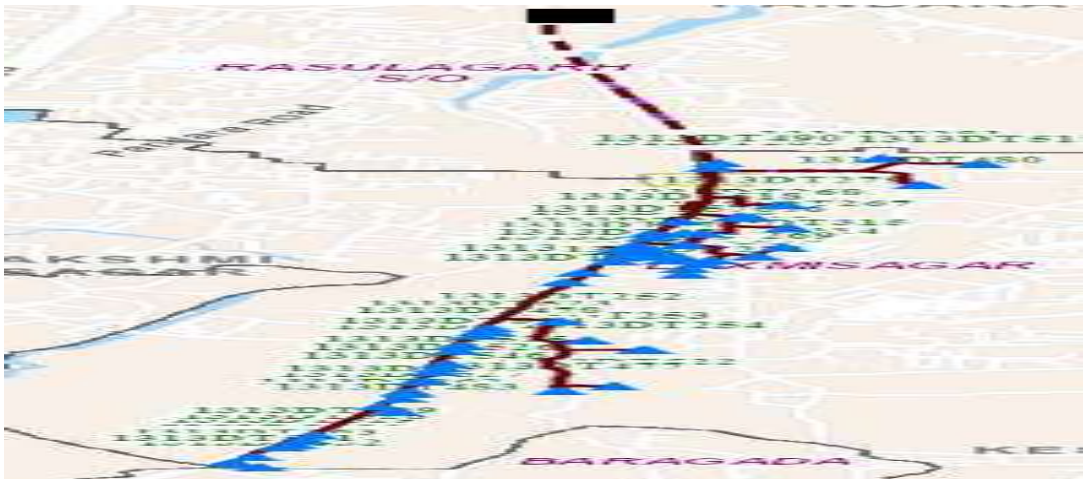
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Kalyani Plaza feeder.
- Augmented with Covered conductor to aviod transient tripping.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

7.0 Proposal for Reliability improvement of 11kV Mangaraj Point Feeder:

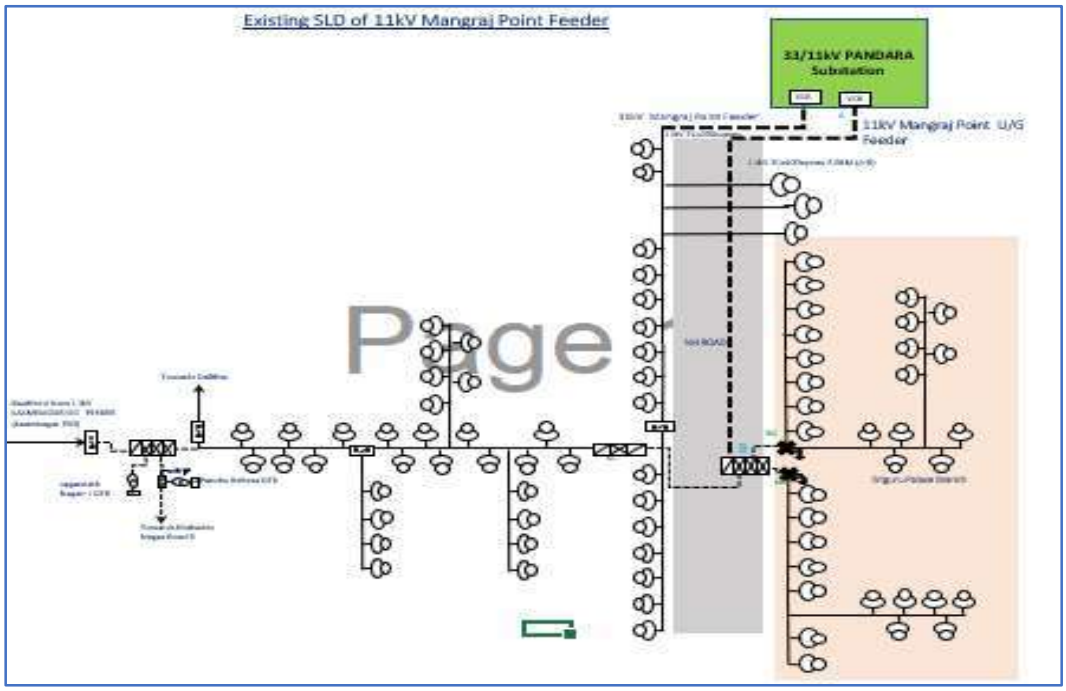
Proposal:

Augmentation of 0.8cKM line of 11kV Mangaraj Point feeder for strengthening as well as improving reliability**.**



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Mangaraj Point Feeder.

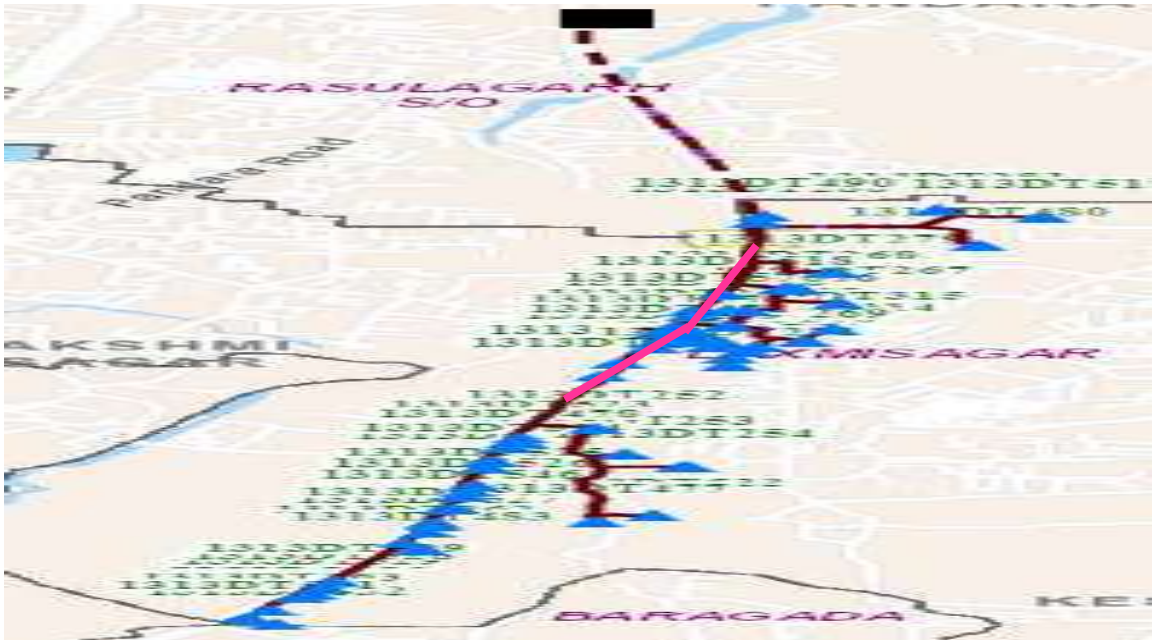


Existing Scenario:

- At present, 11kV Mangaraj Point feeder is emanating from 33/11kV Pandra PSS. The total trunk length of 11kV Mangaraj Point is 9.7 Ckm and peak load is 3.7 MVA.
- The trunk conductor size of 11 kV Mangaraj is 3CX400sqmm & have multiple tripping because of vegetation & transient faults
- Frequent shutdowns are required for maintaining this feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service

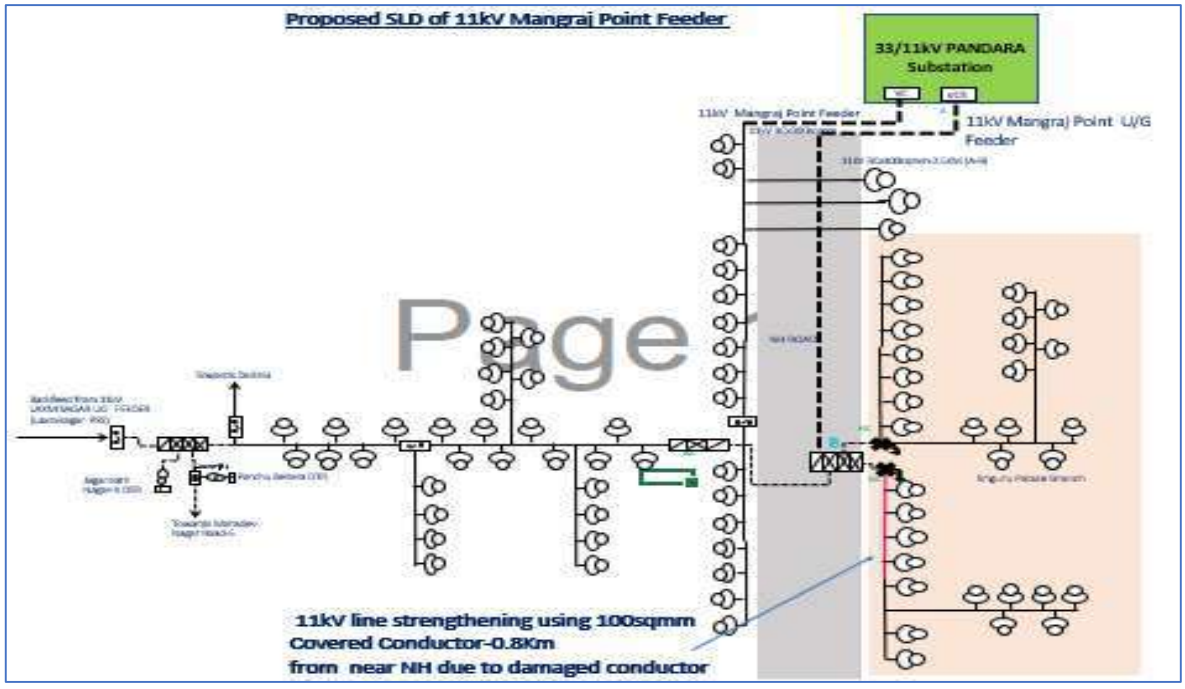
GIS MAP

Existing SLD:



Priority of the Project:

Priority: Since the 11kV Mangaraj Point feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last two year was 228 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for Augmentation for 0.8km using 100sqmm Covered Conductor for 11kV O/H line from Absolute DSS to near NH for strengthening as well as improving reliability.
  - Covered conductor is proposed in order to reduce transient tripping.
  - This location is growing with new commercial & Residential Buildings and requires reliable power supply for smooth operation.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation for 0.8ckm using 100sqmm Covered Conductor for 11kV O/H line strengthening from Absolute DSS to near NH.
- Covered conductor is proposed in order to reduce transient tripping.
- This location is growing with new commercial & Residential Buildings and requires reliable power supply for smooth operation

Proposed Cost with Estimate Break-up:

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Mangaraj Point feeder.
- Augmented with Covered conductor to aviod transient tripping.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

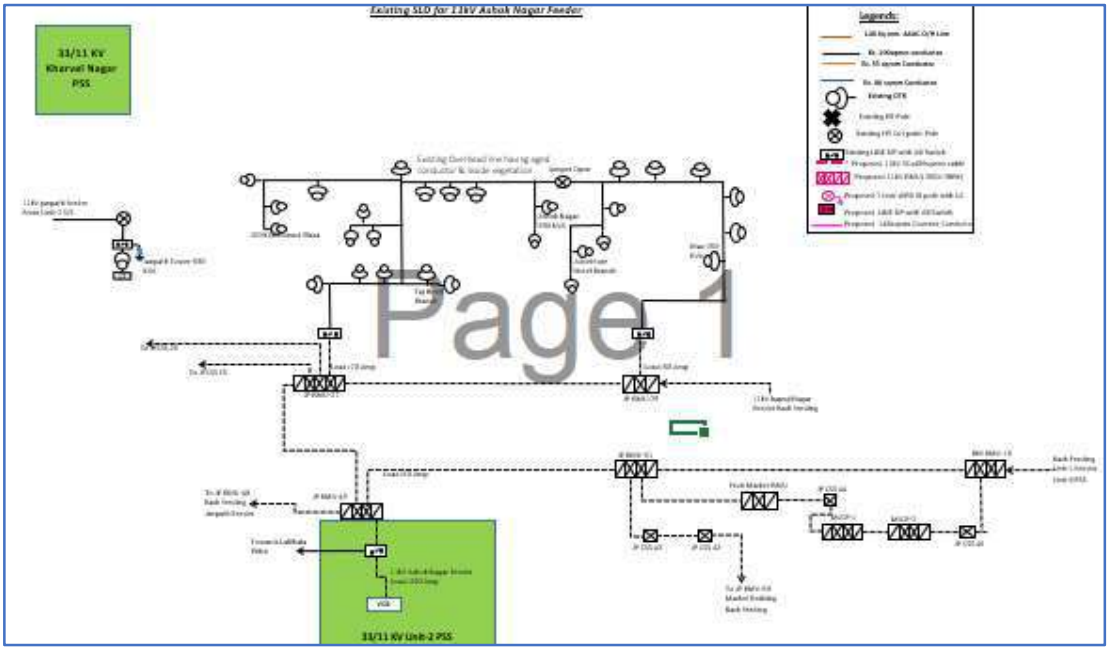
8.0 Proposal for Reliability improvement along with Over loading mitigation of 11kV Ashok Nagar Feeder:

Proposal:

Proposal for Bifurcation of 11kV Ashok Nagar Feeder for reliability improvement along with overloading mitigation.

Requirement/ Need of the proposal:

Objective: Reliability improvement along with overloading mitigation of 11kV Ashok Nagar Feeder.



Existing Scenario:

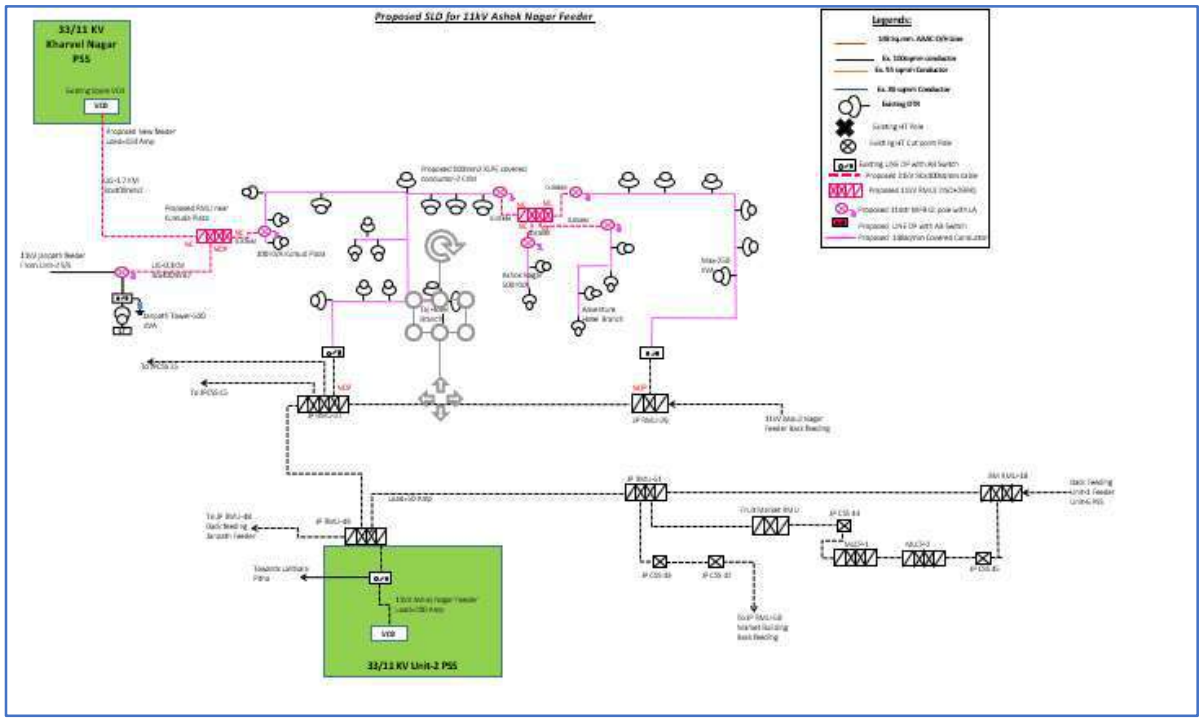
- At present, 11kV Ashok Nagar feeder is emanating from 33/11kV Unit-2 PSS. The total feeder length of11kV Ashok Nagar feeder is 6.2CKM and peak load is 3.2MVA.
- The trunk size of the cable is 3CX120sqmm.
- Frequent tripping is observed in the 11KV Ashok Nagar feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Ashok Nagar feeder caters to an urban consumer and is experiencing frequent interruptions due to feeder tripping's, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping's during the last year was 27 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions



Proposed Scenario:

- It is proposed for construction of new feeder of length 1.7CKM from Kharavela Nagar PSS to improve reliability as along with overloading mitigation.
- Installation of 2nos of RMU for establishing ring connectivity.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation
- The New feeder will help for maintaining reliable power supply for smooth operation.

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length- 2 CKM using 3Cx400mm2 XLPE UG cable from kharvel nagar PSS to Kumuda Plaza RMU
- Installation of 2 Nos. of RMU in 11kV Ashok nagar Feeder in different location
- Augmentation of 11kV Ashok Nagar Feeder of length 2 CKM.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.8

1	Part-A:- 1. Laying of 11kV UG cable of length- 2 CKM using 3Cx400mm2 XLPE UG cable from kharvel nagar PSS to Kumuda Plaza RMU. 2. Installation of 2 Nos. of RMU in 11kV Ashok nagar Feeder in different location.	2,11,08,403.20
2	Part-B:-Augmentation of 11kV Ashok Nagar Feeder of length 2 CKM.	41,35,173.50
3	Part-C Dismantling.	98,037.47
4	**Total Gross**	**2,53,41,614.16**
Total estimated cost is Rs. 2.53 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 2.53Cr. (For detailed BoQ refer Annexure-12.8)

I) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

a) The proposal has been made to maintain essential compliances with statutory safety regulations

b) Compliance with electrical safety regulation for distribution system.

c) Reduction of electrocution risk and public safety hazards.

d) Safe operation and isolation of the feeder.

e) Protection of electrical assets against lightening and surge related failure.

f) Improvement in operational safety for maintenance personnel and public

Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Ashok Nagar feeder.
- Feeder tripping will be reduced
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

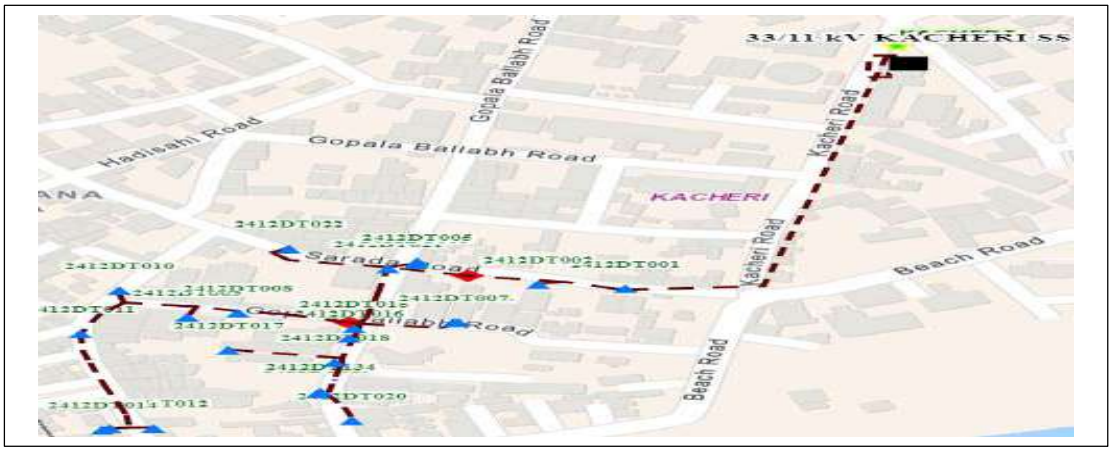
9.0 Proposal Reliability improvement along with overloading mitigation of 11kV Swargadwar-I Feeder:

Proposal:

Proposal for Bifurcation of existing 11 KV Swargadwar-I Feeder load emanating from 33/11kV Kacheri PSS by construction of 1no. of new 11kV feeder from 33/11kV Kacheri PSS by construction of new 11kV bay and 0.82 Ckm 11KV new line.

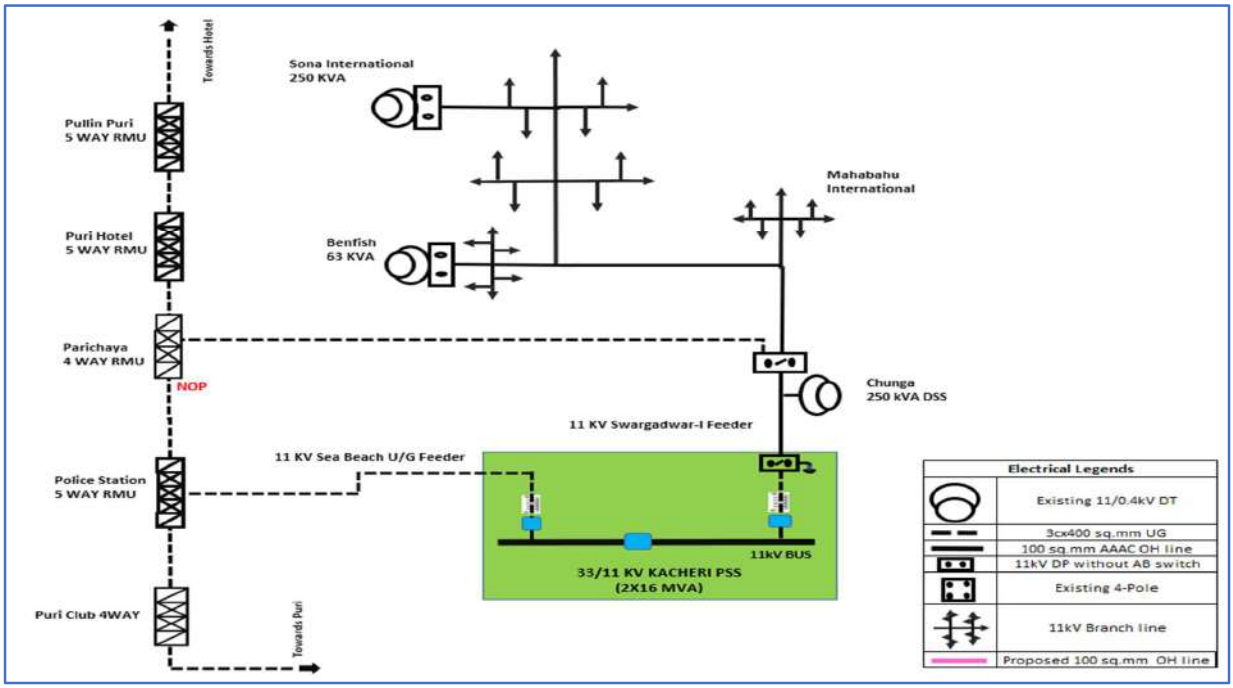
Requirement/ Need of the proposal:

Objective: To enhance reliability as well as mitigation of overloading by bifurcating the existing feeder with construction of new 11kV feeder.



Existing Scenario:

- 11kV Swargadwar-I feeder is emanating from 33/11kV Kacheri PSS. Total length of this feeder is 1.29 CKM and the peak load is 2.21 MVA.
- 11kV Prachi U/G feeder is emanating from 33/11kV Baliapanda PSS. Total length of this feeder is 5.7 CKM and the peak load is 2.51 MVA.
- During Car Festival the entire load of 11 kV Prachi U/g feeder is added to the 11 KV Swargadwar-I feeder and hence this feeder is become overload.
- Conductor size of 11kV Swargadwar-I feeder is 100 sq.mm & the feeder is 43% loaded w.r.t the current carrying capacity of the conductor but during Car Festival the feeder is 91% loaded and 116% loaded considering 13% load growth for urban feeders.
- This feeder is completely feeding commercial & domestic consumers, several breakdowns on 11kV feeder is encountered which hampers the reliability of power supply and also considering future load growth of the residential building, bifurcation of this feeder is proposed to mitigate overloading issue.



Existing Summer'26 Loading and projected load at 11kV Swargadwar-I Feeder

Existing Scenario								
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status (Sumeer'28)**	**Loss in kW in Summer'28**
Kacheri	Swargadwar-I	5.18	2.21	43%	2.82	54%	Under load	44.73
Baliapanda	Prachi U/G	5.75	2.51	44%	3.21	56%	Under load	54.3
During Car Festival								
Kacheri	Swargadwar-I	5.18	4.72	91%	6.03	116%	OVERLOAD	163.37

GIS Map:-

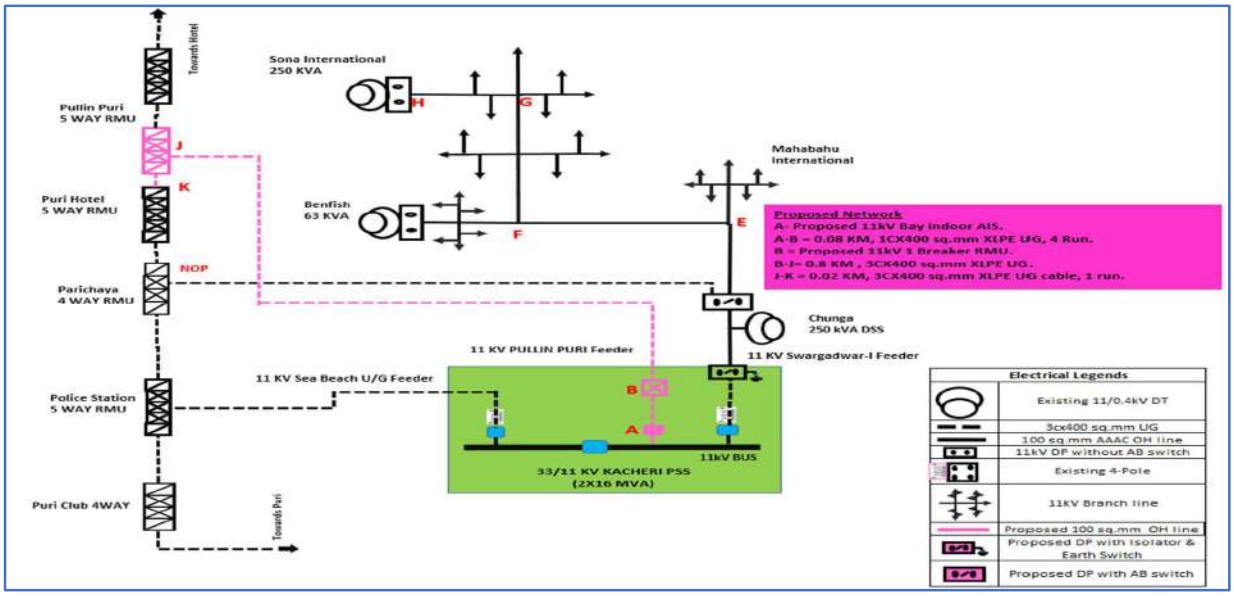
Existing SLD:

Priority of the Project:

Priority:

Since the 11kV Swargadwasr-1 feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 132nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

In addition to this the feeder loading has reached 91% loading in ASIS scenario during Car Festival, with load growth In Summer'28, the feeder loading will reach 116%. In case the issue is not addressed, there will be load shedding of 1588nos. consumers for prolonged period



Proposed Scenario:

- It is proposed to construct 1 no. 11 kV Indoor line Bay at Kacheri PSS for emanating a new 11kV feeder.
- For construction of new 11kV feeder 0.08 KM new U/G line using 1CX630 sqmm XLPE U/G cable with one run spare to be laid inside PSS.
- Out side the PSS It is proposed to lay 0.82 KM new U/G line using 3CX400 sqmm XLPE U/G cable without spare run for constructing the new feeder with ring connectivity to enhance reliability along with over loading mitigation.

Proposed Summer'28 Loading and projected load at 11kV Swargadwar-1 Feeder:

Loading after Proposal (Summer'28)						
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load Summer'28 (MVA)**	**% Loading in Summer-28**	**Feeder Status**	**Loss in kW in Summer'28**
Kacheri	Swargadwar-I	5.18	3.45	67%	Under load	45.60
Kacheri	Proposed Parichaya	5.18	0.00	0%	Under load	52.49
Baliapanda	Prachi U/G	5.75	2.51	44%	Under load	0

Proposed SLD:

Scope of Work:

- Construction of One No. 11 kV Indoor Bay at Kacheri PSS .
- Supply and laying of 0.08 KM new U/G line using 1CX630 sqmm XLPE U/G cable with one run spare.
- Supply and laying of 0.82 KM new U/G line using 3CX400 sqmm XLPE U/G cable without spare run.

Proposed Cost with Estimate Break-up:

Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of One No. 11 kV Indoor Bay	32,73,345.56
2	PART B: Supply & Laying of 11kV 1C, 630sqmm UG Cable of length= 0.08 KM with one run spare.	2,99,987.03
3	PART C: Supply & laying of 11kV 3CX400sqmm UG Cable of length= 0.82 km without spare run.	1,77,94,210.18
5	**Total Gross**	**2,13,67,542.76**
Total estimated cost is Rs. 2.14 Cr.		

Cost Estimate: ₹ 2.14 Crore (For detailed BoQ refer Annexure-12.9)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

1. Improved Reliability thereby overloading mitigation of 11kV Swargadwar-1 feeder.
2. Improved capability of Network by use of UG Cable, resulting into reduction in tripping on the feeder.
3. Reduction in tripping will ultimately improve improved useful life of Power-transformer upstream.

4. Consumers will get Quality & Reliable power supply with fever interruptions thereby improving their overall capability to use stable, quality & reliable power supply.
5. The above arrangement will help to release power supply to upcoming potential consumers.

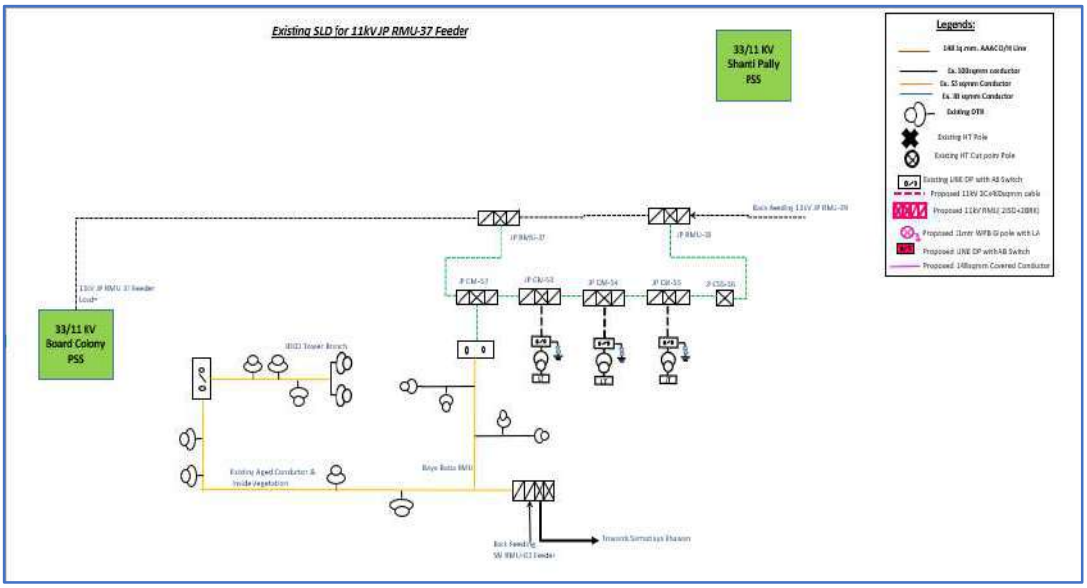
10.0 Proposal for Reliability improvement of 11kV JP RMU 37:

Proposal:

Proposal for Bifurcation of 11kV JP RMU 37 Feeder for reliability improvement along with overloading mitigation.

Requirement/ Need of the proposal:

Objective: Reliability improvement along with overloading mitigation of 11kV Shatabdi Nagar Feeder.



Existing Scenario:

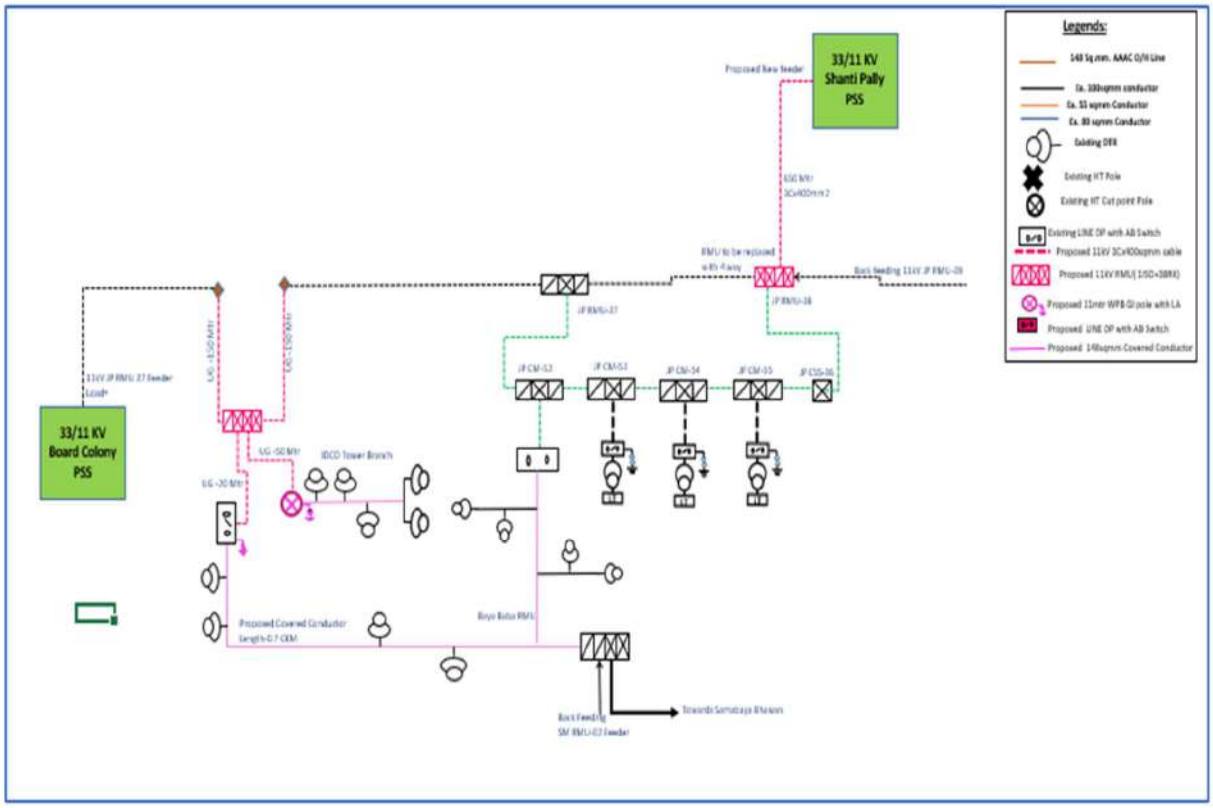
- At present, 11kV JP RMU 37 feeder is emanating from 33/11kV Board Colony PSS. The total feeder length of 11kV JP RMU 37 feeder is 3.55CKM and peak load is 3.2MVA.
- The trunk size of the cable is 3CX120sqmm.
- Frequent tripping is observed in the 11KV JP RMU 37 feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV JP RMU 37 feeder caters to an urban consumer and is experiencing frequent interruptions due to feeder tripping's, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping's during the last year was 27nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for construction of new feeder of length 0.65CKM from 33/11kV Shanti Pally PSS
- Proposal for Installation of 2nos of RMU for reliability enhancement by establishing ring connectivity between networks.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation
- The New feeder will help for maintaining reliable power supply for smooth operation

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Supply and Laying of 11kV UG cable of length- 0.65 CKM using 3Cx400mm2 XLPE UG cable from Shantipalli PSS to IDBI Square .
- Supply and Laying of 11kV UG cable of length- 0.3 CKM using 3Cx400mm2 XLPE UG cable from Rupali Square to Rupali LABS for LILO arrangements
- Installation of 2 Nos. of RMU in 11kV JPRMU-37 Feeder (Near Rupali LABS & JPRMU 38).

- Augmentation of 11kV JP RMU-37 Feeder of length 0.7 CKM

Proposed Cost with Estimate Break-up:

ANNEXURE-12.10		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-		BCDD-I
Name of the Sub-Division : -		SDO-3
Name of the Section : -		Unit-9 Flat
Name of the Feeder: -		11kV JP RMU-37
Name of the Work :-		Proposal for Bifurcation of 11kV JP RMU-37 Feeder for mitigation of overloading.

Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	Part-A:- 1. Laying of 11kV UG cable of length- 0.65 CKM using 3Cx400mm2 XLPE UG cable from Shantipalli PSS to IDBI Square. 2. Laying of 11kV UG cable of length- 0.3 CKM using 3Cx400mm2 XLPE UG cable from Rupali Square to Rupali LABS for LILO arrangements. 2. Installation of 2 Nos. of RMU in 11kV JPRMU-37 Feeder (Near Rupali LABS & JPRMU 38).	1,43,36,345.91
2	Part-B:-Augmentation of 11kV JP RMU-37 Feeder of length 0.7 CKM.	12,02,989.59
3	Part-C Dismantling.	25,791.74
4	**Total Gross**	**1,55,65,127.24**
Total estimated cost is Rs. 1.56 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 1.56Cr. (For detailed BoQ refer Annexure-12.10)

i.) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii.) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

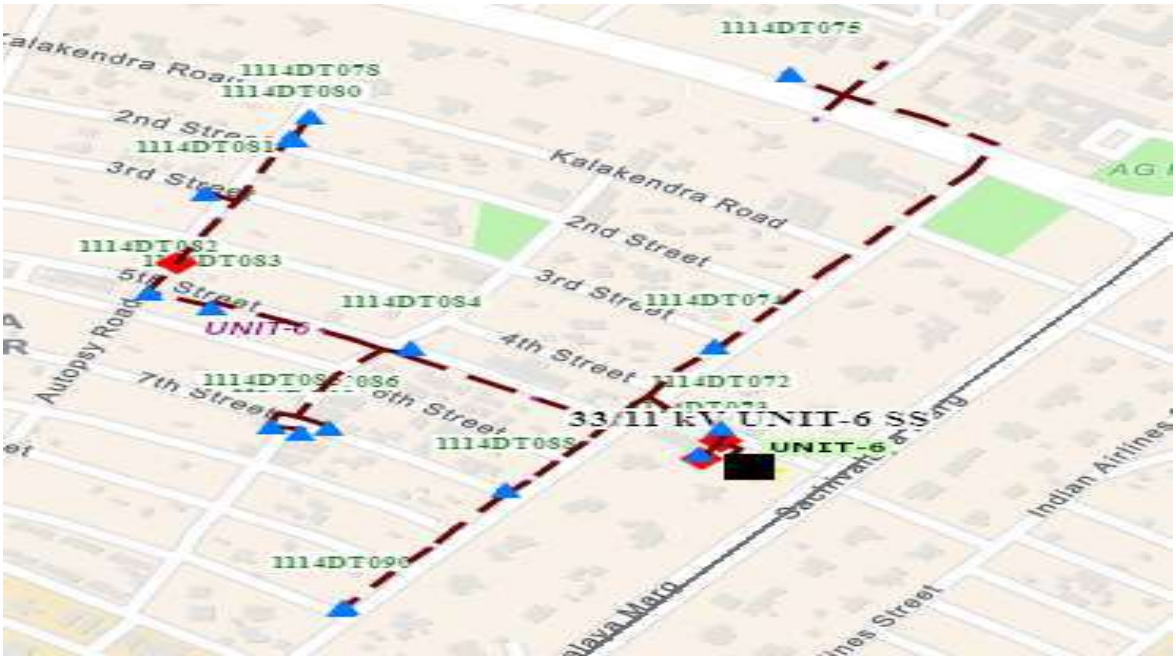
Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Ashok Nagar feeder.
- Feeder tripping will be reduced
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

11.0 Proposal for Reliability improvement of 11kV Unit-6 Feeder:

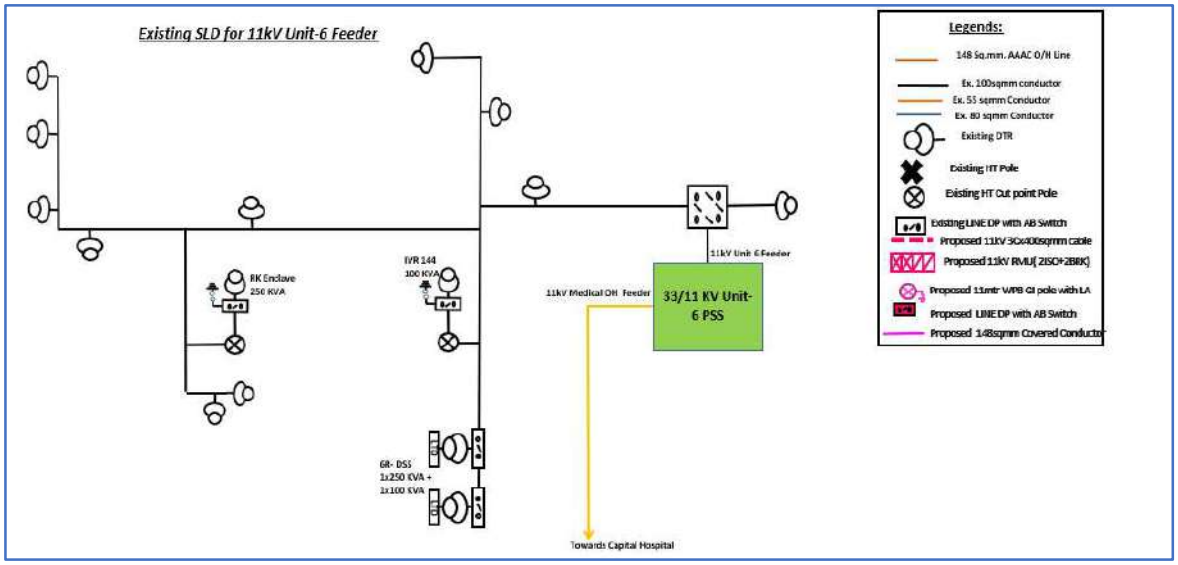
Proposal:

Proposal for installation of RMU & linking with nearby Feeder for reliability improvement of 11kV Unit-6 Feeder.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Unit-6 Feeder.

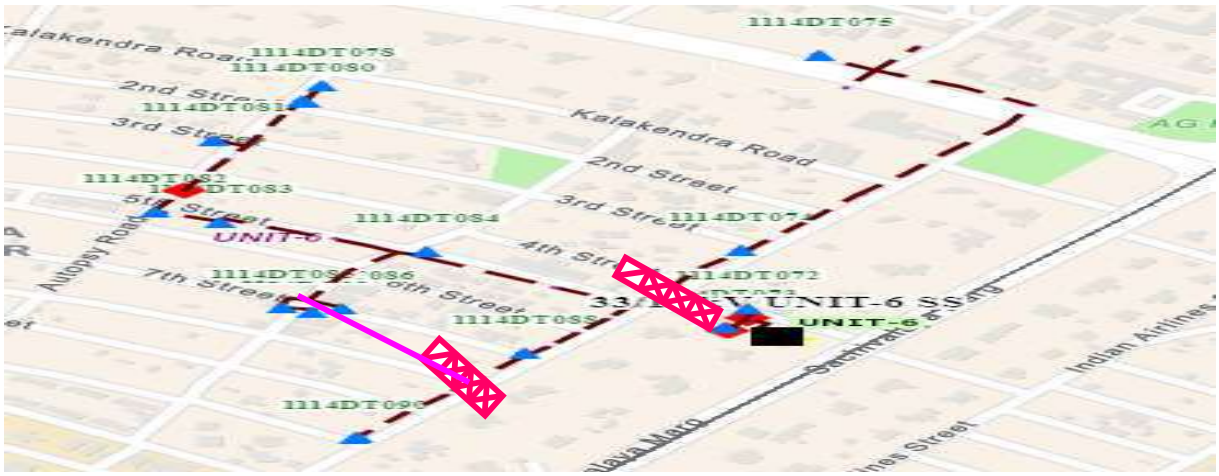


Existing Scenario:

- At present, 11kV Unit-6 feeder is emanating from 33/11kV Unit-6 PSS. The total trunk length of 11kV unit 6 feeder is 2.2 km and peak load is 1.25 MVA.
- The trunk conductor size of 11 kV feeder is 100 sq.mm AAAC
- At present frequent shutdowns are required for maintaining this feeder & there is no bifurcation/isolation arrangements while maintaining feeder
- Because of tripping/maintenance activities major commercial consumers remains out of service.

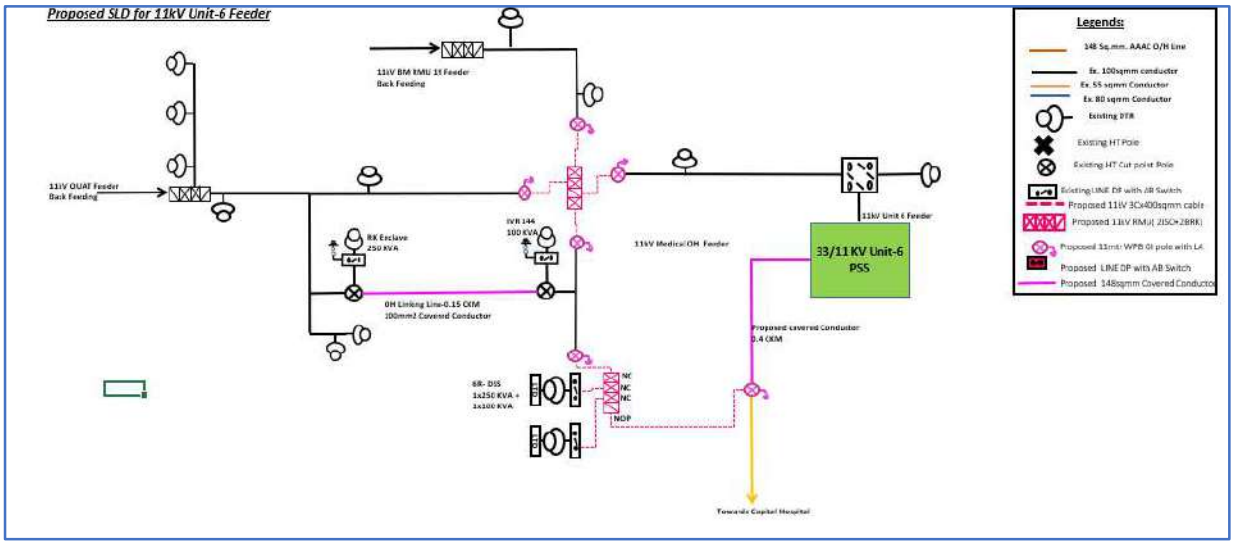
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Unit-6 feeder caters to an urban consumer and is experiencing frequent interruptions due to feeder tripping's, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping's during the last year was 47 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions



Proposed Scenario:

- Proposal of connecting 11KV Unit-6 feeder with 11 kV Medical Feeder to mitigate N-1 issues along with over loading issues.
- Installation of 2nos of RMU to establish ring connectivity.
- This location is growing with new commercial& Residential Buildings and requires reliable power supply for smooth operation

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Installation of 2 Nos. of RMU in 11kV Unit-6 Feeder in different location.
- Construction of 11kV OH line of length- 0.15 CKM from VIR DSS to RK Enclave DSS
- Augmentation of back feeding 11kV Medical OH feeder of length 0.4 CKM.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.11

Name of the Sub-Division : -		SDO-1
Name of the Section : -		Unit-6
Name of the Feeder: -		11kV Unit-6
Name of the Work :-		Proposal for installation of RMU & linking with nearby Feeder for reliability improvement of 11kV Unit-6 Feeder.
Names of Schemes: -		TPCODL CAPEX (FY 2027-28)
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	Part-A:- 1. Installation of 2 Nos. of RMU in 11kV Unit-6 Feeder in different location.(Refer Proposed SLD)	68,02,167.03

2	Part-B:-Construction of 11kV OH line of length- 0.15 CKM from VIR DSS to RK Enclave DSS. 2. Augmentation of back feeding 11kV Medical OH feeder of length 0.4 CKM.	15,73,583.30
3	Part-C Dismantling.	18,058.15
4	**Total Gross**	**83,93,808.48**
Total estimated cost is Rs. 0.84 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 0.84Cr. (For detailed BoQ refer Annexure-12.11)

i.) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii.) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for commercial consumers after strengthening of the line of 11kV Unit-6 feeder.
- Feeder tripping will be reduced as the feeder is linked with other
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential commercial consumers.

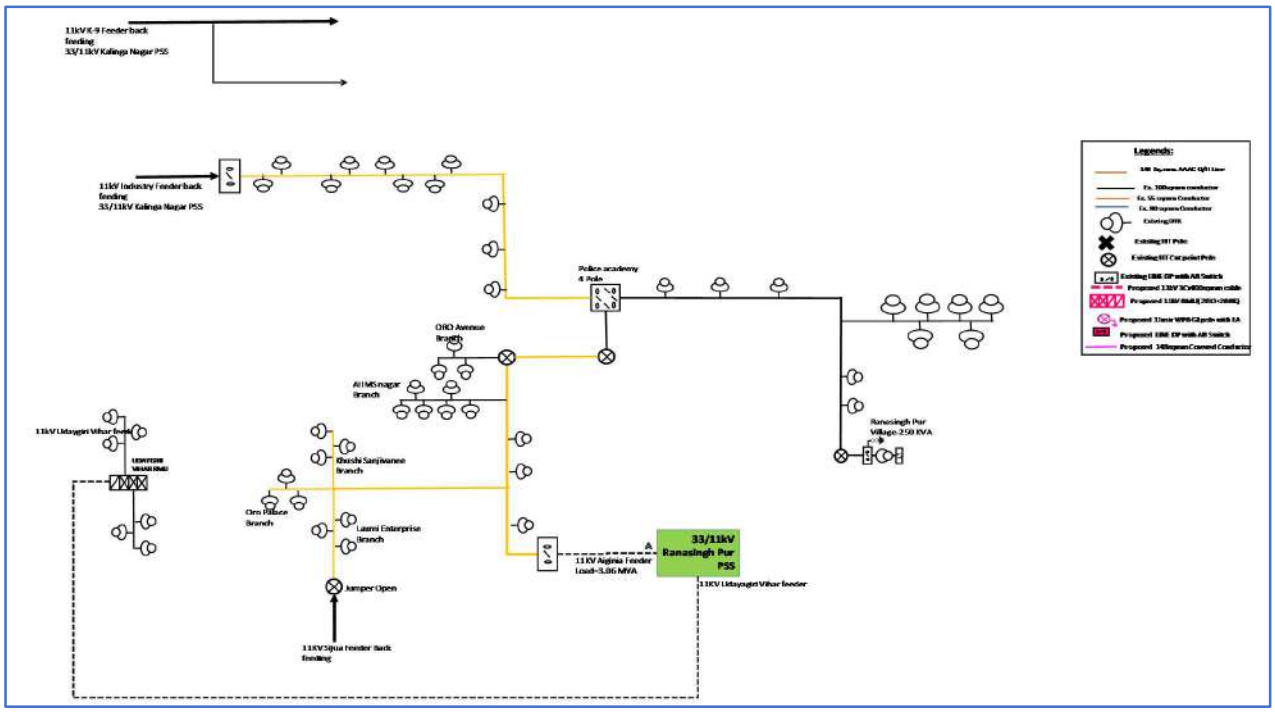
12.0 Proposal for Reliability improvement along with overloading mitigation of 11kV Aiginia Feeder:

Proposal:

Proposal for Bifurcation of existing 11 KV Aiginia Feeder load emanating from 33/11kV Ranasinghpur PSS by construction of 1no. of new 11kV feeder from 33/11kV Ranasingh Pur PSS through existing 11kV bay and 0.65km new line from Ranasingh Pur PSS to Ranasingh Pur Village 250 KVA DTR for reliability improvement.

Requirement/ Need of the proposal:

Objective: Reliability improvement along with overloading mitigation of 11kV Aiginia Feeder.



Existing Scenario:

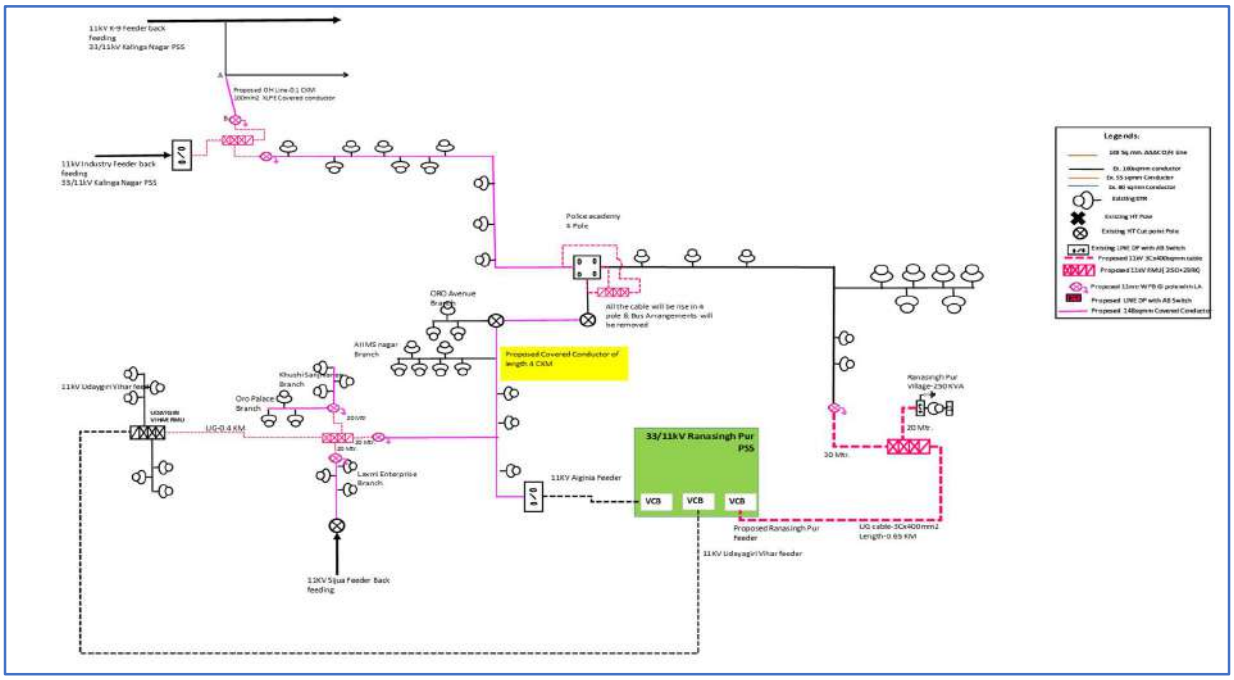
- At present, 11kV Aiginia feeder is emanating from 33/11kV Ranasingh Pur PSS. The total feeder length of 11kV Aiginia Feeder is 9.19 km and peak load is 3.37 MVA.
- The trunk conductor size of feeder is 55 sqmm and it passes through vegetation which is cause tripping due to tree touching.
- Frequent tripping is observed in the 11KV Aiginia feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Aiginia feeder caters to an urban consumer and is experiencing frequent interruptions due to feeder tripping's, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping's during the last year was 308 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Laying of 11kV UG cable of length-0.6 KM using 3Cx400mm2 XLPE UG cable from Ranasingh pur PSS to Ranasingh Pur Village 250 KVA DTR.
- Installation of 4 Nos. of RMU in different location of 11kV Aiginia Feeder.
- Laying of 11kV UG cable of length 0.4 KM using 3Cx400mm2 XLPE UG cable for linking with Udaygiri Vihar RMU & Proposed RMU near Khusi Sannjivani T-off.
- Augmentation of 11kV Aiginia feeder of length 4 CKM.
- Construction of 11kV O/H Linking line from K-9 feeder to Aiginia RMU of length 0.1 CKM using 100mm2 XLPE Covered conductor.
- The New feeder will help for maintaining reliable power supply for smooth operation

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length-0.6 KM using 3Cx400mm2 XLPE UG cable from Ranasingh pur PSS to Ranasingh Pur Village 250 KVA DTR.
- Installation of 4 Nos. of RMU in different location of 11kV Aiginia Feeder.
- Laying of 11kV UG cable of length 0.4 KM using 3Cx400mm2 XLPE UG cable for linking with Udaygiri Vihar RMU & Proposed RMU near Khusi Sannjivani T-off.
- Augmentation of 11kV Aiginia feeder of length 4 CKM.
- Construction of 11kV O/H Linking line from K-9 feeder to Aiginia RMU of length 0.1 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B).

Proposed Cost with Estimate Break-up:

ANNEXURE-12.12	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division :-	BCDD-II
Name of the Sub-Division : -	Khandagiri
Name of the Section : -	Kalinga Nagar
Name of the Feeder: -	11kV Aiginia
Name of the Work :-	Proposal for Bifurcation of existing 11kV AIginia feeder for reliability improvement along with mitigation of overloading.
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)
Abstract of Estimate	

Sl. No.	Description	Gross
1	Part-A:- 1. Laying of 11kV UG cable of length-0.6 KM using 3Cx400mm2 XLPE UG cable from Ranasingh pur PSS to Ranasingh Pur Village 250 KVA DTR. 2. Installation of 4 Nos. of RMU in different location of 11kV Aiginia Feeder. 3. Laying of 11kV UG cable of length 0.4 KM using 3Cx400mm2 XLPE UG cable for linking with Udaygiri Vihar RMU & Proposed RMU near Khusi Sannjivani T-off.	1,83,69,092.58
2	Part-B:-Augmentation of 11kV Aiginia feeder of length 4 CKM. 2. Construction of 11kV O/H Linking line from K-9 feeder to Aiginia RMU of length 0.1 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B)	72,40,263.19
3	Part-C Dismantling.	1,65,088.14
4	Total Gross	2,57,74,443.90
Total estimated cost is Rs. 2.58 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 2.58 Cr. (For detailed BoQ refer Annexure-12.12)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Improved Reliability there by overloading mitigation.
- Feeder restoration will be quick.
- By linking 11KV Aiginia feeder and 11KV new ranasingh Pur feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.

- The above arrangement will help to release power supply to upcoming potential urban consumers.

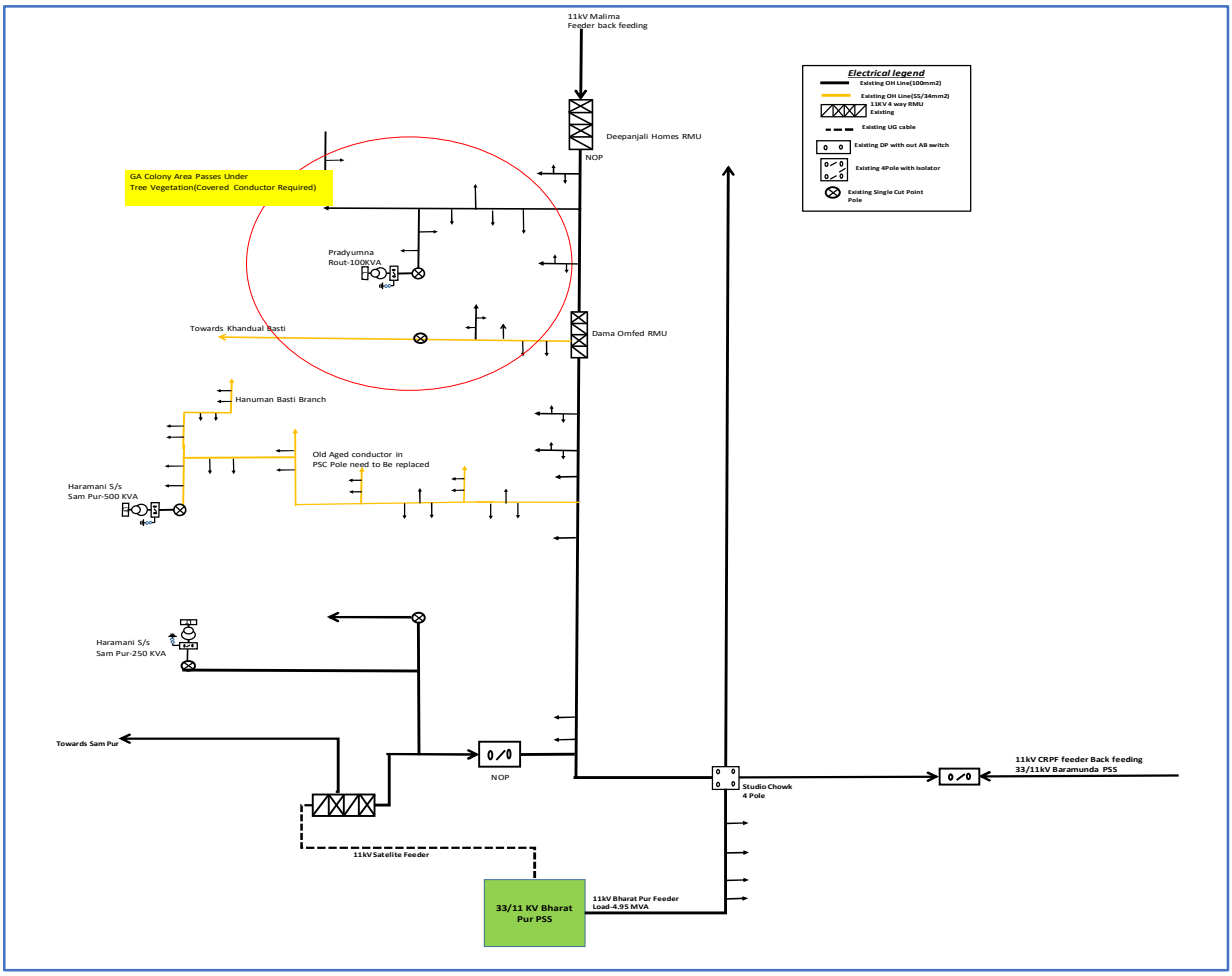
13.0 Proposal for Reliability improvement along with overloading mitigation of 11kV Bharat Pur Feeder:

Proposal:

Proposal for Bifurcation of existing 11 Bharat Pur Feeder emanating from 33/11kV Bharat Pur PSS by construction of new feeder & conductor augmentation of Branch Feeder.

Requirement/ Need of the proposal:

Objective: To ensure reliability improvement along with overloading mitigation by load diversion of the existing feeder with construction of new Linking line.



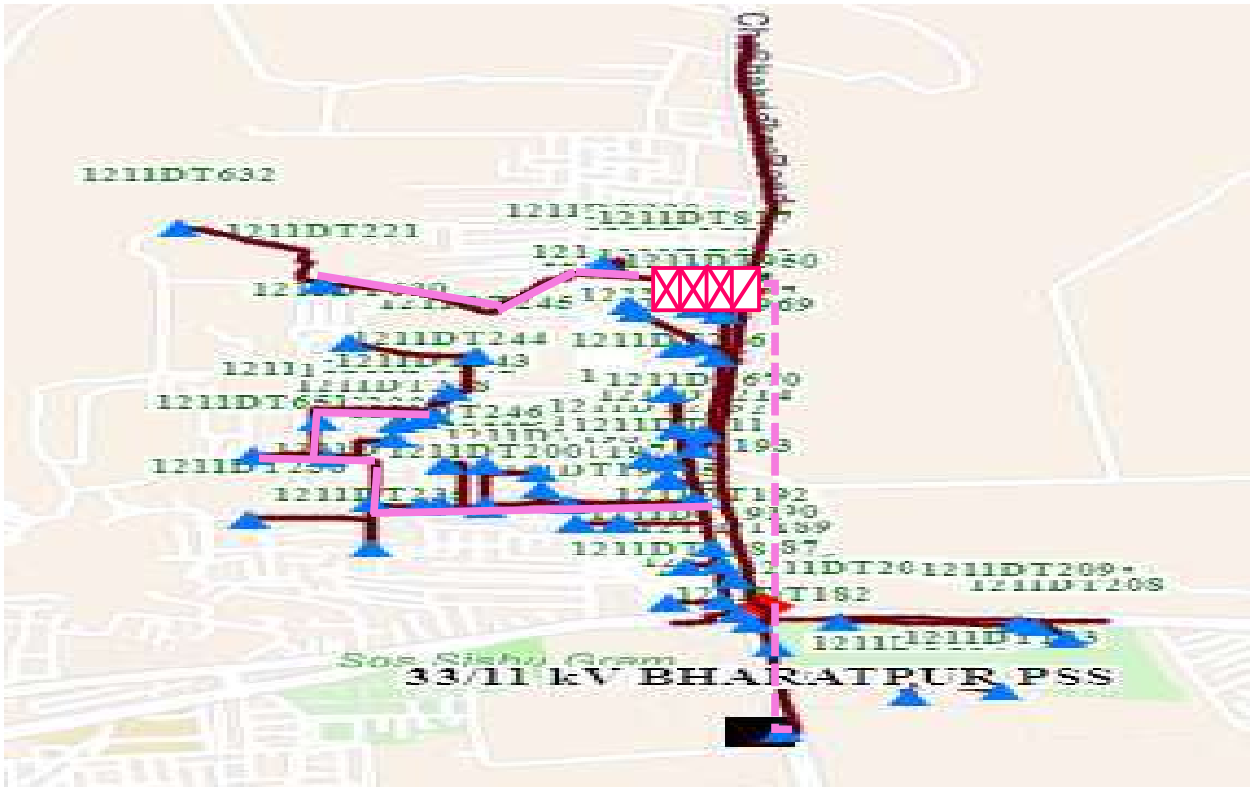
Existing Scenario:

- At present, 11kV Bharat Pur feeder is emanating from 33/11kV Bharat Pur PSS. The total length of 11kV Bharat Pur Feeder is 13.5 Ckm and peak load is 5.48 MVA.
- The trunk conductor size of feeder is 100 sqmm and branch having 55/34 mm2 conductor. It passes through vegetation which is cause tripping due to tree touching.
- Frequent tripping is observed in the 11KV Bharat Pur feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

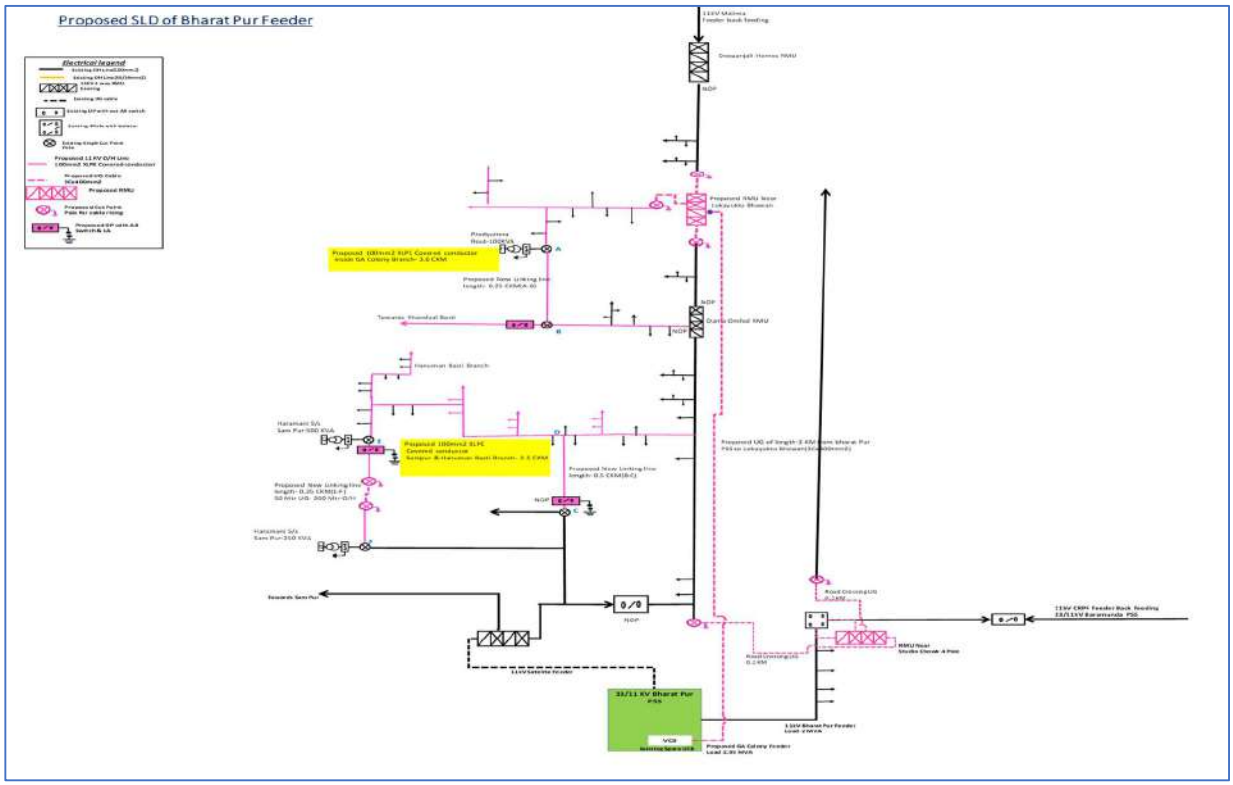
Existing SLD:

Priority :



Priority: Since the 11kV Bharat Pur feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last 2 year was 387 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Proposed Scenario:



- Laying of 11kV UG cable of length-3 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to Lokayukta Bhawan.
- Installation of 2 Nos. of RMU near Lokayukta Bhawan & Studio Chowk.
- Augmentation of 11kV Bharat Pur feeder Branch Line of length 6.1 CKM (GA Colony Branch & Hanuman Basti Sampur Area Branch)

- Construction of 11kV O/H Linking line of length 1.05 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B, C-D, E-F)
- The New feeder will help for maintaining reliable power supply for smooth operation

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length-3 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to Lokayukta Bhawan.
- Installation of 2 Nos. of RMU near Lokayukta Bhawan & Studio Chowk.

3	Part-C Dismantling.	3,13,472.60
4	**Total Gross**	**4,00,01,985.60**

Total estimated cost is Rs. 4 Crore. (On TPCODL CAPEX Scheme)

Cost Estimate: ₹ 4 Cr. (For detailed BoQ refer Annexure-12.13)

i) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

iii) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

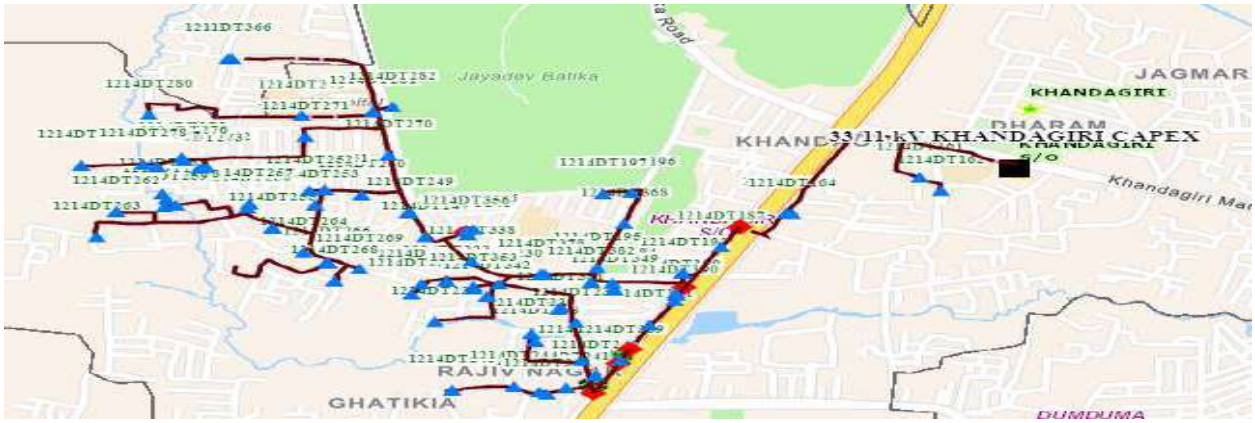
- Improved Reliability there by overloading mitigation.
- Feeder restoration will be quick.
- By linking 11KV Bharat Pur feeder and 11KV New feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential urban consumers.

14.0 Proposal for Reliability improvement along with overloading mitigation of 11kV Kolathia Feeder:

Proposal:

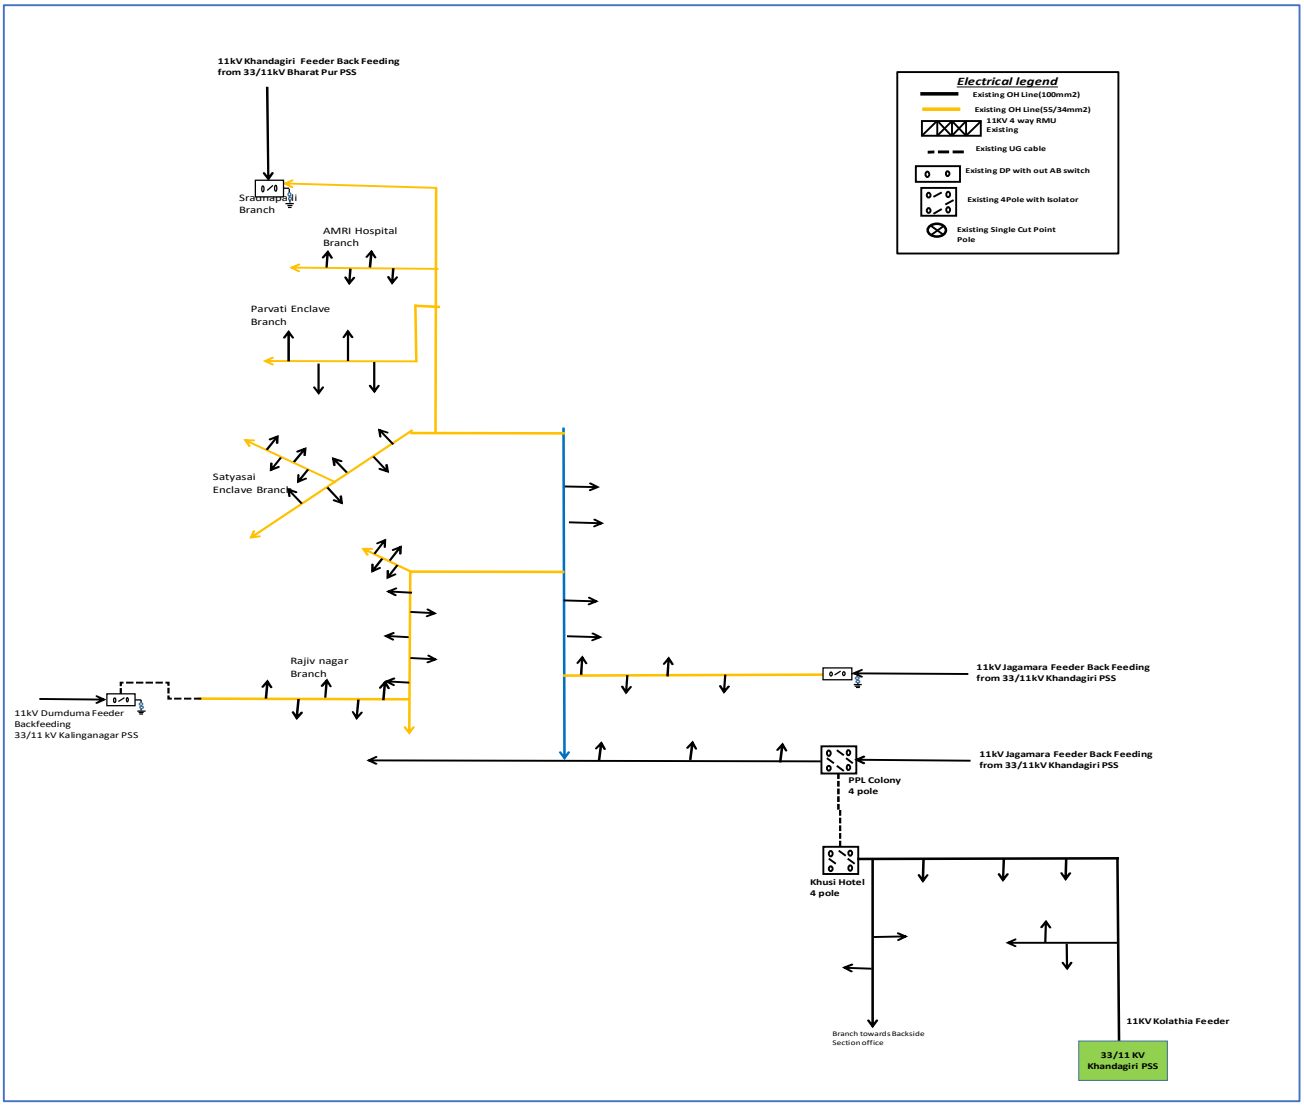
Proposal for Bifurcation of existing 11 KV Kolathia Feeder load emanating from 33/11kV Khandagiri PSS by construction of 1no. of new 11kV feeder from 33/11kV Bharat Pur PSS through existing 11kV bay and 3.3 km 11KV new line from Bharat Pur PSS to Manipal Hospital & augmentation of 11kV Kolathia Feeder using 100mm2 XLPE Covered conductor.

Requirement/ Need of the proposal:



Objective: To ensure reliability improvement along with overloading mitigation by bifurcating the existing feeder with construction of new 11kV feeder & refurbishment of existing feeder.

Existing Scenario:

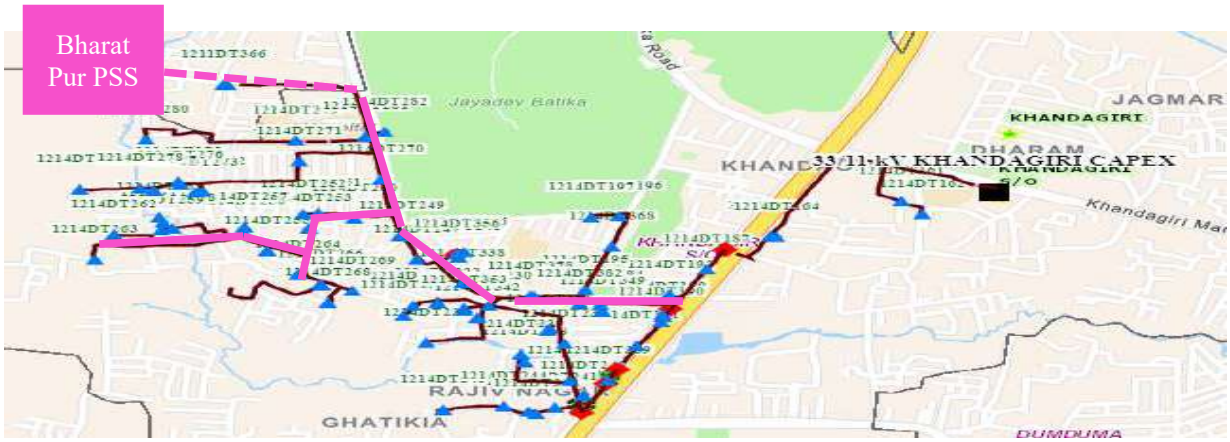


- At present, 11kV Kolathia feeder is emanating from 33/11kV Khandagiri PSS. The total length of 11kV Kolathia Feeder is 16 Ckm and peak load is 6.17 MVA.
- The trunk conductor size of feeder is 100 sqmm and branch having 80/55 mm2 conductor. It passes through vegetation which is cause tripping due to tree touching.

- Frequent tripping is observed in the 11KV Kolathia feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

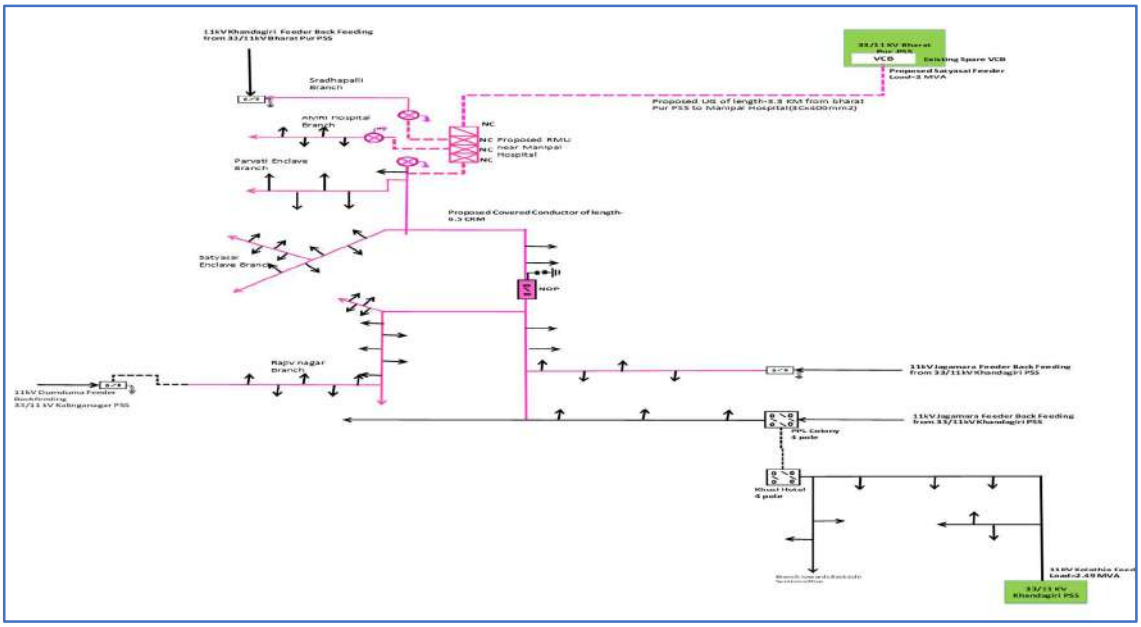
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Kolathia feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last 2 year was 266 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Laying of 11kV UG cable of length-3.5 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to Manipal Hospital.
- Installation of 1 No. of RMU near Manipal Hospital.
- Augmentation of 11kV Kolathia Feder Branch Line of length 6.5 CKM.

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length-3.5 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to Manipal Hospital.
- Installation of 1 No. of RMU near Manipal Hospital.
- Augmentation of 11kV Kolathia Feder Branch Line of length 6.5 CKM.

- The above arrangement will help to release power supply to upcoming potential urban consumers.

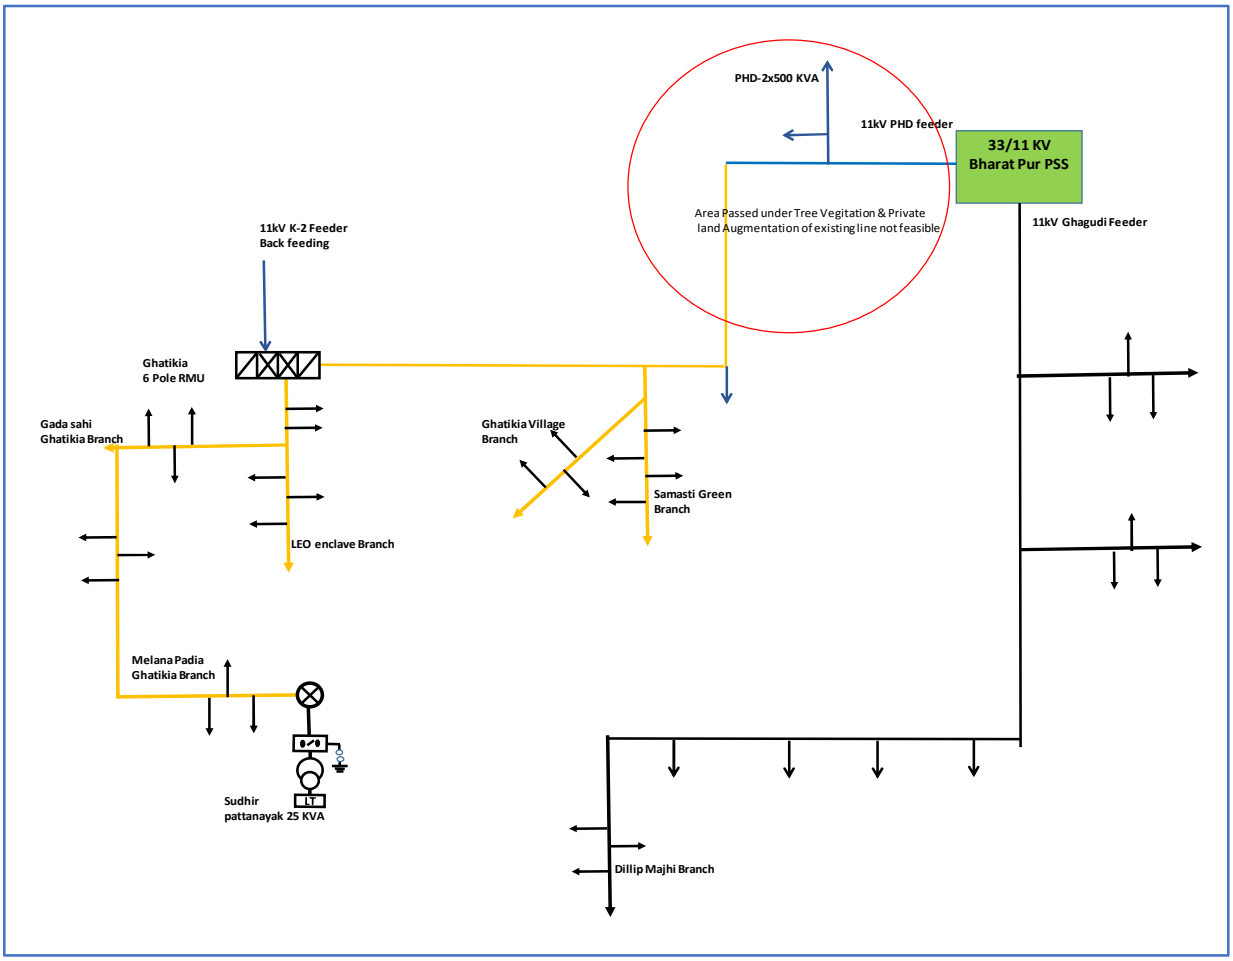
15.0 Proposal for Reliability improvement along with overloading mitigation of 11kV PHD Feeder:

Proposal:

Proposal for Augmentation of existing 11 kV PHD Feeder load emanating from 33/11kV Bharat Pur PSS by conductor augmentation.

Requirement/ Need of the proposal:

Objective: To ensure reliability improvement along with overloading mitigation by augmentation of the existing feeder

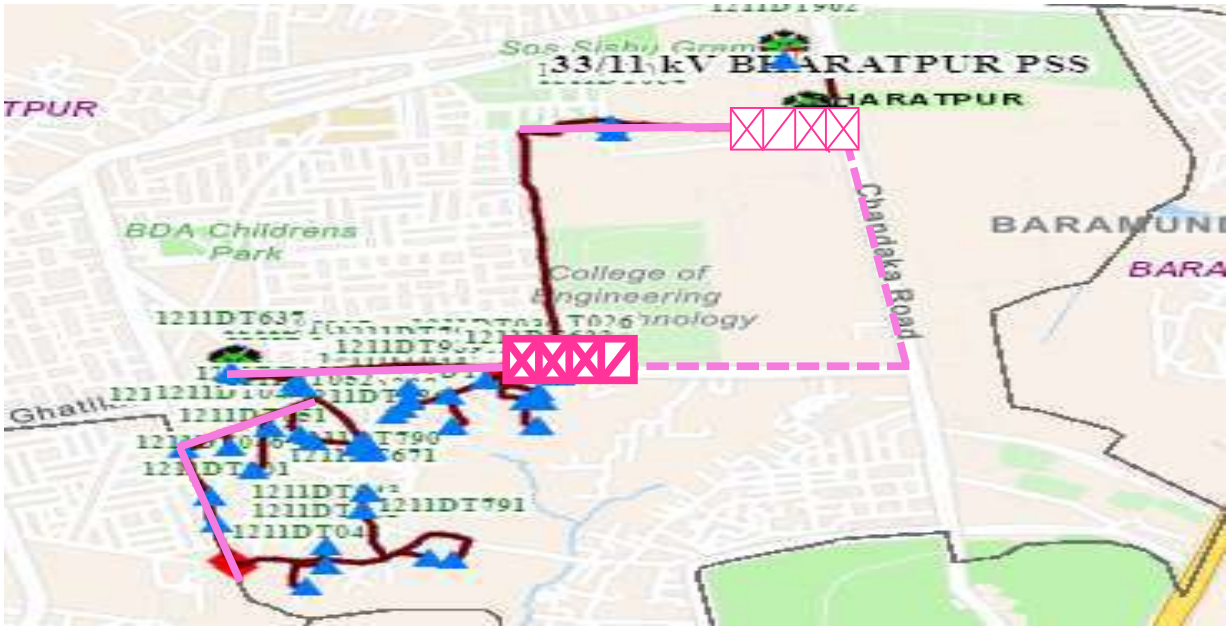


Existing Scenario:

- 11kV PHD feeder is emanating from 33/11kV Bharat Pur PSS. Total length of this feeder is 7.61 CKM and the peak load is 3.12 MVA.
- The trunk conductor size of feeder is 55 sqmm and branch having 55/34 mm2 conductor. It passes through vegetation which is cause tripping due to tree touching.
- Frequent tripping is observed in the 11KV PHD feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

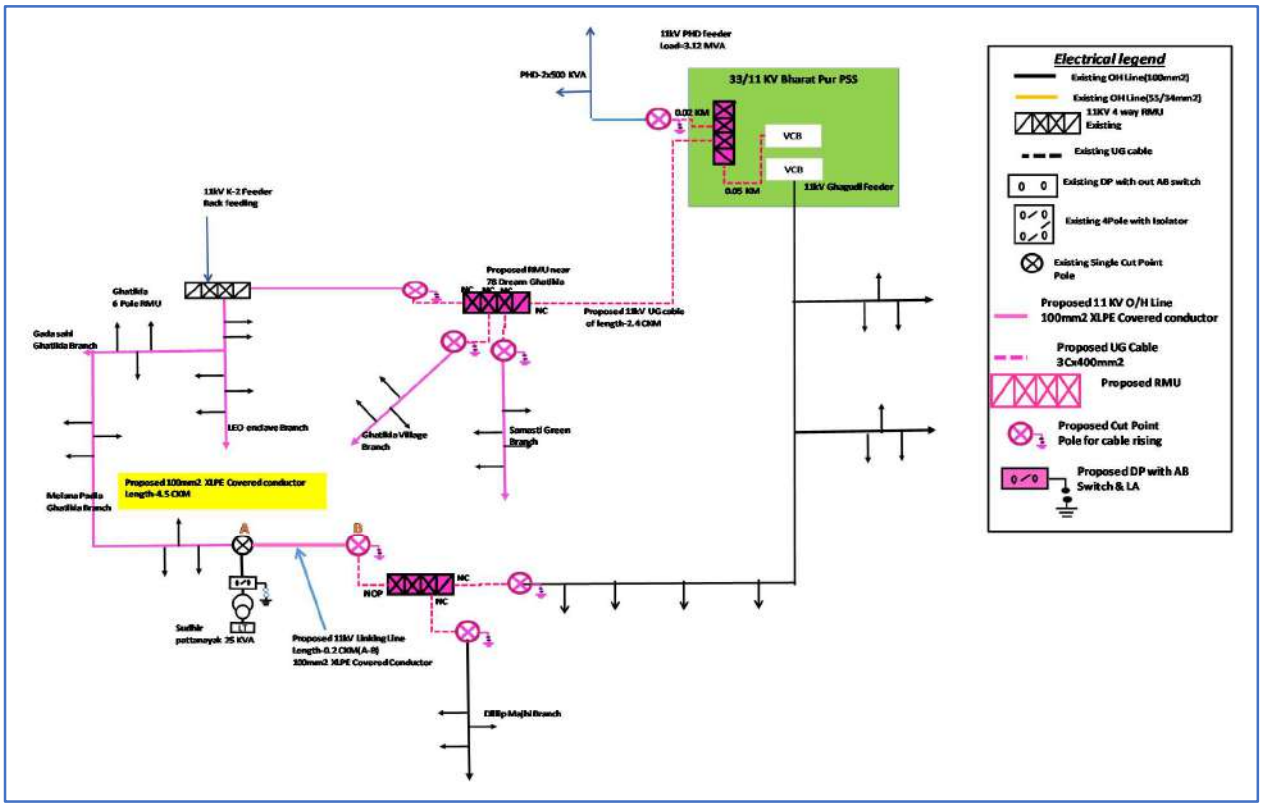
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV PHD feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last 2year was 203 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Laying of 11kV UG cable of length-2.4 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to 78 Dreams Ghatikia.
- Installation of 3 Nos. of RMU in 11kV PHD Feeder in different location.
- Augmentation of 11kV PHD feeder Branch Line of length 4.5 CKM (Ghatikia Village Branch)
- Construction of 11kV O/H Linking line of length 0.2 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B)

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length-2.4 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to 78 Dreams Ghatikia.
- Installation of 3 Nos. of RMU in 11kV PHD Feeder in different location.
- Augmentation of 11kV PHD feeder Branch Line of length 4.5 CKM (Ghatikia Village Branch)
- Construction of 11kV O/H Linking line of length 0.2 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B)

Proposed Cost with Estimate Break-up:

ANNEXURE-12.15	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division: -	BCDD-II
Name of the Sub-Division: -	Khandagiri
Name of the Section: -	Bharat Pur
Name of the Feeder: -	11kV PHD
Name of the Work: -	Proposal for augmentation of 11kV PHD Feeder for reliability improvement.
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)
Abstract of Estimate	

Sl. No.	Description	Gross
1	Part-A: - 1. Laying of 11kV UG cable of length-2.4 CKM using 3Cx400mm2 XLPE UG cable from Bharat Pur PSS to 78 Dreams Ghatikia. 2. Installation of 3 Nos. of RMU in 11kV PHD Feeder in differen location.	2,81,87,767.90
2	Part-B: -Augmentation of 11kV PHD feeder Branch Line of length 4.5 CKM (Ghatikia Village Branch) 2. Construction of 11kV O/H Linking line of length 0.2 CKM using 100mm2 XLPE Covered conductor (Refer Proposed SLD A-B)	73,60,908.74
3	Part-C Dismantling.	2,08,964.25
4	**Total Gross**	**3,57,57,640.90**
Total estimated cost is Rs. 3.58 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 3.58 Cr. (For detailed BoQ refer Annexure-12.15)

i) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

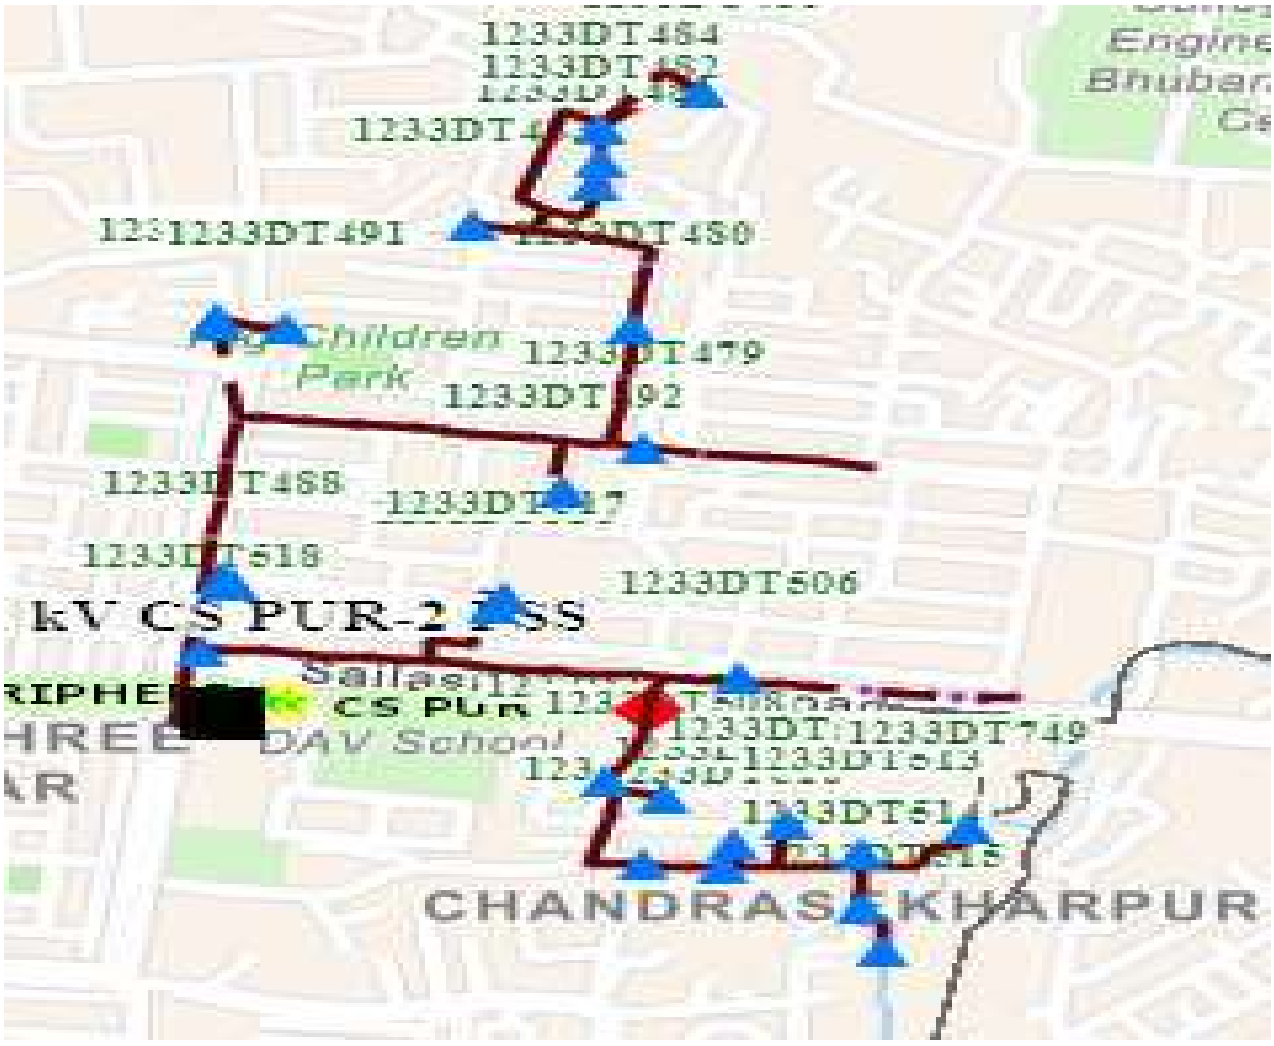
Benefit to the system and consumers:

- Improved Reliability there by overloading mitigation.
- Feeder restoration will be quick by installation of RMU in T-off.
- By linking 11KV PHD feeder and 11KV Ghagudi feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential urban consumers.

16.0 Proposal for Reliability improvement of 11kV HB-3 Feeder:

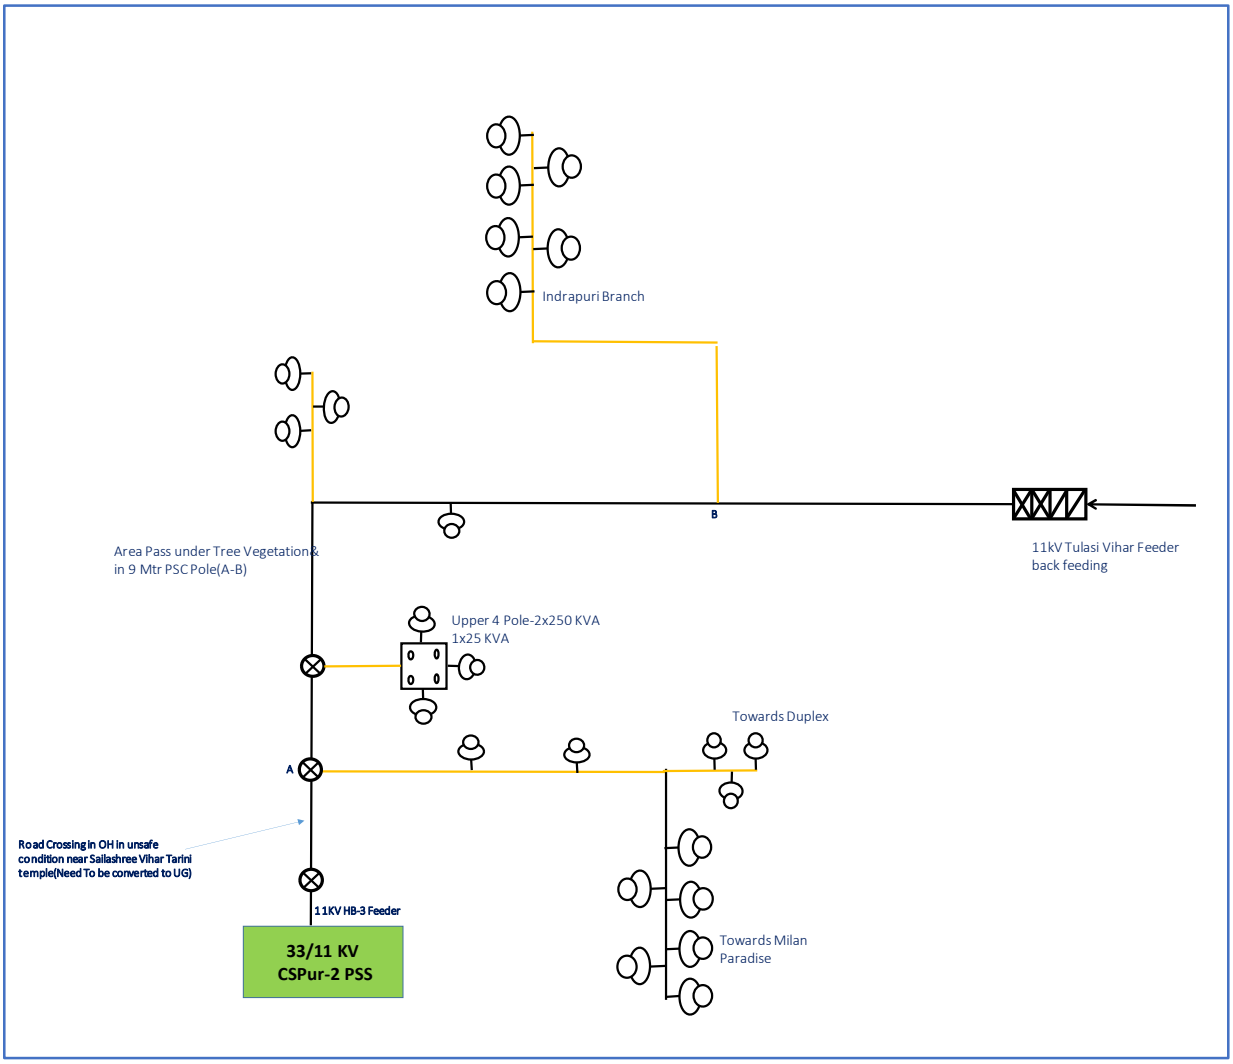
Proposal:

Proposal for Augmentation of existing 11kV HB-3 feeder using 100mm2 XLPE Covered conductor & installation of RMU for reliability improvement.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV HB-3 Feeder.

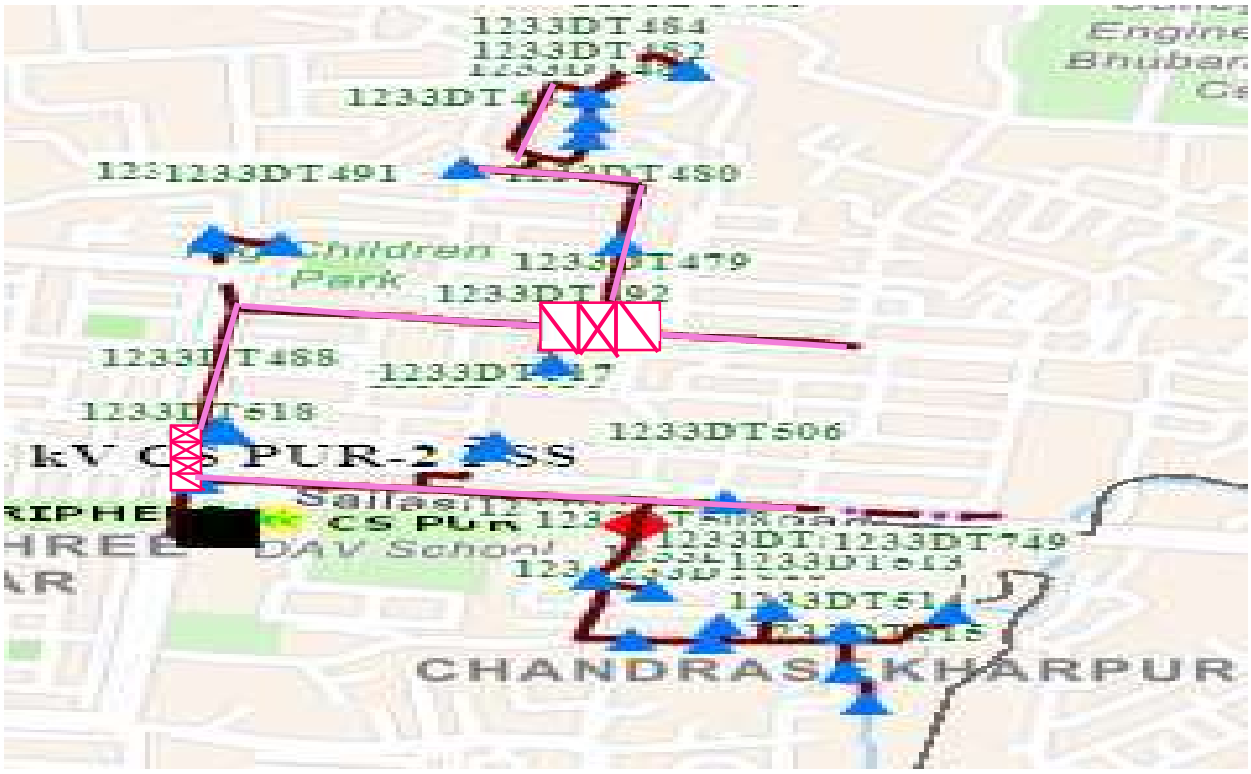


Existing Scenario:

- At present, 11kV HB-3 feeder is emanating from 33/11kV CS PUR-2 PSS. The total trunk length of 11kV HB-3 Feeder is 4.73 km and peak load is 3.35 MVA.
- The trunk conductor size of feeder is 100/80 sqmm and it passes through vegetation which is cause tripping due to tree touching.
- Frequent tripping is observed in the 11KV HB-3 feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

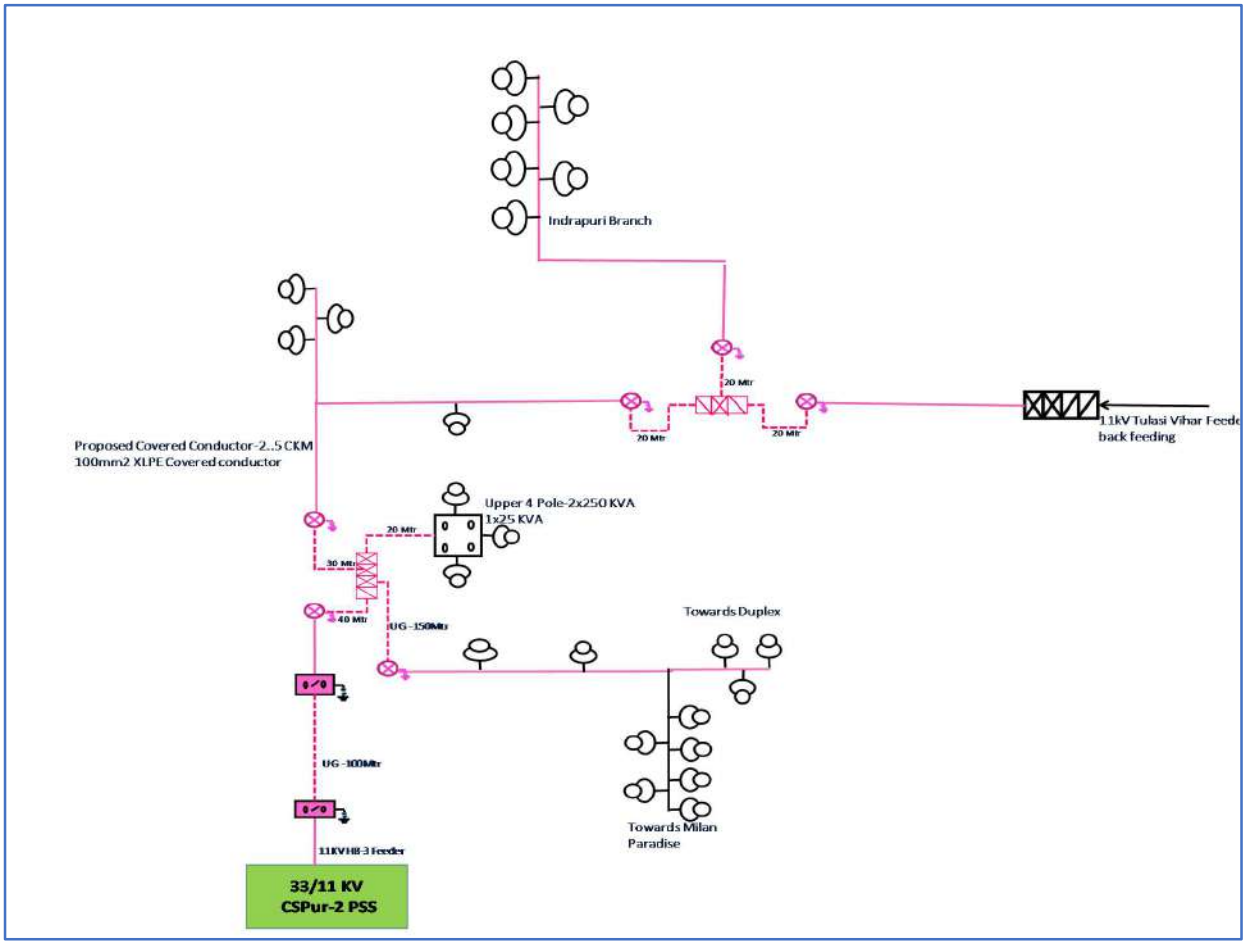
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV HB-3 feeder caters to a urban consumers and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 125 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Laying of 11kV UG cable of length-0.1 KM using 3Cx400mm2 XLPE UG cable near Sailashree Vihar Tarini Temple for avoid unsafe Road Crossing.
- Installation of 2 Nos. of RMU in different location of 11kV HB-3 Feeder.
- Augmentation of 11kV HB-3 feeder of length 2.5CKM using 100mm2 XLPE Covered conductor.
- The New feeder will help for maintaining reliable power supply for smooth operation

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Laying of 11kV UG cable of length-0.1 KM using 3Cx400mm2 XLPE UG cable near Sailashree Vihar Tarini Temple for avoid unsafe Road Crossing.
- Installation of 2 Nos. of RMU in different location of 11kV HB-3 Feeder.
- Augmentation of 11kV HB-3 feeder of length 2.5CKM using 100mm2 XLPE Covered conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.16		
TP CENTRAL ODISHA DISTRIBUTION LIMITED

Name of the Work: -		Proposal for Augmentation of existing 11kV HB-3 feeder using 100mm2 XLPE Covered conductor & installation of RMU for reliability improvement.
Names of Schemes: -		TPCODL CAPEX (FY 2027-28)
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	Part-A: - 1. Laying of 11kV UG cable of length-0.1 KM using 3Cx400mm2 XLPE UG cable near Sailashree Vihar Tarini Temple for avoid unsafe Road Crossing. 2. Installation of 2 Nos. of RMU in different location of 11kV HB-3 Feeder.	71,69,294.13
2	Part-B: -Augmentation of 11kV HB-3 feeder of length 2.5CKM.	51,17,317.47
3	Part-C Dismantling.	1,21,057.09
4	**Total Gross**	**1,24,07,668.69**
Total estimated cost is Rs. 1.24 Crore. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 1.24 Cr. (For detailed BoQ refer Annexure-12.16)

i. All rates considered in the estimate as per the Cost Data Book (DB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Improved Reliability of urban consumers.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.

The above arrangement will help to release power supply to upcoming potential urban consumers.

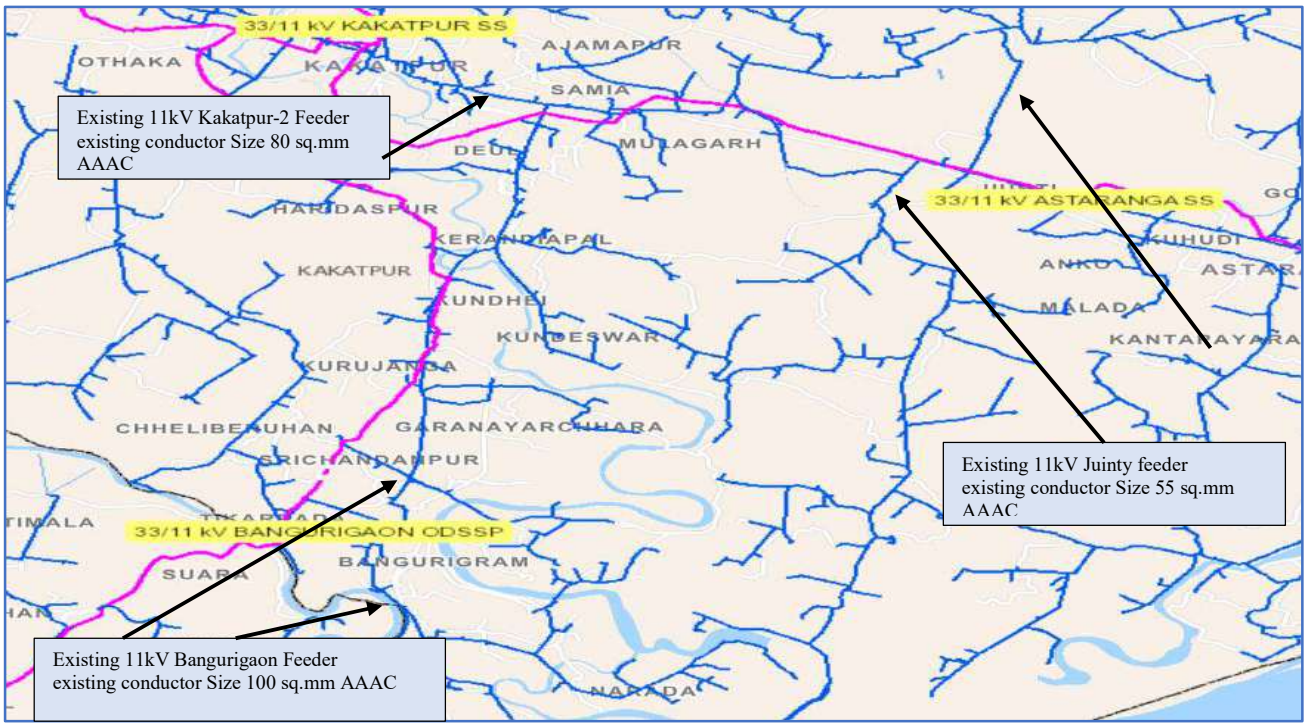
17.0 Proposal for Reliability Improvement along with overloading mitigation of 11KV Kakatpur-2 Feeder

Proposal:

Proposal for construction of 2 Nos. of new 11 kV feeders of 3.5 CKM and 0.5 CKM lengths to bifurcate the load of the existing 11 kV Kakatpur-2 Feeder, mitigate the overloading of the 11 kV Kakatpur Feeder and the 8 MVA PTR-1 at Kakatpur PSS, and bifurcate the lengthy 11 kV Juinty Feeder.

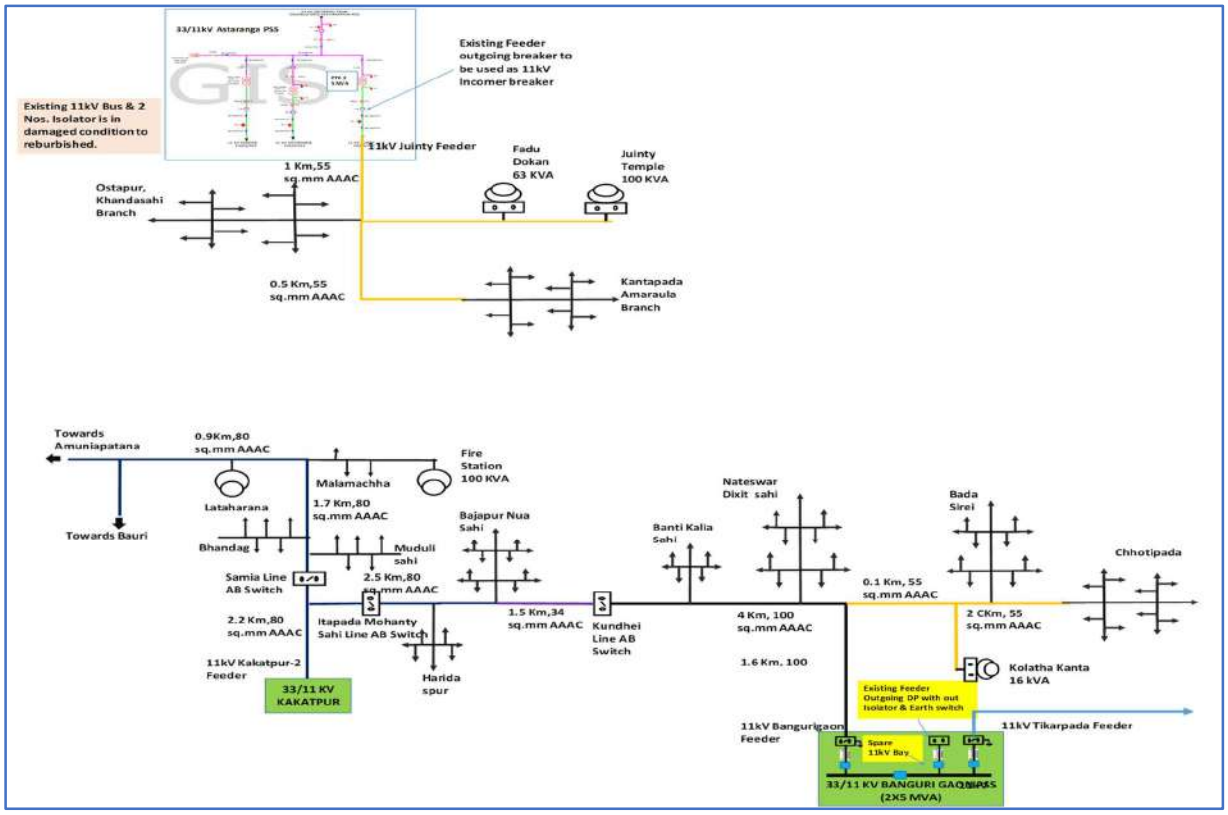
Requirement/ Need of the proposal:

Objective: To enhance reliability and overloading mitigation of 11 kV Kakatpur-2 Feeder along with bifurcate the lengthy 11 kV Juinty Feeder.



Existing Scenario:

- At present, 11kV Kakatpur-2 Feeder is emanating from 33/11kV Kaktpur PSS. Total length of this feeder is 50.89 km and the peak load is 4.24 MVA.
- 11kV Juinty Feeder is emanating from 33/11kV Astaranga PSS. Total length of this feeder is 55.47 km and the peak load is 4.24 MVA.
- In the existing scenario, conductor size of 11kV Kakatpur-2 Feeder is 80 sq mm & the feeder is 107% loaded w.r.t the current carrying capacity of the conductor.
- Considering 6% load growth for next 2Yrs. the feeder loading will reach 120% of its capacity.
- This feeder is proposed to ensure safe power supply to the domestic as well as commercial consumers.
- This feeder is mainly feeding rural consumers and some urban consumers of Kaktpur area, several breakdown on 11kV feeder is encountered which hampers the reliability of power supply and also considering future load growth of the urban area, conductor augmentation proposed for overloading mitigation & to improving reliability.
- 11kV Juinty feeder is lengthy and radial in nature, and passes through paddy field area, for which during any beakedown it becomes very difficault for patrolling and fault rectification.



Existing Summer'26 Loading and projected load at 11 kV Kaktpur-2 Feeder:

Existing Scenario								
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status (Sumeer'28)**	**Loss in kW in Summer'28**
Kaktpur	Kaktpur-2	4.52	4.85	107%	5.87	130%	Over load	487.09
Astaranga	Juintl	3.55	2.08	59%	2.52	71%	Under load	154.44
Banguriga on	Banguriga on	3.55	1.47	41%	1.78	50%	Under load	61.68

GIS SLD:

Existing SLD

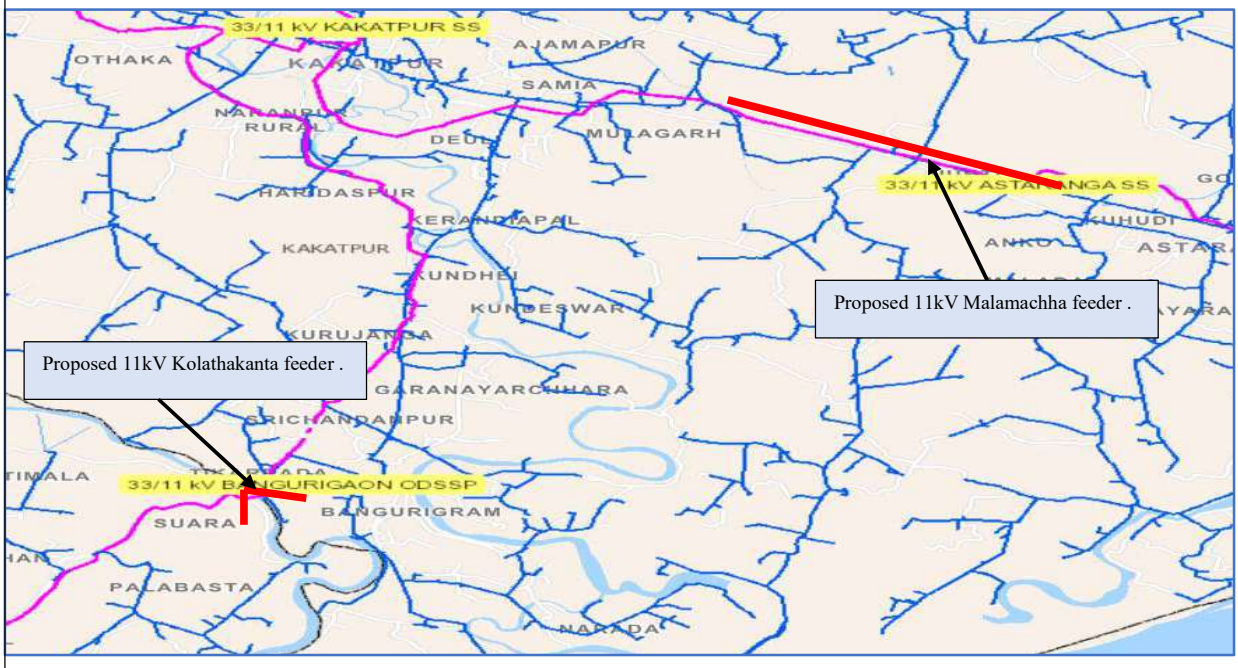
Priority of the Project:

- Since the feeder loading has reached 97% loading in ASIS scenario, with load growth In Summer'28, the feeder loading will reach 109%. In case the issue is not addressed, there will be load shedding of 9161nos. consumers for prolonged period.
- In addition to this since the 11kV Kakatpur-2 feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 132nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Technical Justification

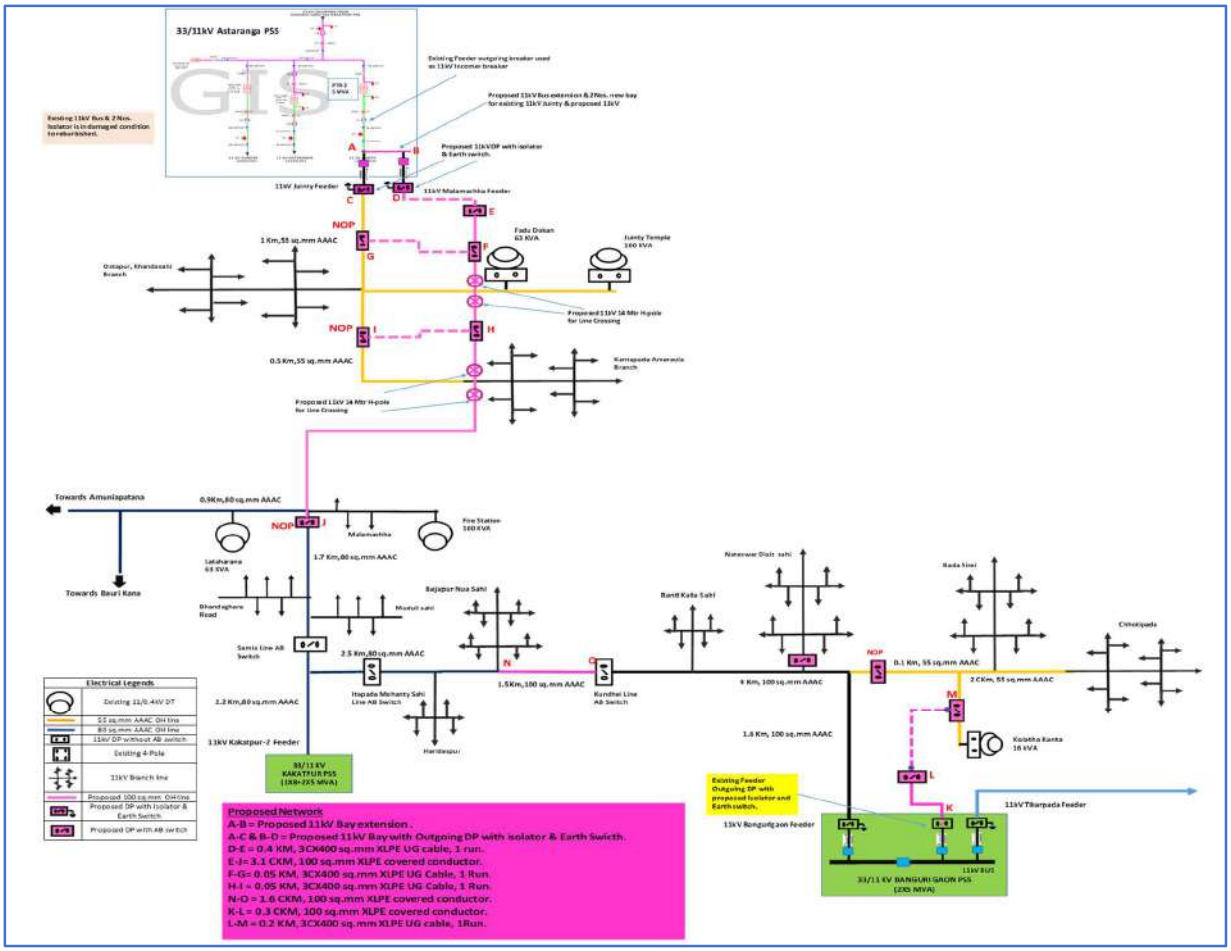
- The current carrying capacity as per CEA Distribution Planning Manual for recommended current carrying capacity. As per IS:398-4 (1994) or OEM recommendation for AAAC conductors.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, feeder loaded more than 70% without N-1 condition is required for augmentation / new feeder.
- In AS IS scenario, the feeder is 107% loaded w.r.t the current carrying capacity. The feeder loading is not N-1 complaint.

Proposed Scenario:



- Proposal for construction 3.1 CKM OH line using 100 sq.mm XLPE Covered conductor and 0.4 KM UG line using 11kV 3Cx400 sq.mm XLPE U/G cable from Astaranga PSS to Malamachha.
- Installation of 4 Nos. 11kV DP with Ab switch and construction of 0.1 KM UG interlinking line with for 11kV Juinty feeder bifurcation and load diversion from 11kV kakatpur-2 feeder.
- Construction 0.3 CKM OH line using 100 sq.mm XLPE Covered conductor and 0.2 KM UG line using 11kV 3Cx400 sq.mm XLPE U/G cable from Bangurigaon PSS to Kolathakanta, 16 KVA.
- Divert load of 11kV Kakatpur-2 feeder to 11kV Bangurigaon feeder emanated from 33/11kV Banguriga PSS and proposed 11kV Malamachha Feeder emanated from 33/11kV Astaranga Feeder.

Proposed Summer'28 Loading and projected load at 11 kV Kakatpur-2 Feeder:



Loading after Proposal (Summer'28)						
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load Summer'28 (MVA)**	**% Loading in Summer-28**	**Feeder Status**	**Loss in kW in Summer'28**
Kaktpur	Kaktpur-2	4.52	3.60	80%	Under load	186.3
Astaranga	JuintI	3.55	1.90	54%	Under load	123.2
Bangurigaon	Bangurigaon	3.55	0.90	25%	Under load	19.33
Bangurigaon	Proposed Kolathkanta	5.19	0.96	18%	Under load	34.26
Astaranga	Proposed Malamachha	5.19	2.80	54%	Under load	159.46

- After bifurcation the existing 11KV Dutta Tota feeder will be divided into three parts, the existing 11KV Dutta Tota feeder will be loaded upto 32% of its capacity and the proposed 11KV malamachha feeder will be loaded upto 72% of its capacity and 11kV bangurigaon feeder will be loaded upto 62% of its capacity.

GIS SLD:

Proposed SLD (Summer'28)

Scope of Work:

- Construction of Two No of 11 KV Line Bay (Outdoor).
- Construction 11kV 3Ph 3W O/H Line of Length= 5 CKM, using 100 SQ.MM. -XLPE AAA Covered Conductor & 11 Mtr. H-Pole for Pin-Points and Cut-Points & 11 Mtr WPB Pole for DP.
- Supply and Laying of 11kV 3C, 400sqmm UG Cable of length = 0.7 KM, without spare run.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.17	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Cicle :-	BBSR-1
Name of the Division :-	NED
Name of the Sub-Division : -	Nimapada
Name of the Section : -	Kakatpur-2 & Astaranga
Name of the Work :-	Proposal for construction of 2 Nos. of new 11 kV feeders of 3.5 CKM and 0.5 CKM lengths to bifurcate the load of the existing 11 kV Kakatpur-2 Feeder, mitigate the overloading of the 11 kV Kakatpur Feeder and the 8 MVA PTR-1 at Kakatpur PSS, and bifurcate the lengthy 11 kV Juinty Feeder.

Names of Schemes: -		CAPEX 27-28
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of Two No of 11 KV Line Bay (Outdoor)	57,19,805.47
2	PART B : Installation of 2 Nos. DP with Isolator & earth switch for feeder outgoing.	4,30,356.69
3	PART C: Construction 11kV 3Ph 3W O/H Line of Length= 5 CKM, with 40 Mtr. Span using 100 SQ.MM. -XLPE AAA Covered Conductor & 11 Mtr. H-Pole for Pin-Points and Cut-Points & 11 Mtr WPB Pole for DP.	1,71,45,409.91
4	PART D- Supply and Laying of 11kV 3C, 400sqmm UG Cable of length = 0.7 KM, with one run spare.	67,61,082.36
5	PART E: Construction of 11kV Line Protecting Guarding on Single Pole for Road Crossing	56,502.88
6	PART F: Dismantling of Materials	98,177.44
7	**Total Gross**	**3,02,11,334.75**
Total estimated cost is Rs. 3.02 Cr.		

Cost Estimate: ₹ 3.02 Cr. (For detailed BoQ refer Annexure-12.17)

i. All rates considered in the estimate as per the Cost Data Book (DB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Overloading mitigation of 11kV Kakatpur-2 Feeder to maintain reliable Power Supply .

- 11KV Kaktpur-2 feeder length reduced from 50.96 CKM to 24.46 CKM.
- 11KV Juinty feeder length reduced from 50.96 CKM to 24.46 CKM.
- 11KV Bangurigaon feeder length reduced from 50.96 CKM to 24.46 CKM.
- The above arrangement will help to release power supply to upcoming potential consumers of urban area .
- Safety to to the public & working personnel will be improved since conductor snapping because of overloading is addressed through above proposal.

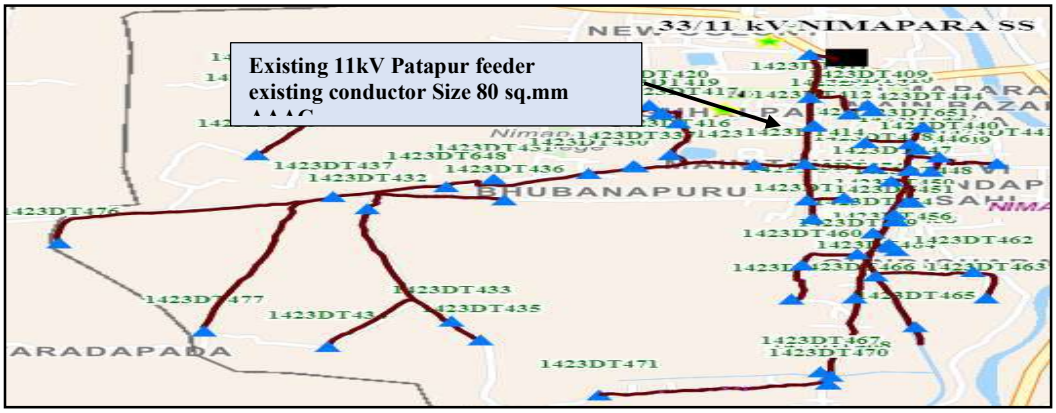
18.0 Proposal for reliability improvement along with overloading Mitigation of 11KV Patapur Feeder

Proposal:

Proposal for augmentation and bifurcation of 11kV Patapur Feeder by installation of 11kV 4 Way RMU and construction of 0.5 CKM overhead line and 0.8 CKM Under ground line.

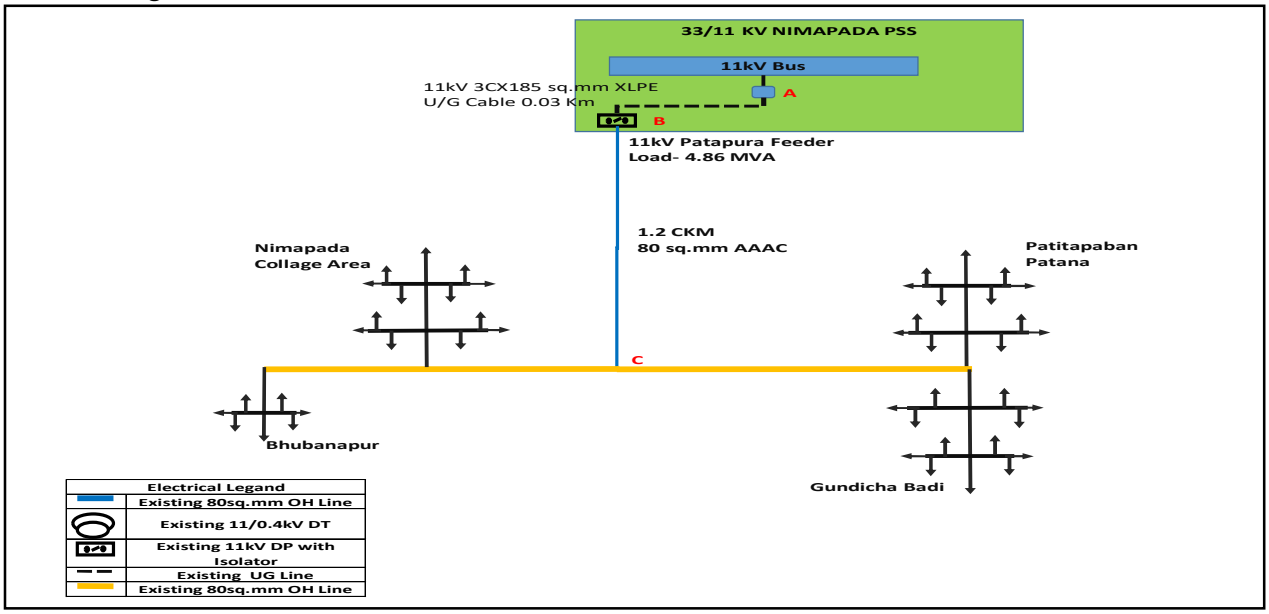
Requirement/ Need of the proposal:

Objective: To enhance reliability as well as to mitigate the overloading of the 11 kV Patapur Feeder.



Existing Scenario:

- At present, 11kV Patapur Feeder is emanating from 33/11kV Nimapada PSS. Total length of this feeder is 23.5 km and the peak load is 4.02 MVA.
- In the existing scenario, conductor size of 11kV Patapur Feeder is 80 sq mm & the feeder is 89% loaded w.r.t the current carrying capacity of the conductor.
- Considering 10% load growth for next 2Yrs. the feeder loading will reach 108% of its capacity.
- This feeder is proposed to ensure safe power supply to the domestic as well as commercial consumers.
- This feeder is mainly feeding urban consumers and some rural consumers of Nimapada area, several breakdown on 11kV feeder is encountered which hampers the reliability of power supply and also considering future load growth of the urban area, conductor augmentation proposed for overloading mitigation & to improving reliability.



Existing Summer'26 Loading and projected load at 11 kV Patapur Feeder:

Existing Scenario								
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Peak Loading Summer'26 (MVA)**	**% Loading**	**Projected load Summer'28 (MVA)**	**% Loading**	**Feeder Overloading Status (Sumeer'28)**	**Loss in kW in Summer'28**
Nimapada	Patapur	4.51	4.02	89%	4.86	108%	Over load	227

GIS SLD:

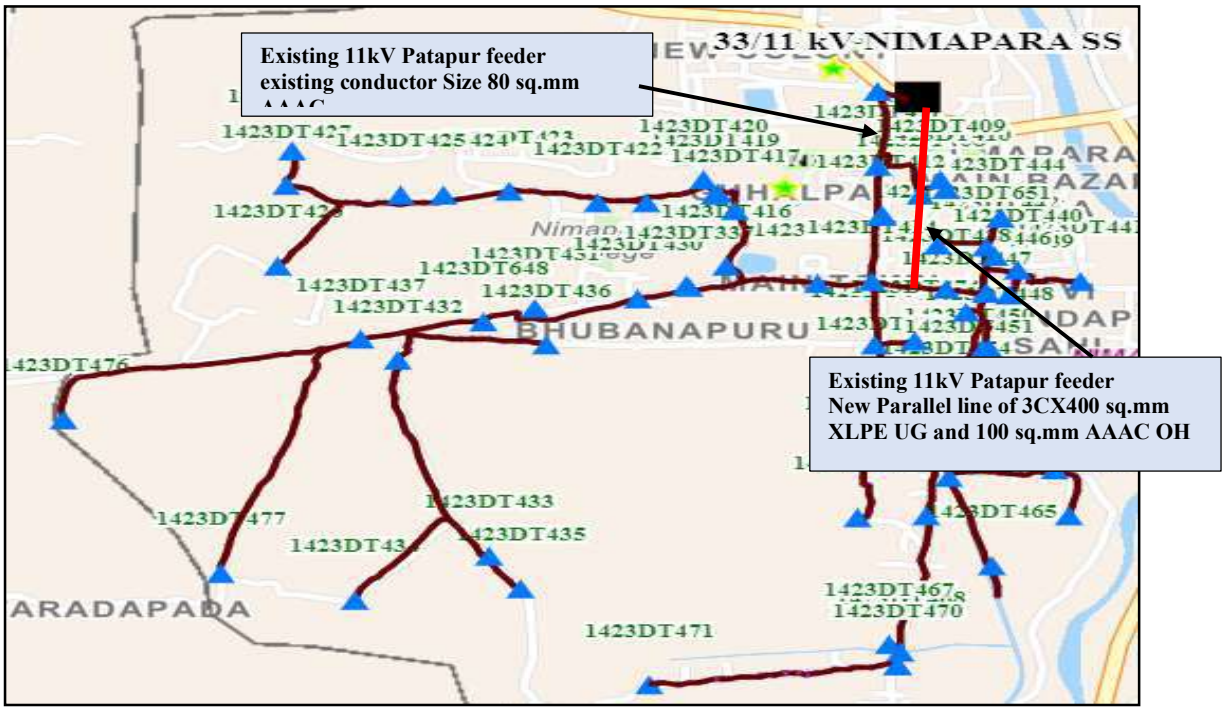
Existing SLD

Priority of the Project:

Since the feeder loading has reached 89% loading in ASIS scenario, with load growth In Summer'28, the feeder loading will reach 108%. In case the issue is not addressed, there will be load shedding of 4422nos. consumers for prolonged period.

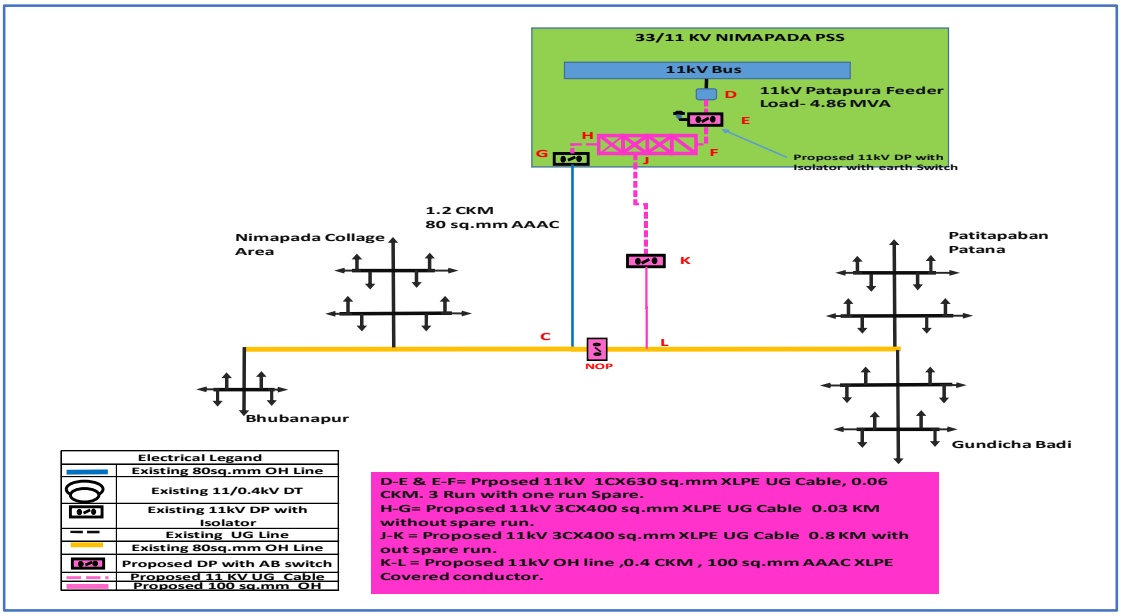
In addition to this since the 11kV Patapur feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 46nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Proposed Scenario:



- Proposal for augmentation of existing U/G cable from 3CX185 sq.mm to 1CX630 sq.mm and installation of 11kV 4 WAY RMU at Nimapada PSS for bifurcation of 11kV Patapur feeder load .
- Construction of new 11kV line of 1 CKM using 100 sq.mm AAAC XLPE covered conductor and UG line ,from Nimapda PSS to canal square for load diversion and overloading mitigation of 11kV Patapur feeder.

Proposed Summer'28 Loading and projected load at 11 kV Patapur Feeder:



Loading after Proposal (Summer'28)						
Name of the PSS	**11 kV Feeder Name**	**Feeder Capacity (MVA)**	**Projected load Summer'28 (MVA)**	**% Loading in Summer-28**	**Feeder Status**	**Loss in kW in Summer'28**
Nimapada	Patapur	8.57	4.86	57%	Under load	150.00

- After bifurcation the existing 11KV Patapur feeder will be divided into two parts, the existing 11KV Dutta Tota feeder will be loaded upto 57% of its capacity.

GIS SLD:

Proposed SLD (Summer'28)

Scope of Work:

- Installation of 11kV 4WAY RMU at Nimapada PSS for feeder bifurcation.
- Construction 11kV 3Ph 3W O/H Line of Length= 0.4 CKM, using 100 SQ.MM. -XLPE AAA Covered Conductor
- Supply and Laying of 11kV 3C, 400sqmm UG Cable of length = 0.83 KM, without spare run.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.18		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Circle :-		BBSR-1
Name of the Division :-		NED
Name of the Sub-Division : -		Nimapada
Name of the Section : -		Nimapada-1
Name of the Work :-		Proposal for augmentation & Bifurcation of 11kV Patapur feeder using RMU to mitigate overloading issue & improve reliability.
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A- Supply and Laying of 11kV 1C, 630sqmm UG Cable of length = 0.06 KM, 3 run without spare run.	31,57,361.26
2	PART B: Construction of 11kV Feeder outgoing DP with isolator & Earth switch.	2,92,205.32
3	PART C- Supply and Laying of 11kV 3C, 400sqmm UG Cable of length = 0.83 KM, with one run spare.	66,09,700.83

4	PART D: Construction of 3Ph, 3W ,11kV Line of Length= 0.5 CKM with 40 Mtr. Span using 100 SQ.MM. -XLPE AAA Covered Conductor.	14,82,406.92
5	**Total Gross**	**1,15,41,674.32**
Total estimated cost is Rs. 1.15 Cr.		

Cost Estimate: ₹ 1.15 Cr. (For detailed BoQ refer Annexure-12.18)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a. Compliance with electrical safety regulation for distribution system.
b. Reduction of electrocution risk and public safety hazards.
c. Safe operation and isolation of the feeder.
d. Protection of electrical assets against lightening and surge related failure.
e. Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

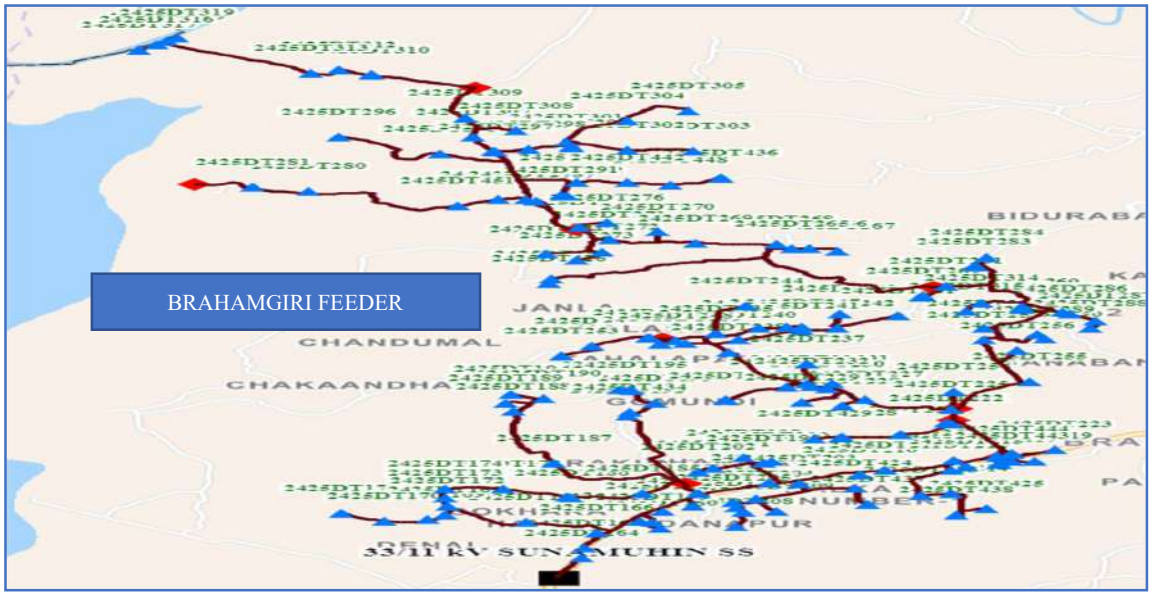
- Improved Reliability thereby overloading mitigation.
- Improved capability of Network by use of covered conductor, resulting into reduction in tripping on the feeder.
- Reduction in tripping will ultimately improve improved useful life of Power-transformer upstream.
- Consumers will get Quality & Reliable power supply with fever interruptions thereby improving their overall capability to use stable, quality & reliable power supply.
- The above arrangement will help to release power supply to upcoming potential consumers.

19.0 Proposal for Reliability improvement of 11kV Brahamgiri Feeder:

Proposal:

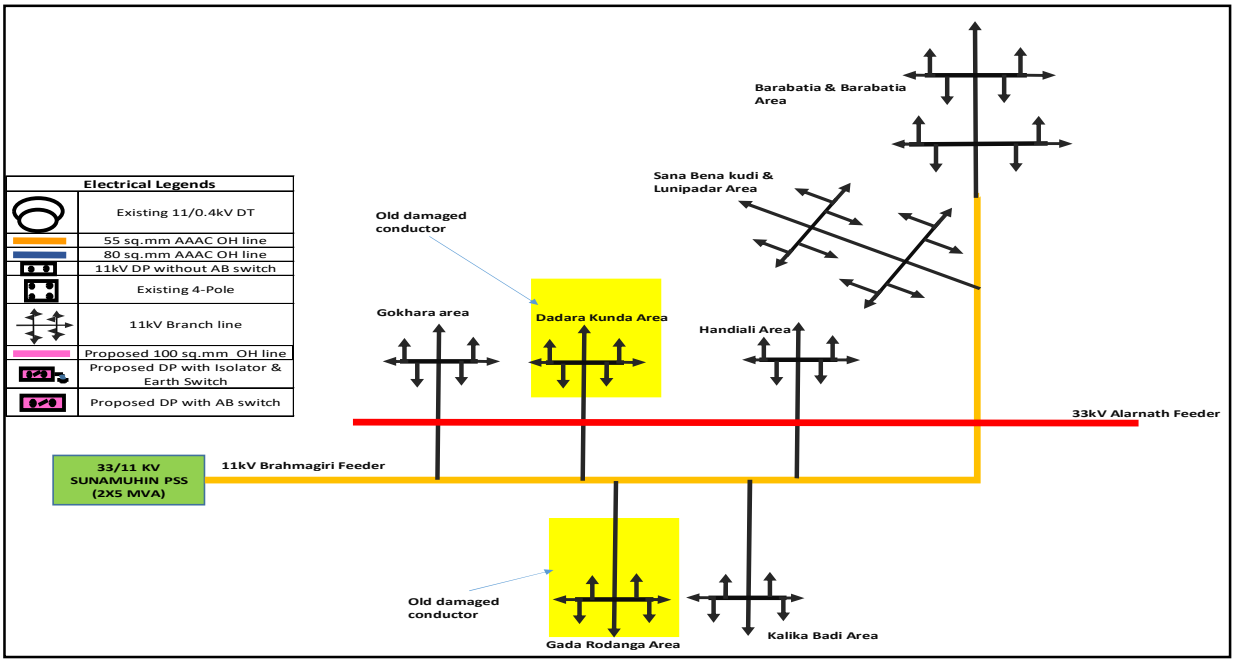
Proposal for refurbishment of existing 11 KV Brahamgiri Feeder emanating from 33/11 KV Sunamuhin PSS for length-3KM for reliability purpose.

Requirement/ Need of the proposal:



Objective: Reliability improvement of 11kV Brahamgiri Feeder.

Existing Scenario:

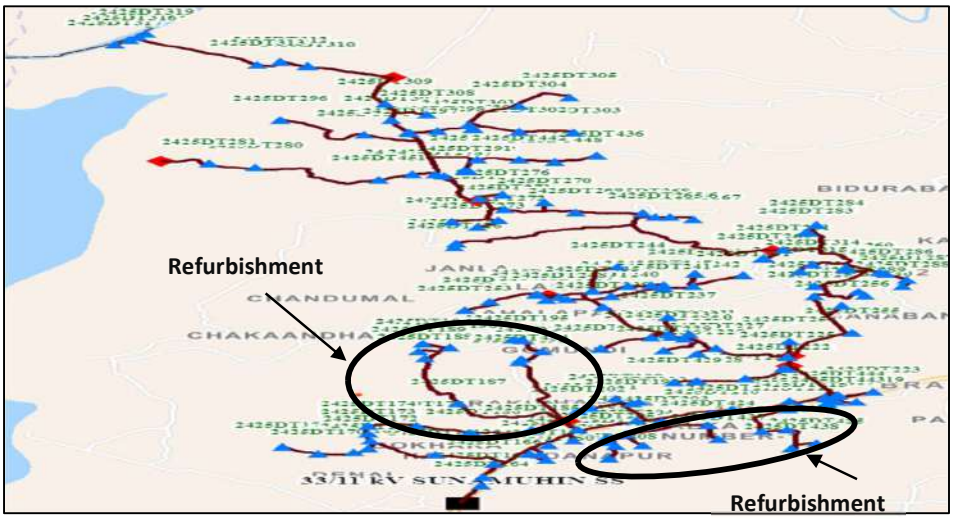


- At present, 11kV Brahamgiri feeder is emanating from 33/11kV Sunamuhin PSS. The total trunk length of 11kV Rajib is 64.8 km and peak load is 2.79 MVA.

- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Brahamgiri feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

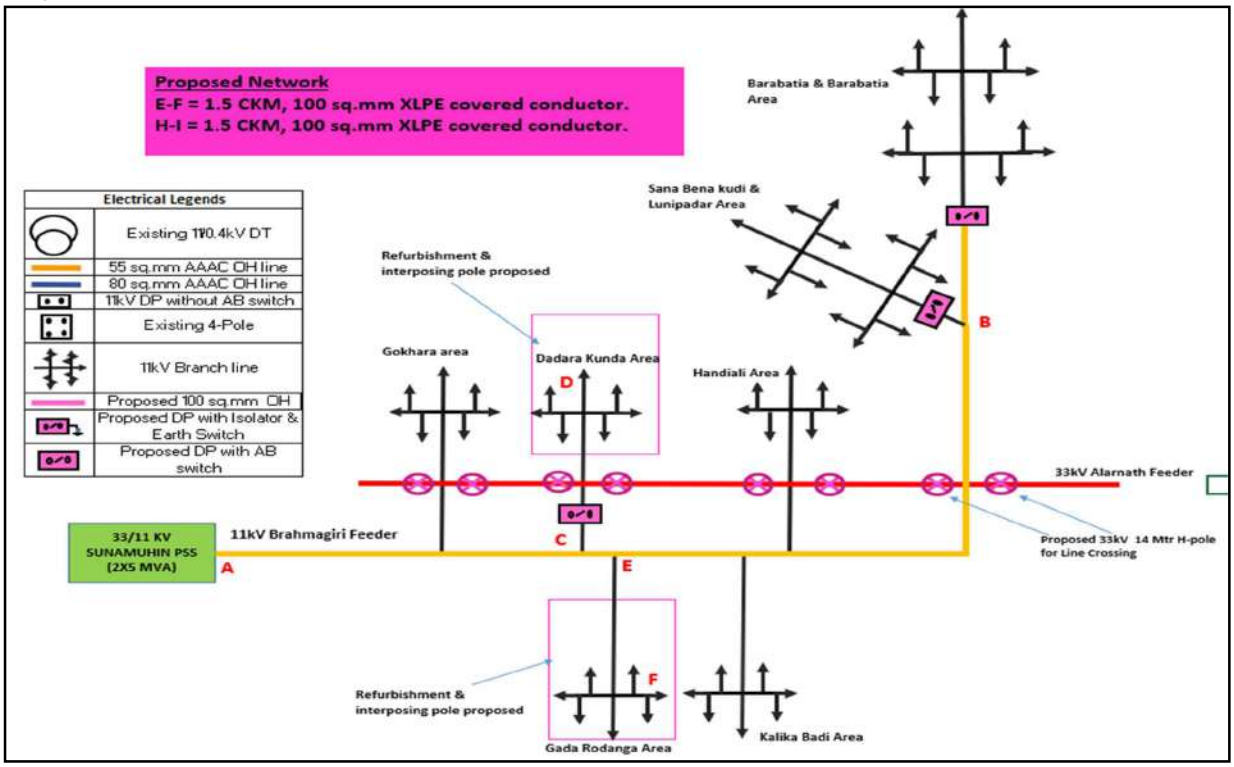
GIS MAP

Existing SLD:



Priority of the Project:

Since the 11kV Brahamgiri feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 239nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Refurbishment of 3 CKM 11kV O/H Line using 100 SQ.MM. XLPE covered -AAA Conductor.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Refurbishment of 3 CKM 11kV O/H Line using 100 SQ.MM. XLPE covered -AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.19		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Cicle :-		BBSR-2

Name of the Sub-Division : -		PURI-II
Name of the Section : -		Sunamuhin
Name of the Work :-		Proposal for Augmentation of 11kV Brahmagiri feeder 3 CKM by using 100 SQ.MM. AAA to enhance reliability.
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction 11kV 3Ph 3W O/H Line of Length= 3 CKM, with 40 Mtr. Span using 100 SQ.MM. -XLPE AAA Covered Conductor & 11 Mtr. H-Pole for Pin-Points and Cut-Points & 11 Mtr WPB Pole for DP.	92,98,729.19
2	PART B: Installation of 14Mtr H-pole for 11kV & 33kV Crossing.	11,28,869.72
3	PART C: Dismantling of Materials	1,48,151.64
4	PART D: Construction of 11kV Line Protecting Guarding on Single Pole for Road Crossing	60,874.38
6	**Total Gross**	**1,06,36,624.93**
Total estimated cost is Rs. 1.06 Cr.		

Cost Estimate: ₹ 1.06 Cr. (For detailed BoQ refer Annexure-12.19)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a. Compliance with electrical safety regulation for distribution system.

b. Reduction of electrocution risk and public safety hazards.

c. Safe operation and isolation of the feeder.

d. Protection of electrical assets against lightening and surge related failure.

e. Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 KV Brahmagiri Feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Reduce conductor snapping issue.
- ``The above arrangement will help to reliable power supply to consumers.

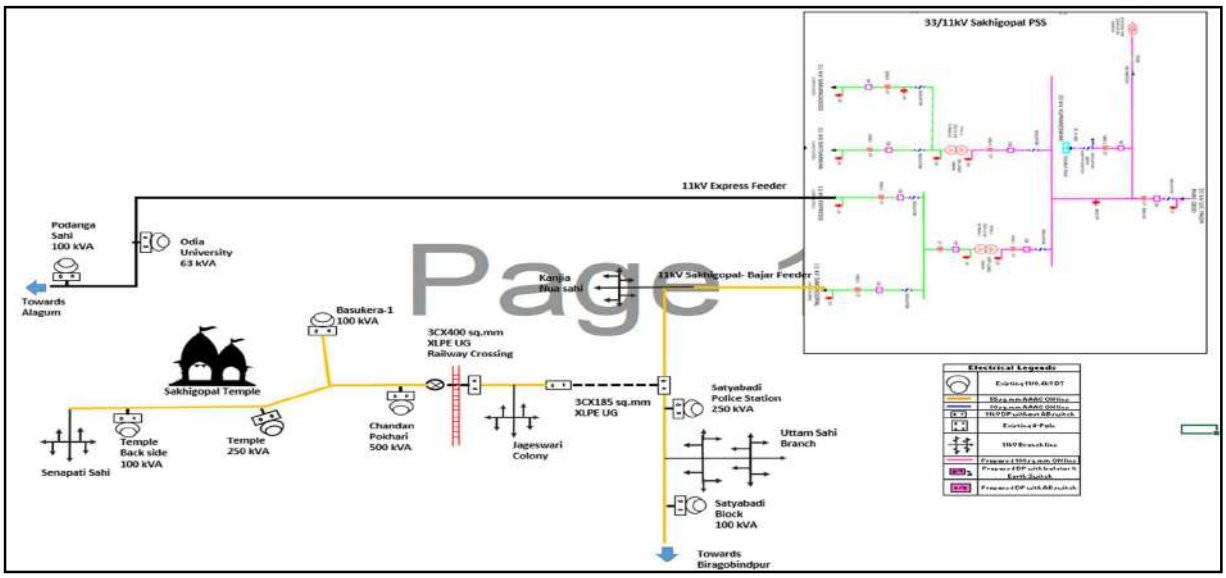
20.0 Proposal for Reliability improvement including overloading mitigation of 11kV Sakhigopal Bajar Feeder:

Proposal:

Proposal for refurbishment of existing Sakhigopal Bajar feeder to enhance reliability as well as to mitigate the overloading issue.

Requirement/ Need of the proposal:

Objective: To ensure reliability improvement by augmentation of the existing 11 KV Sakhigopal Bajar feeder.

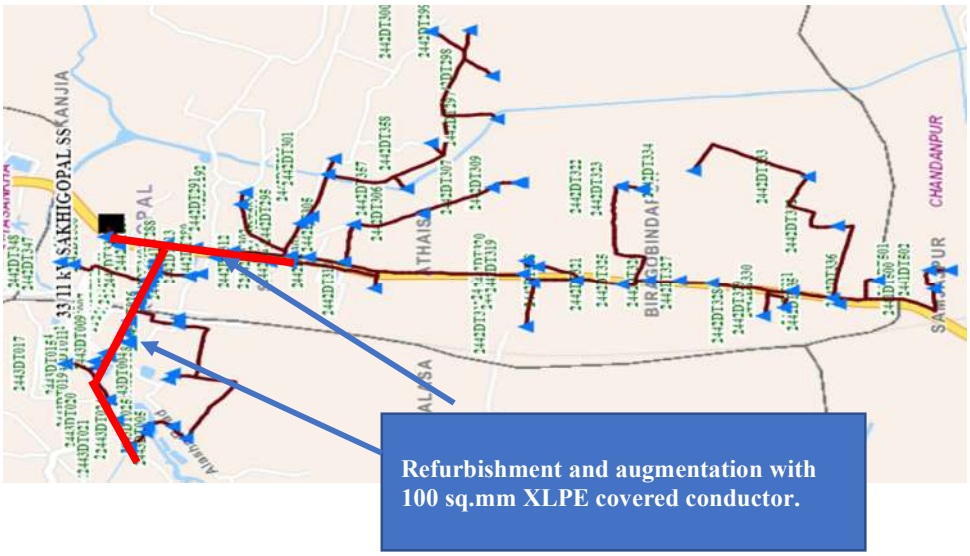


Existing Scenario:

- 11kV Sakhigopal Bajar feeder is emanating from 33/11kV Sakhigopal PSS. Total length of this feeder is 21.4 CKM and the peak load is 2.91 MVA.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- This feeder is completely feeding commercial & domestic consumers, several breakdowns on 11kV feeder is encountered which hampers the reliability of power supply and also considering future load growth of the residential building, bifurcation of this feeder is proposed to mitigate overloading issue.
- Frequent tripping is observed in the 11KV Sakhigopal Bajar feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

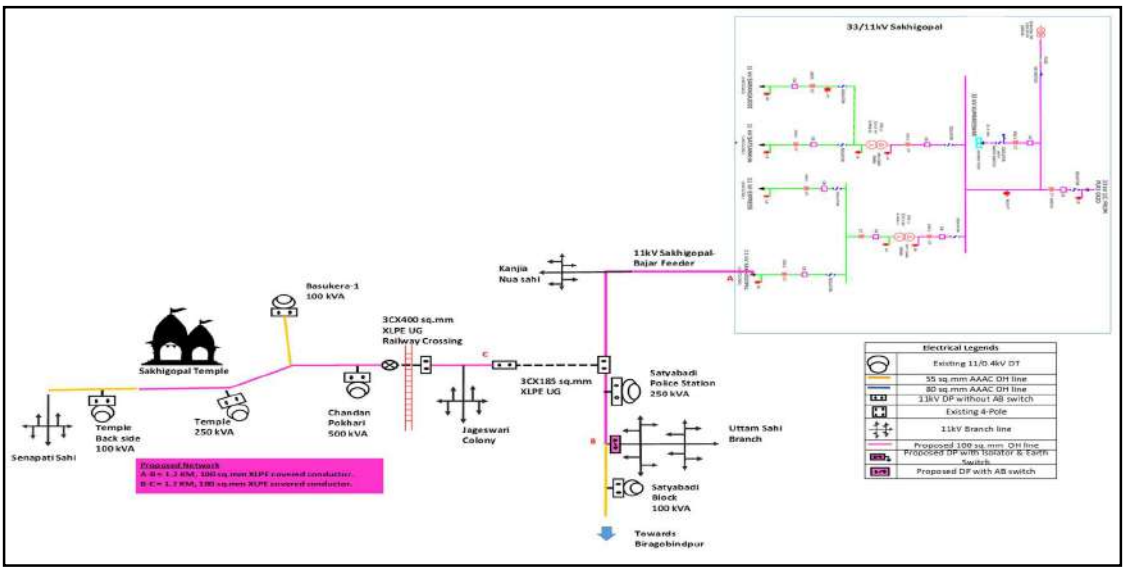
GIS Map:-

Existing SLD:



Priority of the Project:

Since the 11kV Sakhigopal Bajar feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 23nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

1. Augmentation of 2.9CKM of existing feeder using 100 sqmm XLPE covered AAAC.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

1. Augmentation of 2.9CKM of existing feeder using 100 sqmm XLPE covered AAAC.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.20		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Circle :-		BBSR-2
Name of the Division :-		PED
Name of the Sub-Division : -		Sakhigopal
Name of the Section : -		Sakhigopal-1 & 2
Name of the Work :-		Proposal for augmentation of the 11 kV Sakhigopal Bajar Feeder to enhance reliability including to mitigate the overloading issue.
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
2	PART A: Construction of one 11kV Out Going DP.	3,16,296.95
3	PART B: Construction of 11kV Line Length= 2.9 CKM with 40 Mtr. Span using 100 SQ.MM. -XLPE AAA Covered Conductor & 11 Mtr. H-Pole for Pin-Points and Cut-Points & 11 Mtr WPB Pole for DP	86,81,033.23
4	PART C : Dismantling of Materials	1,11,825.88
5	PART D: Construction of 11kV Line Protecting Guarding on Single Pole for Road Crossing	1,13,005.75
7	**Total Gross**	**92,22,161.81**
Total estimated cost is Rs. 0.92 Cr.		

Cost Estimate: ₹ 0.92 Crore (For detailed BoQ refer Annexure- 12.20)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

a. The proposal has been made to maintain essential compliances with statutory safety regulations

b. Compliance with electrical safety regulation for distribution system.

c. Reduction of electrocution risk and public safety hazards.

d. Safe operation and isolation of the feeder.

e. Protection of electrical assets against lightening and surge related failure.

f. Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

6. Improved Reliability as well as overloading mitigation.
7. Improved capability of Network by use of covered conductor, resulting into reduction in tripping on the feeder.
8. Reduction in tripping will ultimately improve improved useful life of Power-transformer upstream.
9. Consumers will get Quality & Reliable power supply with fever interruptions thereby improving their overall capability to use stable, quality & reliable power supply.
10. The above arrangement will help to release power supply to upcoming potential consumers.

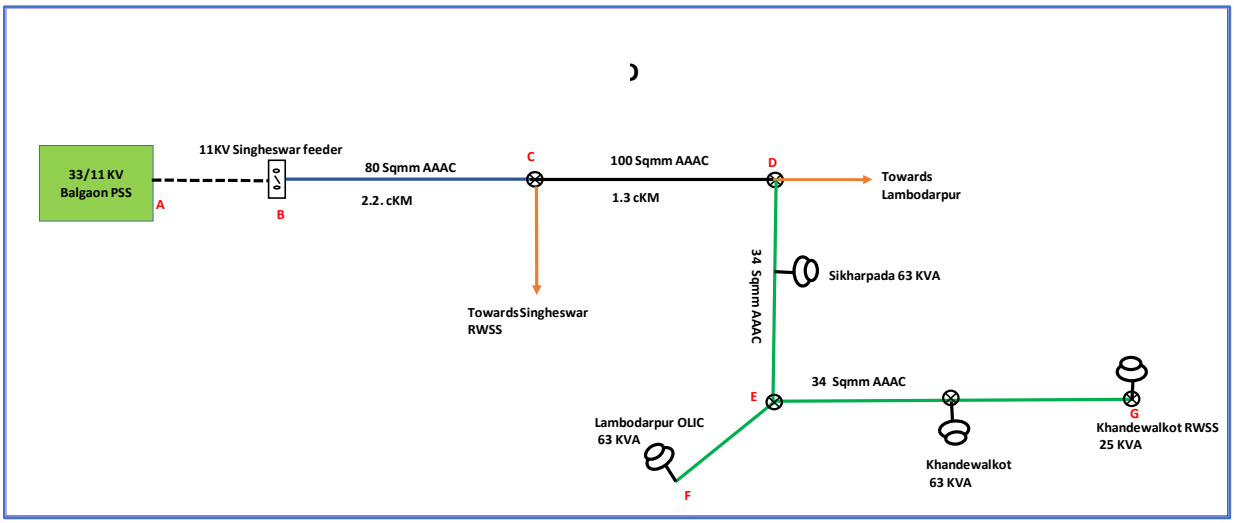
21.0 Proposal for Reliability improvement of 11kV Singheswar Feeder:

Proposal:

Proposal for refurbishment of existing 11 KV Sindheswar Feeder emanating from 33/11 KV Balugaon PSS for length-3.0 KM for reliability purpose.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Sindheswar Feeder.

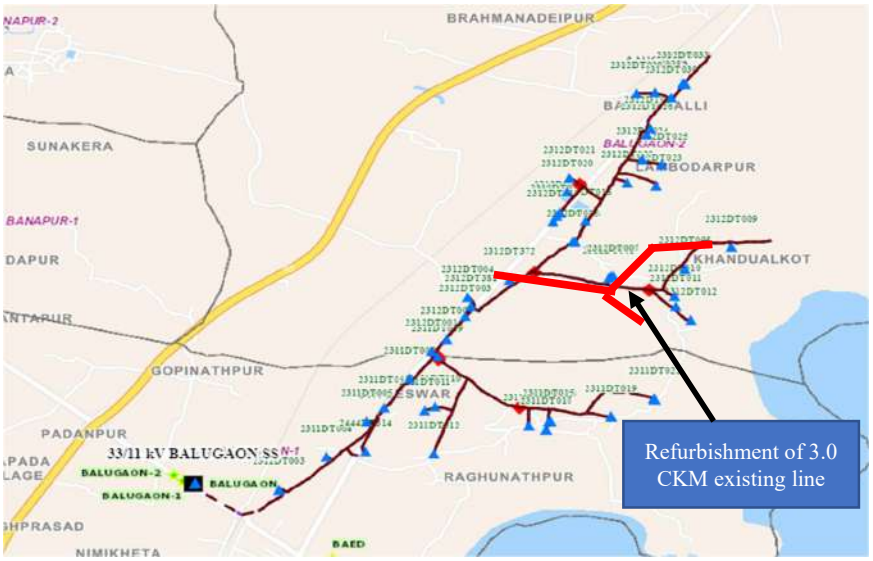


Existing Scenario:

- At present, 11kV Sindheswar feeder is emanating from 33/11kV Balugaon PSS. The total trunk length of 11kV Sindheswar is 14 km and peak load is 1.73 MVA.
- The conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Sindheswar feeder.
- At present frequent shutdowns are required for connecting feeder restoration

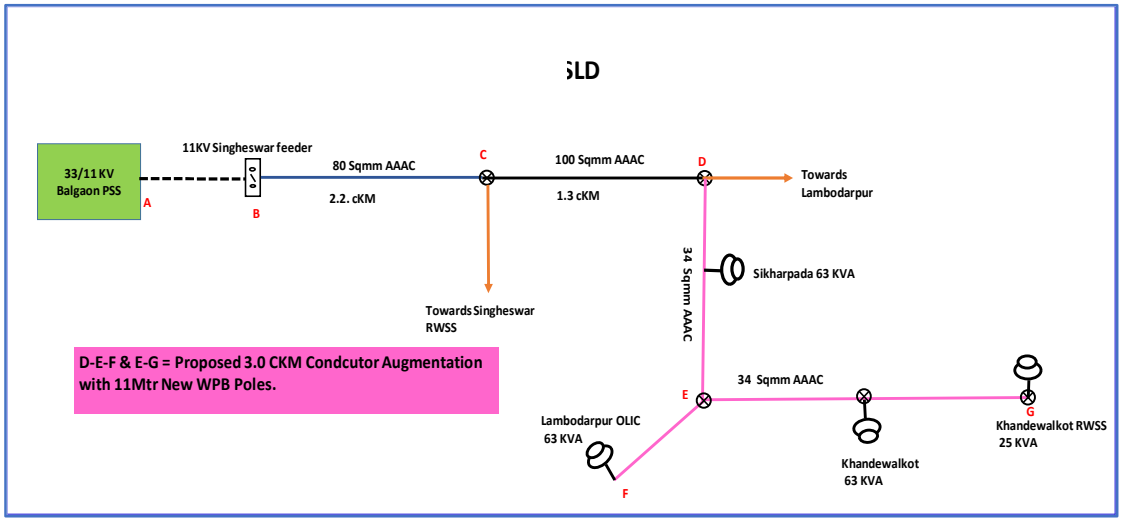
GIS MAP

Existing SLD:



Priority of the Project:

Since the 11Kv Sindheswar feeder caters to the RWSS points and is experiencing frequent interruptions due to feeder tripping, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping during the last year was 30nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Refurbishment of 3.0 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

GIS Map Proposed:

Proposed SLD:

Scope of Work:

- Refurbishment of 3.0 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.21	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division :-	BAED
Name of the Sub-Division : -	Balugaon
Name of the Section : -	Balugaon-1
11kV feeder name : -	11kV Singheswar feeder
Name of the Work :-	Proposal for augmentation of existing 11 KV Singheswar Feeder emanating from 33/11 KV Balugaon PSS to mitigate the reliability issues
Names of Schemes: -	**CAPEX 27-28**

Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	Part A: Augmentation of existing 11kV Line Length of 2.5 CKM with 40 Mtr. Span using 100 SQ.MM. -XLPE AAA Covered Conductor & 11 Mtr. H-Pole for Pin-Points and Cut-Points & 11 Mtr WPB Pole for DP	49,69,062.47
2	Part B: Dismantling of Materials	85,213.70
3	**Total Gross**	**50,54,276.17**
Total estimated cost is Rs. 0.51 Cr. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 0.51 Cr. (For detailed BoQ refer Annexure-12.21)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a. Compliance with electrical safety regulation for distribution system.
b. Reduction of electrocution risk and public safety hazards.
c. Safe operation and isolation of the feeder.
d. Protection of electrical assets against lightening and surge related failure.
e. Improvement in operational safety for maintenance personnel and public.

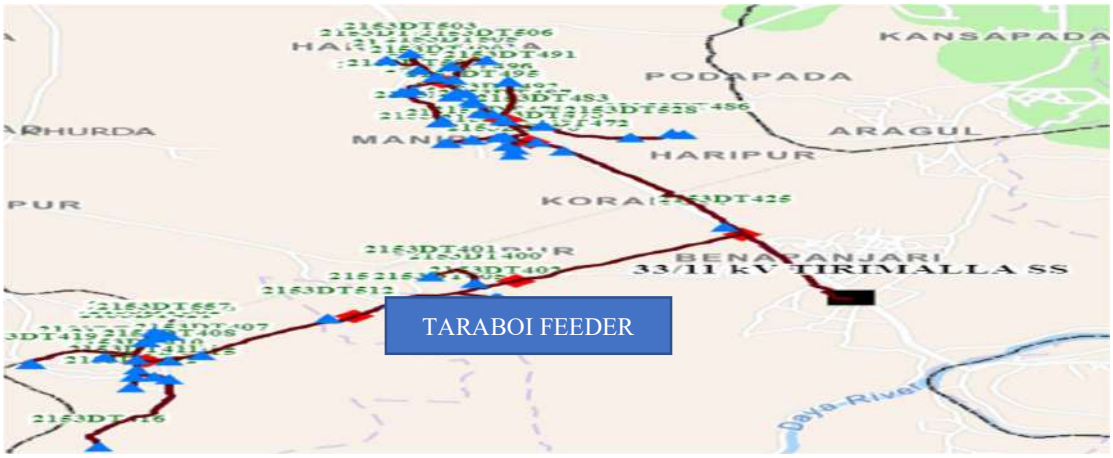
Benefit to the system and consumers:

- Reliability will be improved for 11 KV Singheswar Feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Reduce conductor snapping issue.
- The above arrangement will help to reliable power supply to consumers.

22.0 Proposal for Reliability improvement of 11kV Taraboi Feeder:

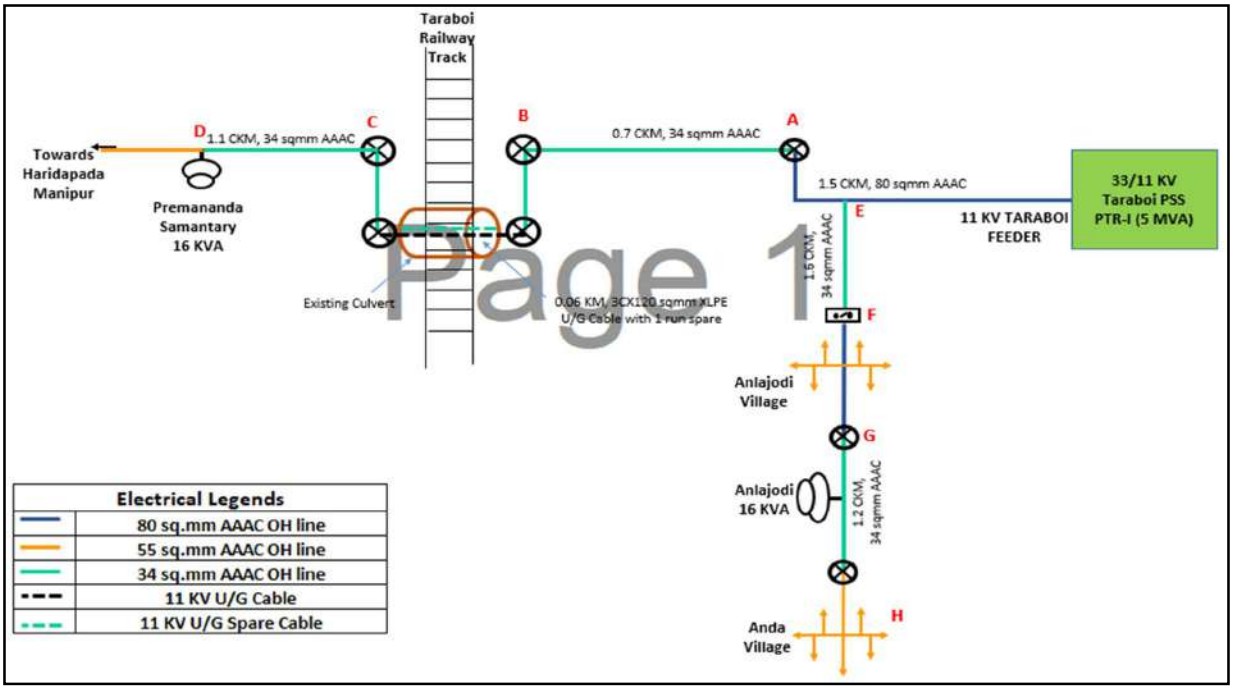
Proposal:

Proposal for refurbishment of existing 11 KV Tararboi Feeder emanating from 33/11 KV Tirimal PSS for length-3.4KM for reliability purpose.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Taraboi Feeder.

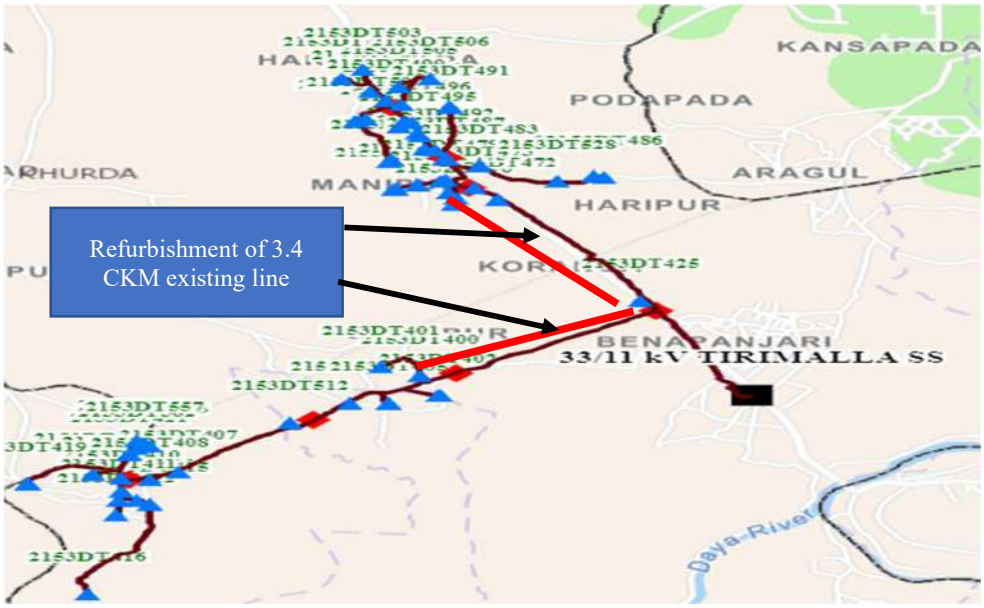


Existing Scenario:

- At present, 11kV Taraboi feeder is emanating from 33/11kV Tirimal PSS. The total trunk length of 11kV Taraboi is 20.6 km and peak load is 2.07 MVA.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Taraboi feeder.
- At present frequent shutdowns are required for connecting feeder restoration

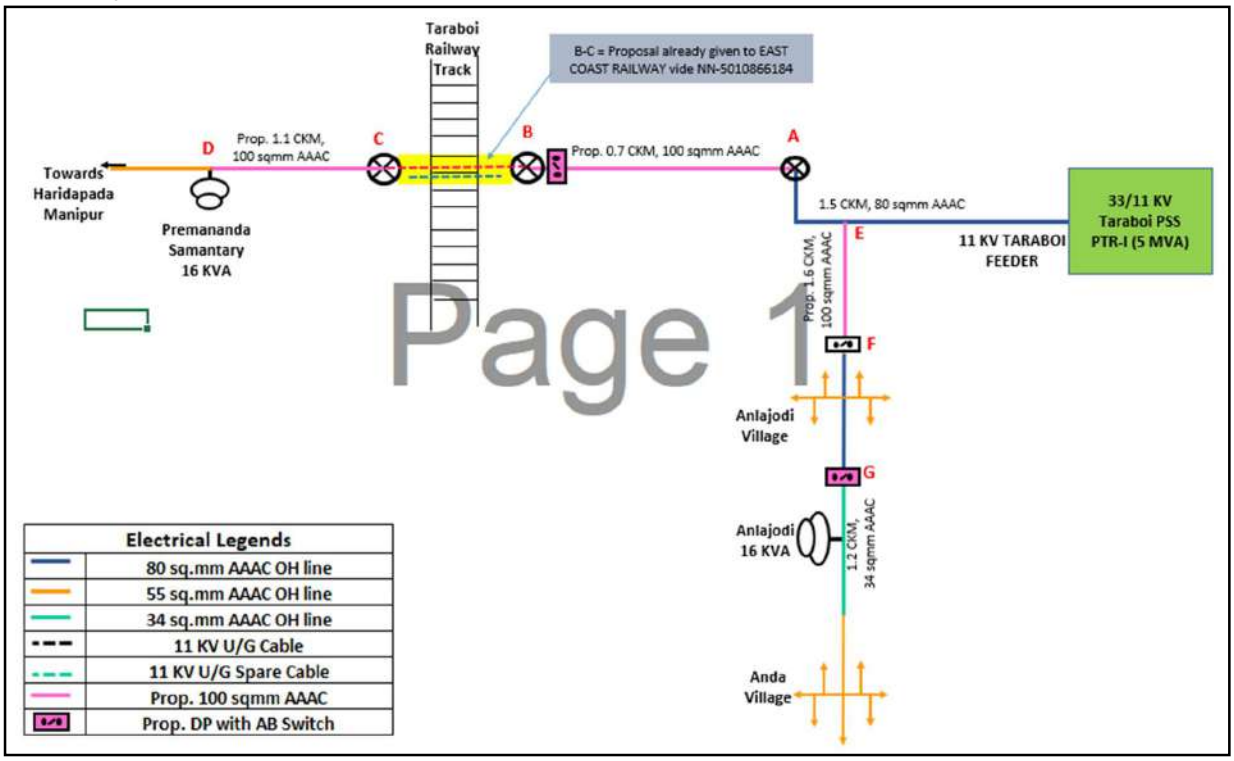
GIS MAP

Existing SLD:



Priority of the Project:

Since the 11kV Taraboi feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 195nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Refurbishment of 3.4 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

GIS Map Proposed:

Proposed SLD:

Page 1

Scope of Work:

- Refurbishment of 3.4 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.22		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-		KHD
Name of the Sub-Division : -		Khordha
Name of the Section : -		Khordha 3
11kV feeder name : -		11kV Taraboi feeder
Name of the Work :-		Proposal for refurbishment of existing 11 KV Taraboi Feeder emanating from 33/11 KV Tirimal PSS to mitigate the frequent conductor snapping.
Names of Schemes: -		**CAPEX 27-28**
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Augmentation of 3.4 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor. (Refer PSLD point A-B, C-D, E-F & G-H)	48,66,130.26
2	PART B: Dismantling of Materials	1,42,510.15
4	**Total Gross**	**50,08,640.40**

Cost Estimate: ₹ 0.50 Cr. (For detailed BoQ refer Annexure-12.22)

i) All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026.

ii) For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 KV Taraboi Feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Reduce conductor snapping issue.
- The above arrangement will help to reliable power supply to consumers.

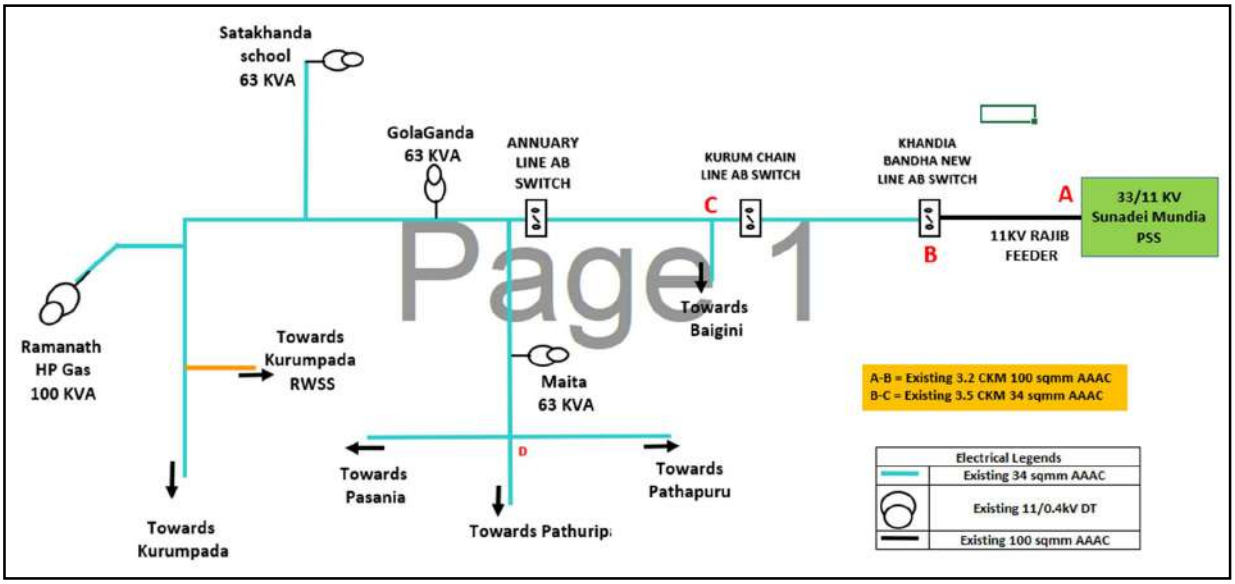
23.0 Proposal for Reliability improvement of 11kV Rajiba Feeder:

Proposal:

Proposal for refurbishment of existing 11 KV Rajiba Feeder emanating from 33/11 KV Sunadeimundia PSS for length-3.5KM for reliability purpose.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Rajiba Feeder.

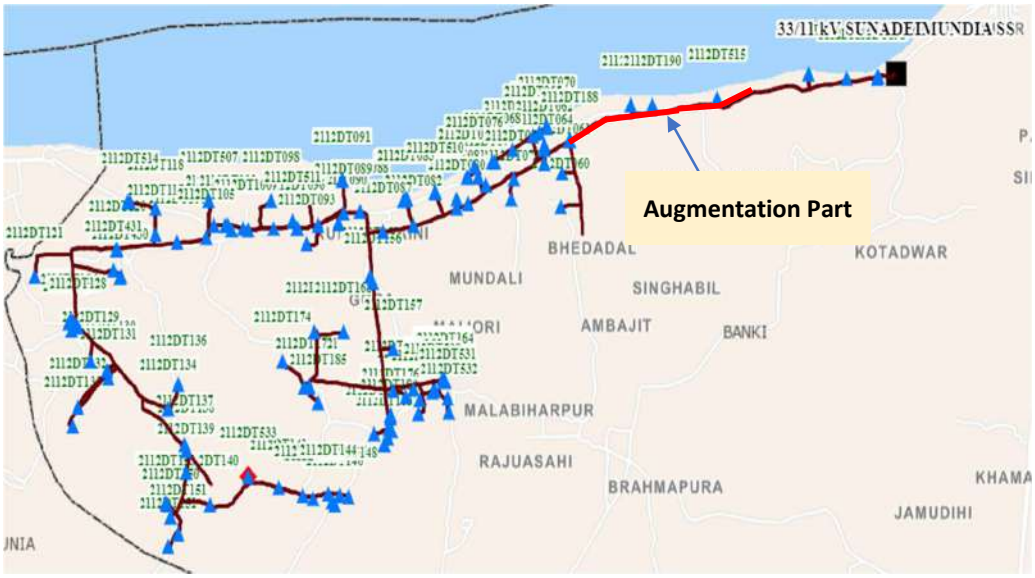


Existing Scenario:

- At present, 11kV Rajiba feeder is emanating from 33/11kV Sunadeimundia PSS. The total trunk length of 11kV Rajib is 41.8 km and peak load is 2.05 MVA.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Rajiba feeder.
- At present frequent shutdowns are required for connecting feeder restoration

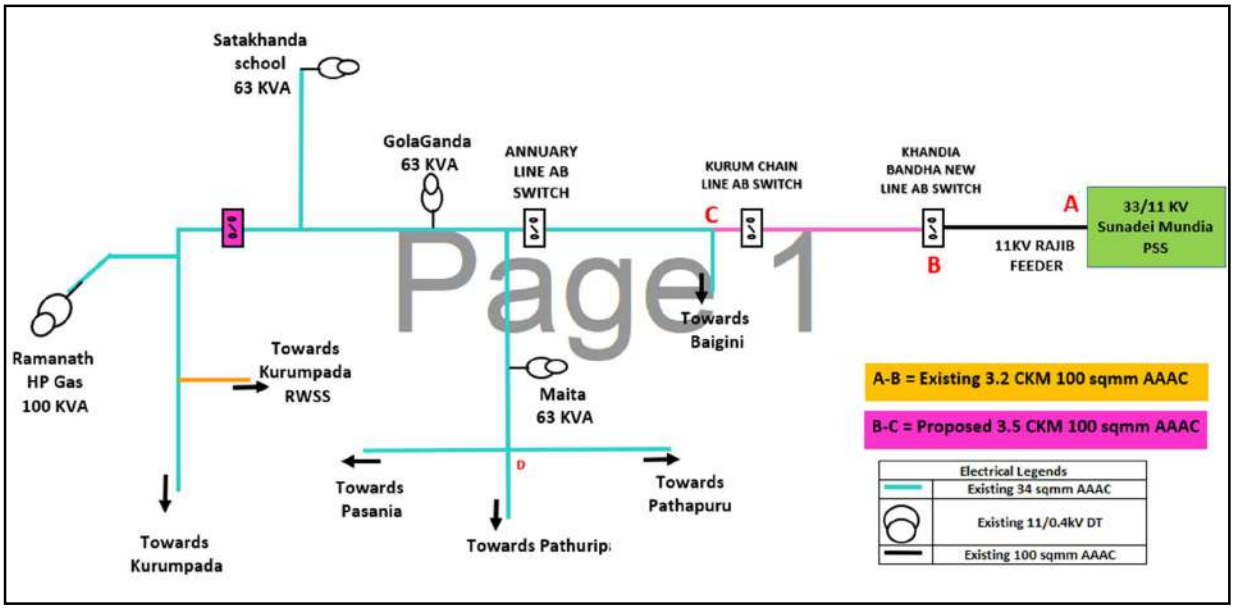
GIS MAP

Existing SLD:



Priority of the Project:

Since the 11kV Rajiba feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 137nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Refurbishment of 3.5 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Refurbishment of 3.5 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.23	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division :-	KHD
Name of the Sub-Division : -	BANKI
Name of the Section : -	Banki-III

Name of the Work :-	Proposal for Augmentation of 11kV Rajiba Feeder 3.5 CKM by using 100 SQ.MM. AAA to improve reliability .
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)

Abstract of Estimate

Sl. No.	Description	Gross
1	PART A: Augmentation of 3.5 CKM 11kV O/H Line using 100 SQ.MM. -AAA Conductor. (Refer PSLD point B-C)	48,95,497.18
2	PART B: Dismantling of Materials	1,38,546.75
3	**Total Gross**	**50,34,043.93**

Cost Estimate: ₹ 0.50 Cr. (For detailed BoQ refer Annexure-12.23)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

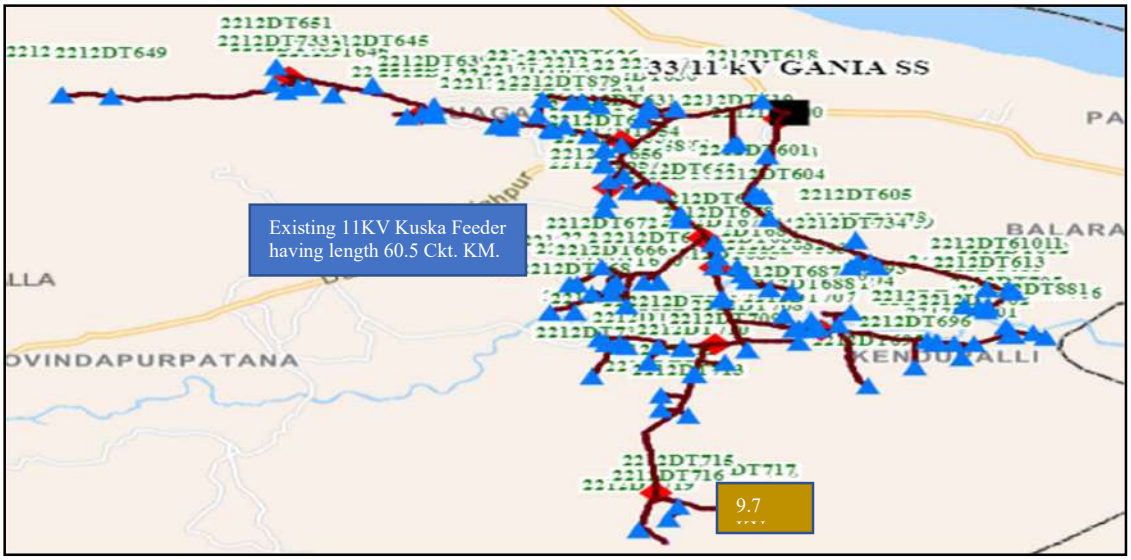
Benefit to the system and consumers:

- Reliability will be improved for 11 KV Rajiba Feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Reduce conductor snapping issue.
- ``The above arrangement will help to reliable power supply to consumers.

24.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Kuska Feeder:

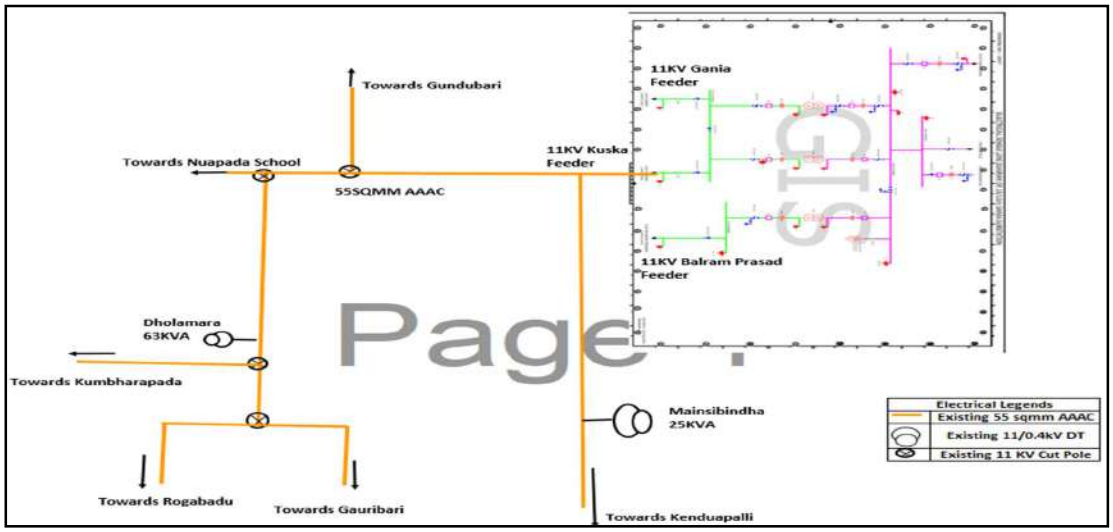
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Kuska feeder.



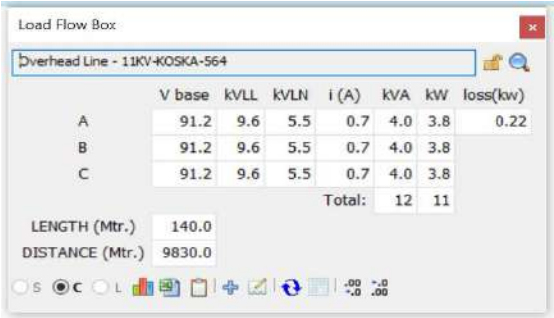
Requirement/ Need of the proposal:

Objective: Reliability improvement and Length reduction of 11kV Kuska Feeder.



Existing Scenario:

- At present, 11kV Kuska feeder is emanating from 33/11kV Gania PSS having a feeder length of 60.5 Ckt. KM and tail end voltage is 9.7 KV.
- Entire 11kV Kuska Fdr is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.



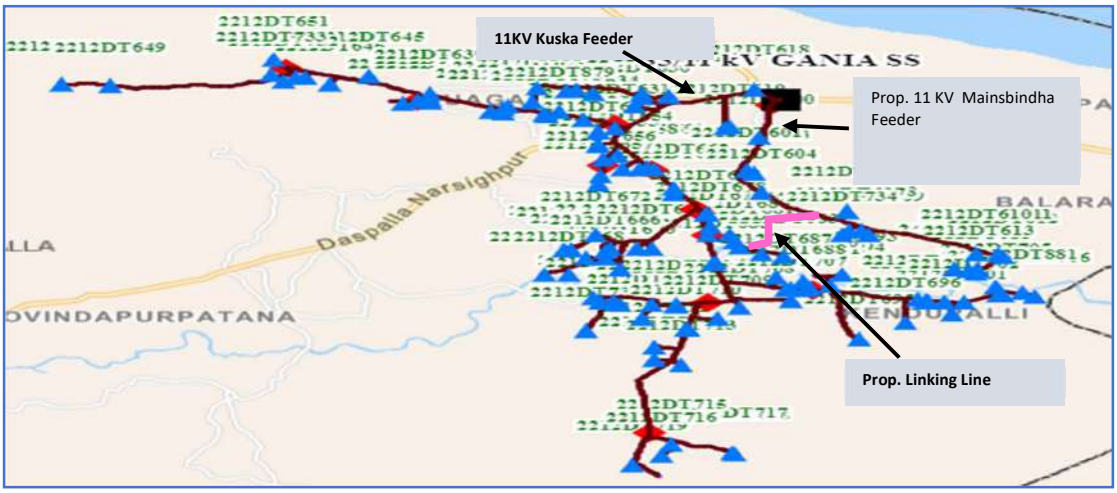
GIS SLD:

Existing SLD:

Tail end Voltage in existing scenario through load flow with 2 year load growth:

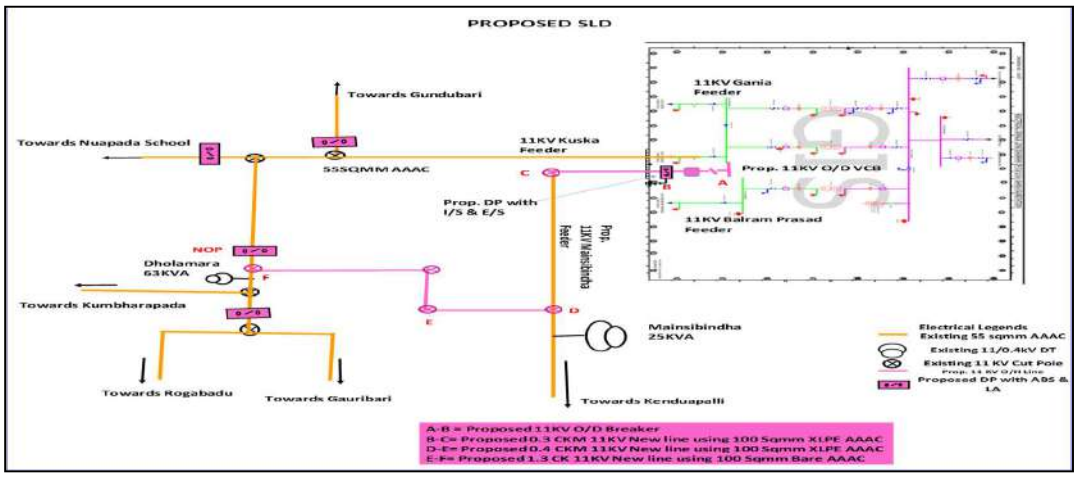
Priority and Timeline of the Project:

Priority: The existing 11kV Kuska feeder has a length of 60.5Ckm in the AS-IS scenario, resulting in a tail-end voltage of 9.7kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 9.6kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



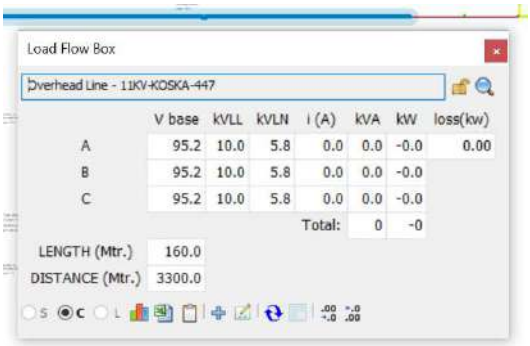
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 9.7. The voltage regulation of the feeder is not within permissible limits.

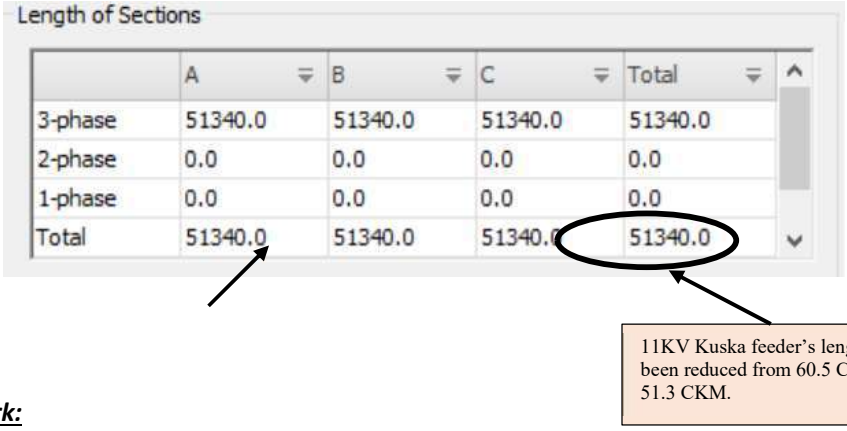


Proposed Scenario:

- It is proposed for Construction of One No of 11 KV Line Bay (Outdoor) at 33/11 KV Gania PSS for bifurcation of existing 11kV feeder.
- For interlinking it is proposed to construct 1.3 CKM 11 kV line using 100 Sq.mm. AAA Conductor.
- Due to heavy vegetation 0.7 Ckm 11 kV line proposed using 100 Sq.mm. XLPE covered AAA Conductor.



GIS SLD:



Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

Scope of Work:

- Construction of One No of 11 KV Line Bay (Outdoor) at 33/11 KV Gania PSS.
- 1.3 CKM 11 kV line proposed using 100 Sq.mm. AAA Conductor.
- 0.7 CKM 11 kV line proposed using 100 Sq.mm. XLPE covered AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.24		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-		NYED
Name of the Sub-Division :-		Daspalla
Name of the Section : -		Gania
Name of the Work :-		Proposal for construction of a new 11 KV Feeder from 33/11 KV Gania PSS and interlink with existing 11kV Kuska Feeder to bifurcate the length of the 11 KV Kuska Feeder.
Names of Schemes: -		TPCODL CAPEX (FY 2027-28)
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	Part A: Construction of One No of 11 KV Line Bay (Outdoor)	20,47,132.35
2	Part A: Construction of 11KV new Line length of 1.3 CKM using 100 SQMM AAAC and 11 mtr WPB Pole.	26,97,974.37
3	Part B: Construction of 11KV new Line length of 0.7 CKM using 100 SQMM XLPE covered AAAC and 11 mtr WPB Pole	12,88,203.89
3	**Total Gross**	**60,33,310.61**
Total estimated cost is Rs. 0.60 Cr. (On TPCODL CAPEX Scheme)		

Cost Estimate: ₹ 0.60 Cr. (For detailed BoQ refer Annexure-12.24)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a. Compliance with electrical safety regulation for distribution system.
b. Compliance with the guidelines of voltage regulation in the distribution network.
c. Reduction of electrocution risk and public safety hazards.
d. Safe operation and isolation of the feeder.
e. Protection of electrical assets against lightening and surge related failure.
f. Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

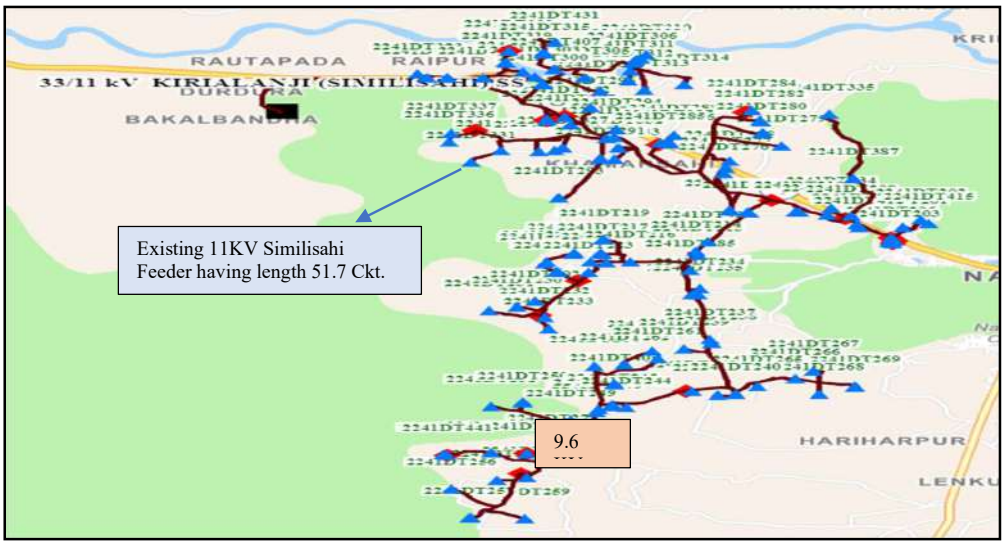
- 11KV Kuska feeder length reduced from 60.5 CKM to 35.5 CKM
- 11KV Kuska feeder's tail end voltage improved from 9.7 KV to 10.0 KV.

- Ring connectivity is established between 11KV Kuska feeder with 11KV New Feeder which will be helpful for power supply restorations during breakdown and maintenance works.

25.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Similisahi Feeder:

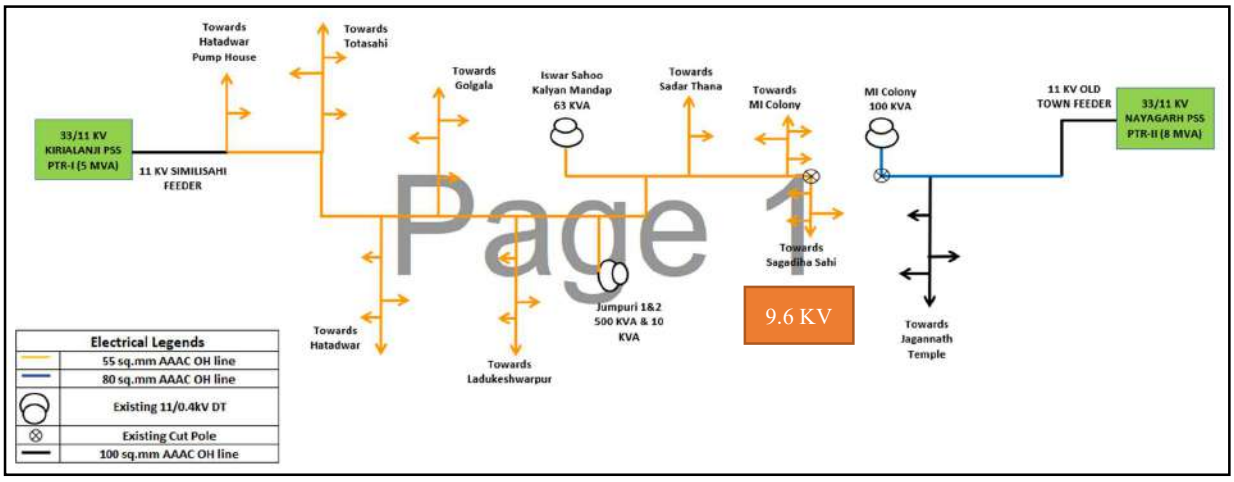
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Similisahi feeder and reliability improvement.



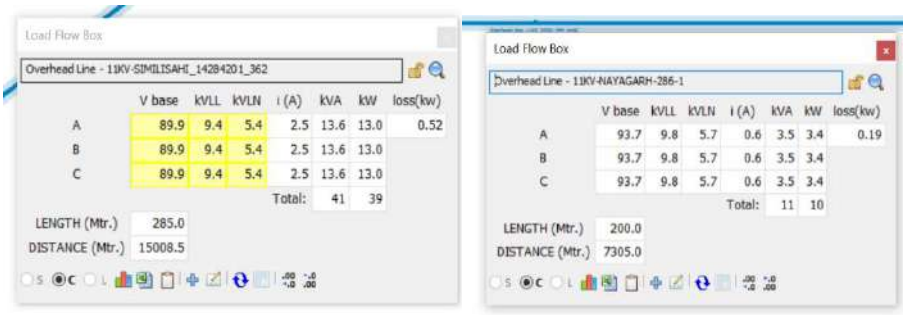
Requirement/ Need of the proposal:

Objective: Reliability improvement and Length reduction of 11kV Similisahi Feeder.



Existing Scenario:

- At present, 11kV Similisahi feeder is emanating from 33/11kV Kirialanji PSS having a feeder length of 51.7 Ckt. KM and tail end voltage is 9.6 KV.
- Entire 11kV Similisahi Fdr is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.



GIS SLD:

Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 0.04 CKM 11kV O/H Line using 100 SQ.MM. - AAA Conductor. (Refer PSLD point A-B)	4,31,129.50
4	**Total Gross**	**4,31,129.50**
Total estimated cost is Rs. 0.04 Cr.		

Cost Estimate: ₹ 0.04 Cr. (For detailed BoQ refer Annexure-12.25)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

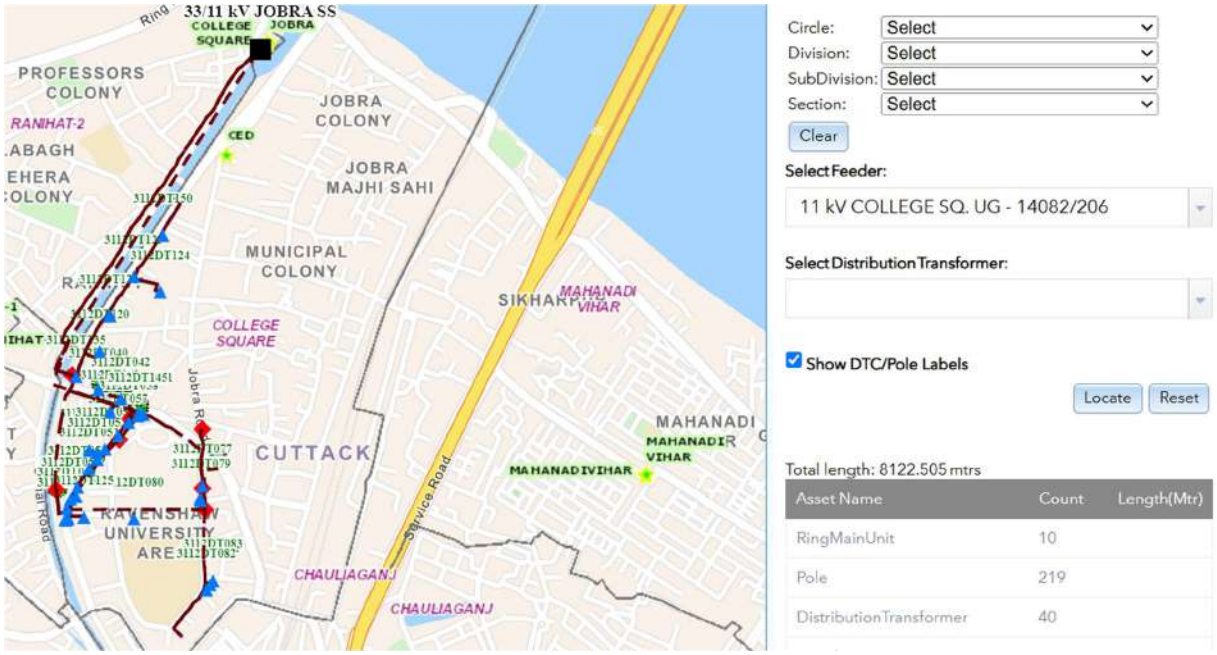
Benefit to the system and consumers:

- 11KV Similisahi feeder length reduced from 51.7 CKM to 43.2 CKM
- 11KV Similisahi feeder's tail end voltage improved from 9.4 KV to 9.5 KV.
- Ring connectivity is established between 11KV Similisahi feeder with 11KV Old Town Feeder which will be helpful for power supply restorations during breakdown and maintenance works.

26.0 Proposal for Reliability improvement of 11kV Collage square ug Feeder:

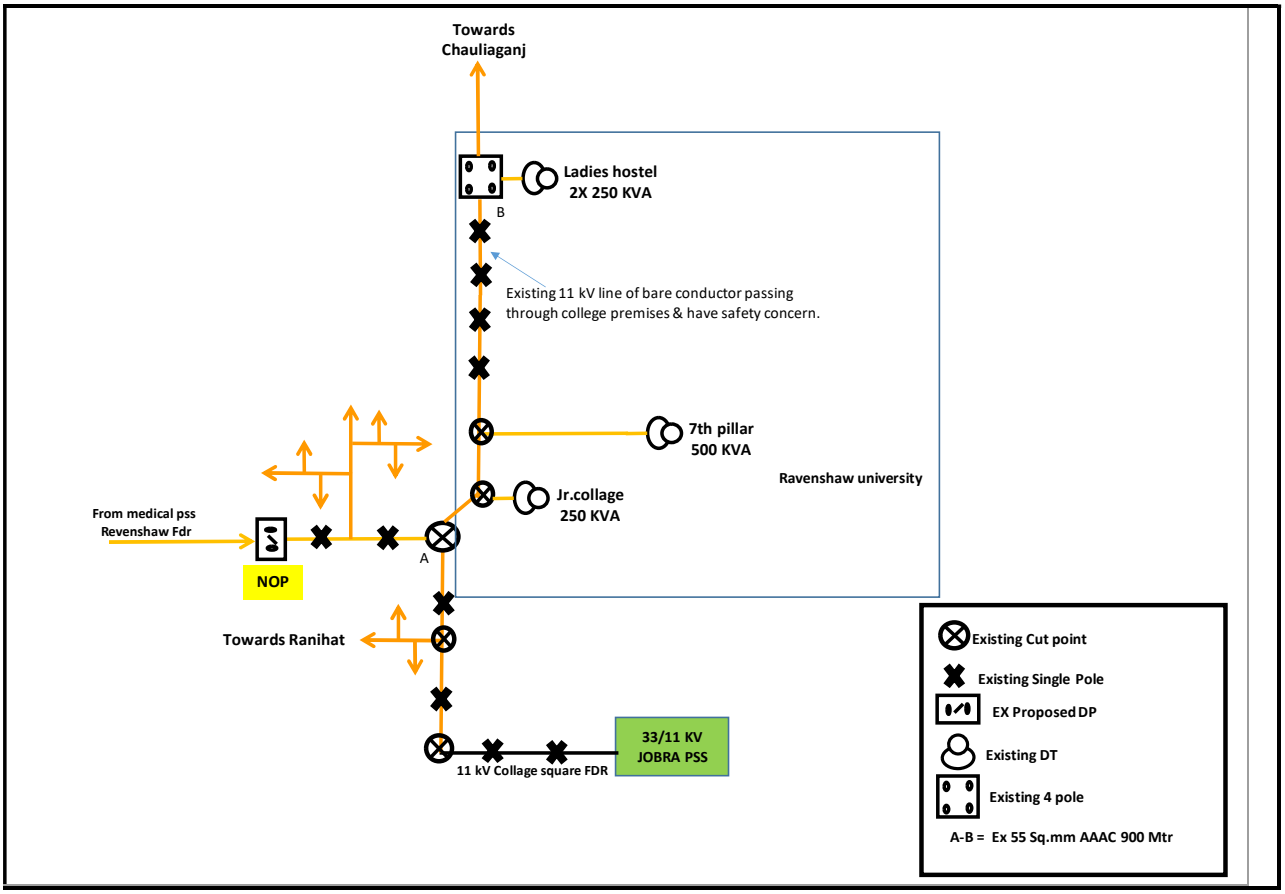
Proposal:

Proposal for refurbishment of 1 CKM O/H line of 11 kV collage square ug Fdr.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV collage square ug Feeder.

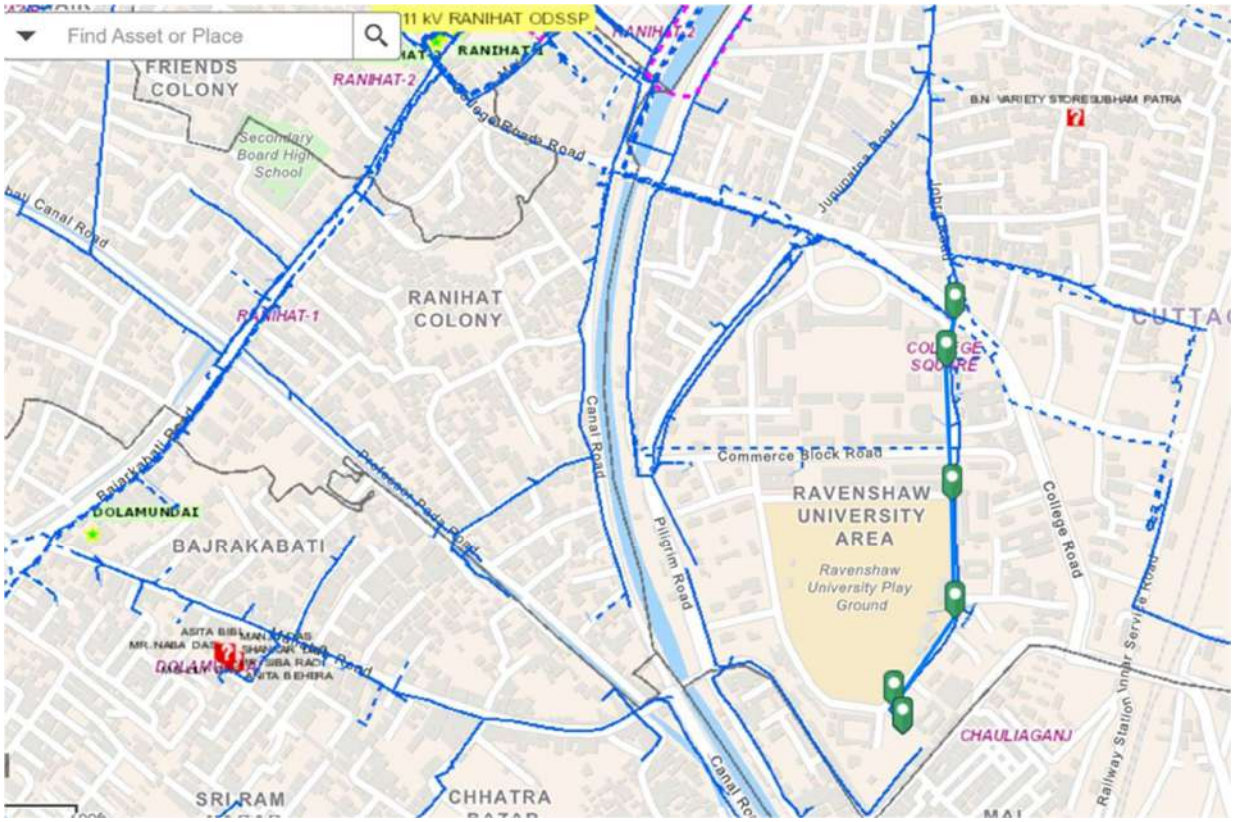


Existing Scenario:

- At present, collage square ug feeder is emanating from 33/11kV Jobra PSS. The total trunk length of 11kV choudwar local Fdr is 8.12 km and peak load is 2.6 MVA.
- The trunk conductor size of feeder is 100 sq.mm AAAC and it supplies to several rural and sub urban consumers.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV collage square ug feeder
- At present frequent shutdowns are required for connecting feeder restoration

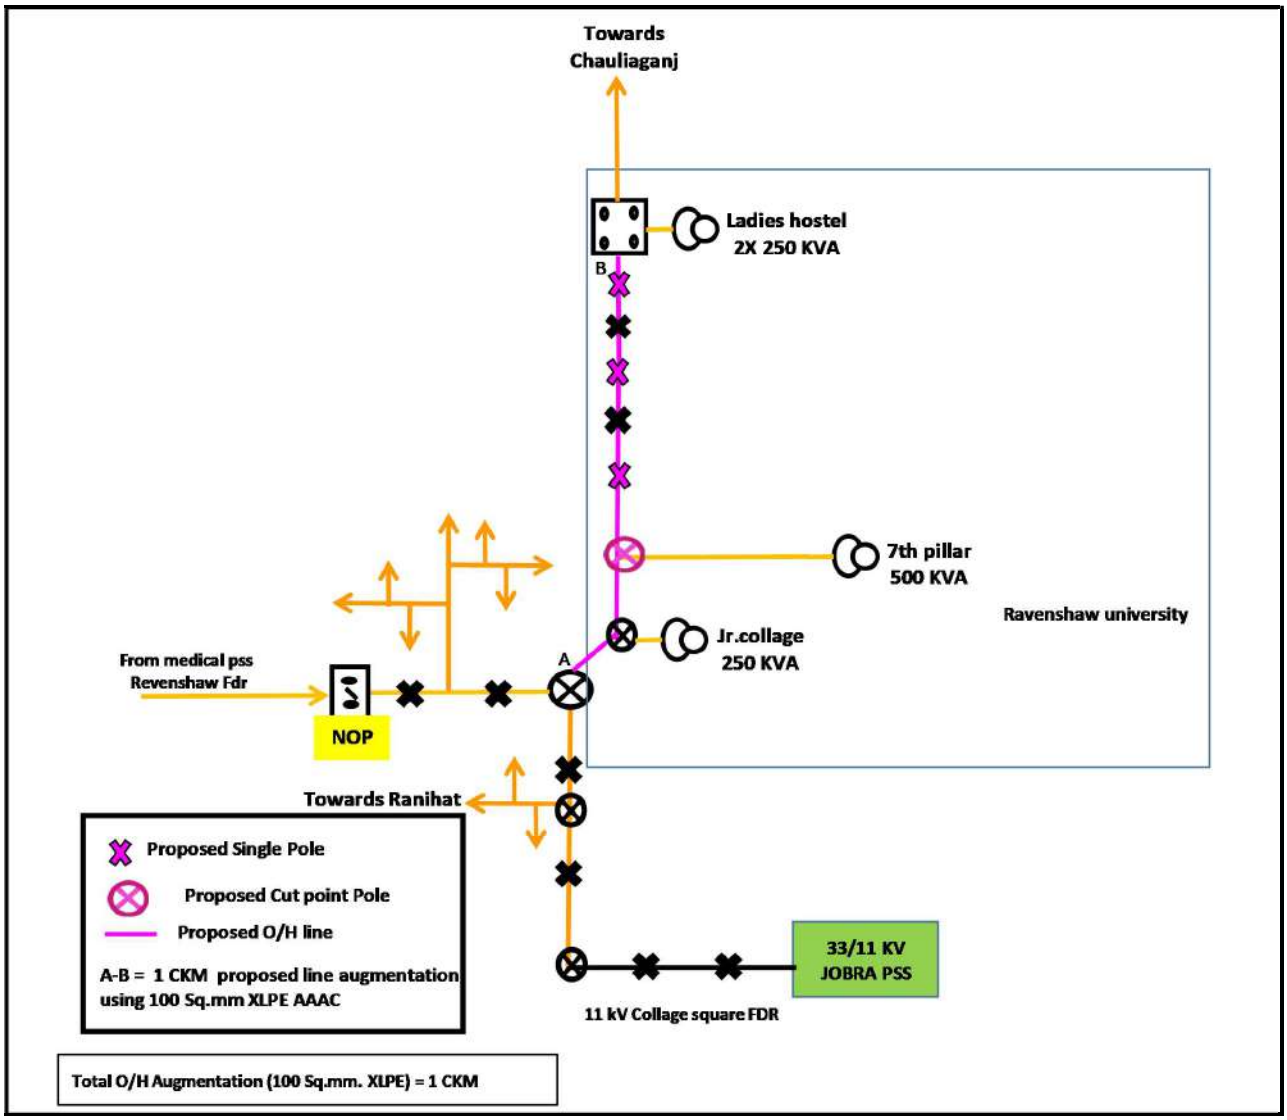
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV collage square ug feeder caters to a critical Government of Odisha organization and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 24 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Proposal for refurbishment of 1 CKM O/H line of 11 kV collage square Fdr.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction New Line of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAA Conductor (Refer PSLD C-D)

Names of Schemes: -	TPCODL CAPEX (FY 27-28)	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction New Line of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAA Conductor (Refer PSLD C-D)	12,24,651.09
2	Part B: Dismantling	22,525.02
	Total Amount	**12,47,176.11**
	Total Amount (In Cr.)	**0.12**
Total estimated cost is Rs. 0.12 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.12 Crore (For detailed BoQ refer Annexure- 12.26)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

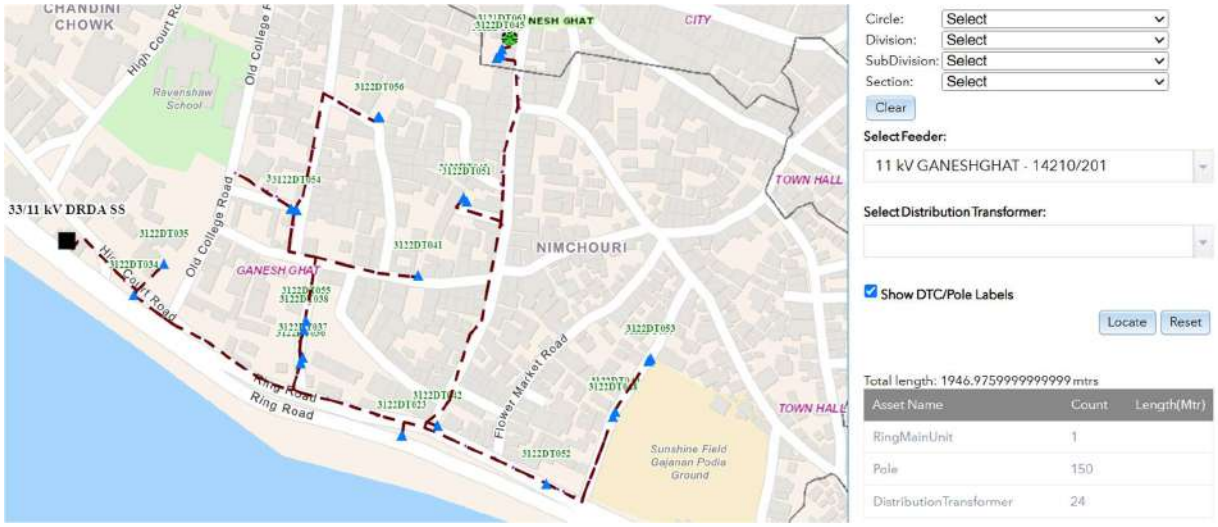
Benefit to the system and consumers:

- Reliability will be improved for 11 kV collage square UG feeder .
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

27.0 Proposal for Reliability improvement of 11kV Ganeshghat Feeder:

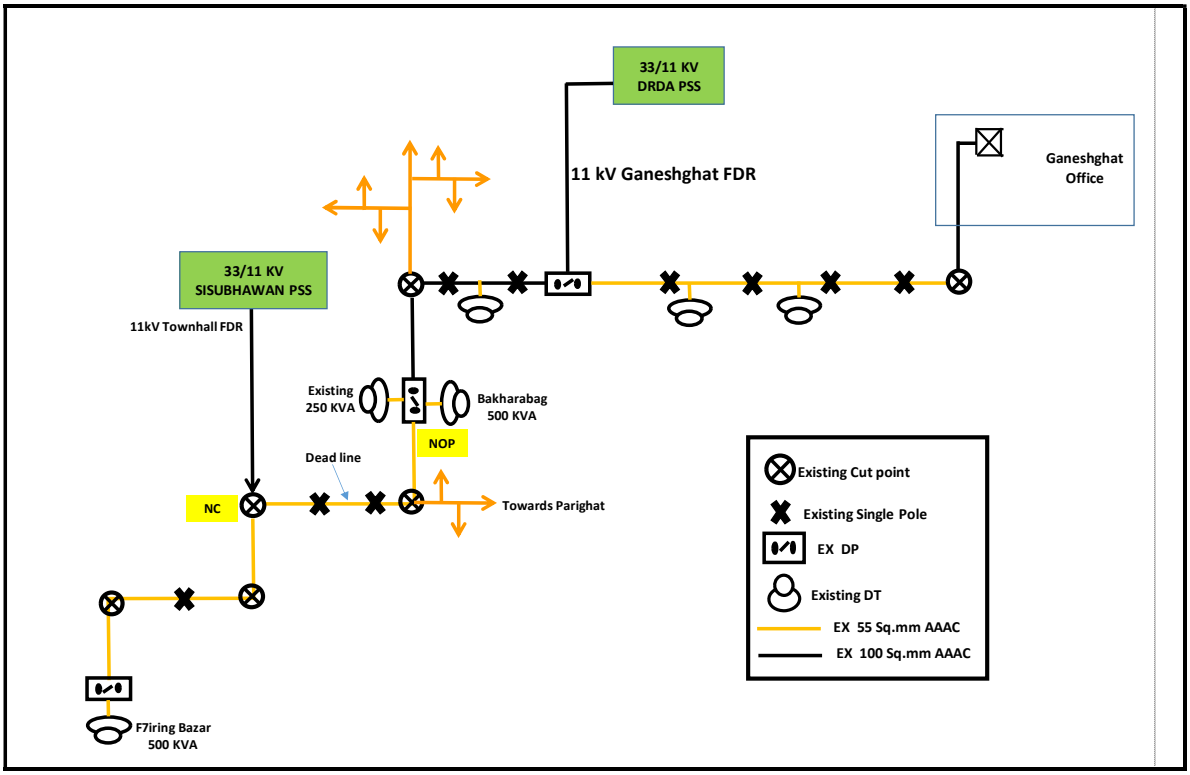
Proposal:

proposal for refurbishment of1 .4 CKM O/H line of 11 kV ganeshghat Fdr



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Ganeshghat Feeder.

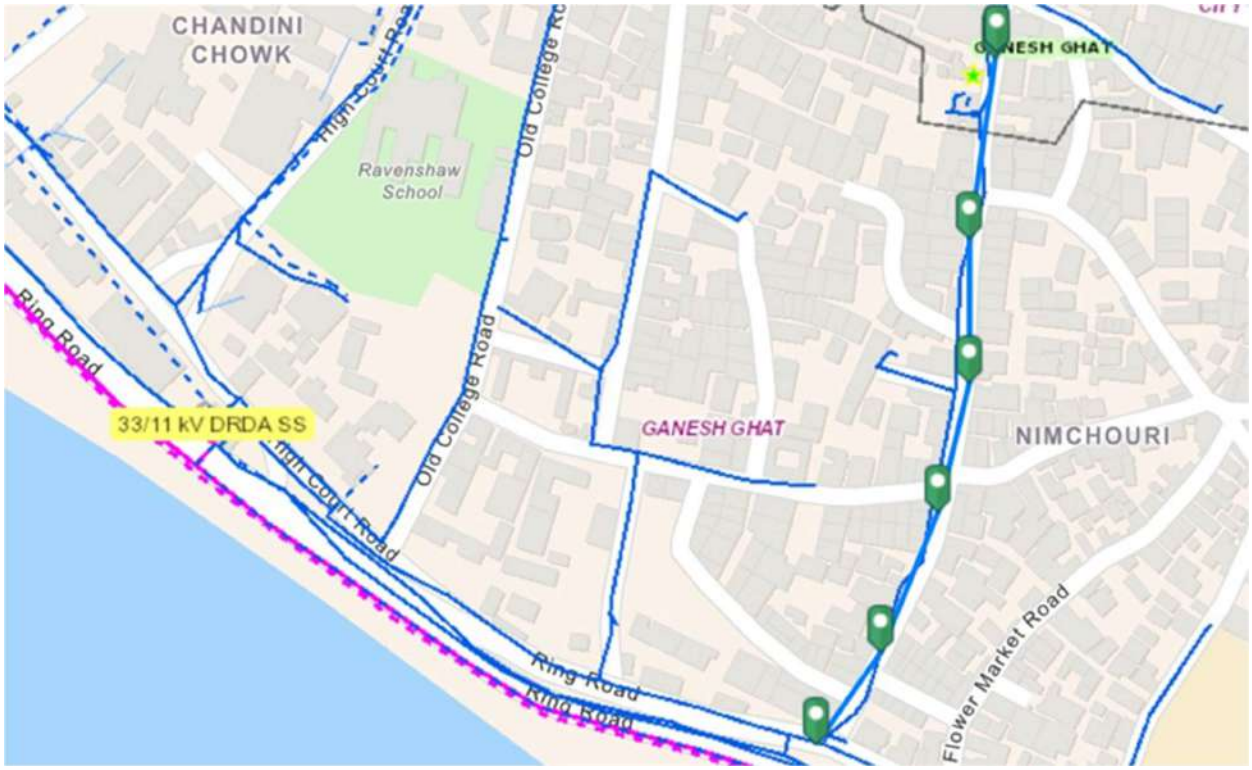


Existing Scenario:

- At present, Ganeshghat feeder is emanating from 33/11kV DRDA PSS. The total trunk length of 11kV Ganeshghat Fdr is 1.94 km and peak load is 2.6 MVA.
- The trunk conductor size of feeder is 100 sq.mm AAAC and it supplies to several rural and sub urban consumers.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Ganeshghat feeder
- At present frequent shutdowns are required for connecting feeder restoration

GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Ganeshghat feeder caters to a critical Government of Odisha organization and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 42 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Proposed Scenario:

Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Augmentation of 1.4 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 100 Sq.mm. XLPE AAAC (Refer PSLD A-B & C-D)	18,72,334.20
2	Part B: Dismantling	35,038.92
	Total Amount	**19,07,373.12**

	Total Amount (In Cr.)	**0.19**
Total estimated cost is Rs. 0.19 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.19 Crore (For detailed BoQ refer Annexure- 12.27)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 kV Ganeshghat feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

28.0 Proposal for Reliability improvement of 11kV AIR Feeder:

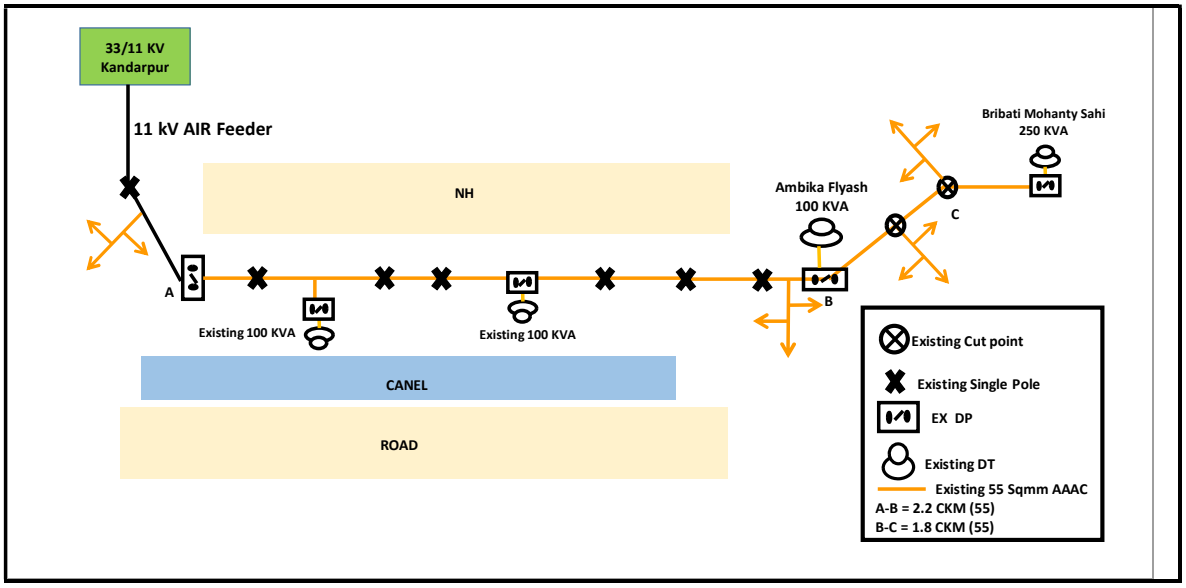
Proposal:

Proposal for refurbishment of 1.8 CKM O/H line of 11 kV AIR Fdr. along with construction of 2.26 CKM new line for reliability improvement & safety issue mitigation

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV AIR Feeder.

Existing Scenario:



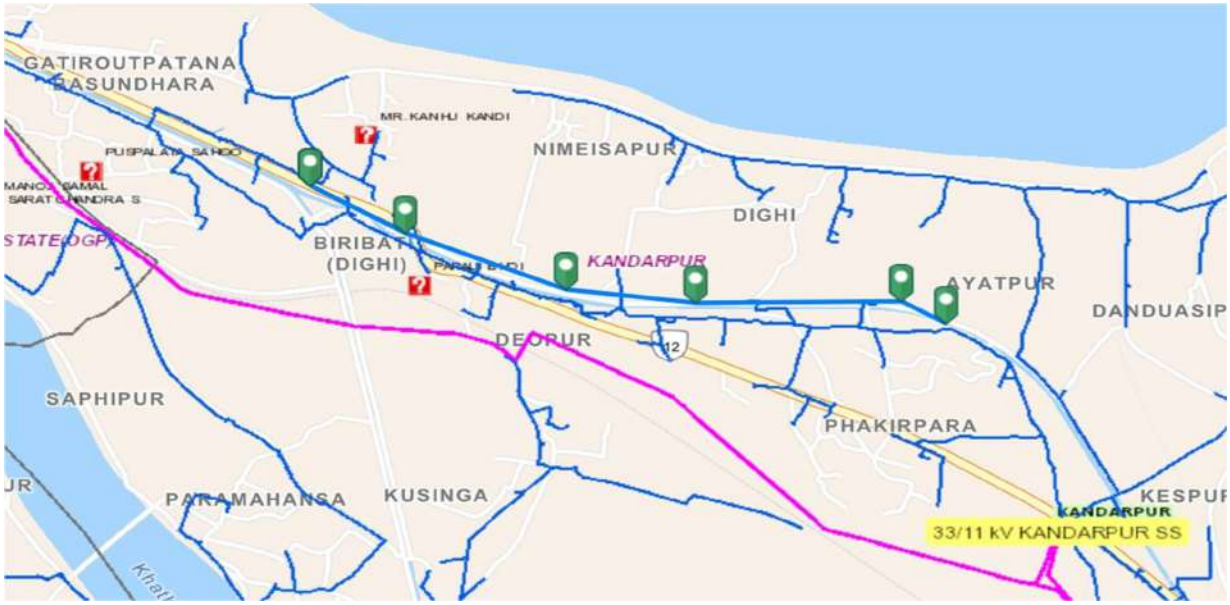
- At present, 11kV AIR feeder is emanating from 33/11kV Kandarpur PSS. The total trunk length of 11kV AIR Fdr is 20.69 km and peak load is 2.8 MVA.
- The trunk conductor size of feeder is 100 sq.mm AAAC and it supplies to several rural and sub urban consumers.

- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV ARI feeder
- At present frequent shutdowns are required for connecting feeder restoration

GIS MAP

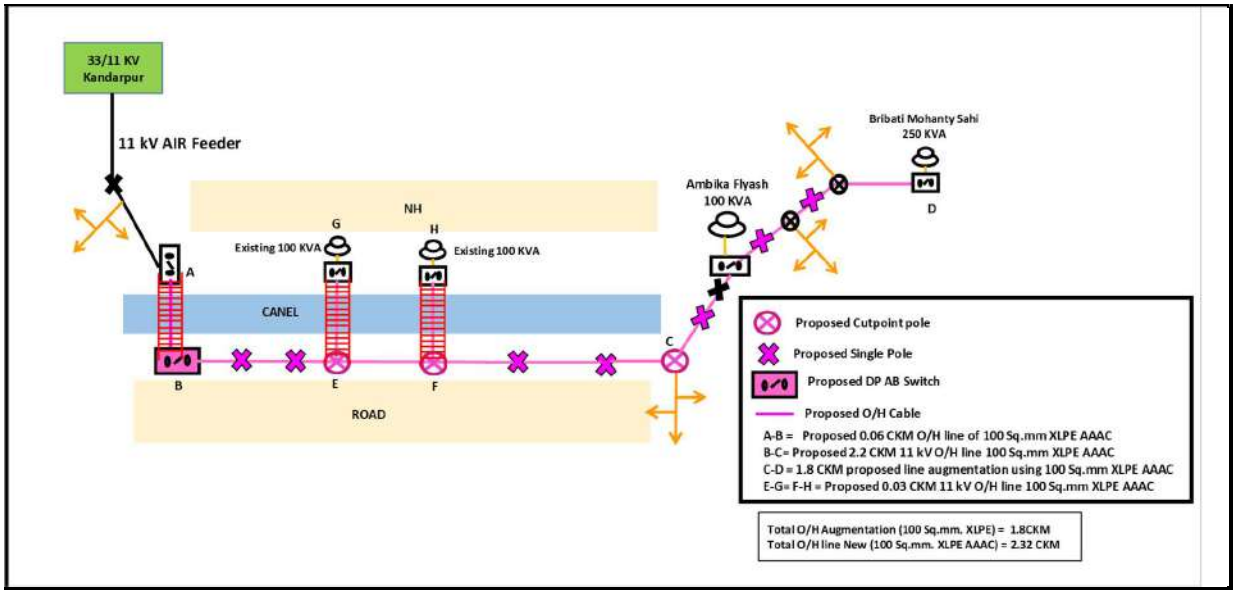
Existing SLD:

Priority and Timeline of the Project:



Priority: Since the 11kV AIR feeder caters to a critical Government of Odisha organization and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 51 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the

public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- 1.8 CKM 11 kV O/H line refurbishment proposed using 100 Sq.mm. XLPE AAAC for strengthening of existing feeder.
- 2.32 CKM 11 kV O/H line shifting proposed from canal side which is in unsafe condition.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 2.32 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC.
- Construction of 1.8 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 100 Sq.mm. XLPE AAAC
- Installation 02 Nos of 11 kV line protecting guarding on single pole for canal crossing having span 30 Mtr. Each
- Installation 01 No of 11 kV line protecting guarding on DP for canal crossing

Proposed Cost with Estimate Break-up:

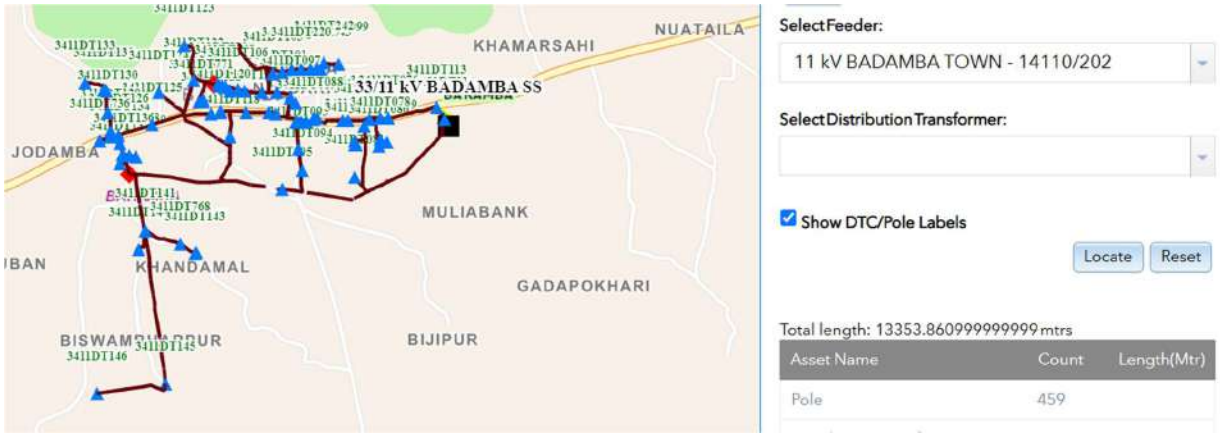
29.0 Proposal for Reliability improvement of 11kV Badamba Town Feeder:

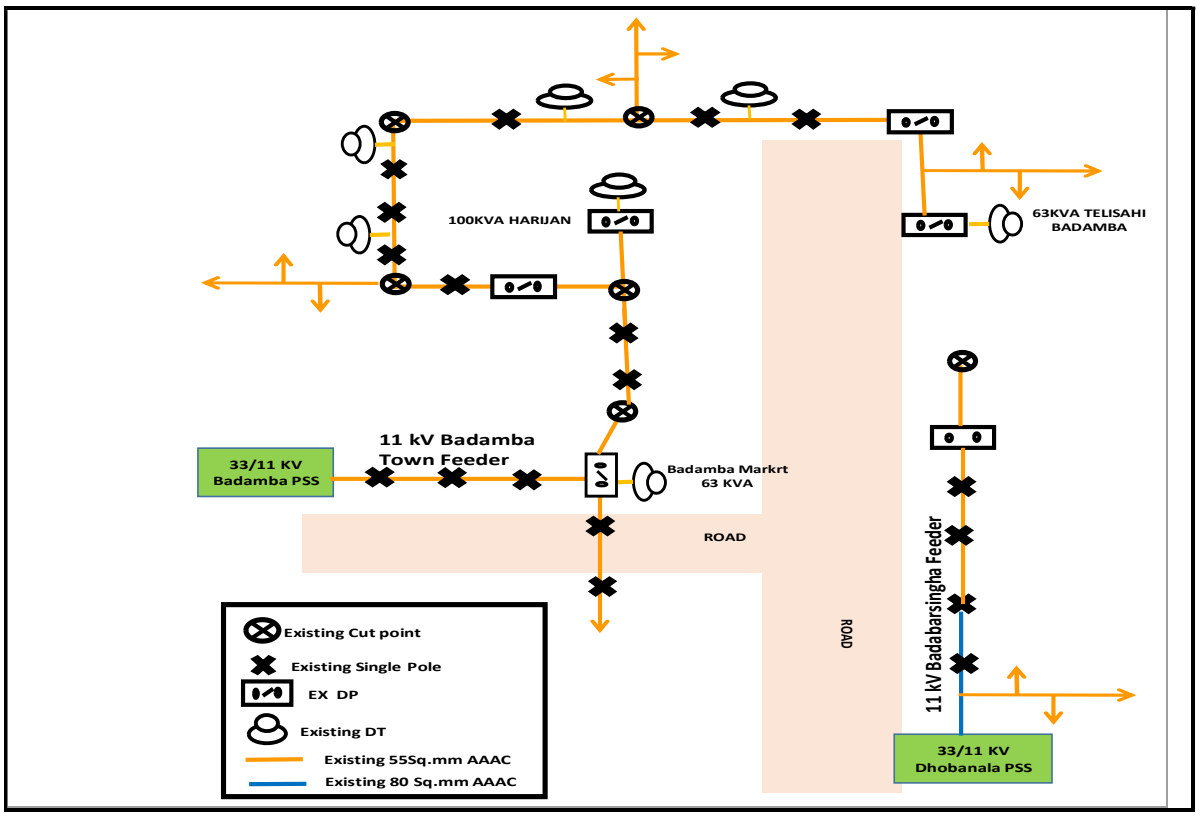
Proposal:

Proposal for refurbishment of 0.5 CKM O/H line of 11 kV Badamba town Fdr. along with construction of 0.08 CKM U/G line for N-1 connectivity between 11 kV Badamba town & Badabarsingha FDR



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Badamba Town Feeder.



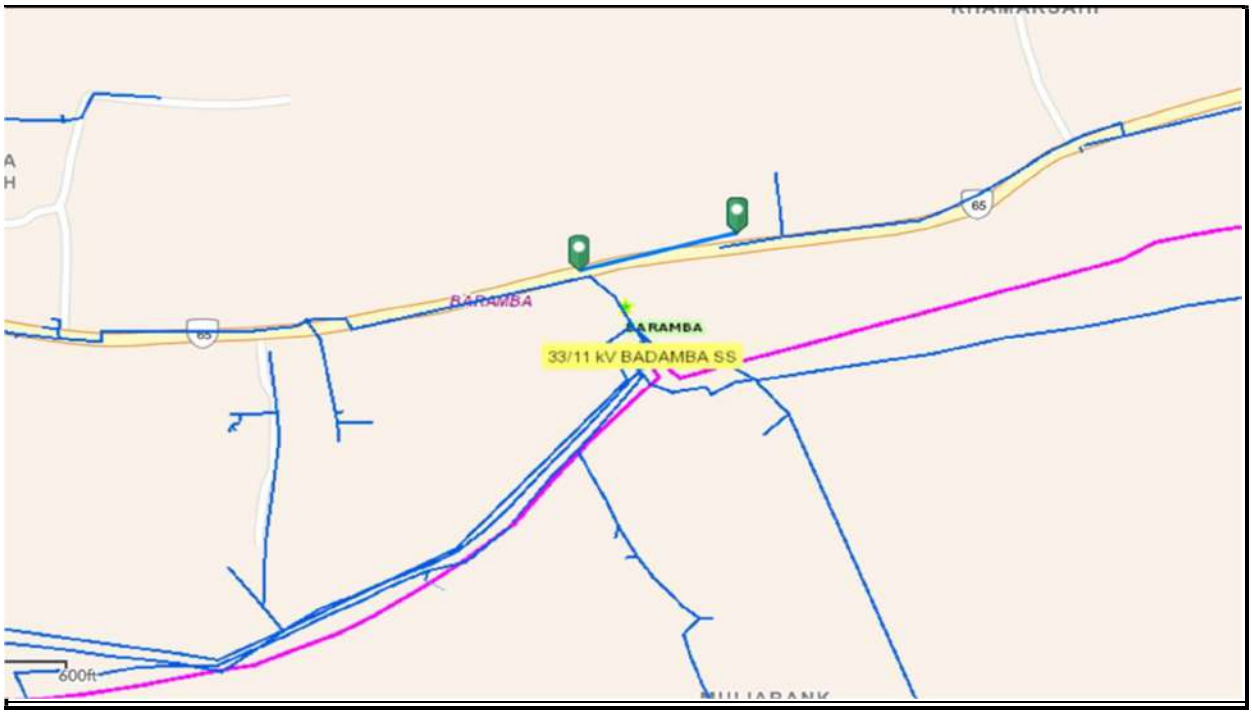
Existing Scenario:

- At present, 11kV Badamba Town feeder is emanating from 33/11kV Badamba PSS. The total trunk length of 11kV AIR Fdr is 13.35 km and peak load is 2.2 MVA.
- The trunk conductor size of feeder is 55 sq.mm AAAC and it supplies to several rural and sub urban consumers.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Badamba Town feeder
- At present frequent shutdowns are required for connecting feeder restoration

GIS MAP

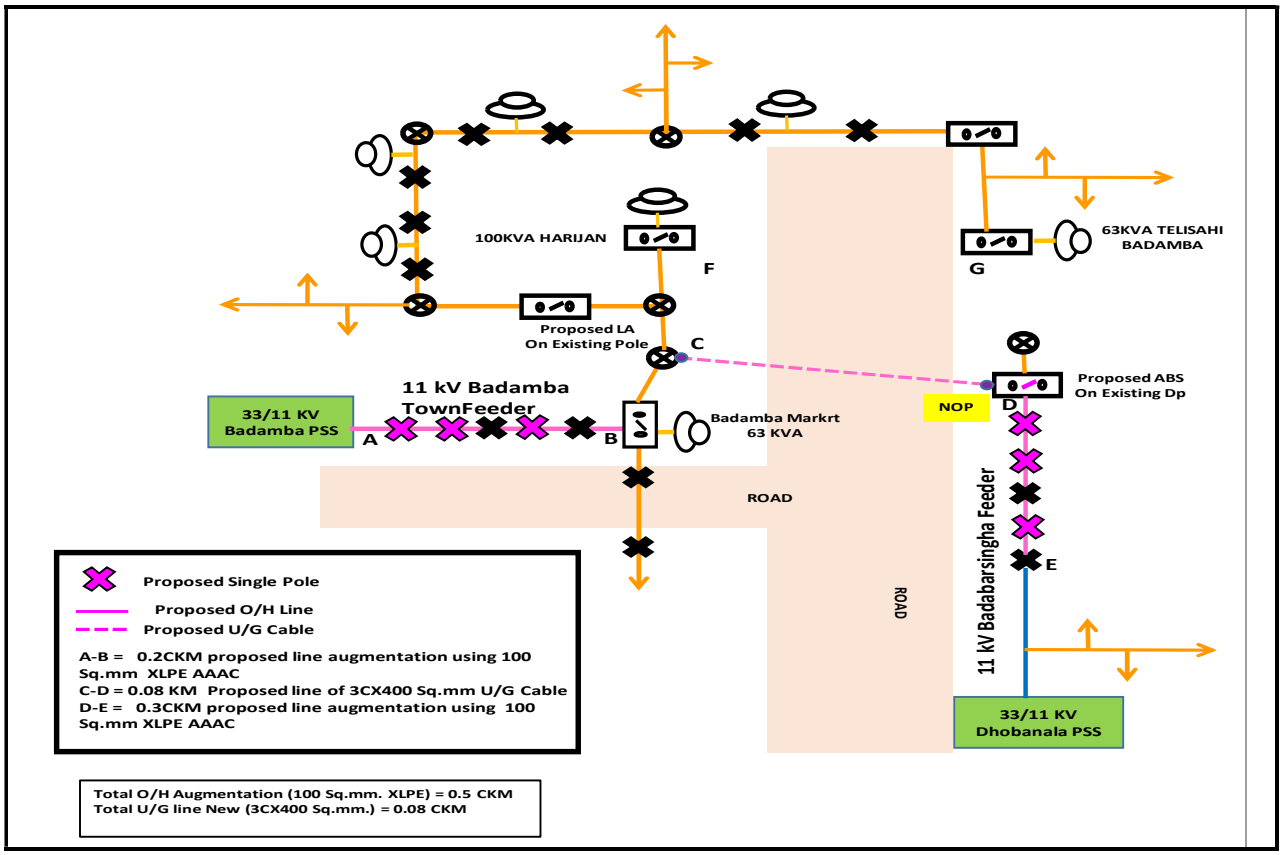
Existing SLD:

Priority and Timeline of the Project:



Priority: Since the 11kV Badamba Town feeder caters to a critical Government of Odisha organization and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 162 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures,

consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Proposal for refurbishment of 0.5 CKM O/H line of 11 kV Badamba town Fdr
- construction of 0.08 CKM U/G line for N-1 connectivity between 11 kV Badamba town & Badabarsingha FDR

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 0.5 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 100 Sq.mm. XLPE AAAC (Refer PSLD A-B,D-E)

	Total Amount	**61,79,314.24**
	Total Amount (In Cr.)	**0.62**
Total estimated cost is Rs. 0.62 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.62 Crore (For detailed BoQ refer Annexure- 12.33)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

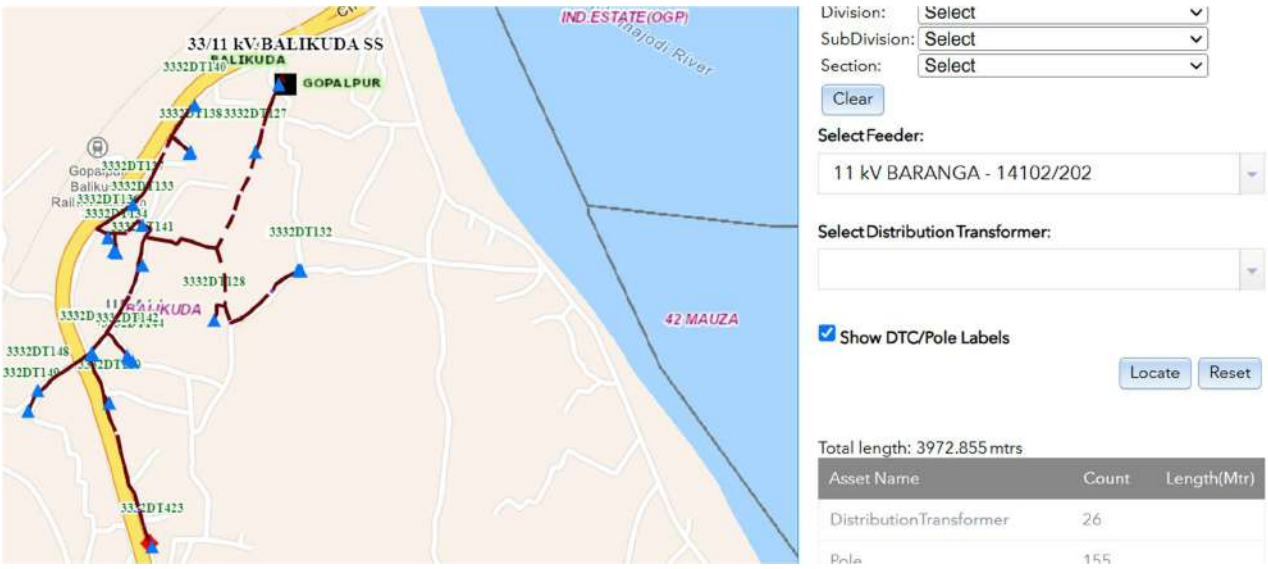
Benefit to the system and consumers:

- Reliability will be improved for 11 kV Orikanta Gopinathpur feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

34.0 Proposal for Reliability improvement of 11kV Baranga Feeder:

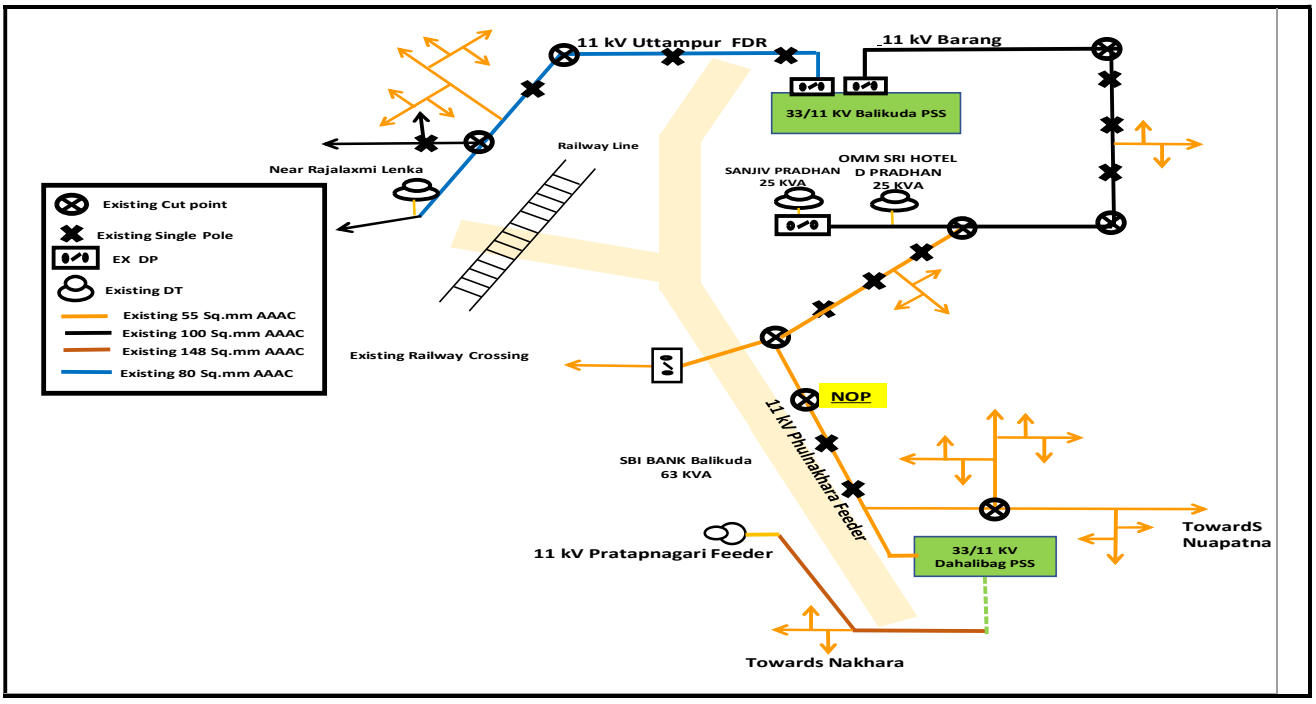
Proposal:

Proposal for construction of 1.39 CKM 11 kV line along with augmentation of 1.55 CKM 11 kV O/H line for N-1 connectivity between 11 kV Baranga & Phulnakhra feeder and 11 kV Pratapnagari & Uttampur feeder for reliability improvement.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Baranga Feeder.



Existing Scenario:

- At present, 11kV Baranga feeder is emanating from 33/11kV Balikuda PSS. The total trunk length of 11kV Baranga Fdr is 3.97 km and peak load is 1.6 MVA.
- The trunk conductor size of feeder is 100 sq.mm AAAC and it supplies to several rural and sub urban consumers.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Baranga feeder
- At present frequent shutdowns are required for connecting feeder restoration

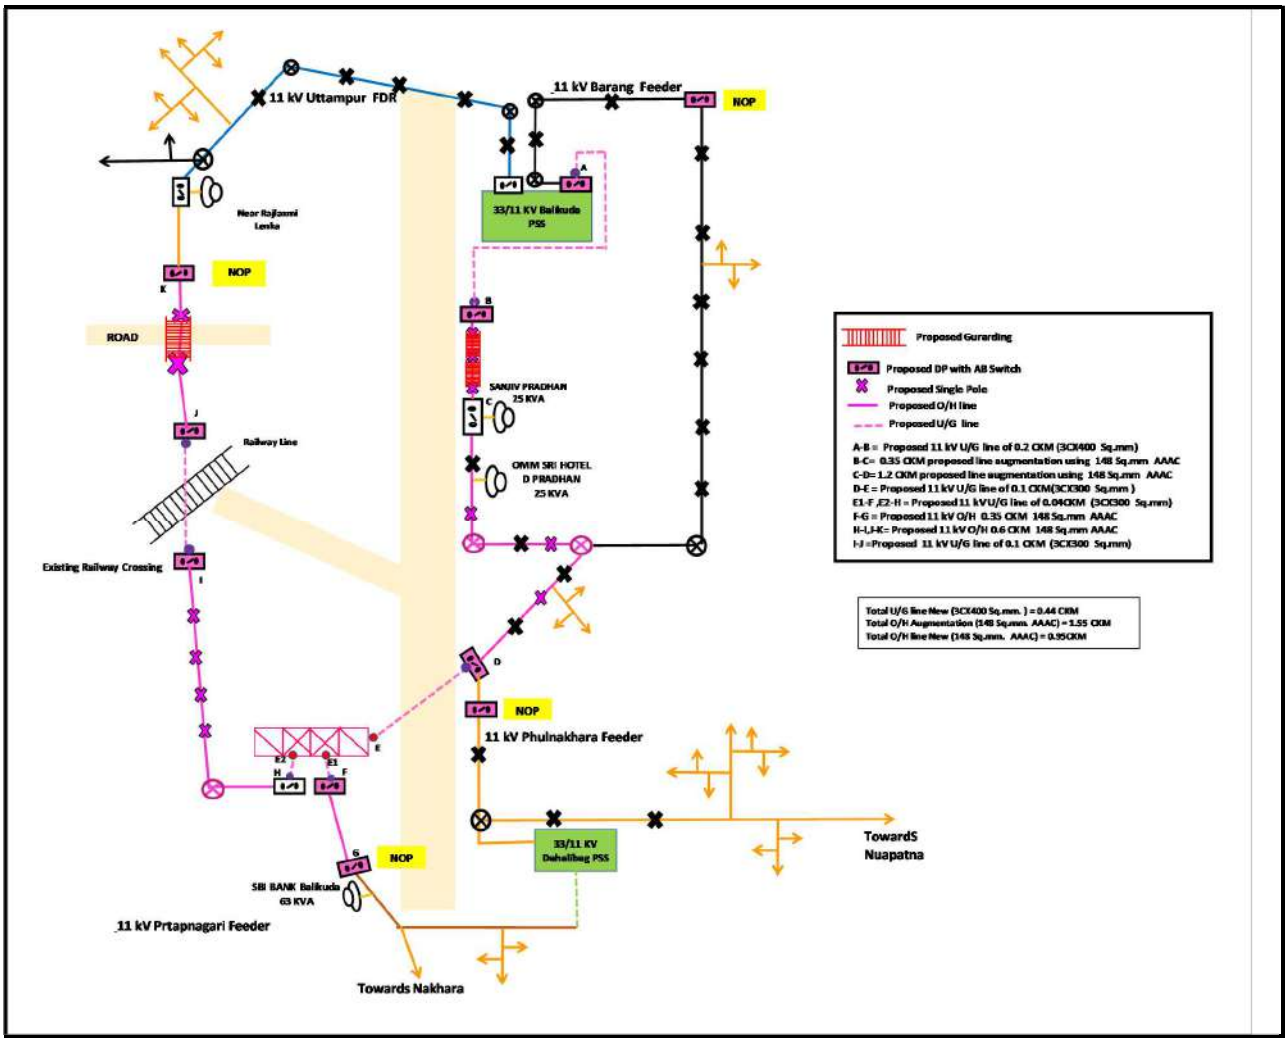
GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Baranga feeder caters to a critical Government of Odisha organization and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 32 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the

public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Proposal for construction of 1.39 CKM 11 kV line along with augmentation of 1.55 CKM 11 kV O/H line for N-1 connectivity between 11 kV Baranga & Phulnakhra feeder and 11 kV Pratapnagari & Uttampur feeder for reliability improvement.
- Installation of 01 No. of 11 kV 4-way RMU (LLVV) for smooth switching & safe operation.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction New Line of 1.55 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 148 Sq.mm. AAAC (Refer PSLD B-C & C-D).
- Construction New Line of 0.95 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 148 Sq.mm. AAAC (Refer PSLD F-G,H-I,J-K)
- Construction of 1 no. of 11 KV DP with Isolator with Earth Switch inside Balikuda PSS (Refer PSLD)
- Supply and Laying of 11KV 3CX400 Sqmm XLPE U/G Cable with line length of 440 MTR Without Spare . (Refer Proposed SLD point A-B,E1-F, E2-H, D-E,I-J)
- Installation of 01 No. of 11 kV 4-way RMU (LLVV) (refer PSLD)
- *Installation of 3 Nos of 11 kV line protecting guarding on single pole for road crossing(Refer PSLD)*

Proposed Cost with Estimate Break-up:

- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

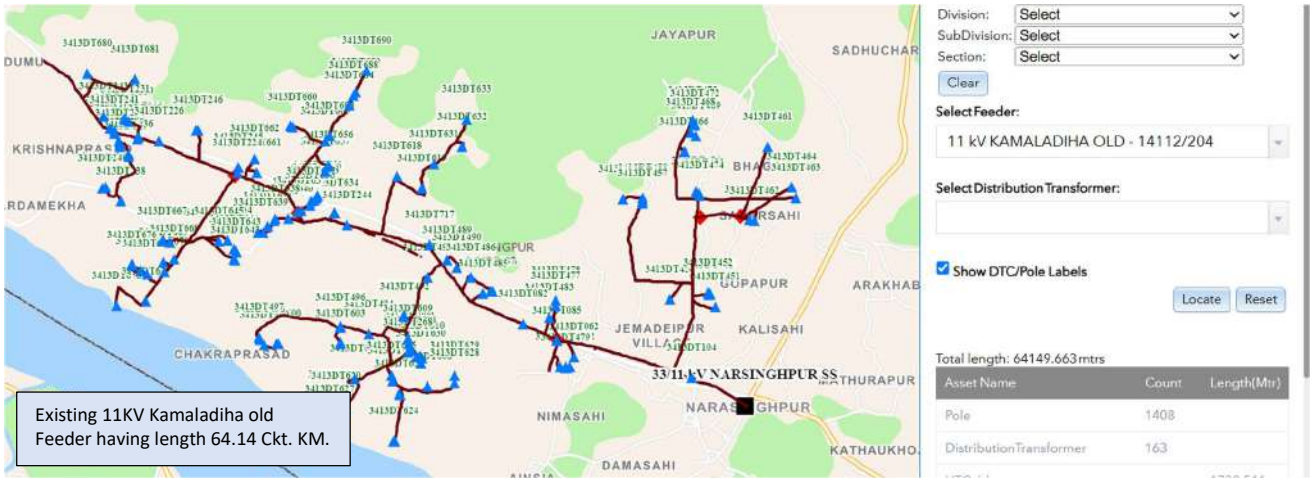
37.0 Proposal for Length Reduction of 11kV Kamaladhia old Feeder:

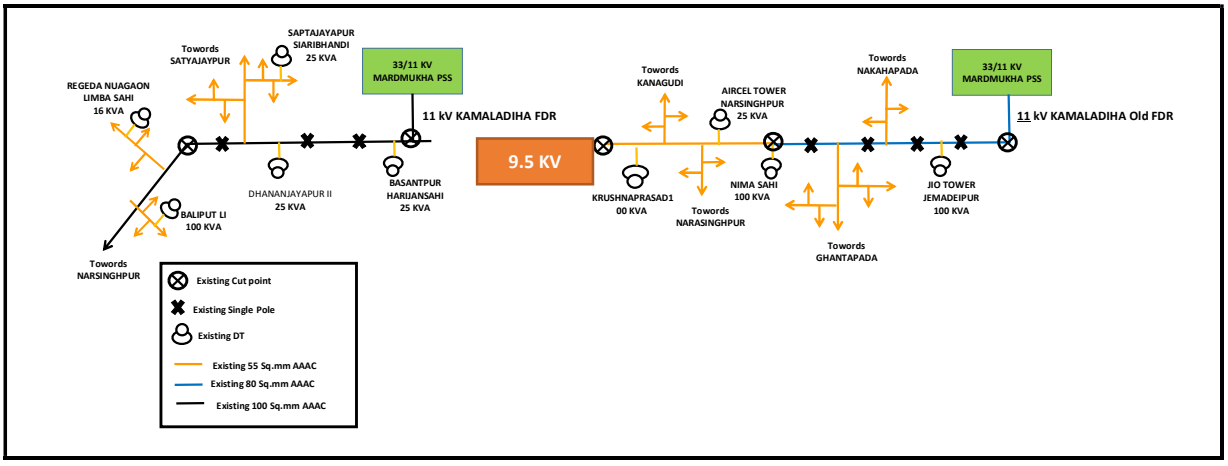
Proposal:

Proposal for length reduction of 11KV Kamaladhia old feeder for reliability improvement.



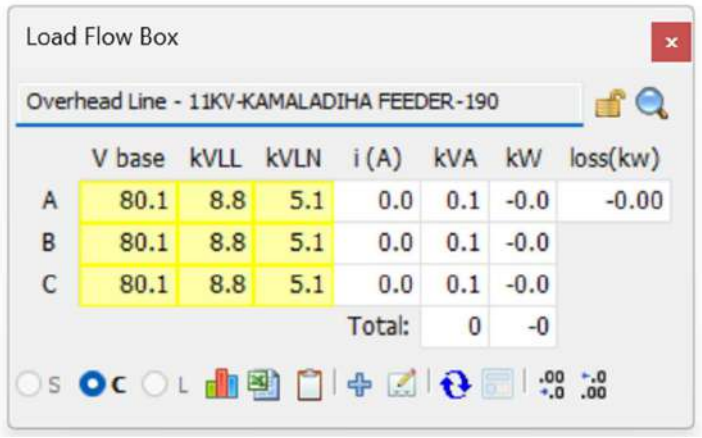
Requirement/ Need of the proposal:

Objective: Length reduction and reliability improvement of 11kV Kamaladhia old Feeder.



Existing Scenario:

- At present, 11kV Kamaladhia old feeder is emanating from 33/11kV Narasinghpur PSS having a feeder length of 64.14 Ckt. KM and tail end voltage is 9.5 KV.
- Entire 11kV Kamaladiha old Fdr is of 80/55 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.



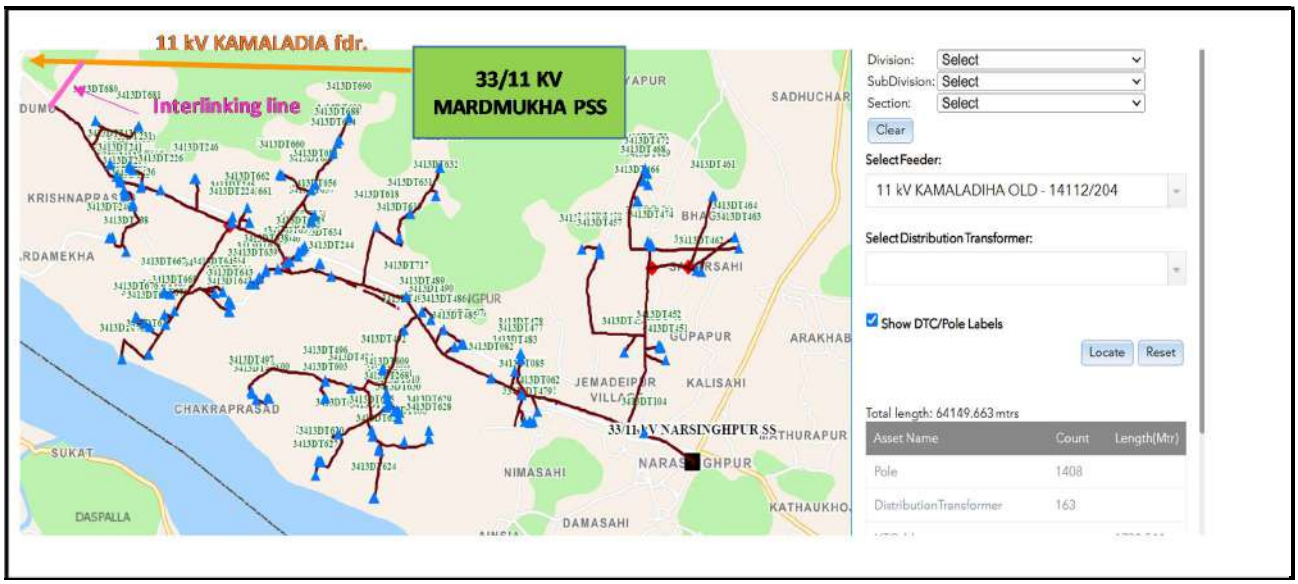
GIS SLD:

Existing SLD:

Tail end Voltage in existing scenario through load flow analysis after two years load growth:

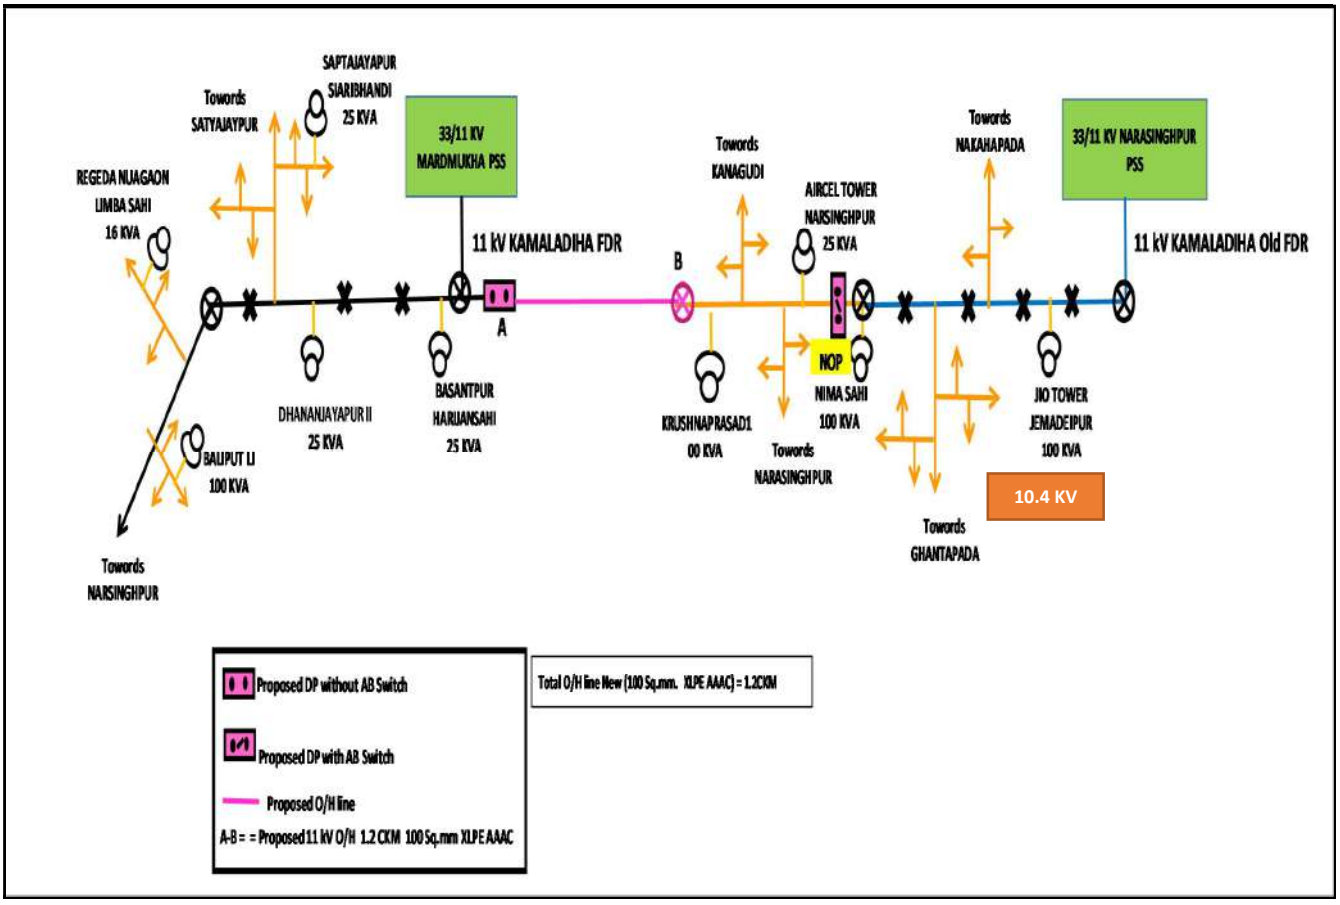
Priority and Timeline of the Project:

Priority: The existing 11kV Kamaladiha old feeder has a length of 64.14 Ckm in the AS-IS scenario, resulting in a tail-end voltage of 9.5 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 8.8 kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



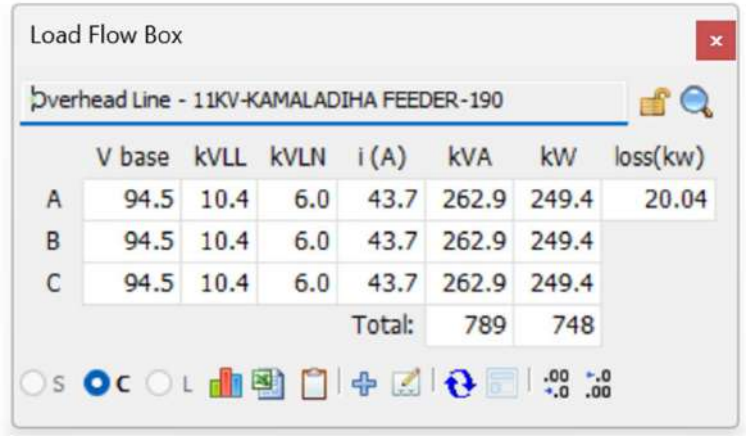
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 9.5 kV. The voltage regulation of the feeder is not within permissible limits.



Proposed Scenario:

- Construction of 1.2 CKM 11 kV O/H line using 11 Mtr. WPB Pole and100 Sq.mm. XLPE AAAC
- Installation of 02 Nos of 11 kV line protecting guarding on Single Pole for Road Crossing having span 20 Mtr. each



Proposed GIS SLD:

Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

Length of Sections

	A	B	C	Total
3-phase	48358.68	48358.68	48358.68	48358.68
2-phase	0.0	0.0	0.0	0.0
1-phase	0.0	0.0	0.0	0.0
Total	48358.68	48358.68	48358.68	48358.68

11KV Kamaladiha Old feeder's length has been reduced from 64.14 CKM to 48.35 CKM.

Scope of Work:

- Construction of 1.2 CKM 11 kV O/H line using 11 Mtr. WPB Pole and100 Sq.mm. XLPE AAAC.
- Installation of 02 Nos of 11 kV line protecting guarding on Single Pole for Road Crossing having span 20 Mtr. each.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.37

Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**

Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 1.2 CKM 11 kV O/H line using 11 Mtr. WPB Pole and100 Sq.mm. XLPE AAAC (Refer PSLD)	27,41,164.71
2	PART B: Installation of 02 Nos of 11 kV line protecting guarding on Single Pole for Road Crossing having span 20 Mtr. each(Refer PSLD)	56,502.88
	Total Amount	**27,97,667.58**
	Total Amount (In Cr.)	**0.28**
Total estimated cost is Rs. 0.28 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.28 Cr. (For detailed BoQ refer Annexure-12.37)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026
II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Compliance with the guidelines of voltage regulation in the distribution network.
c) Reduction of electrocution risk and public safety hazards.
d) Safe operation and isolation of the feeder.
e) Protection of electrical assets against lightening and surge related failure.
f) Improvement in operational safety for maintenance personnel and public.

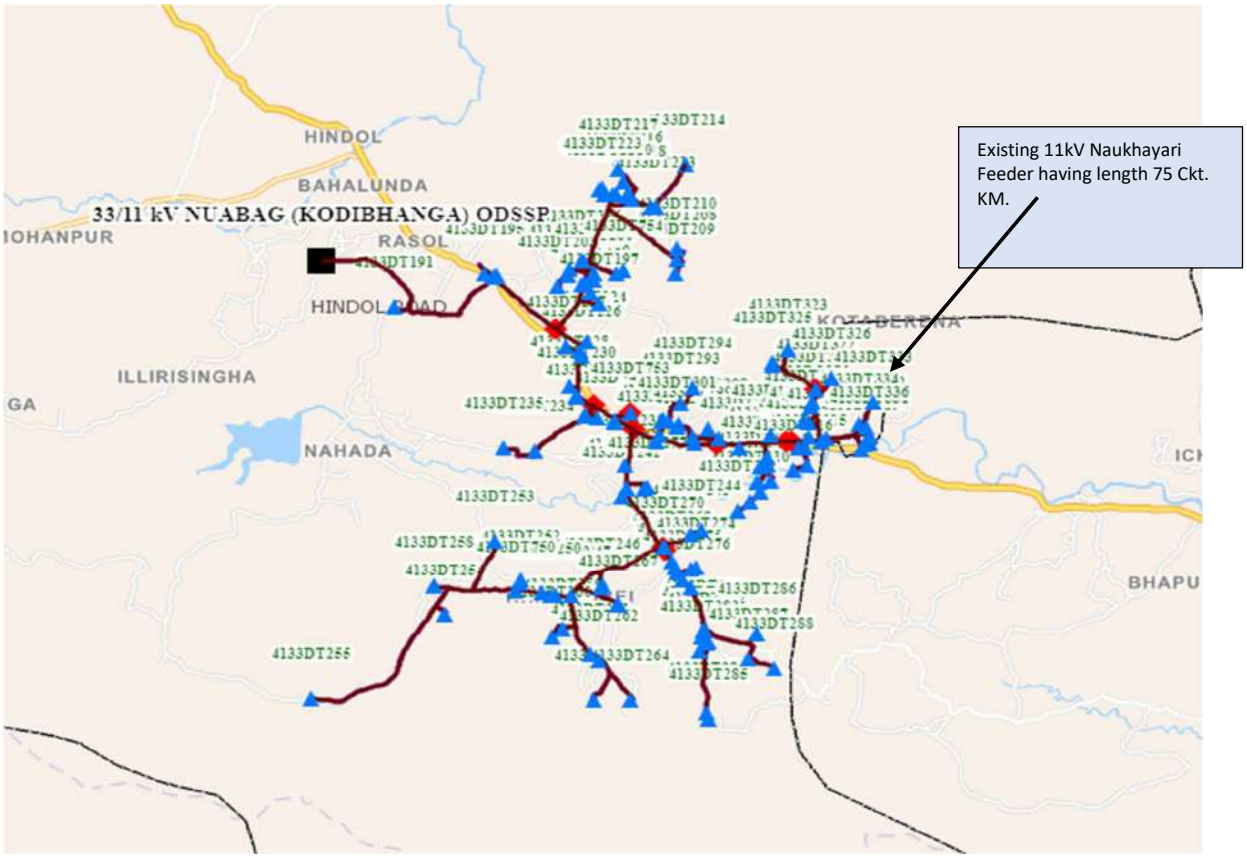
Benefit to the system and consumers:

- 11KV Kamaladiha old length reduced from 64.14 CKM to 48.35 CKM
- 11KV Kamaladiha old tail end voltage improved from 9.5 KV to 10.4 KV.
- Ring connectivity is established between 11KV Kamaladiha old and 11 kV Kamaladiha feeder which will be helpful for power supply restorations during breakdown and maintenance works.

38.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Naukhayari Feeder:

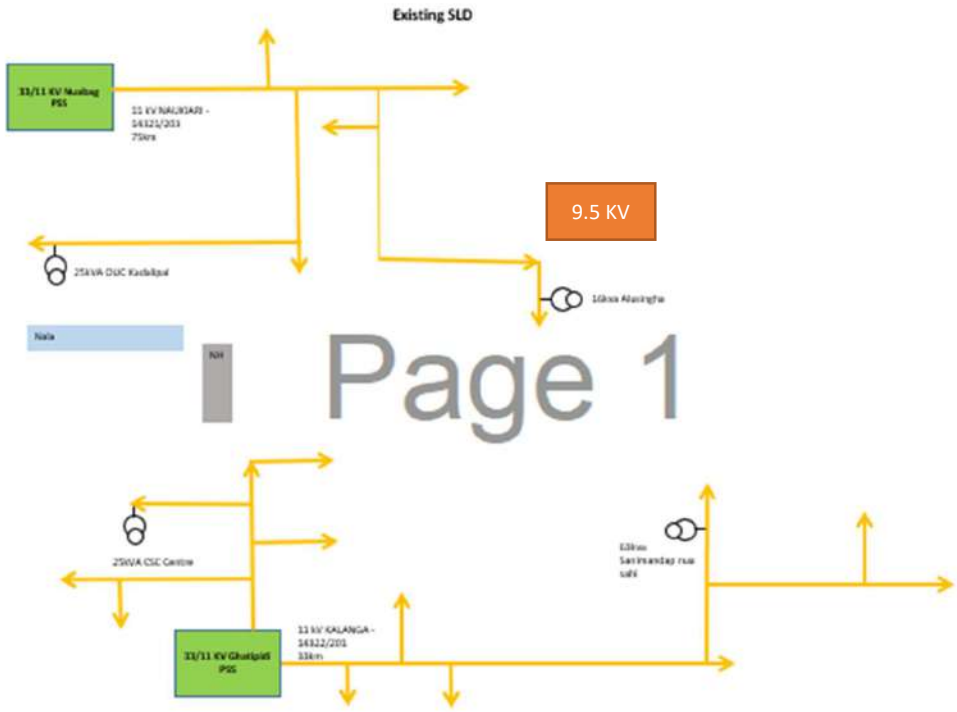
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Naukhayari feeder.



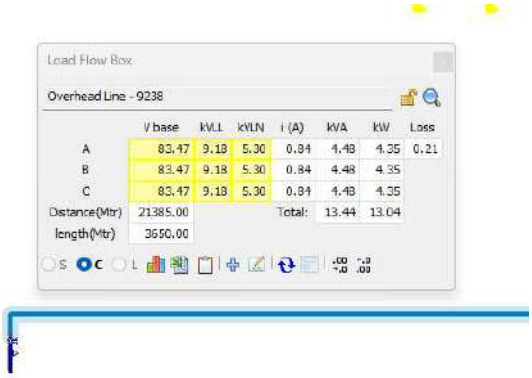
Requirement/ Need of the proposal:

Objective: Reliability improvement and Length reduction of 11kV Naukhayari Feeder.

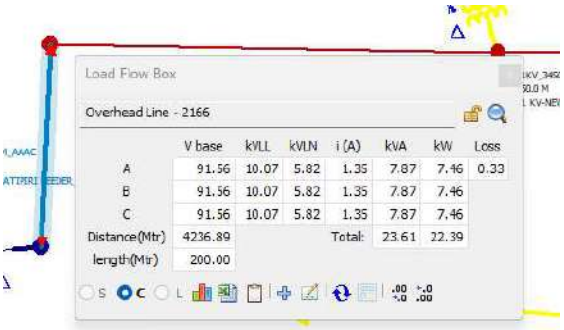


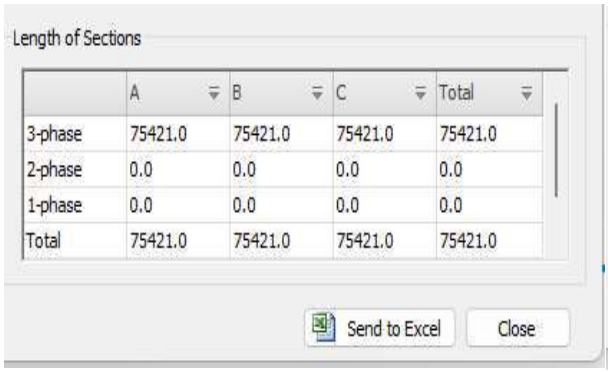
Existing Scenario:

- At present, 11kV Naukhayari Feeder is emanating from 33/11kV Nuabag PSS having a feeder length of 75 Ckt. KM and tail end voltage is 9.1 KV.
- Entire 11kV Naukhayari Feeder is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.

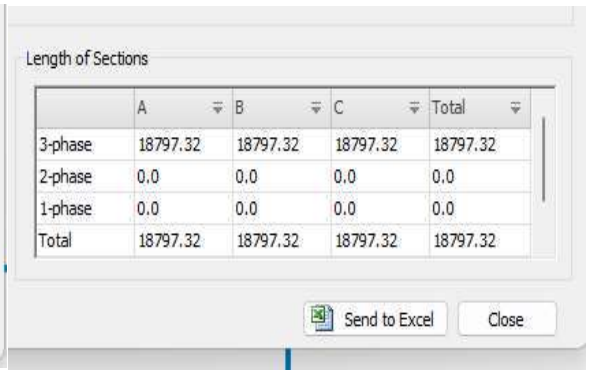


GIS SLD:





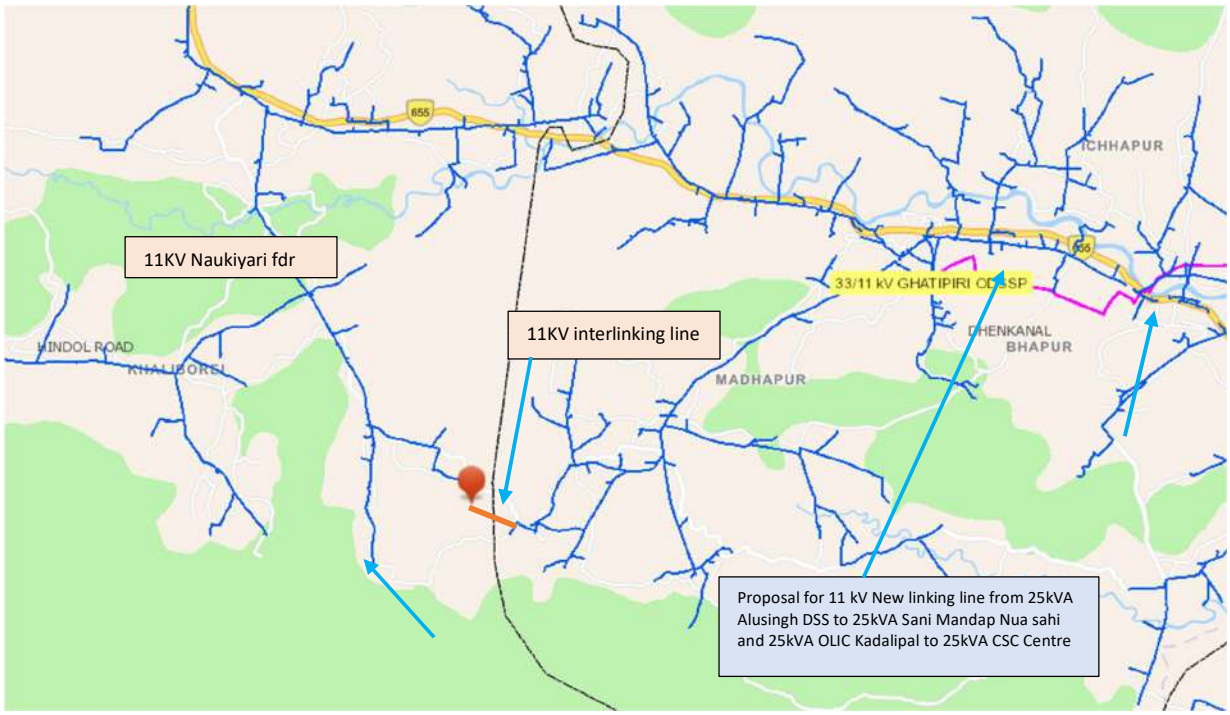
Existing SLD:



Tail end Voltage in existing scenario through load flow analysis:

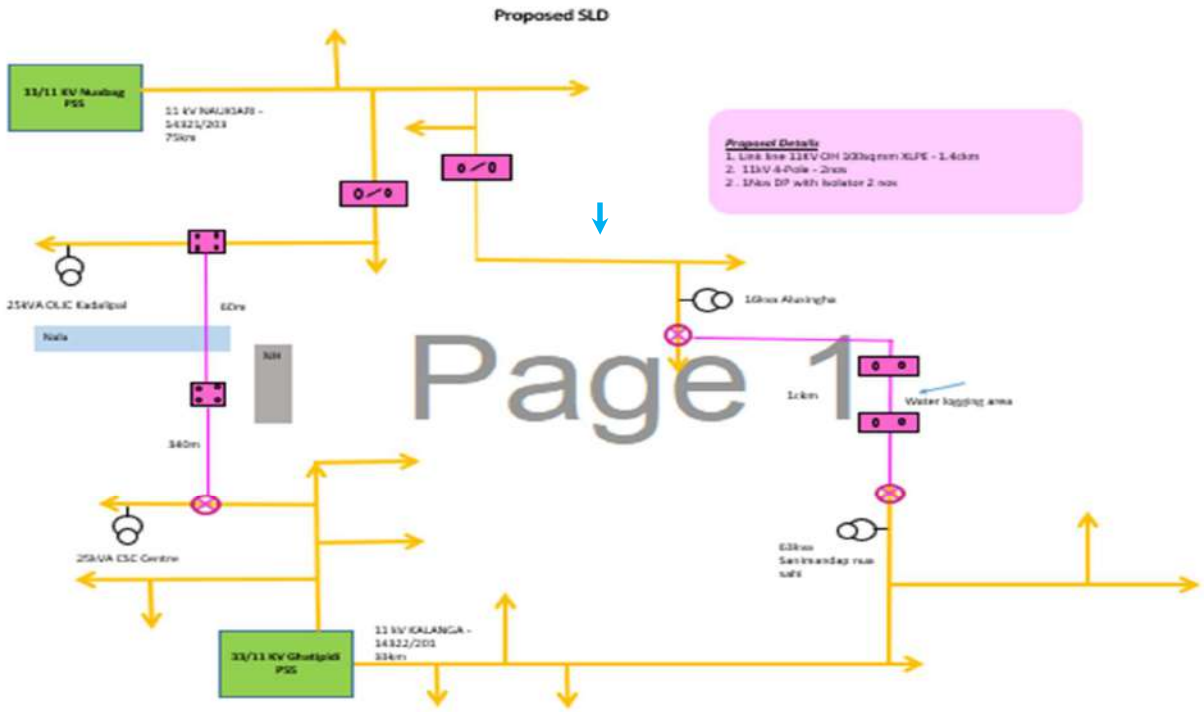
Priority:

The existing 11kV Naukhiyari feeder has a length of 75Ckm in the AS-IS scenario, resulting in a tail-end voltage of 9.1 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 9.9 kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



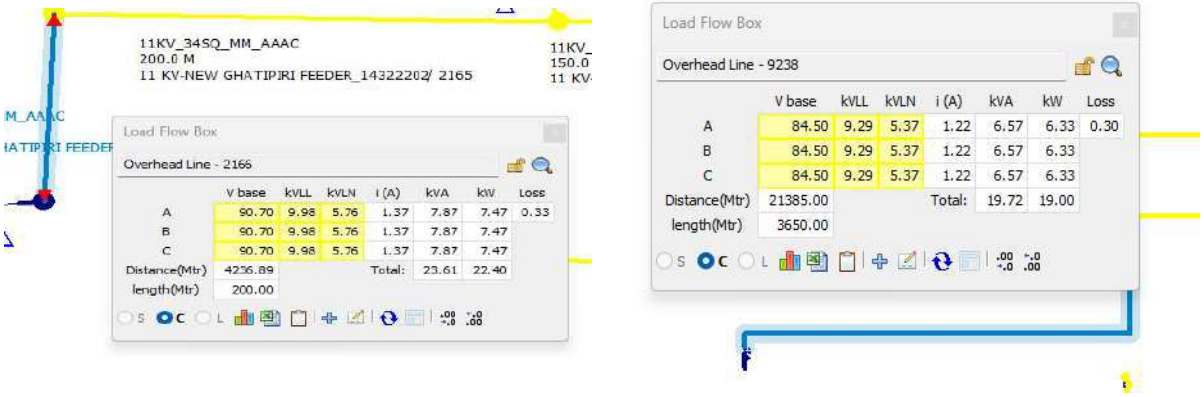
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 9.1. The voltage regulation of the feeder is not within permissible limits.

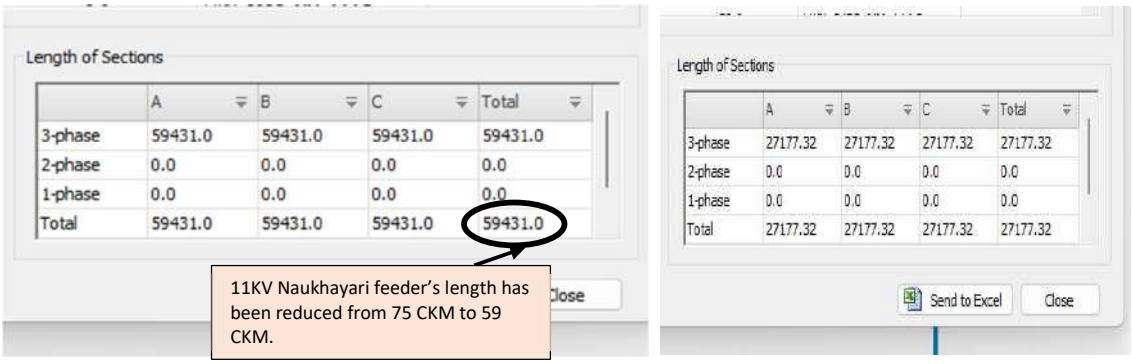


Proposed Scenario:

- It is proposed to inter link existing 11kV Naukhyari feeder with near by 11kV Kalanga feeder emanating from Ghatipidi PSS
- 1.4 CKM 11 kV line interconnection is proposed using 11 Mtr. WPB pole & 100 Sq.mm. XLPE Conductor
- DP along with Isolator 2 nos is proposed for better operation flexibility
- 2nos of 4-Pole is proposed for canal crossing



GIS SLD:



Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

After execution of proposal 11kV Naukhyari feeder Voltage will Improve from 9.1 kV to 9.9kV and feeder length reduced from 75ckm to 59ckm

Scope of Work:

- It is proposed to link the 11kV Naukiari feeder by linking of 11kV Kalanga Feeder.
- Construction of 1.4 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC.

Proposed Cost with Estimate Break-up:

		Total Amount	**₹ 43,39,272.03**
		Total Amount (In Cr)	**₹ 0.43**

Cost Estimate: ₹ 0.43 Cr. (For detailed BoQ refer Annexure-12.38)

III. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

IV. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

f) Compliance with electrical safety regulation for distribution system.

g) Compliance with the guidelines of voltage regulation in the distribution network.

h) Reduction of electrocution risk and public safety hazards.

i) Safe operation and isolation of the feeder.

j) Protection of electrical assets against lightening and surge related failure.

k) Improvement in operational safety for maintenance personnel and public.

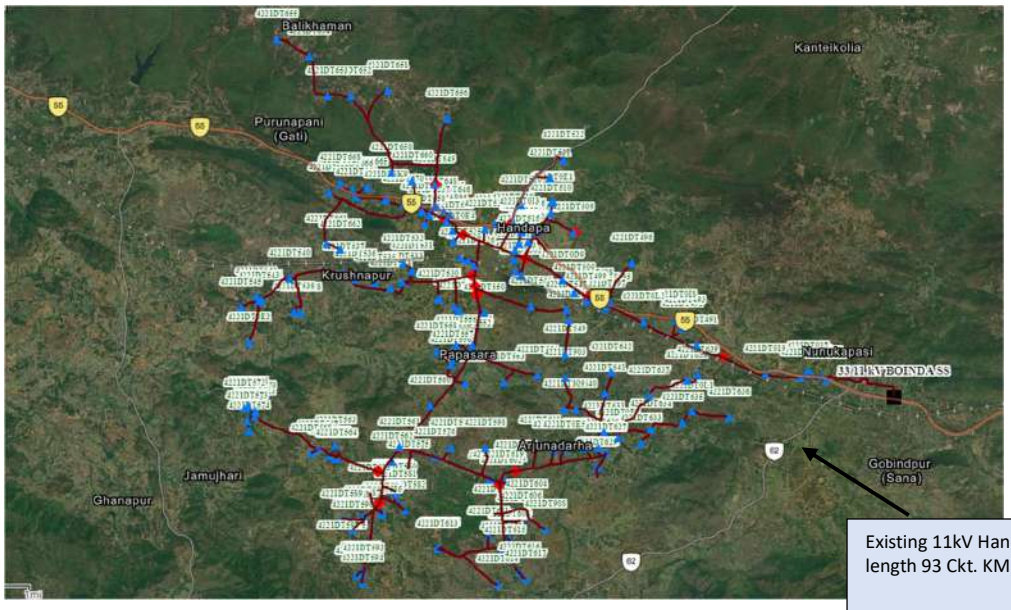
Benefit to the system and consumers:

- 11KV Naukhyari feeder length reduced from 75 CKM to 59 CKM
- 11KV Naukhyari feeder's tail end voltage improved from 9.1 KV to 9.9 KV.
- Ring connectivity is established between 11KV Naukhyari feeder with 11KV Kalanga Feeder feeder which will be helpful for power supply restorations during breakdown and maintenance works.

39.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Handapa Feeder:

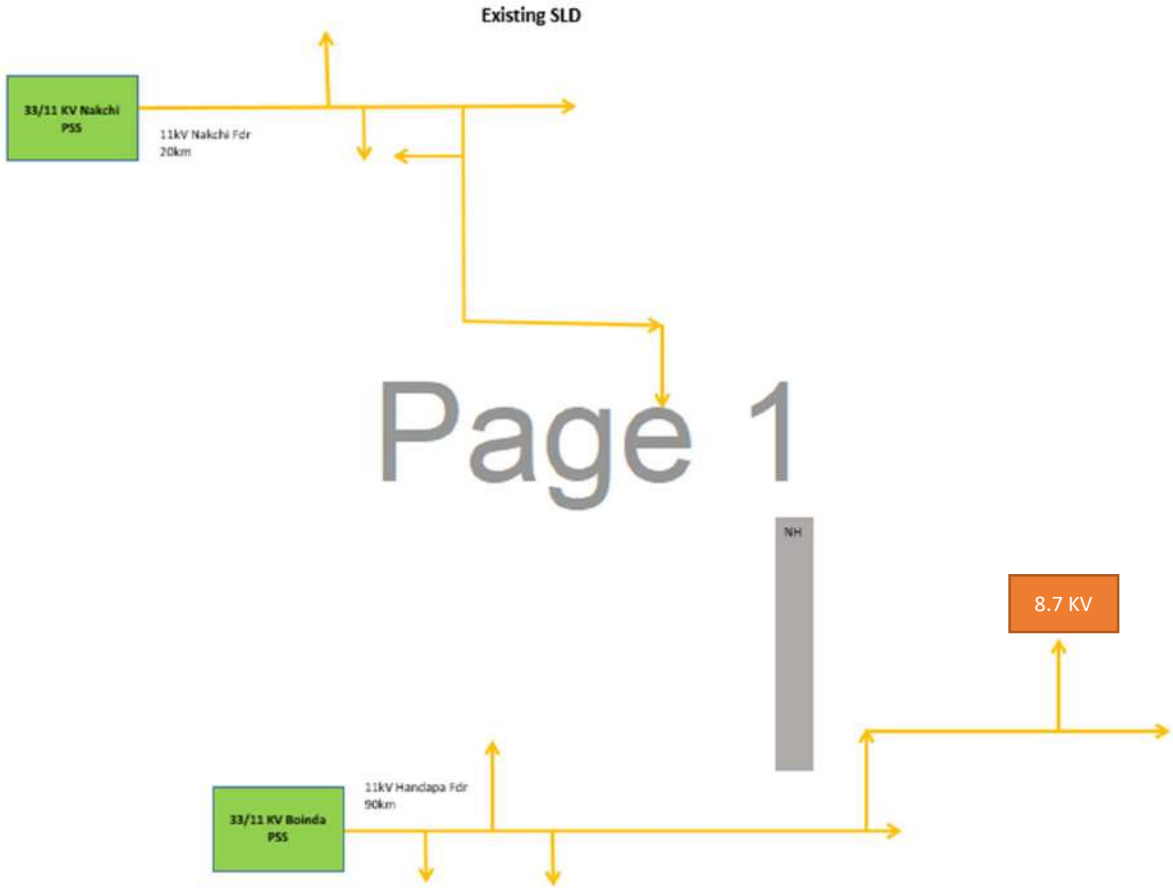
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Hanadapa feeder.



Requirement/ Need of the proposal:

Objective: Reliability improvement and Length reduction of 11kV Handapa Feeder.



Existing Scenario:

- At present, 11kV Handpa Feeder is emanating from 33/11kV Boinda PSS having a feeder length of 93 Ckt. KM and tail end voltage is 8.7 KV.
- Entire 11kV Handpa Feeder is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.

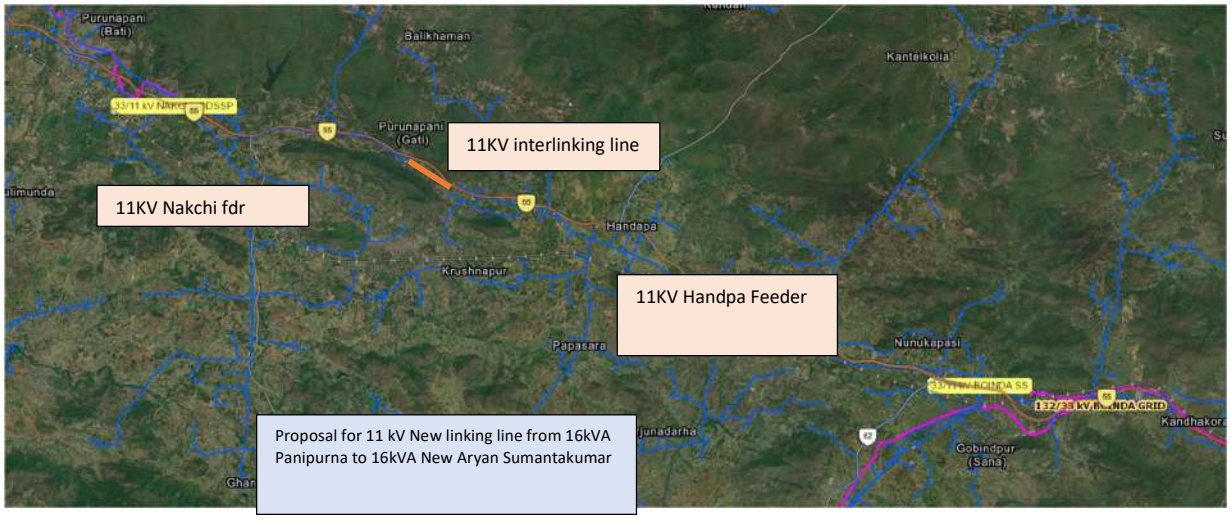
Tail end Voltage in existing scenario through load flow analysis:

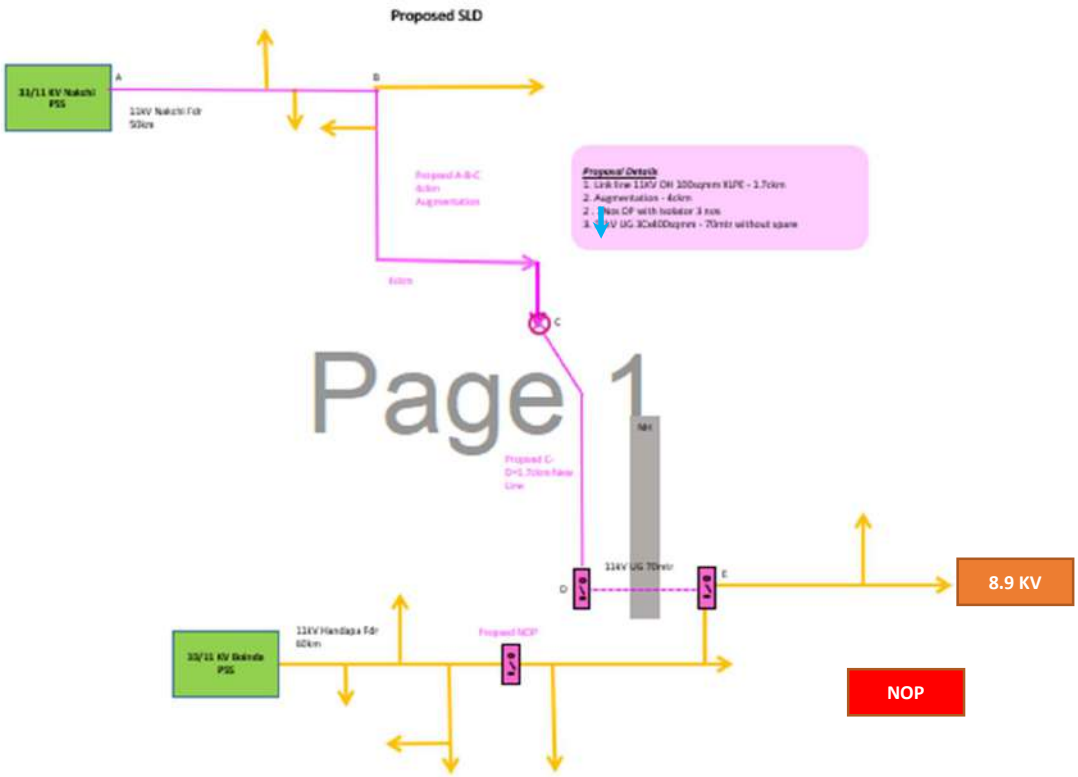
Priority:

The existing 11kV Handapa feeder has a length of 90Ckm in the AS-IS scenario, resulting in a tail-end voltage of 8.7 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 8.9 kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



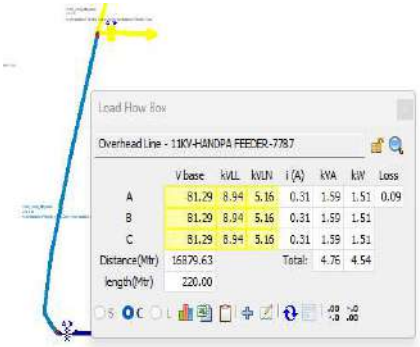
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 8.7kV. The voltage regulation of the feeder is not within permissible limits.



Proposed Scenario:

- It is proposed to inter link existing 11kV Handapa feeder with near by 11kV Nakchi feeder emanating from Nakchi PSS
- 1.7 CKM 11 kV line interconnection is proposed using 11 Mtr. WPB pole & 100 Sq.mm. XLPE Conductor
- DP along with Isolator 4 nos is proposed for better operation flexibility
- It proposed augmentation from Nakchi PSS to New Aryan Sumantakumar from 34sqmm AAAC to 100sqmm XLPE covered conductor



GIS SLD:

3	C	Part-C Supply and Laying of 11kV 3C, 400sqmm UG Cable without spare-0.07km	₹ 5,20,220.79
		Total Amount	**₹ 1,05,16,294.05**
		Total Amount (In Cr)	**₹ 1.05**

Cost Estimate: ₹ 1.05 Cr. (For detailed BoQ refer Annexure-12.39)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Compliance with the guidelines of voltage regulation in the distribution network.

c) Reduction of electrocution risk and public safety hazards.

d) Safe operation and isolation of the feeder.

e) Protection of electrical assets against lightening and surge related failure.

f) Improvement in operational safety for maintenance personnel and public.

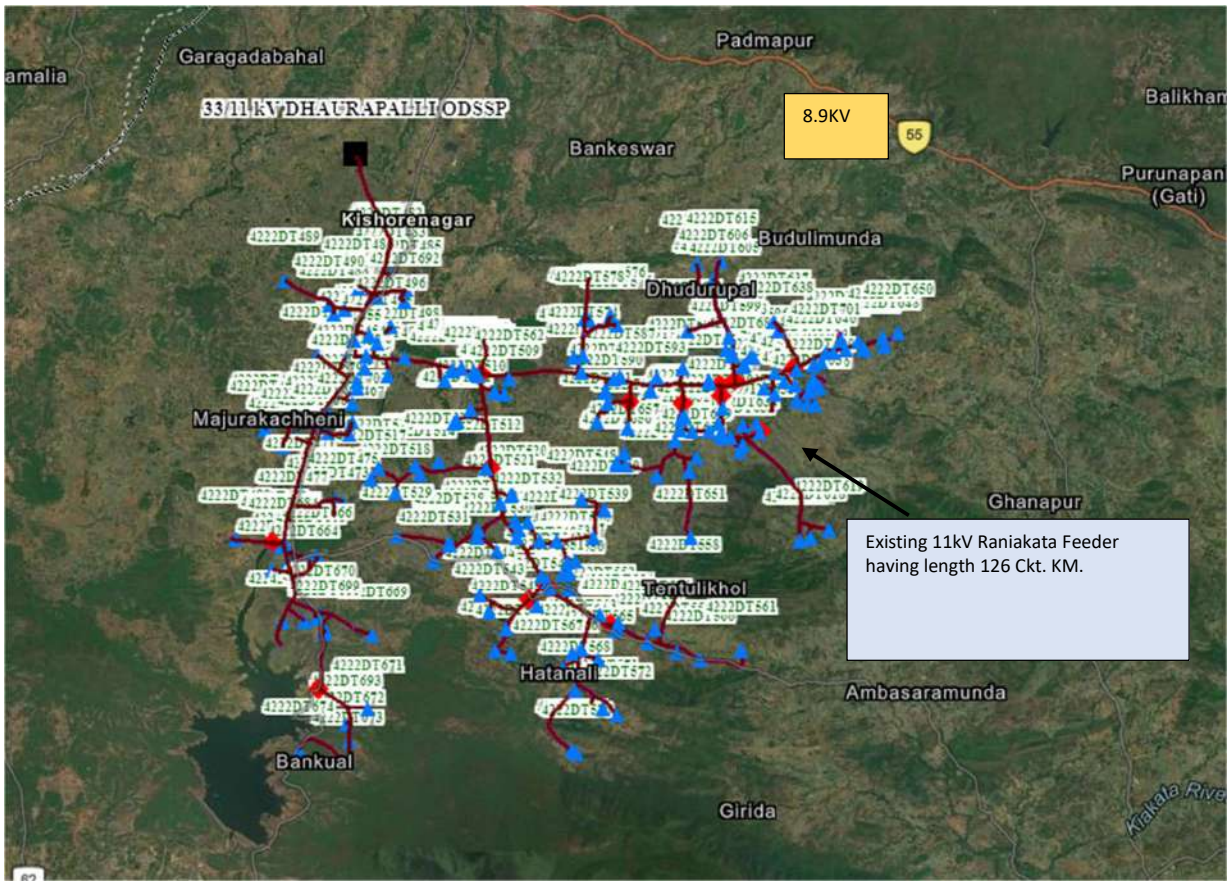
Benefit to the system and consumers:

- 11KV Handapa feeder length reduced from 93 CKM to 77 CKM
- 11KV Handpa feeder's tail end voltage improved from 8.7 KV to 8.9 KV.
- Ring connectivity is established between 11KV Handpa feeder with 11KV Nakchi Feeder which will be helpful for power supply restorations during breakdown and maintenance works.

40.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Raniakata Feeder:

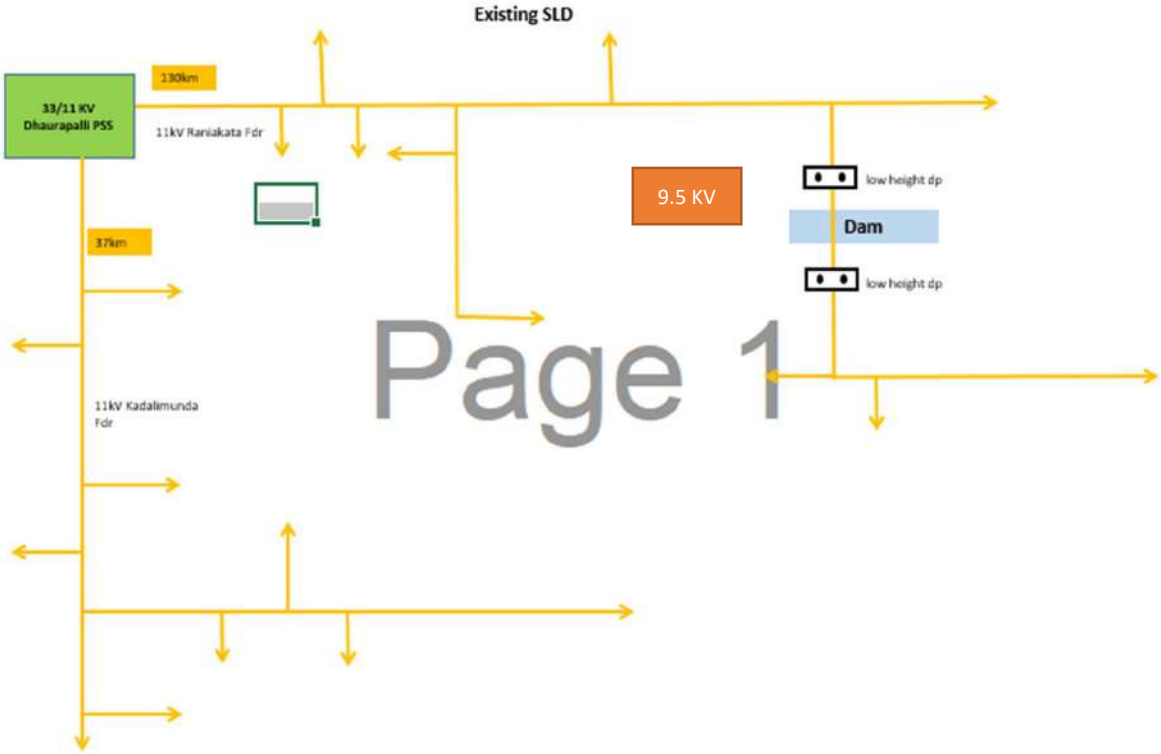
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Raniakata feeder.



Requirement/ Need of the proposal:

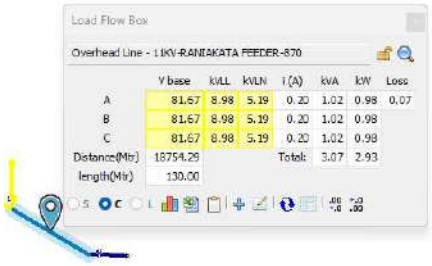
Objective: Reliability improvement and Length reduction of 11kV Raniakata Feeder.

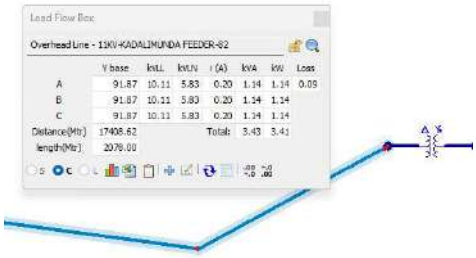


Existing Scenario:

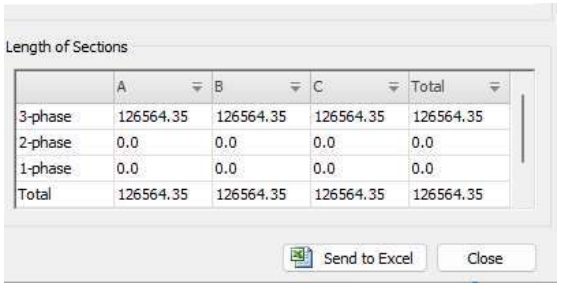
- At present, 11kV Raniakata Feeder is emanating from 33/11kV Dhaurapalli PSS having a feeder length of 126 Ckt. KM and tail end voltage is 8.9 KV.
- Entire 11kV Raniakata Feeder is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.

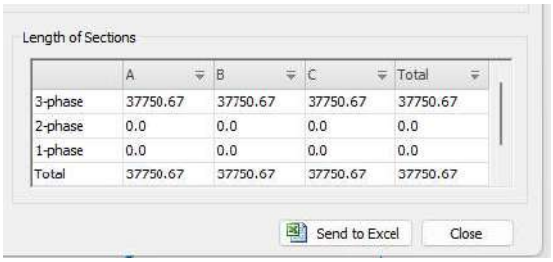
GIS SLD:





Existing SLD:



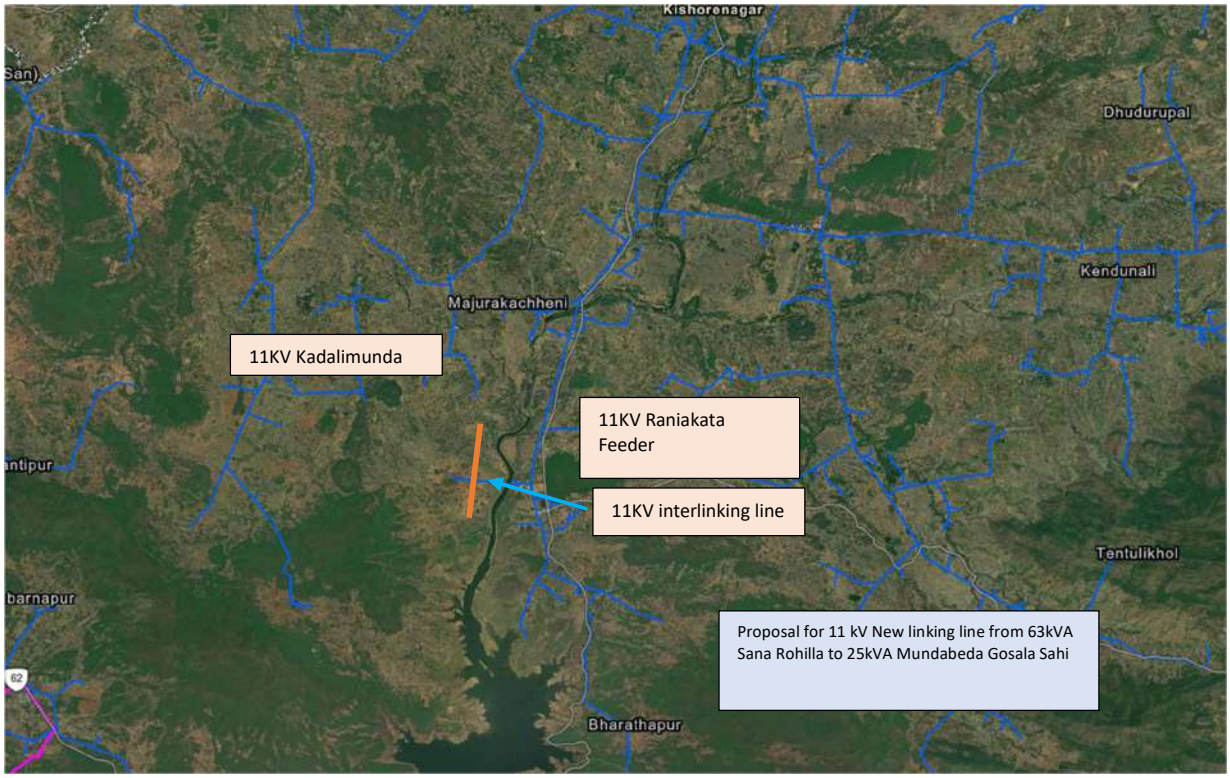


Page 1

Tail end Voltage in existing scenario through load flow analysis:

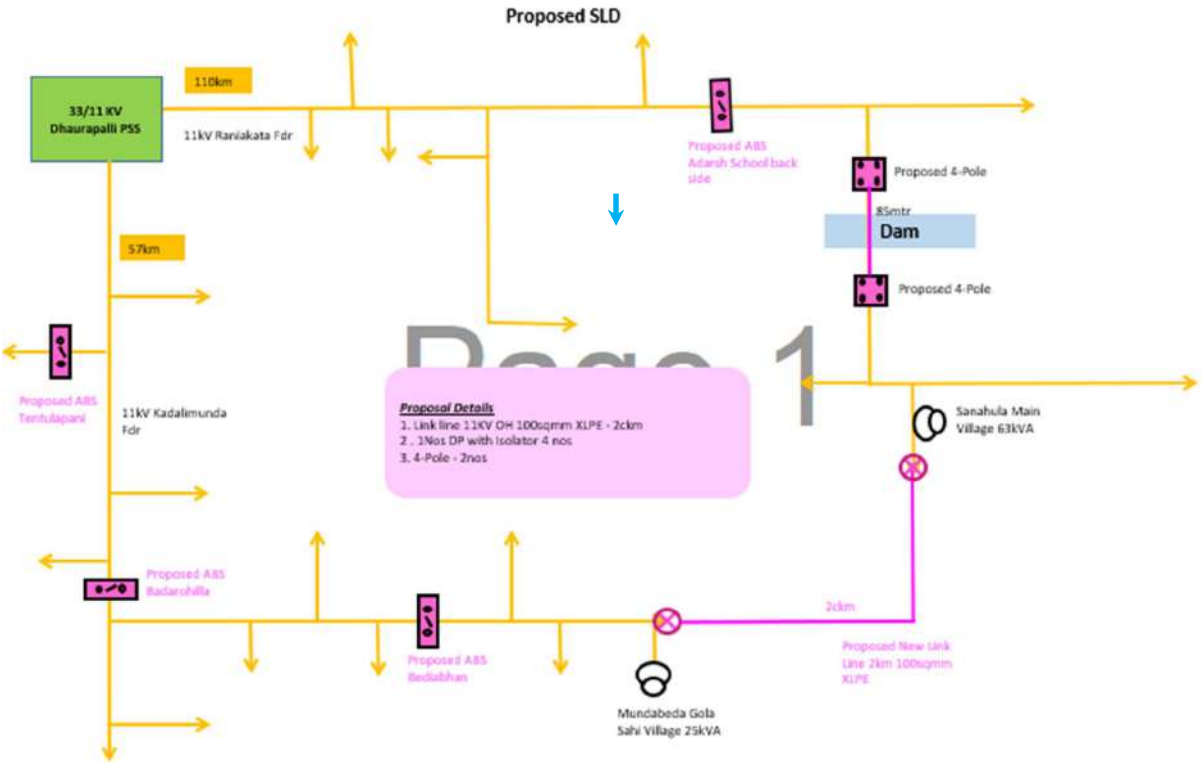
Priority:

The existing 11kV Raniakata feeder has a length of 126Ckm in the AS-IS scenario, resulting in a tail-end voltage of 8.9 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 9.1 kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



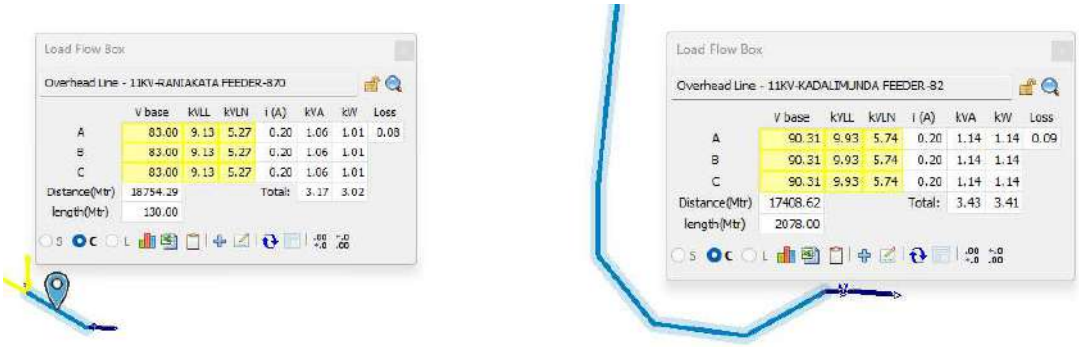
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 8.9. The voltage regulation of the feeder is not within permissible limits.

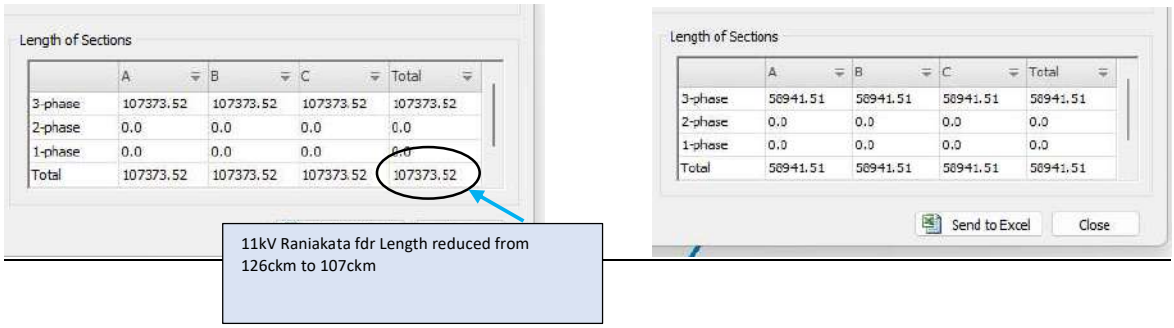


Proposed Scenario:

- It is proposed to inter link existing 11kV Raniakata feeder with near by 11kV Kalidimunda feeder emanating from Dhaurapalli PSS
- 2 CKM 11 kV line interconnection is proposed using 11 Mtr. WPB pole & 100 Sq.mm. XLPE Conductor
- DP along with Isolator 4 nos is proposed for better operation flexibility
- 2nos of 4-Pole is proposed for canal crossing



GIS SLD:



Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

After execution of proposal 11kV Raniakata feeder Voltage will Improve from 8.9 kV to 9.13kV and feeder length reduced from 126ckm to 107ckm and Voltage of Kadalimunda Feeder will be 9.93kV

<u>Scope of Work:</u>

- It is proposed to link the 11kV Raniakata feeder by linking of 11kV Kadalimunda Feeder.
- Construction of 2 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC.

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Compliance with the guidelines of voltage regulation in the distribution network.

c) Reduction of electrocution risk and public safety hazards.

d) Safe operation and isolation of the feeder.

e) Protection of electrical assets against lightening and surge related failure.

f) Improvement in operational safety for maintenance personnel and public.

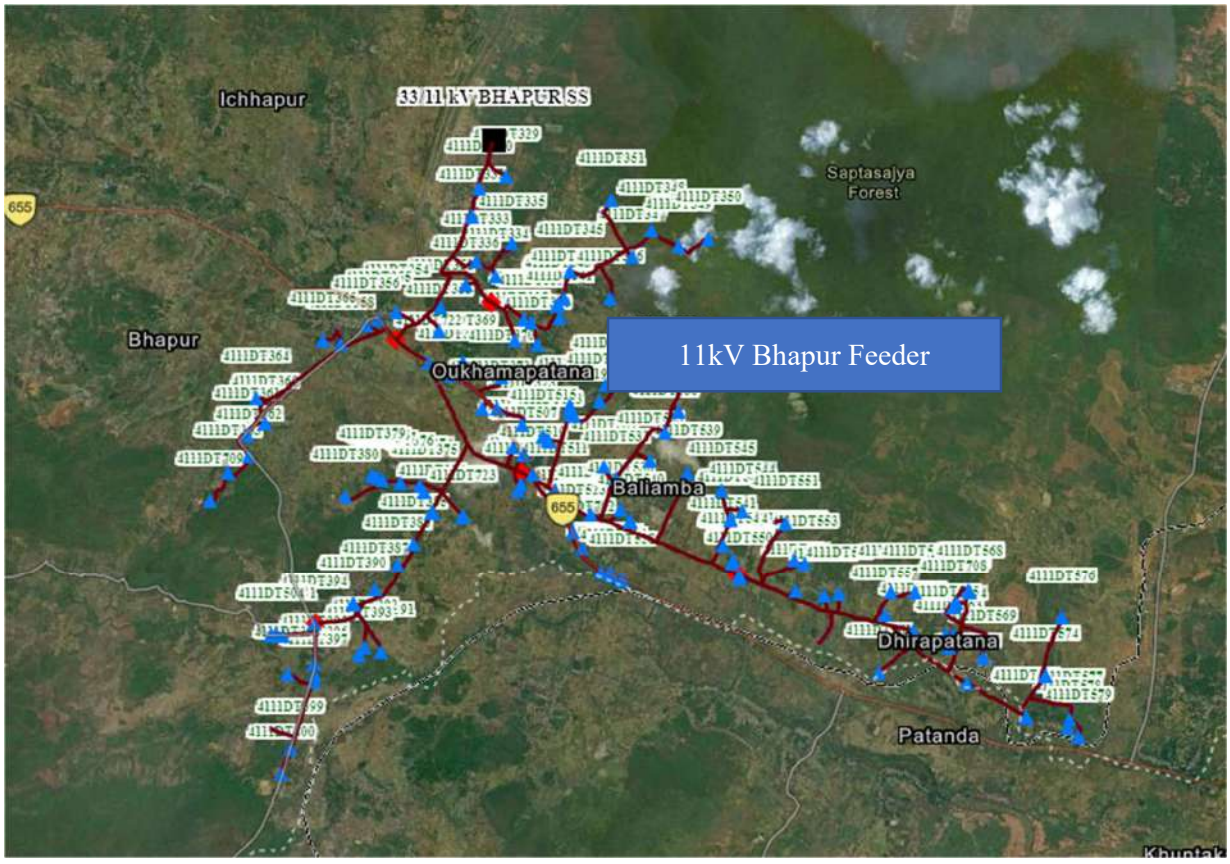
Benefit to the system and consumers:

- 11KV Raniakata feeder length reduced from 126 CKM to 107 CKM
- 11KV Kadalimunda feeder's tail end voltage improved from 8.9 KV to 9.1 KV.
- Ring connectivity is established between 11KV Raniakata feeder with 11KV Kadalimunda Feeder which will be helpful for power supply restorations during breakdown and maintenance works.

41.0 Proposal for Reliability improvement of 11kV Bhapur Feeder:

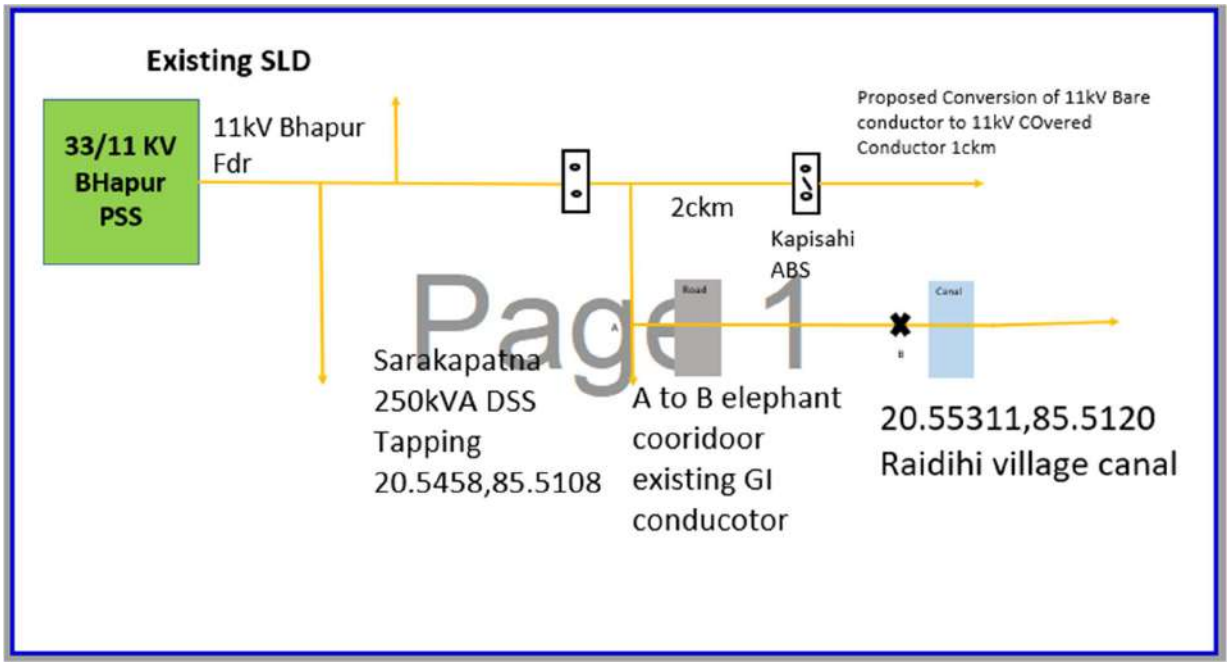
Proposal:

Proposal for Conversion of 11kV Bhapur Feeder from Sarakapatna Primary School 20.5458,85.5108 to 20.55311,85.5120 Chandrasekhar Prasad for reliability purpose-1CKM



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Bhapur Feeder.

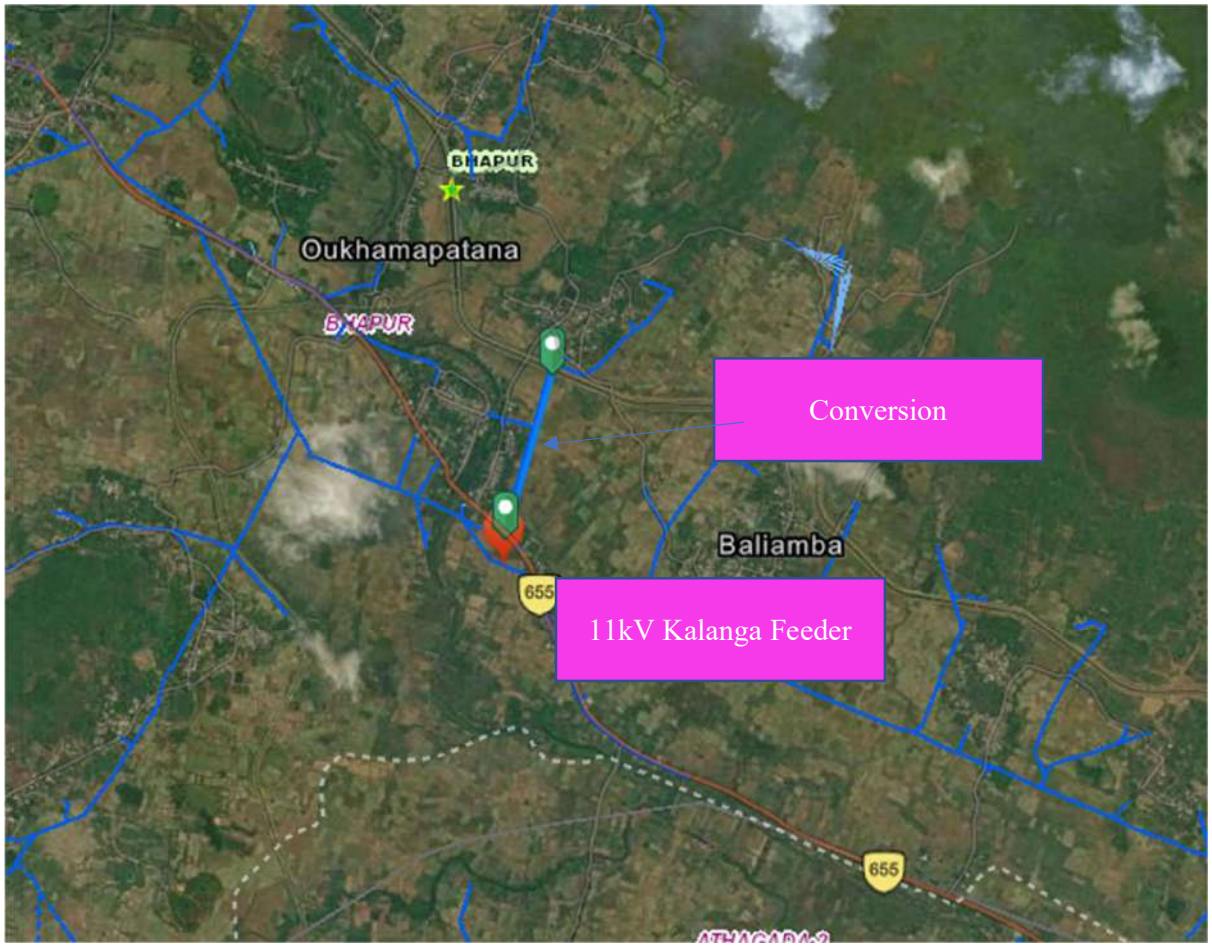


Existing Scenario:

- At present, 11kV Bhapur feeder is emanating from 33/11kV Bhapur PSS. The total trunk length of 11kV Kalanga is 11 km and peak load is 2 MVA.
- The trunk conductor size of feeder is 55sqmm AAAC and it supplies to Bhapur, Oukhamapatana, Baliamba Village.
- The trunk conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Bhapur feeder.
- At present frequent shutdowns are required for connecting feeder restoration

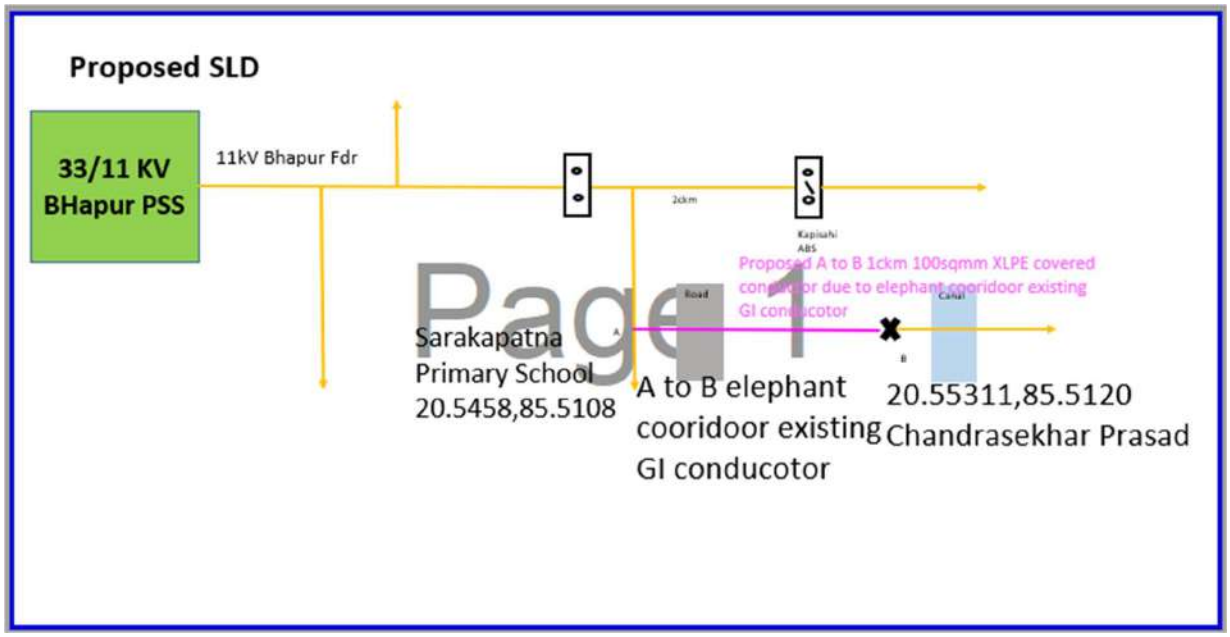
GIS MAP

Existing SLD:



Priority:

Since the 11kV Bhapur feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. The no. of trippings during the last year was 32nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Conversion of Bare to Covered conductor from Sarakapatna Primary School 20.5458,85.5108 to 20.55311,85.5120 Chandrasekhar Prasad.
- Due to Elephant corridor of 11KV Bhapur feeder is in unsafe condition.
- The New feeder will help for maintaining reliable power supply for smooth operation as well as enhancement in safety for moving elephants.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Conversion of 11kV Bhapur Feeder from Sarakapatna Primary School 20.5458,85.5108 to 20.55311,85.5120 Chandrasekhar Prasad for reliability purpose-1CKM

Cost Estimate: ₹ 0.15 Cr. (For detailed BoQ refer Annexure-12.41)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11kV Bhapur.
- Feeder restoration will be quick.

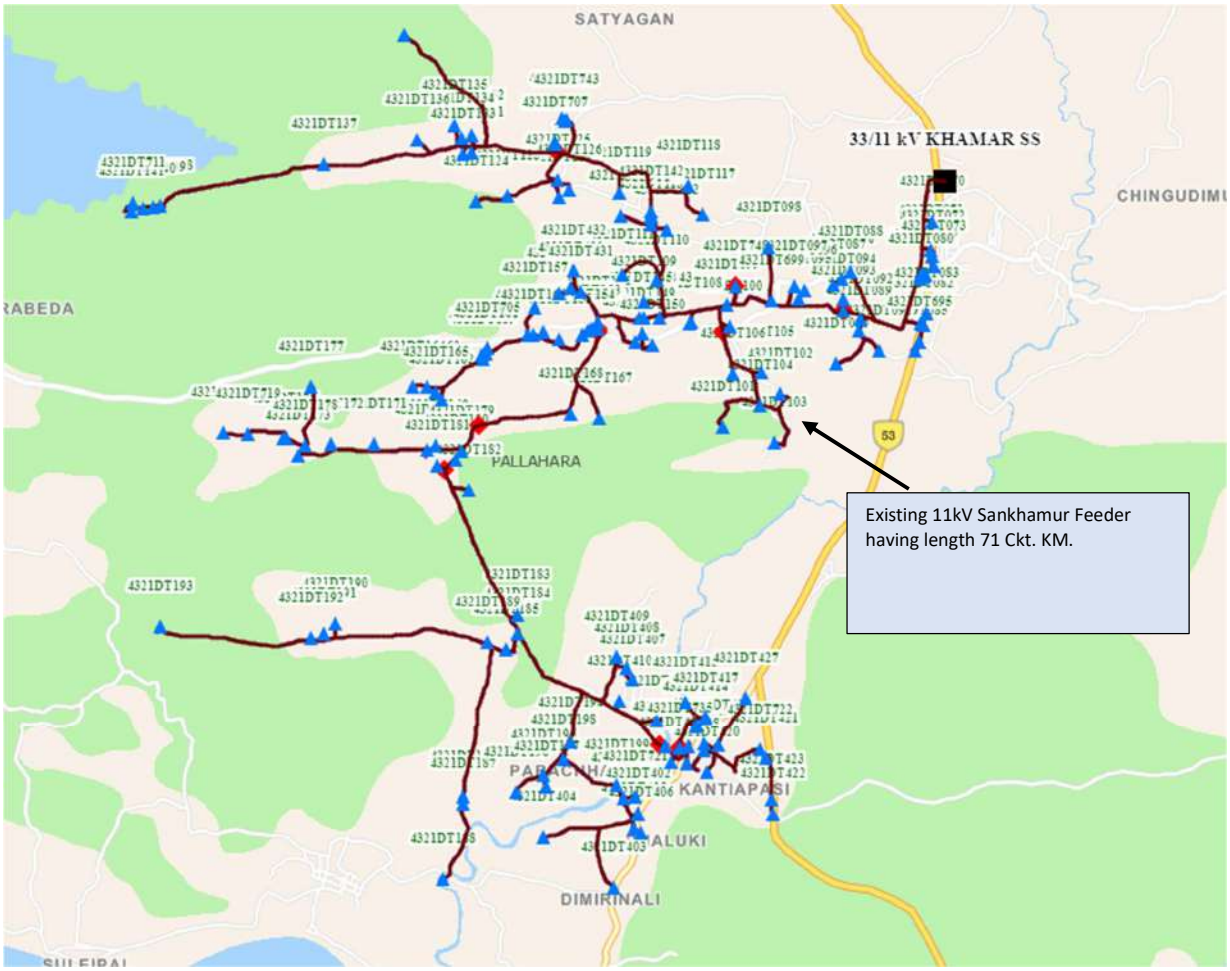
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.

- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

42.0 Proposal for Reliability Improvement as well as Length Reduction of 11kV Sankhamur Feeder:

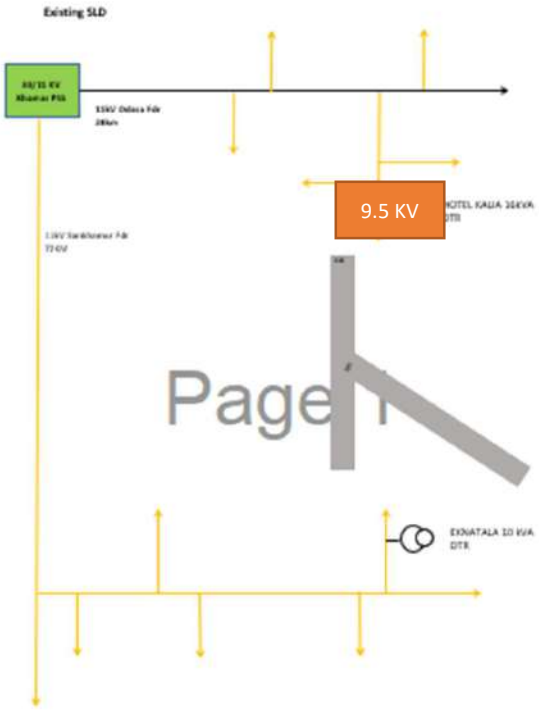
Proposal:

Proposal for reliability improvement as well as length reduction of 11KV Sankhamur feeder.



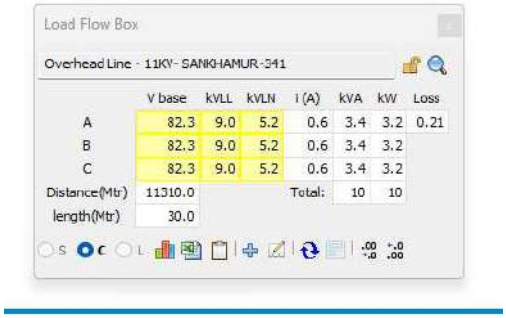
Requirement/ Need of the proposal:

Objective: Reliability improvement and Length reduction of 11kV Sankhamur Feeder.

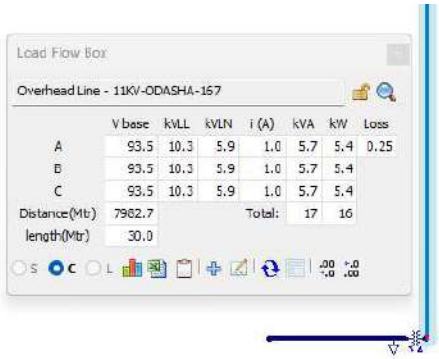


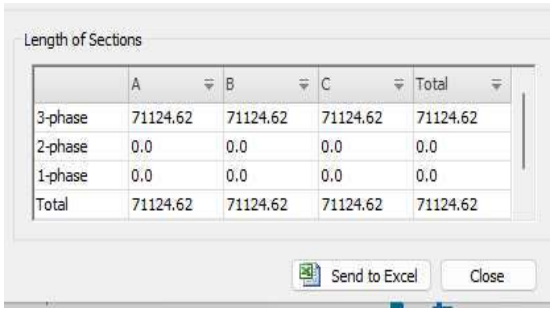
Existing Scenario:

- At present, 11kV Sankhmur Feeder is emanating from 33/11kV Khamar PSS having a feeder length of 71 Ckt. KM and tail end voltage is 9.0 KV.
- Entire 11kV Sankhamur Feeder is of 55/34 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.

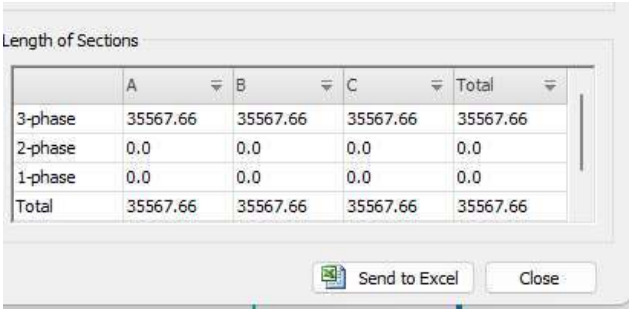


GIS SLD:





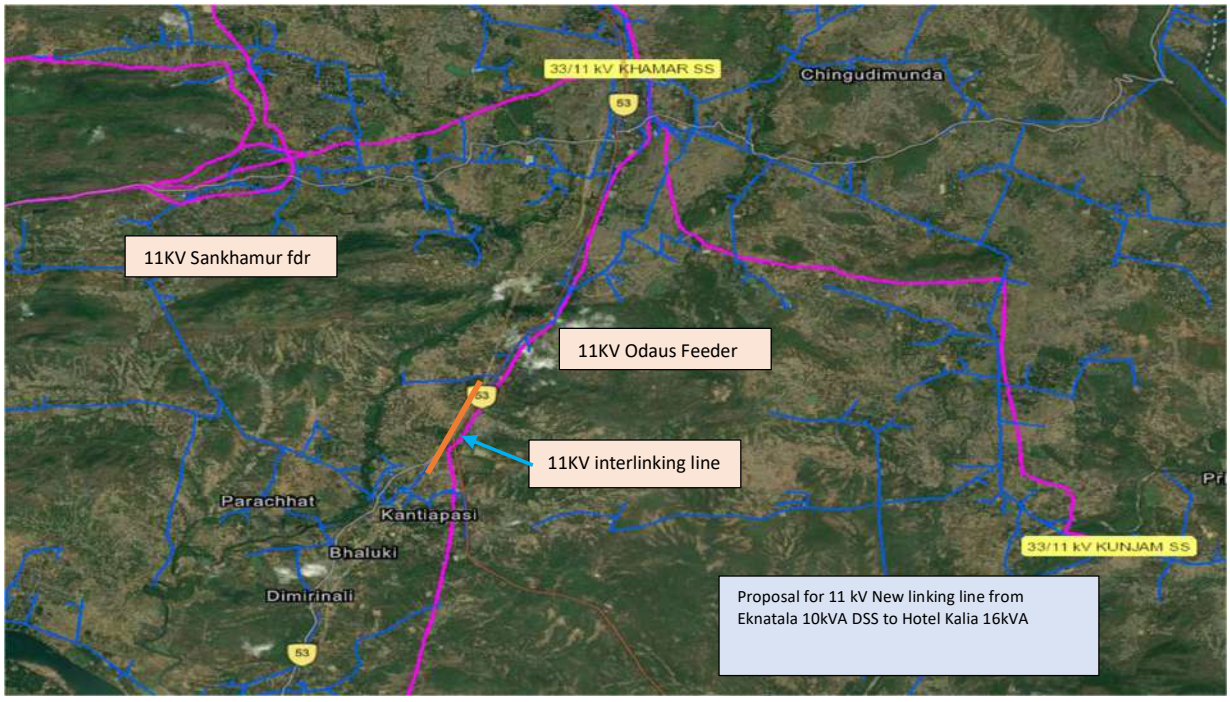
Existing SLD:



Tail end Voltage in existing scenario through load flow analysis:

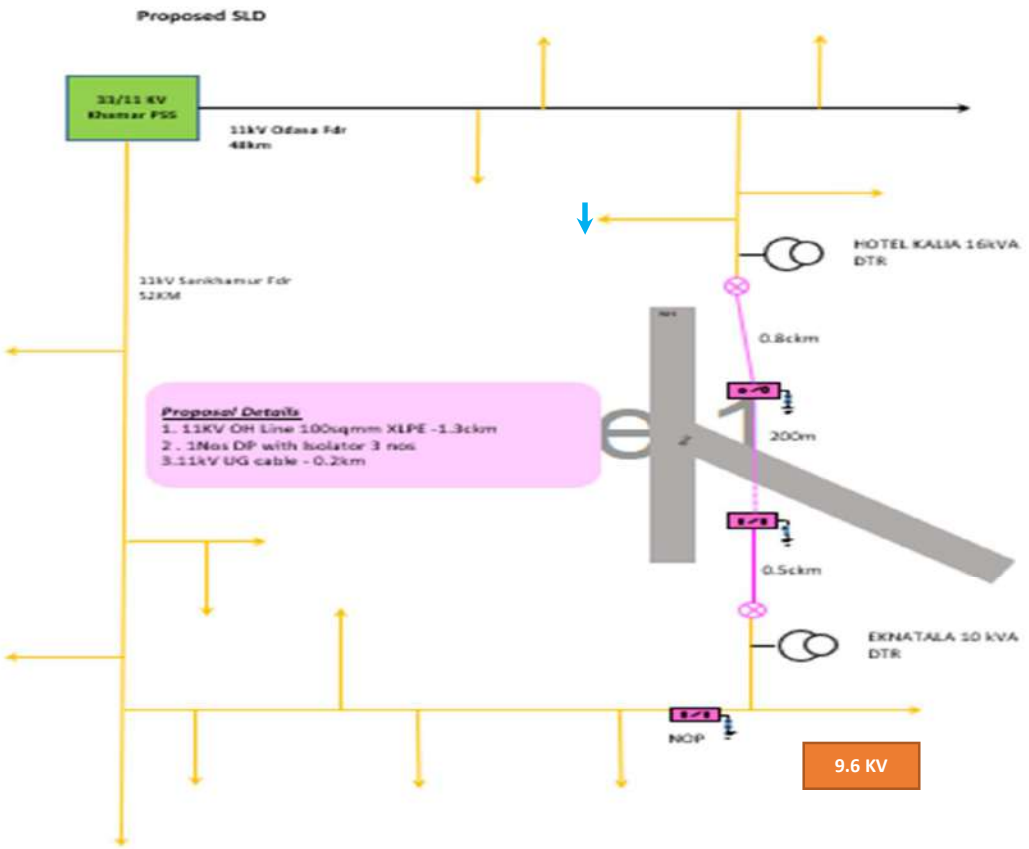
Priority: The existing 11kV Sankhamur feeder has a length of 72Ckm in the AS-IS scenario, resulting in a tail-end voltage of 9.0 kV. With the projected load growth, the tail-end voltage is expected to drop

further and reach 9.6 kV by Summer-2028. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



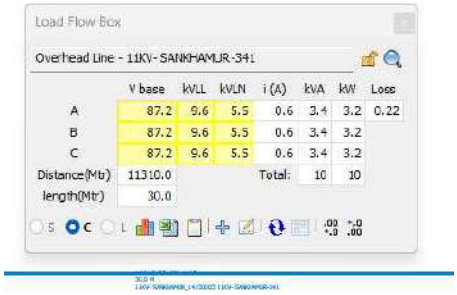
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 9.0. The voltage regulation of the feeder is not within permissible limits.

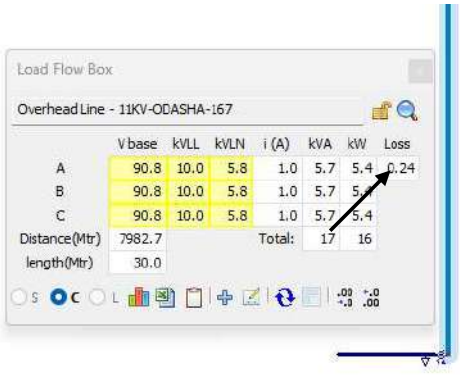


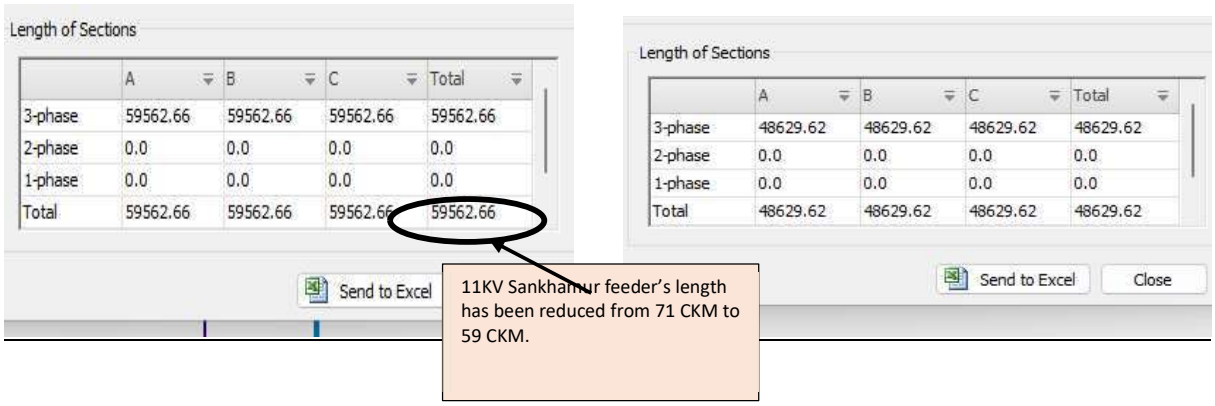
Proposed Scenario:

- It is proposed to inter link existing 11kV Sankhamur feeder with near by 11kV Odaus feeder emanating from Khamar PSS
- 1.3 CKM 11 kV line interconnection is proposed using 11 Mtr. WPB pole & 100 Sq.mm. XLPE Conductor
- DP along with Isolator 2 nos is proposed for better operation flexibility



GIS SLD:





Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

After execution of proposal 11kV Sankhmaur feeder Voltage will Improve from 9.0 kV to 9.6kV and feeder length reduced from 71ckm to 59ckm

Scope of Work:

- It is proposed to link the 11kV Sankhamur feeder by linking of 11kV Odaus Feeder.
- Construction of 1.3 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC. And 0.2km UG

Cost Estimate: ₹ 0.55 Crore (For detailed BoQ refer Annexure- 12.43)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

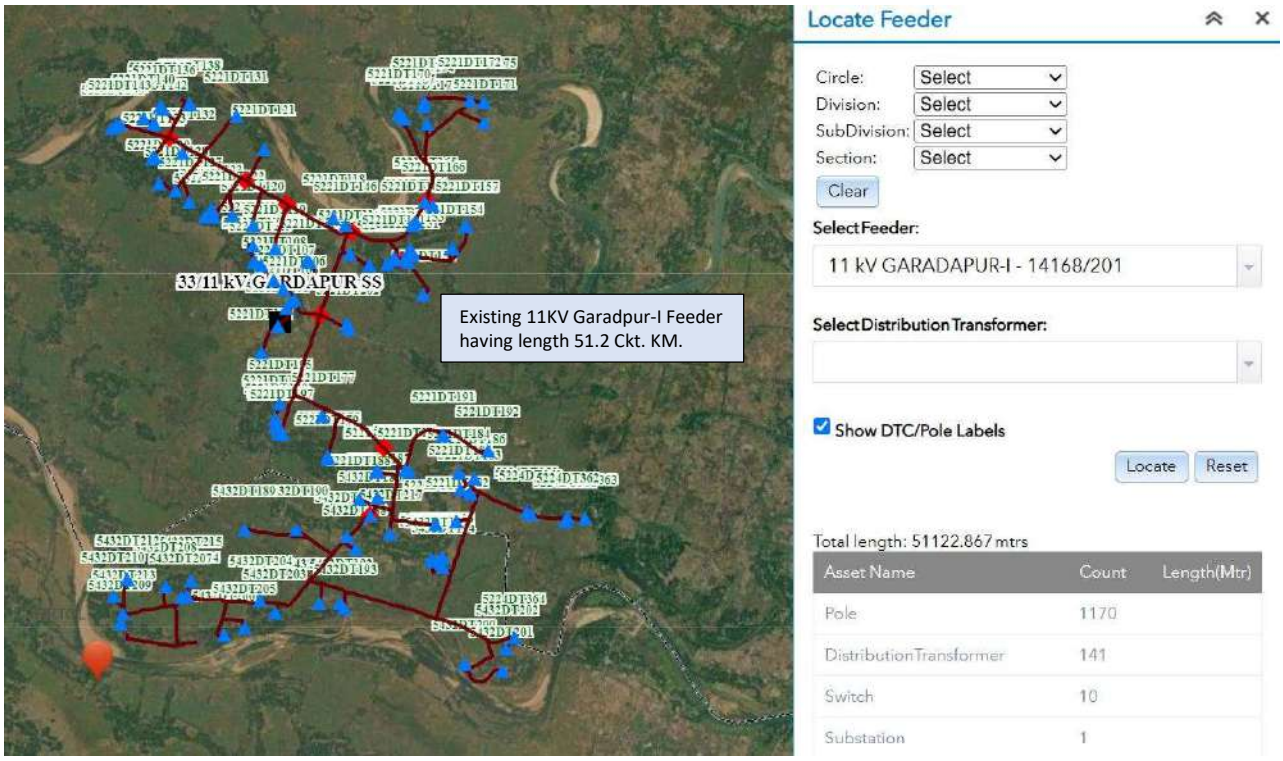
- Reliability will be improved for 11kV Banarpal-Hindol Feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

44.0 Proposal for Length Reduction of 11kV Garadpur-I Feeder:

Proposal:

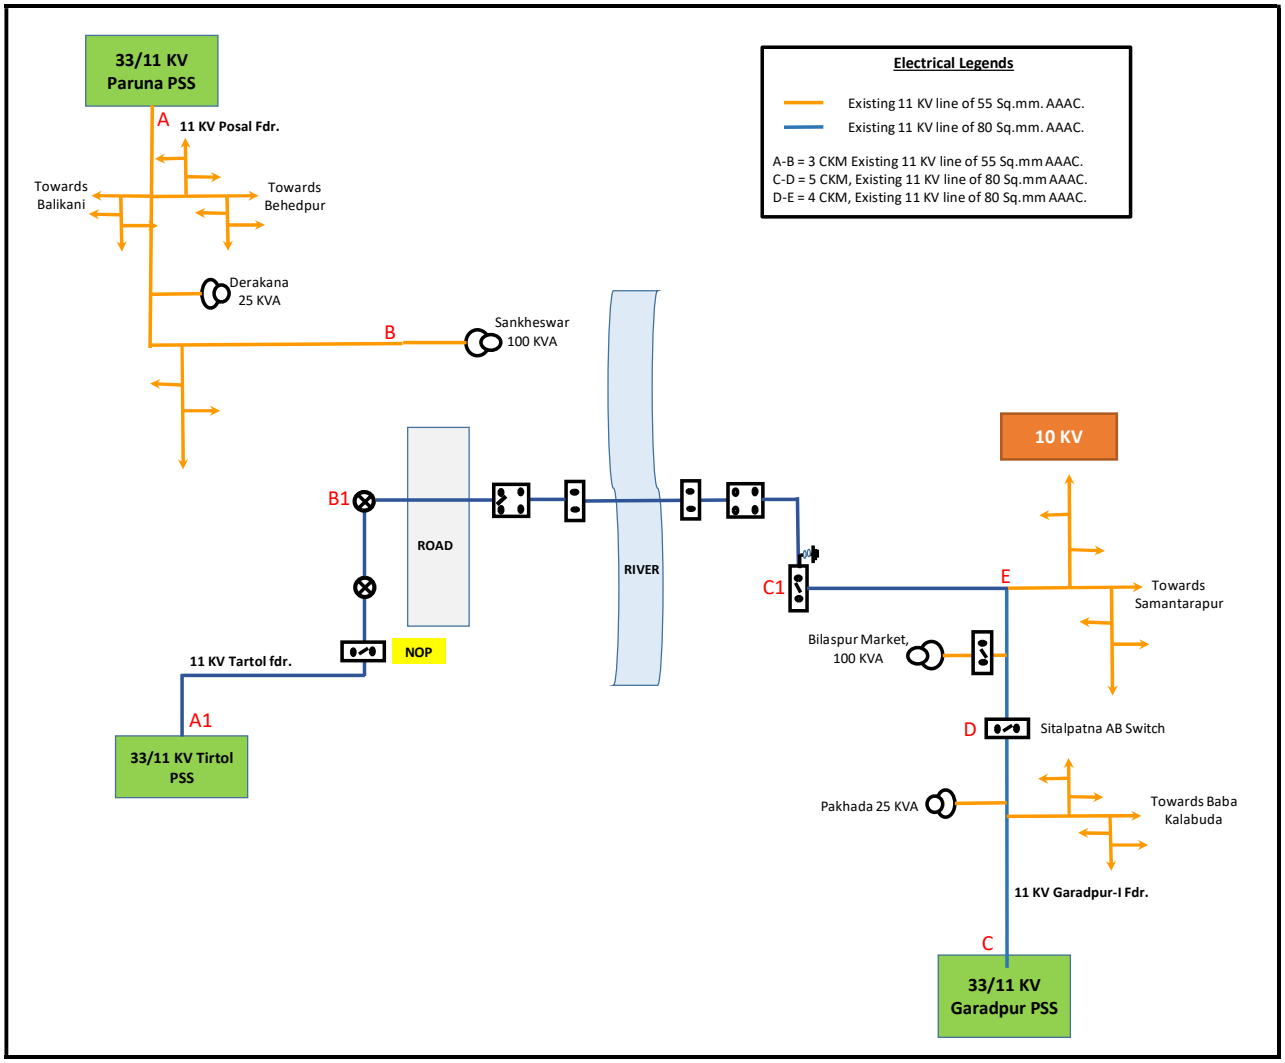
Proposal for reduction in length for 11KV Garadpur-I feeder and reliability improvement.

Requirement/ Need of the proposal:



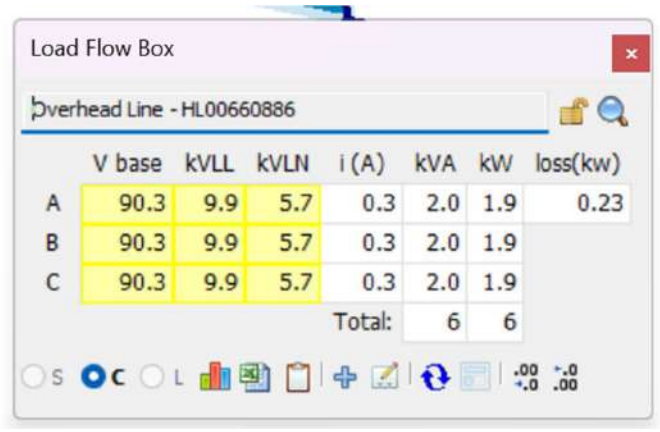
Objective: Length reduction and reliability improvement of 11kV Garadpur-I Feeder.

Existing Scenario:



- At present, 11kV Garadpur-I feeder is emanating from 33/11kV Garadpur PSS having a feeder length of 51.2 Ckt. KM and tail end voltage is 10 KV.
- Entire 11kV Garadpur-I Fdr is of 55/80 Sq.mm. AAAC.

- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.



GIS SLD:

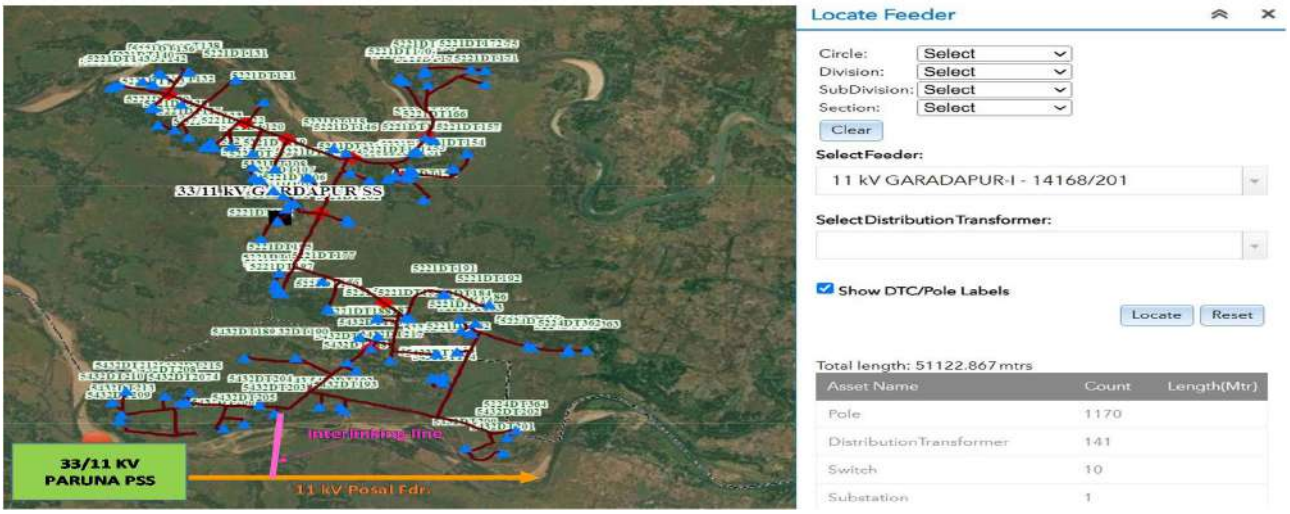
Existing SLD:

Tail end Voltage in existing scenario through load flow analysis with 2 years load growth:

	V base	kVLL	kVLN	i (A)	kVA	kW	loss(kw)
A	90.3	9.9	5.7	0.3	2.0	1.9	0.23
B	90.3	9.9	5.7	0.3	2.0	1.9	
C	90.3	9.9	5.7	0.3	2.0	1.9	
				Total:	6	6	

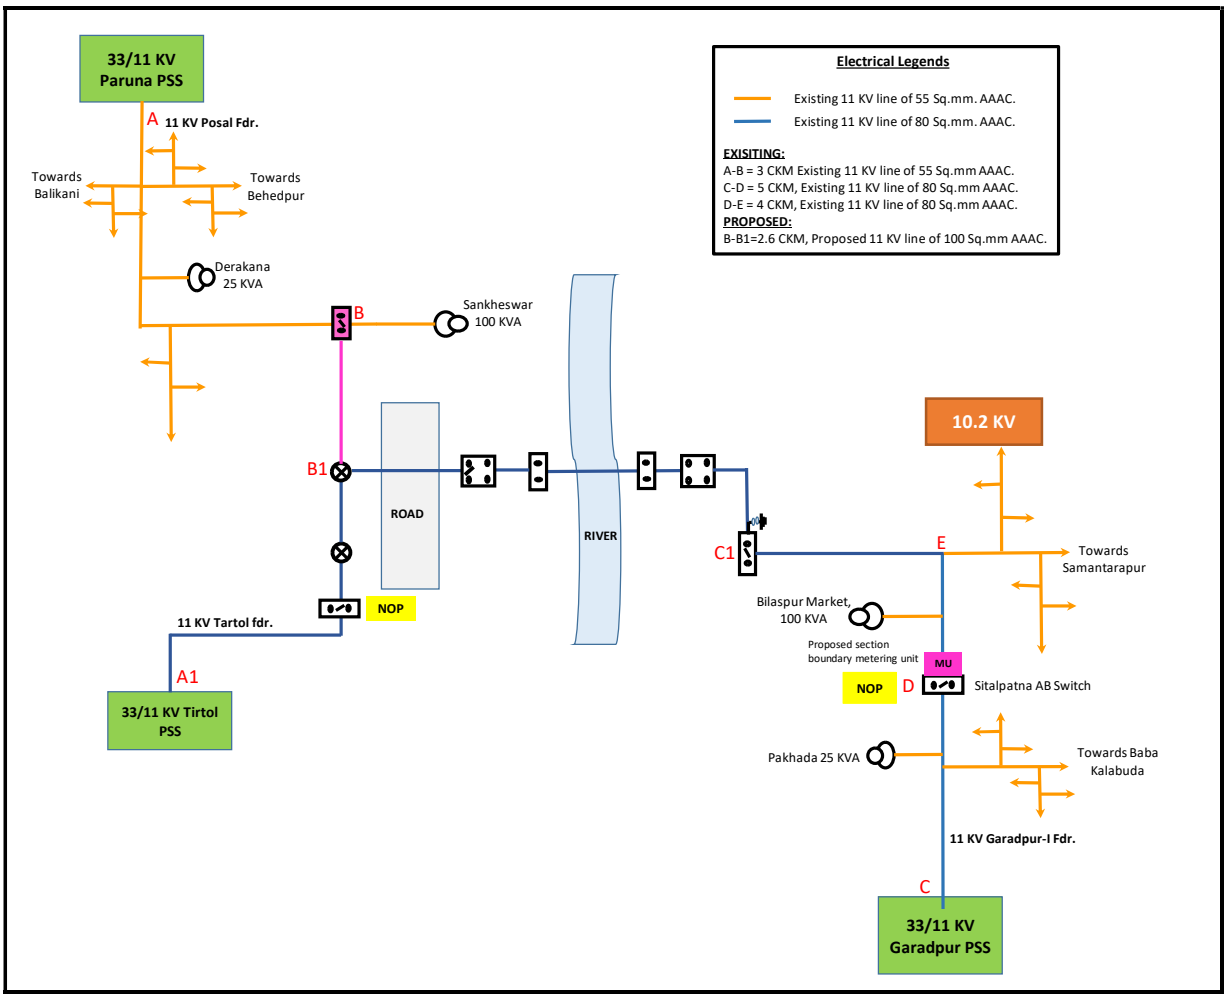
Priority and Timeline of the Project:

Priority: The existing 11kV Garadpur-I feeder has a length of 51.2 Ckm in the AS-IS scenario, resulting in a tail-end voltage of 10 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 9.9 kV by Summer-2028 with 2year load growth. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



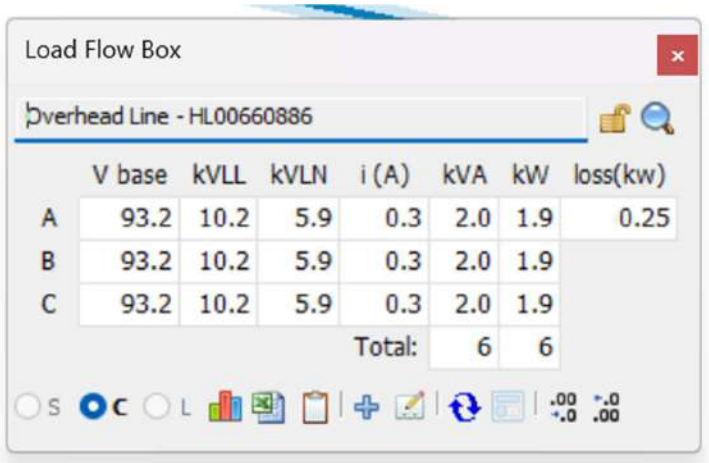
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 10 kV. The voltage regulation of the feeder is not within permissible limits.
- The feeder is facing frequent interruption since the feeder is lengthy & passed through difficult terrains such as paddy field area, dense vegetation etc. In case of any fault it takes longer duration for fault identification & restoration. Total 3311 No's consumer connected to the 11KV Garadpur-I feeder. No of 11KV feeder tripping in FY26 is 31 No's & 53 No's till July 26.
- In existing scenario 11KV Garadpur-I feeder feeding consumers of two different section of two different Division. This is also causes delay in restoration due to multiple co-ordination required for isolation & restoration .This also causes energy auditing issue to overlapping of two section boundary.



Proposed Scenario:

- It is proposed for interlinking of existing 11KV Garadpur-I feeder with nearby 11KV Posal feeder emanating from Paruna PSS for existing Garadpur-I feeder length reduction by construction of 2.6 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC.
- Installation of 01 No. HT Meter at the section boundary for energy auditing purpose.



GIS SLD:

Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

Length of Sections

	A	B	C	Total
3-phase	29611.0	29611.0	29611.0	29611.0
2-phase	0.0	0.0	0.0	0.0
1-phase	0.0	0.0	0.0	0.0
Total	29611.0	29611.0	29611.0	29611.0

11KV Garadpur-I feeder's length has been reduced from 51.2 CKM to 29.61 CKM.

Scope of Work:

- Construction of 2.6 CKM 11 kV O/H line using 11 Mtr. H-Pole & 100 Sq.mm. AAA Conductor.
- Installation of 01 No. section boundary meter.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.44		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-II	
Name of the Sub-Division : -	Marsaghai	
Name of the Section : -	Garadpur	
Name of the Work :-	Proposal for construction of 2.6 CKM 11 kV linking line between 11 kV Postal & Garadpur-I Fdr. for n-1 reliability and length reduction of 11 kV Garadpur-I Fdr.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 2.6 CKM 11 kV O/H line using 11 Mtr. H-Pole & 100 Sq.mm. AAA Conductor.(Refer PSLD - B-B1)	6,831,343.16
2	PART B: Installation of 01 No. section boundary meter (refer PSLD)	92,915.60

	Total Amount	**6,924,258.76**
	Total Amount (In Cr.)	**0.69**
Total estimated cost is Rs. 0.69 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.69 Cr. (For detailed BoQ refer Annexure-12.44)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026
ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Compliance with the guidelines of voltage regulation in the distribution network.
c) Reduction of electrocution risk and public safety hazards.
d) Safe operation and isolation of the feeder.
e) Protection of electrical assets against lightening and surge related failure.
f) Improvement in operational safety for maintenance personnel and public.
g) This will also resolve energy auditing issue to overlapping of two section boundary.

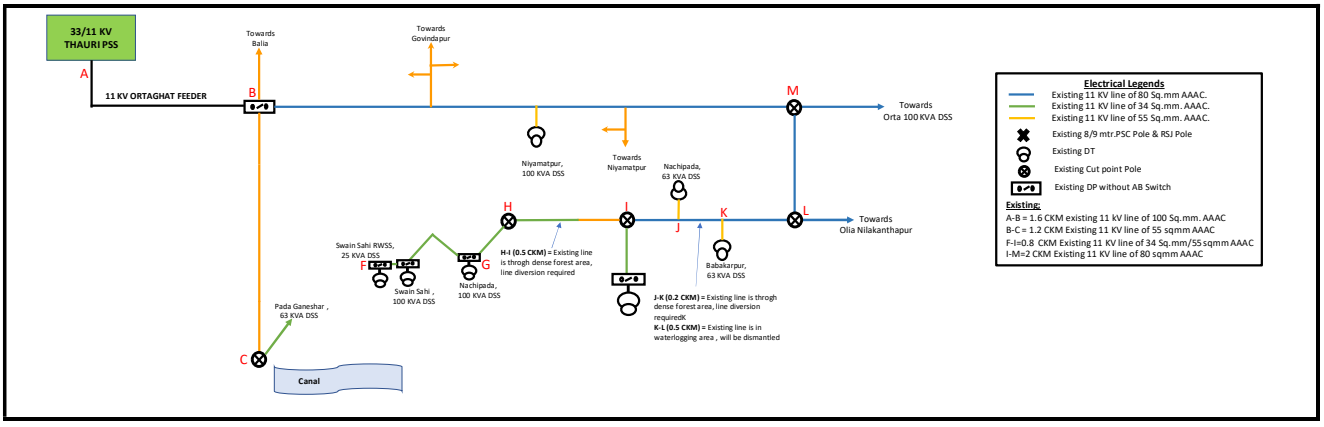
45.0 Proposal for Reliability improvement of 11kV Ortaghat Feeder:

Proposal:

Proposal for shifting of existing feeder from water logging and dense vegetation area at Rajgarh area and re construction of 2.3 CKM new line for reliability improvement of 11 kV Ortaghat feeder.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Ortaghat Feeder.



Existing Scenario:

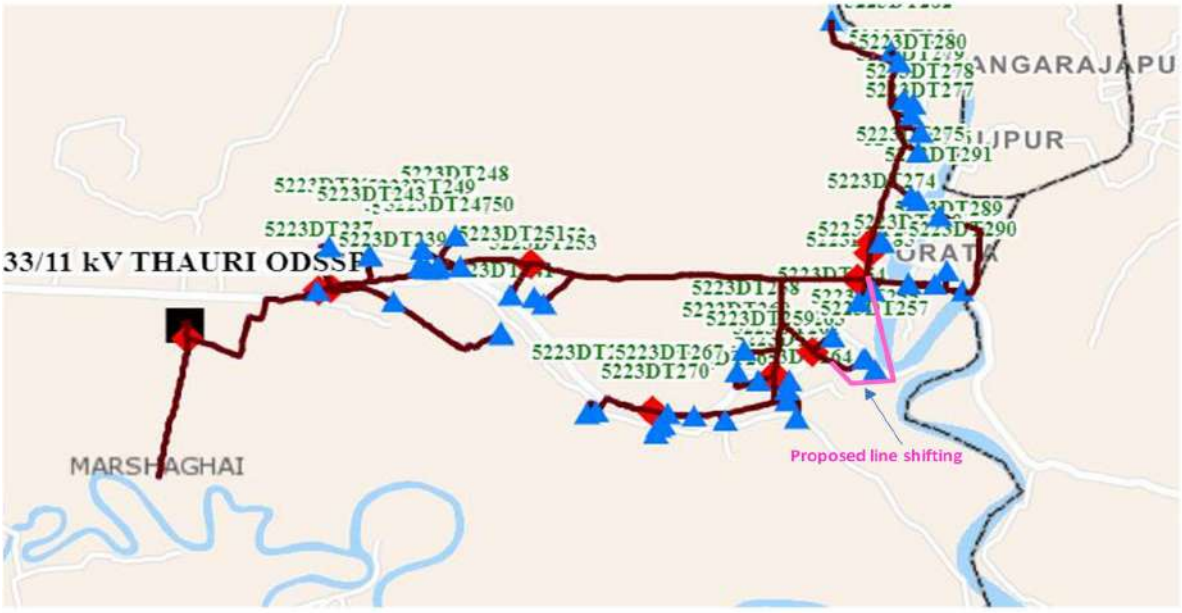
- At present, 11kV Ortaghat feeder is emanating from 33/11kV Thauri PSS. The total length of 11kV Ortaghat is 22 km and peak load is 1.31 MVA.
- At rajgarh area 11 kV feeder is passing through dense forest and water logging area which create difficulties during maintenance and in case of any fault occurs it takes long time to identify fault and restore line.
- Frequent tripping is observed in the 11KV Ortghat feeder due to dense forest area.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

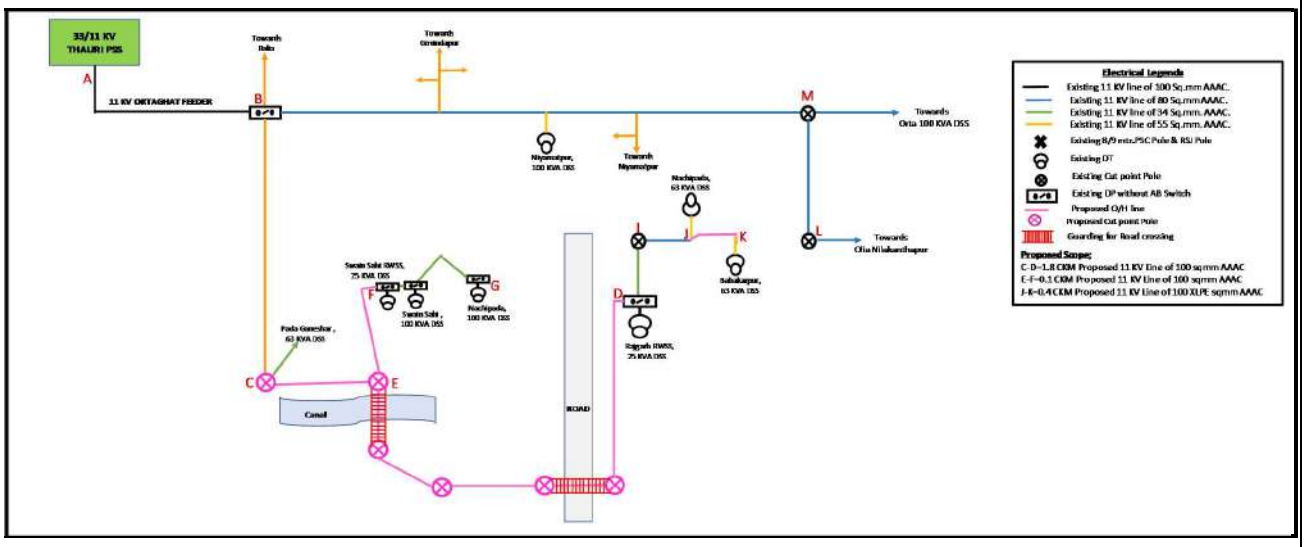
Priority and Timeline of the Project:

Priority: Since the 11kV Ortghat feeder is experiencing frequent interruptions as 11 kV existing line is passing through dense vegetation area & water logging area and it takes long time for restoration and maintenance activities. Total 3314 No's consumer connected to the 11KV Ortghat feeder. No of 11KV feeder tripping in FY26 is 24 No's & 32 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply



interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.

Proposed Scenario:



- Construction of 1.9 CKM 11 kV O/H line using 100 Sq.mm. AAAC & 11 Mtr. H-Pole for shifting of existing line from water logging area.
- Construction of 0.4 CKM 11 kV O/H line using 100 sq.mm. XLPE AAAC in dense forest area to restrict frequent earth fault.

- Installation of 3 Nos of 11 kV line protecting guarding having span 30 Mtr. For road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 1.9 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC.
- Construction of 0.4 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. XLPE AAAC.
- Installation of 3 Nos of 11 kV line protecting guarding having span 30 Mtr.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.45		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-II	
Name of the Sub-Division : -	Marsaghai	
Name of the Section : -	Marsaghai	
Name of the Work :-	Proposal for diversion of existing O/H line of 11 kV Ortaghat Fdr. from Waterlogging area/dense forest area and construction of 2.3 CKM new 11 kV line to improve reliability.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 1.9 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC (Refer PSLD C-D & E-F)	4,933,753.41
2	PART B: Construction of 0.4 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. XLPE AAAC (Refer PSLD J-K)	1,174,662.41
3	PART C: Installation of 3 Nos of 11 kV line protecting guarding having span 30 Mtr. (Refer PSLD)	88,032.94
4	PART D: Dismantling Portion	66,147.16
5	**Total Amount**	**6,262,595.92**
	Total Amount (In Cr.)	**0.63**

Total estimated cost is Rs. 0.63 Crore. (On TPCODL Capex Scheme)

Cost Estimate: ₹ 0.63 Cr. (For detailed BoQ refer Annexure-12.45)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

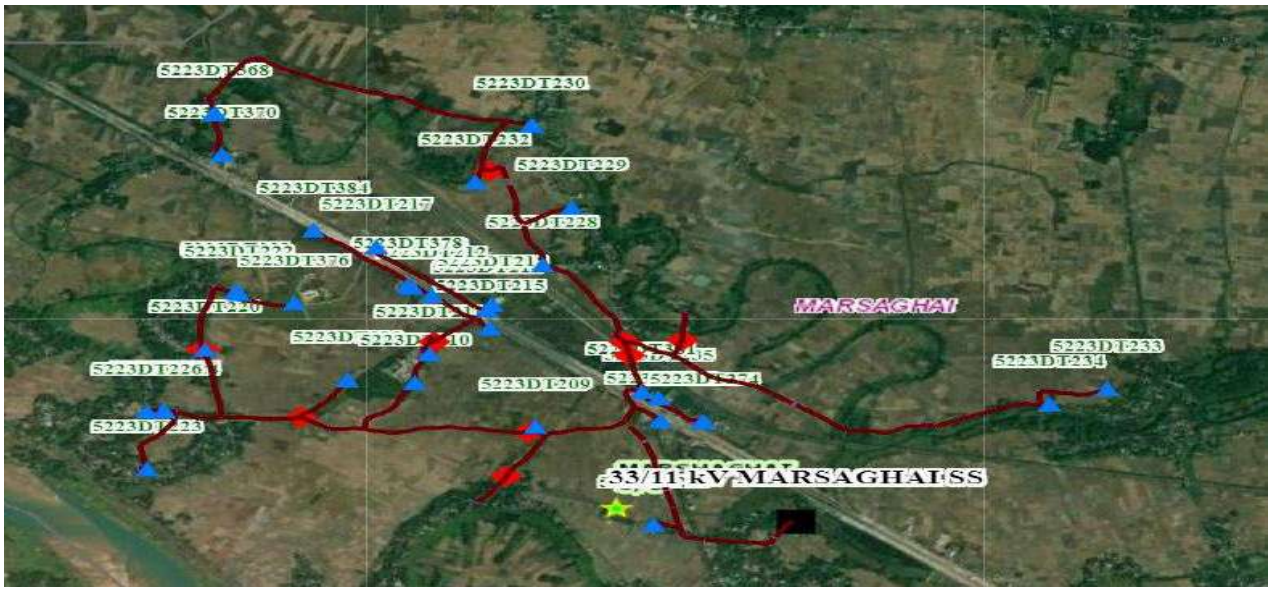
- Reliability will be improved for 11 kV Ortghat feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Earth fault will be reduced in dense forest area.
- Safety issue will be mitigated after shifting of existing line from water logging area.

46.0 Proposal for Reliability improvement of 11kV Angulai Feeder:

Proposal:

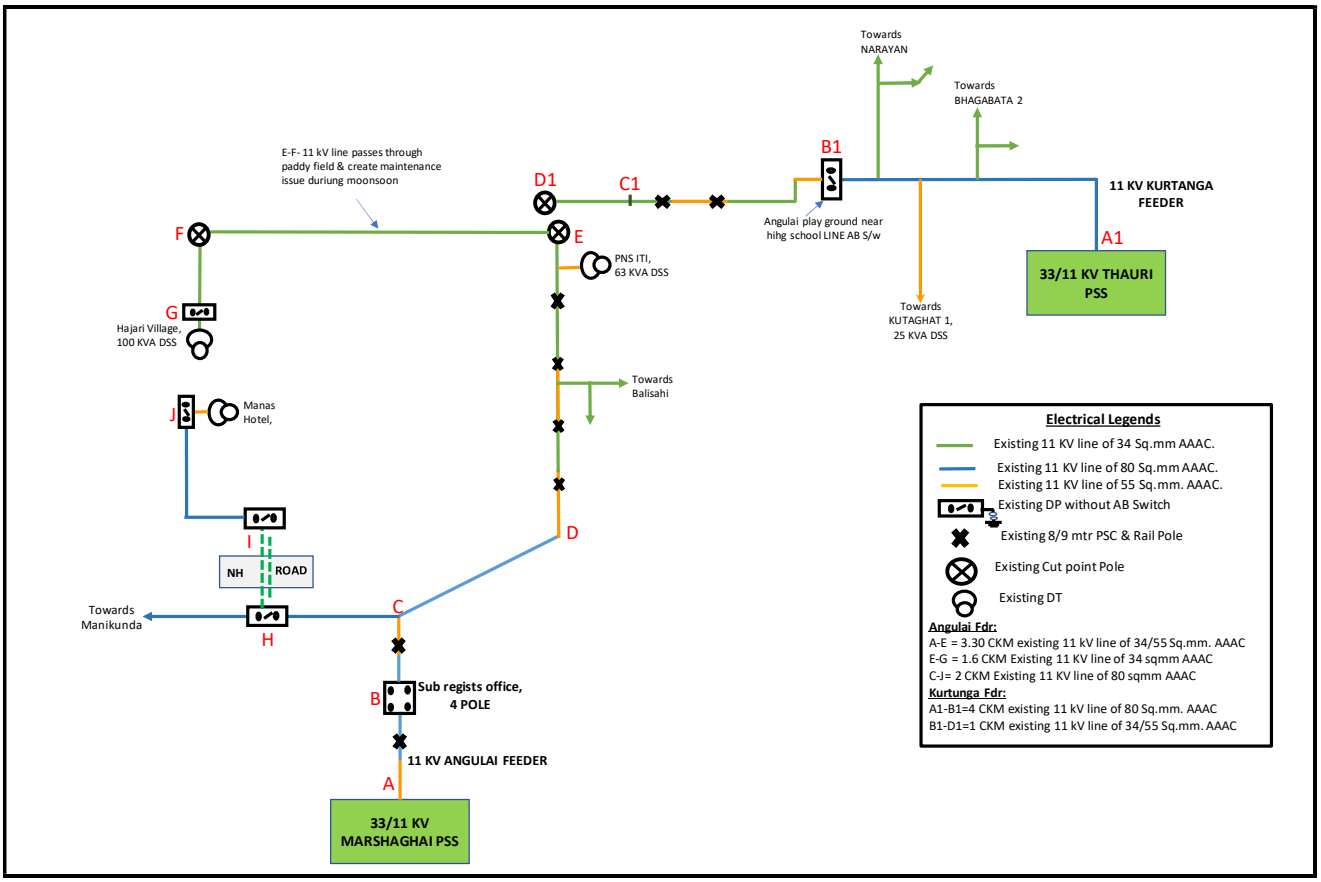
Proposal for Construction of 11kV interlinking line between 11 kV Angulai & Kurtunga feeder for length-2.5KM for reliability purpose.

Requirement/ Need of the proposal:



Objective: Reliability improvement of 11kV Angulai Feeder.

Existing Scenario:

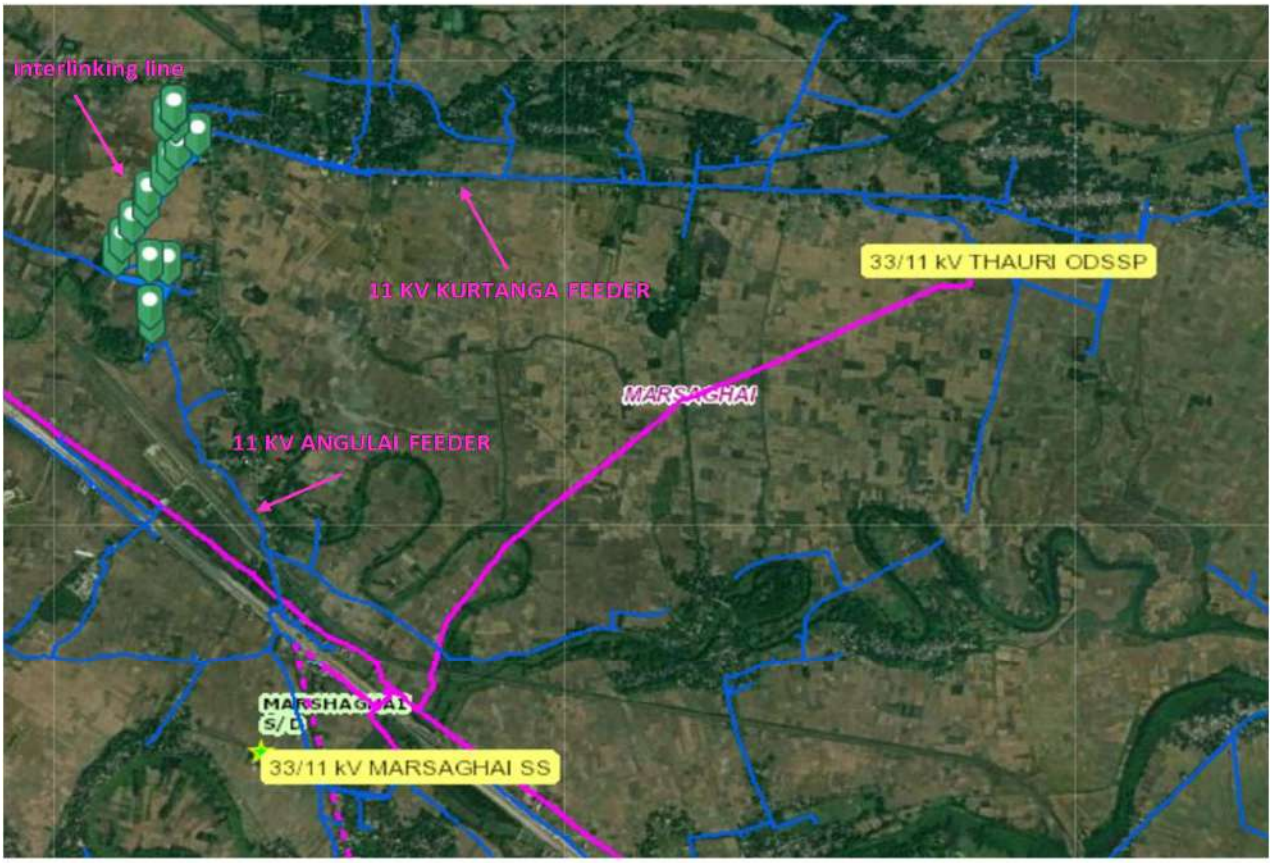


- At present, 11kV Angulai feeder is emanating from 33/11kV Marsaghai PSS. The total length of 11kV Angulai feeder is 15.2 km and peak load is 0.7 MVA.
- The trunk as well as branch conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.

- 11 kV Kurtunga feeder is nearby to 11 kV angulai feeder.
- Frequent tripping is observed in the 11KV Angulai feeder
- At present frequent shutdowns are required for connecting feeder restoration.

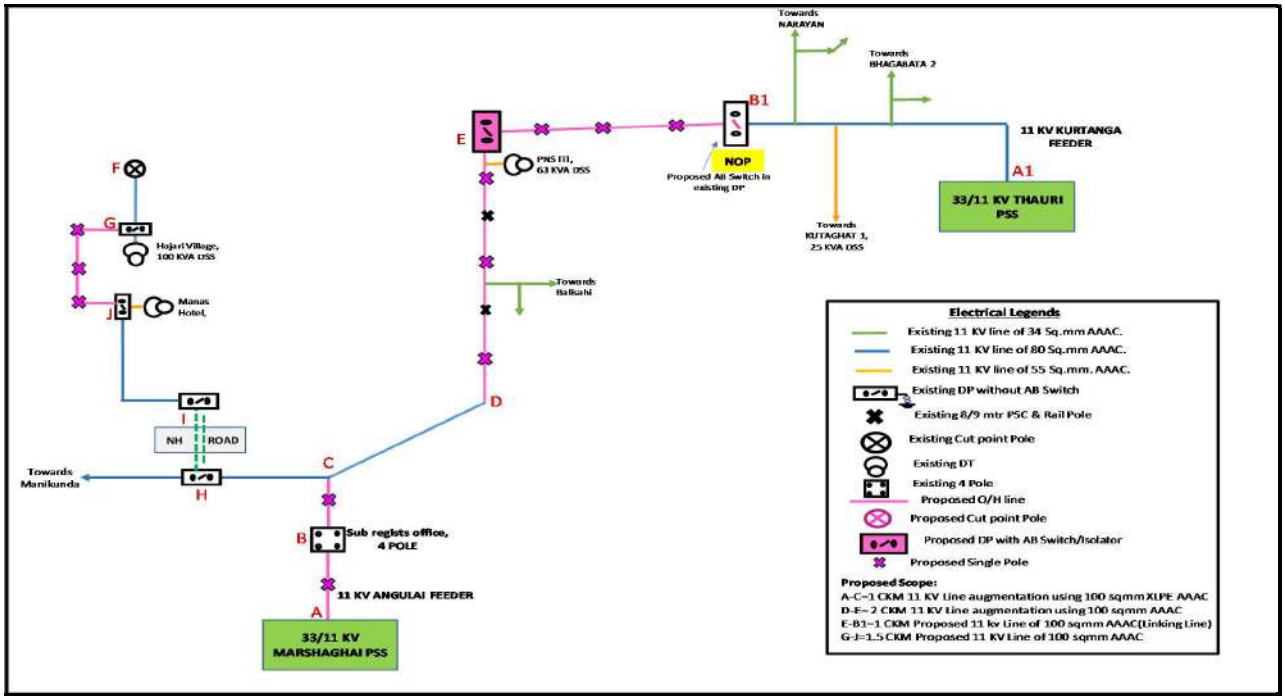
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Angulai feeder is experiencing experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 945 No's consumer connected to the 11KV Angulai feeder. No of 11KV feeder tripping in FY26 is 108 No's & 51 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Construction of 11kV linking line of 2.5 CKM using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC for N-1 connectivity between 11 kV Angulai & Kurtunga feeder.
- Augmentation of 11 kV O/H line of 3 CKM using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC for strengthening of existing line.
- Installation of 02 Nos of 11 kV line protecting guarding for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. XLPE AAA Conductor.
- Construction of the 2.5 CKM 11 kV O/H line using 11 m WPB poles (interposing) and 100 sq. mm AAA conductor.
- Augmentation of the 2 CKM 11 kV O/H line using 11 m WPB poles (interposing) and 100 sq. mm AAA conductor.
- Installation of 11 KV line protecting guarding of 2 Nos having span 30 Mtr. Each.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.46		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-2	
Name of the Sub-Division : -	MARSHAGHAI	
Name of the Section : -	MARSHAGHAI	
Name of the Work :-	Proposal for Augmentation of 3 CKM line of 11 Kv Angulai Fdr. from 34/55 Sq.mm. AAAC to 100 Sq.mm. AAAC along with construction of 2.5 CKM linking line for N-1 reliability with 11 kV Kurtanga Fdr.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. XLPE AAA Conductor (Refer PSLD A-C)	1,735,610.97

2	PART-B : 1.Construction of the 2.5 CKM 11 kV O/H line using 11 m WPB poles (interposing) and 100 sq. mm AAA conductor (refer to PSLD E-B1 and G-J) 2. Augmentation of the 2 CKM 11 kV O/H line using 11 m WPB poles (interposing) and 100 sq. mm AAA conductor (refer to PSLD D-E)	5,789,965.32
3	PART-C: Installation of 11 KV line protecting guarding of 2 Nos having span 30 Mtr. Each (Refer PSLD)	58,688.63
4	PART D: Dismantling Portion	192,219.11
	Total Amount	**7,776,484.03**
	Total Amount (In Cr.)	**0.78**
Total estimated cost is Rs. 0.78 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.78 Cr. (For detailed BoQ refer Annexure-12.46)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

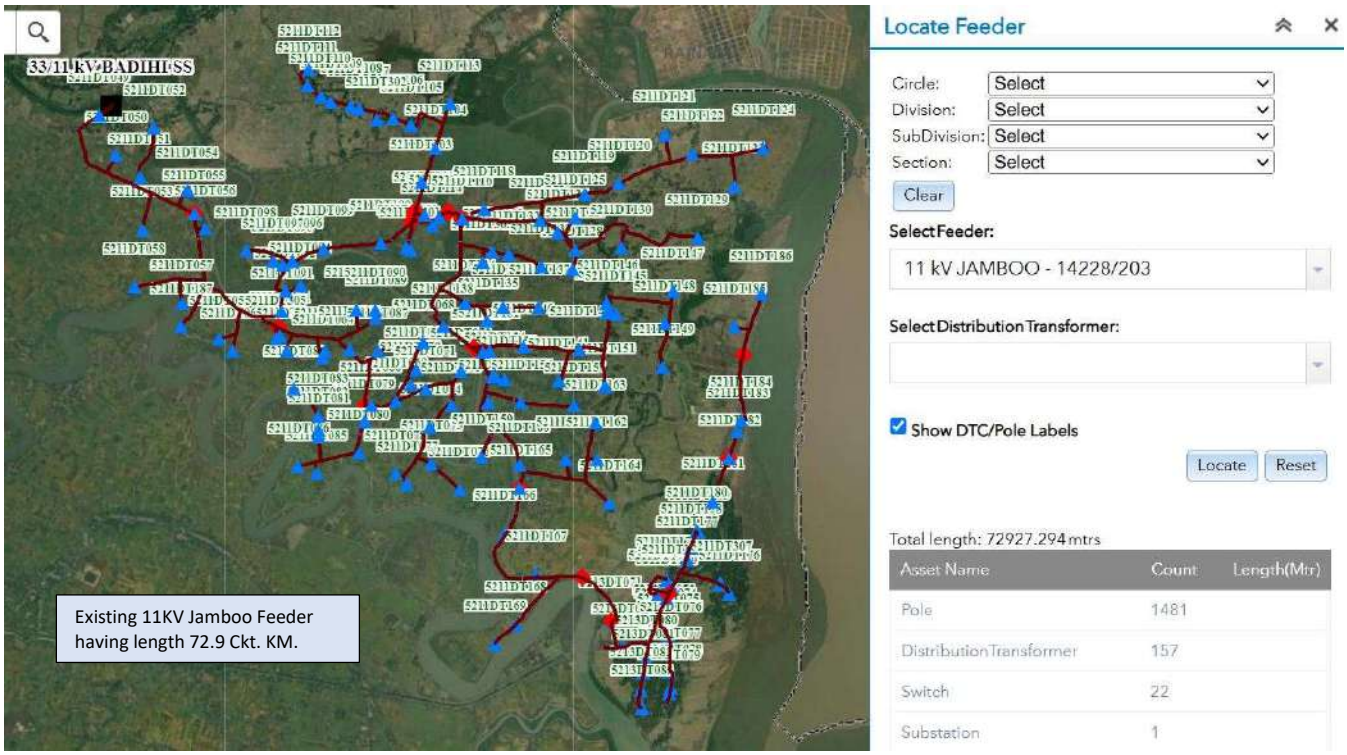
Benefit to the system and consumers:

- Reliability will be improved for 11 kV Angulai as well as Kurtunga feeder.
- Feeder restoration will be quick.
- By linking 11KV Angulai feeder and 11KV Kurtunga feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

47.0 Proposal for Length Reduction of 11kV Jamboo Feeder:

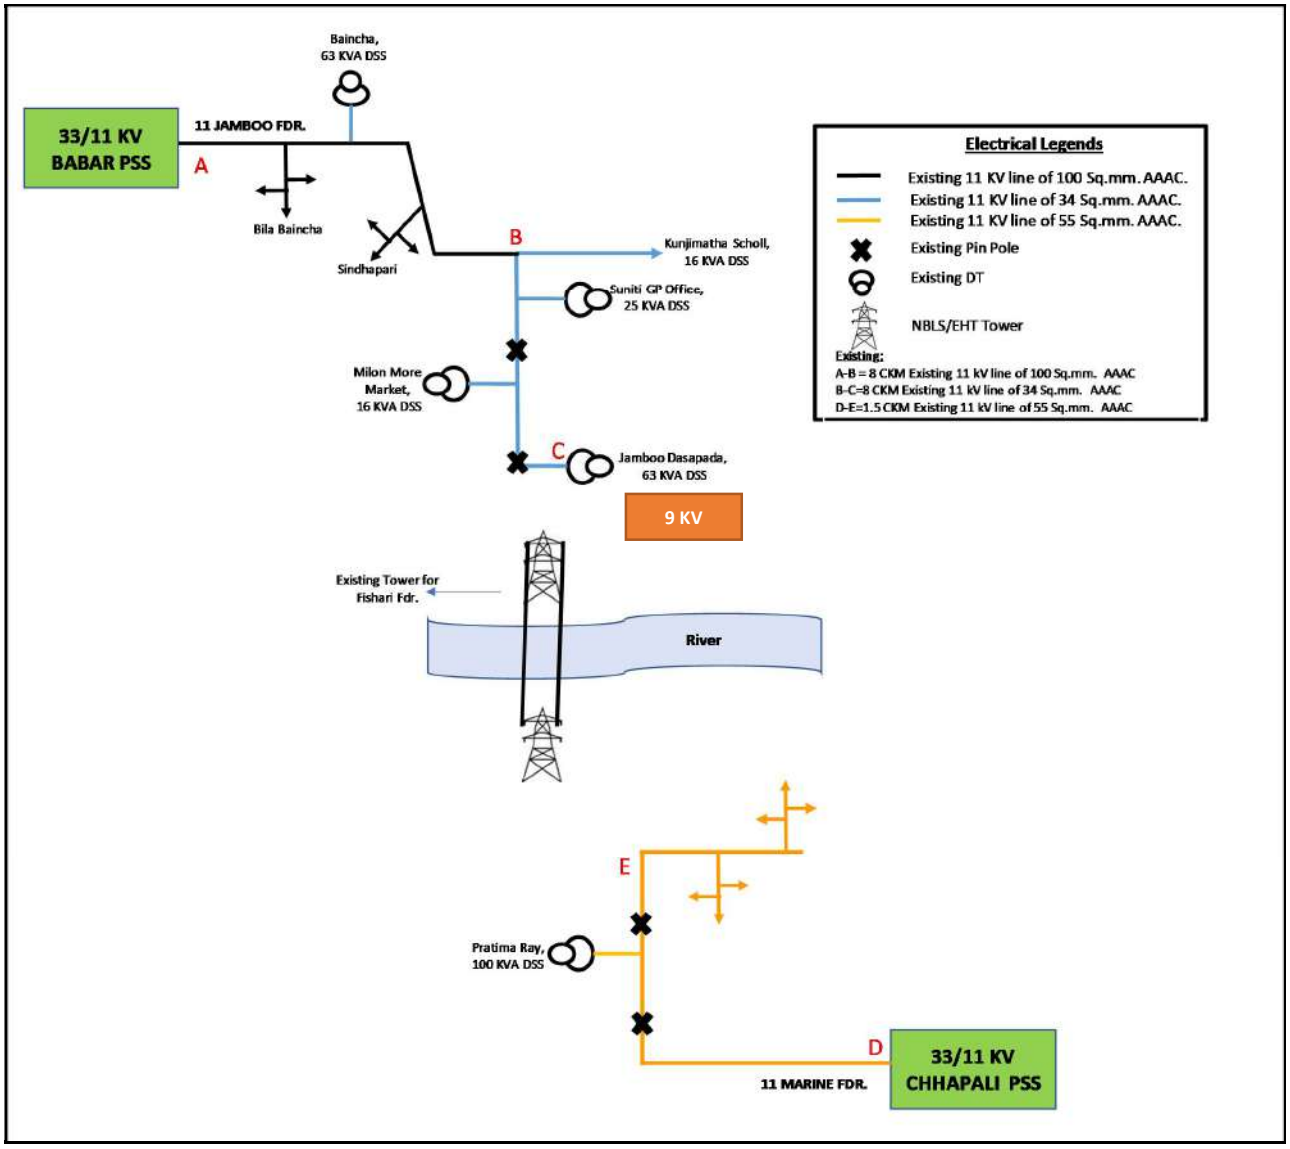
Proposal:

Proposal for reduction in length for 11KV Jamboo feeder and reliability improvement.



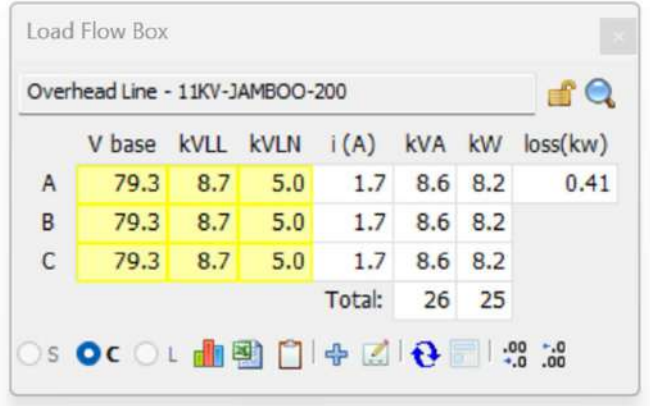
Requirement/ Need of the proposal:

Objective: Length reduction and reliability improvement of 11kV Jamboo Feeder.



Existing Scenario:

- At present, 11kV Jamboo feeder is emanating from 33/11kV Badhi/Babar PSS having a feeder length of 72.9 Ckt. KM and tail end voltage is 9 KV.
- Entire 11kV Jamboo Fdr is of 34/55/100 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.



GIS SLD:

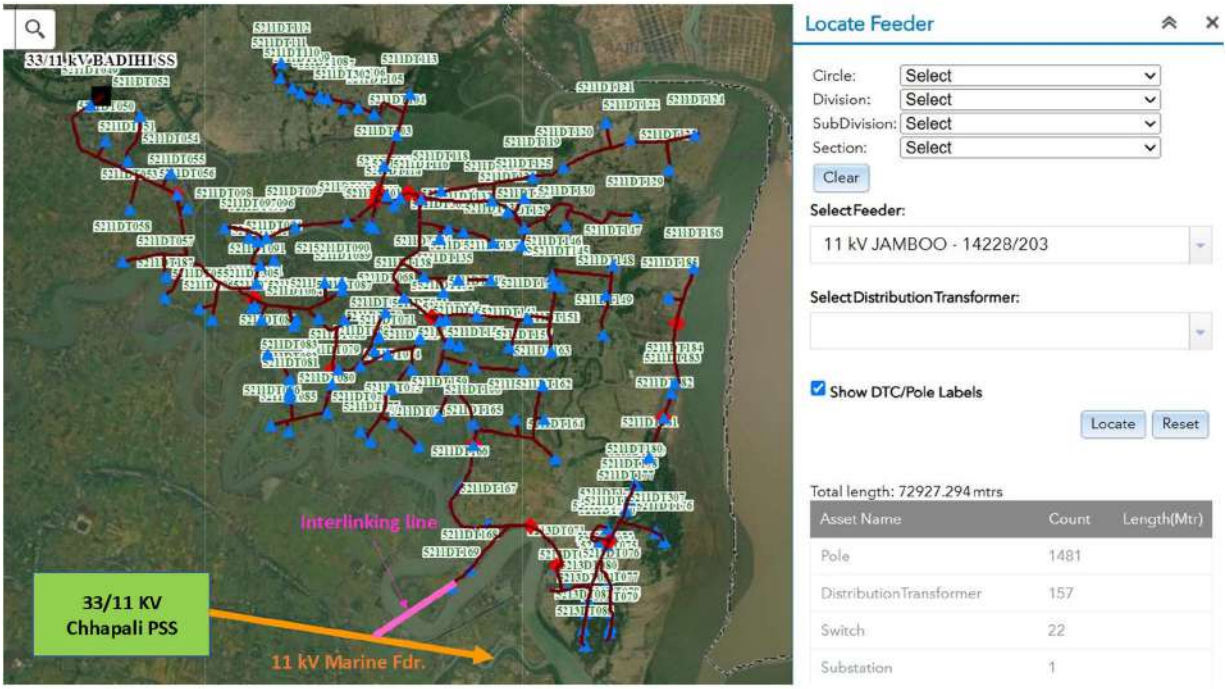
Existing SLD:

Tail end Voltage in existing scenario through load flow analysis with 2 years load growth:

	V base	kVLL	kVLN	i (A)	kVA	kW	loss(kw)
A	79.3	8.7	5.0	1.7	8.6	8.2	0.41
B	79.3	8.7	5.0	1.7	8.6	8.2	
C	79.3	8.7	5.0	1.7	8.6	8.2	
				Total:	26	25	

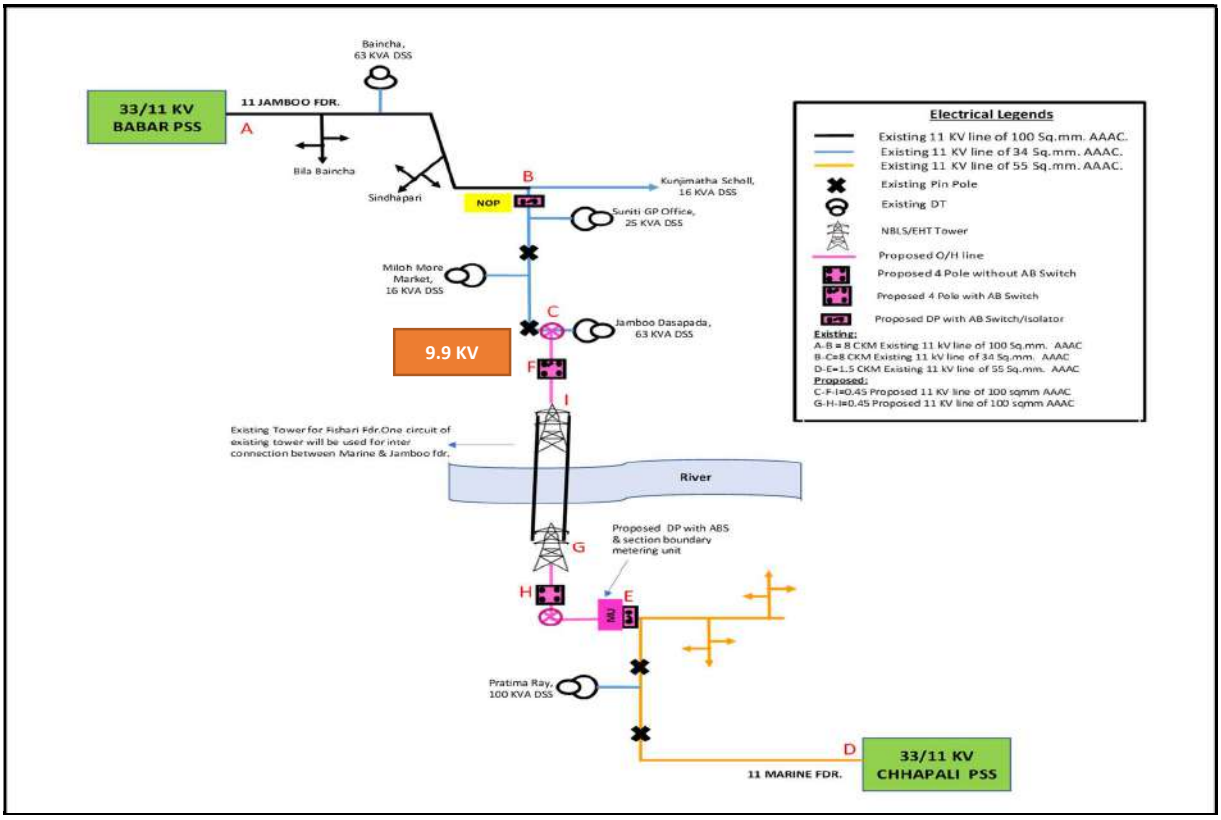
Priority and Timeline of the Project:

Priority: The existing 11kV Jamboo feeder has a length of 72.9 Ckm in the AS-IS scenario, resulting in a tail-end voltage of 9 kV. With the projected load growth, the tail-end voltage is expected to drop further and reach 8.7 kV by Summer-2028 with 2year load growth. If this issue is not addressed in a timely manner, consumers connected at the far end of the feeder are likely to experience persistent low-voltage conditions, adversely affecting the quality and reliability of power supply.



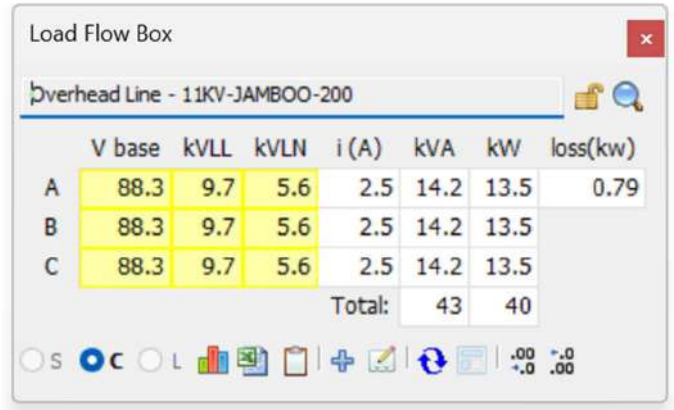
Technical Justification

- As per OERC directive, the 11kV feeder length must be below 50Ckm. In case feeder length is more than the prescribed length, the consumer connected to these feeders will face severe low voltage issues which will cause damage to the appliances or non-functioning of same.
- As per clause no. 4.5 of CEA Distribution Planning Manual recommendation, voltage regulation for the 11kV feeders is (-9% to +6%), i.e., 10.01kV to 11.66kV is required for augmentation / new feeder.
- In AS IS scenario, the voltage at the tail-end of the feeder is 9 kV. The voltage regulation of the feeder is not within permissible limits.
- The feeder is facing frequent interruption since the feeder is lengthy & passed through difficult terrains such as Paddy field area, River crossing, dense vegetation & in narrow market lane area. In case of the any fault it takes longer duration for fault identification & restoration. Total 5010No's consumer connected to the 11KV Jamboo feeder. No of 11KV feeder tripping in FY26 is 153 No's & 78 No's till July 26.



Proposed Scenario:

- It is proposed for interlinking of existing 11KV Jamboo feeder with nearby 11KV Marine feeder emanating from Chhapali PSS for existing Jamboo feeder length reduction by construction of 0.9 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC for
- Installation of 02 No. of 4-Pole connecting the OH line Dropping from River crossing Tower
- Installation of 01 No. HT Meter at the section boundary for energy auditing purpose.



GIS SLD:

Proposed SLD:

Tail end Voltage in proposed scenario after interlinking through load flow analysis:

Length of Sections

	A	B	C	Total
3-phase	45099.5	45099.5	45099.5	45099.5
2-phase	0.0	0.0	0.0	0.0
1-phase	0.0	0.0	0.0	0.0
Total	45099.5	45099.5	45099.5	45099.5

11KV Jamboo feeder's length has been reduced from 72.9 CKM to 45.09 CKM.

Scope of Work:

- Construction of 0.9 CKM 11 kV O/H line using 11 Mtr. H-Pole & 100 Sq.mm. AAAC.
- Installation of 01 No. of 4-Pole without AB Switch
- Installation of 01 No. of 4-Pole with 01 No. of AB Switch
- Installation of 01 No. section boundary meter.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.47	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division :-	KED-II
Name of the Sub-Division : -	Mahakalpada
Name of the Section : -	Mahakalpada
Name of the Work :-	Proposal for construction of 0.9 CKM 11 KV line using 100 Sq.mm AAA Conductor for N-1 connectivity between 11 kV Jamboo & Marine Fdr. and reduction of length of 11 kV Jamboo Fdr.

Names of Schemes: -	TPCODL CAPEX (FY 27-28)	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Construction of 0.9 CKM 11 kV O/H line using 11 Mtr. H-Pole & 100 Sq.mm. AAAC (Refer PSLD)	2,466,126.18
2	PART B: 1. Installation of 01 No. of 4-Pole without AB Switch (Refer PSLD) 2. Installation of 01 No. of 4-Pole with 01 No. of AB Switch (Refer PSLD)	792,437.71
3	PART C: Installation of 01 No. section boundary meter (refer PSLD)	92,915.60
4	**Total Amount**	**3,351,479.49**
	Total Amount (In Cr.)	**0.34**
Total estimated cost is Rs. 0.34 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.34 Cr. (For detailed BoQ refer Annexure-12.47)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026
ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.
b) Compliance with the guidelines of voltage regulation in the distribution network.
c) Reduction of electrocution risk and public safety hazards.
d) Safe operation and isolation of the feeder.
e) Protection of electrical assets against lightening and surge related failure.
f) Improvement in operational safety for maintenance personnel and public.

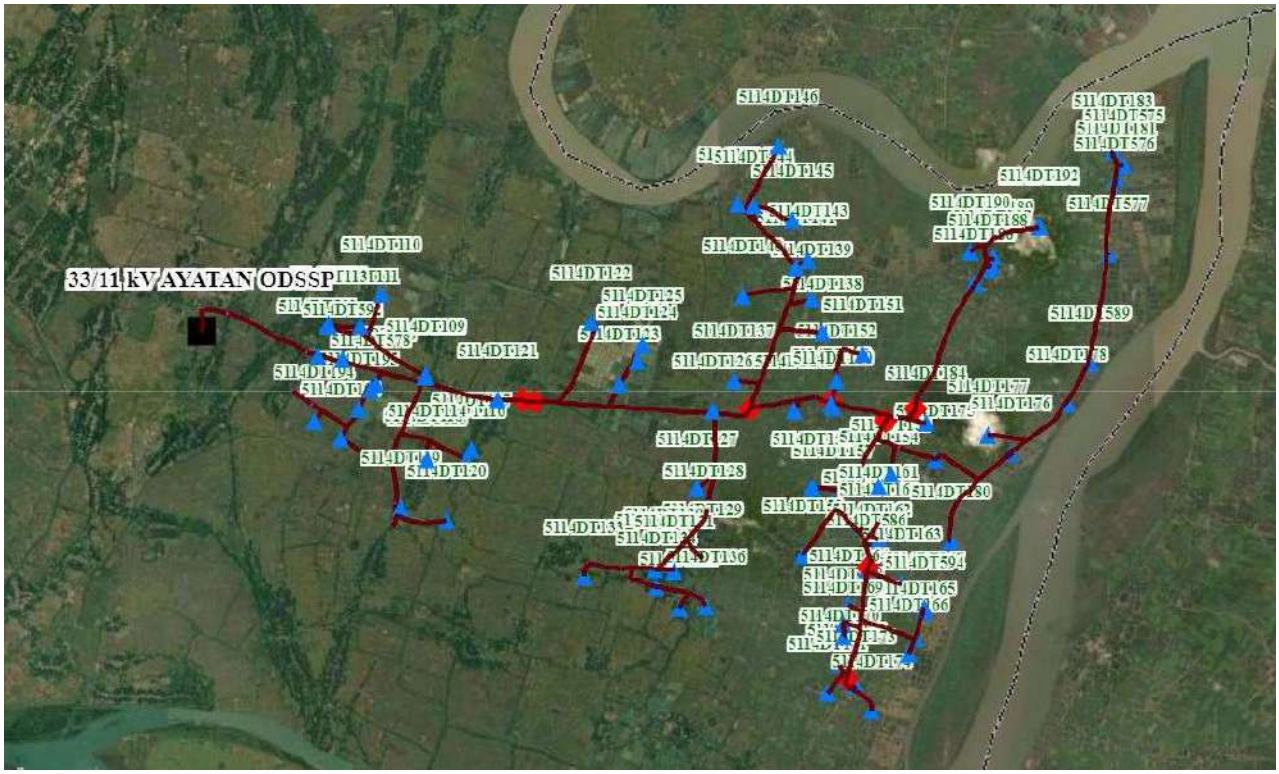
Benefit to the system and consumers:

- 11KV Jamboo feeder length will be reduced from 72.9 CKM to 45.09 CKM to comply Hon'ble OERC directive to keep 11KV feeder length below 50Ckt.KM.
- 11KV Jamboo feeder's tail end voltage improved from 8.7 KV to 9.7 KV & will improve power quality of the all connected consumers to the 11KV feeder.
- Ring connectivity is established between 11KV Jamboo feeder and 11 kV Marine feeder which will be helpful for power supply restorations during breakdown and maintenance works.

48.0 Proposal for Reliability improvement along with mitigation of overloading issue of 11kV Jaynagar Feeder:

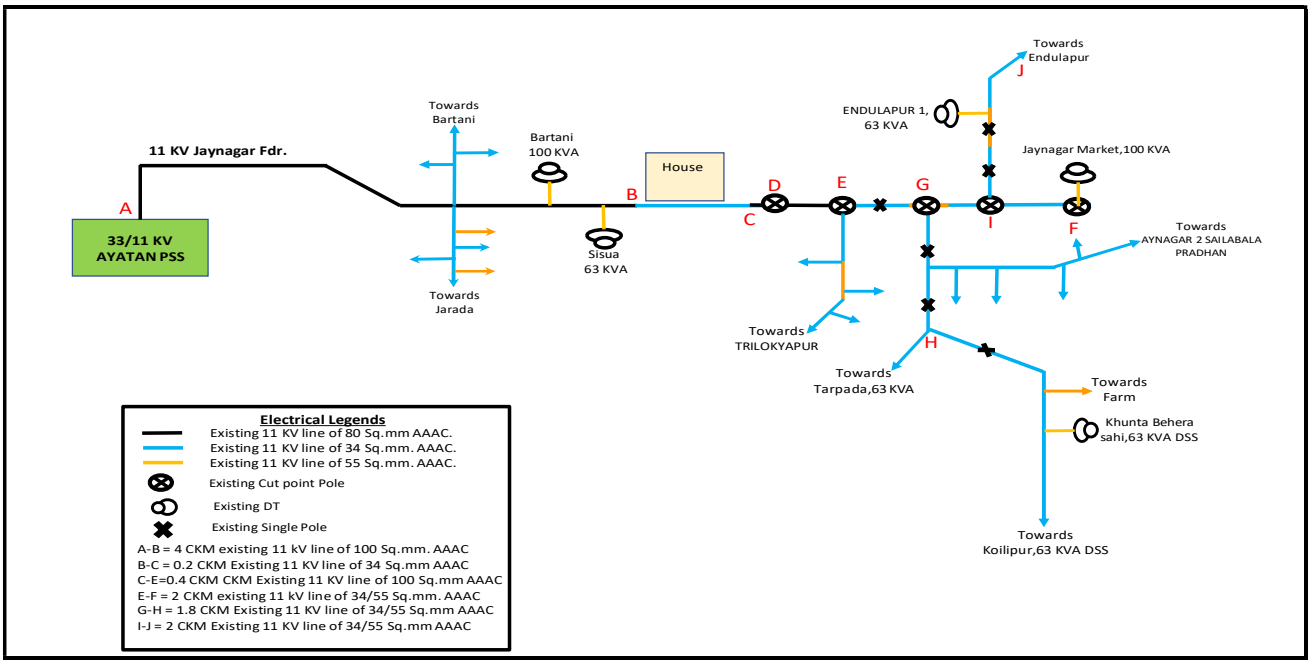
Proposal:

Proposal for augmentation/refurbishment of 11 kV Jaynagar feeder for length 6 CKM for improvement of reliability along with mitigation of overloading issue.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Jaynagar Feeder.

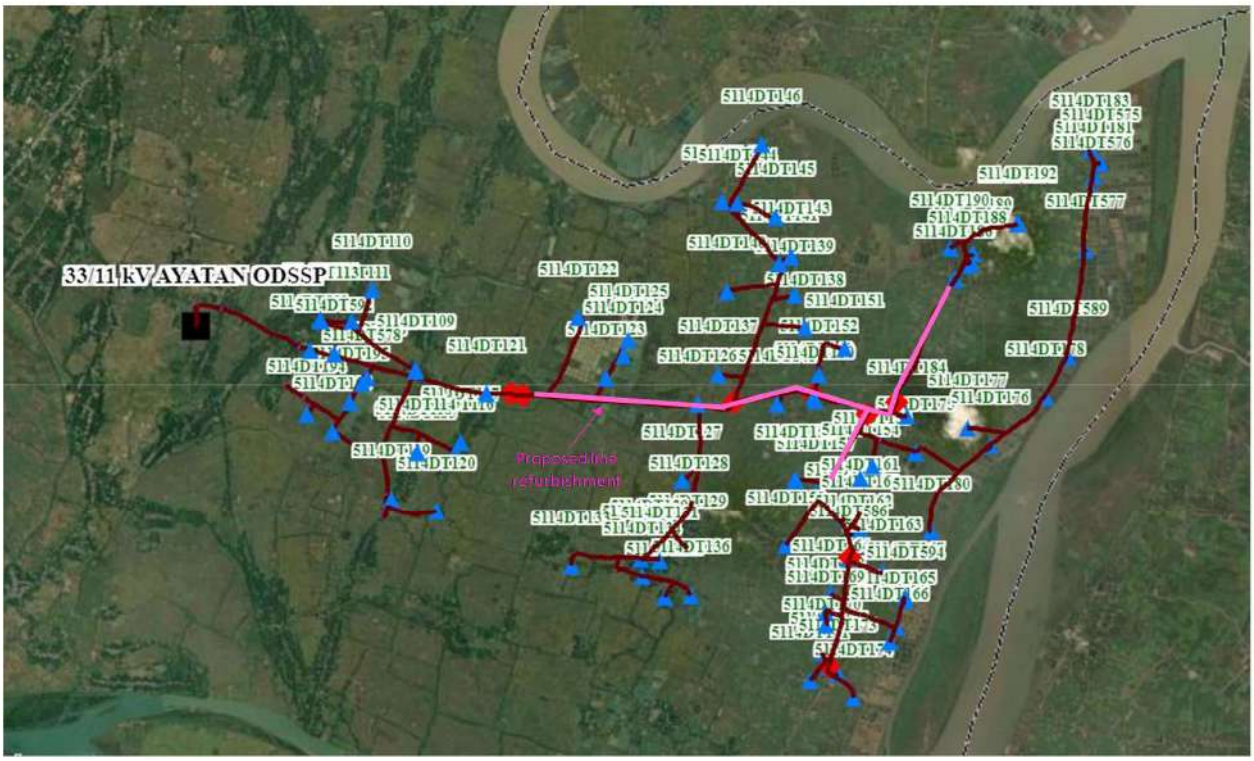


Existing Scenario:

- At present, 11kV Jaynagar feeder is emanating from 33/11kV Ayatan PSS. The total length of 11kV Jaynagar feeder is 45.7 km and peak load is 4.8 MVA.
- The trunk as well as branch conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Jaynagar feeder due to lower size and aged conductor.
- At present frequent shutdowns are required for connecting feeder restoration.

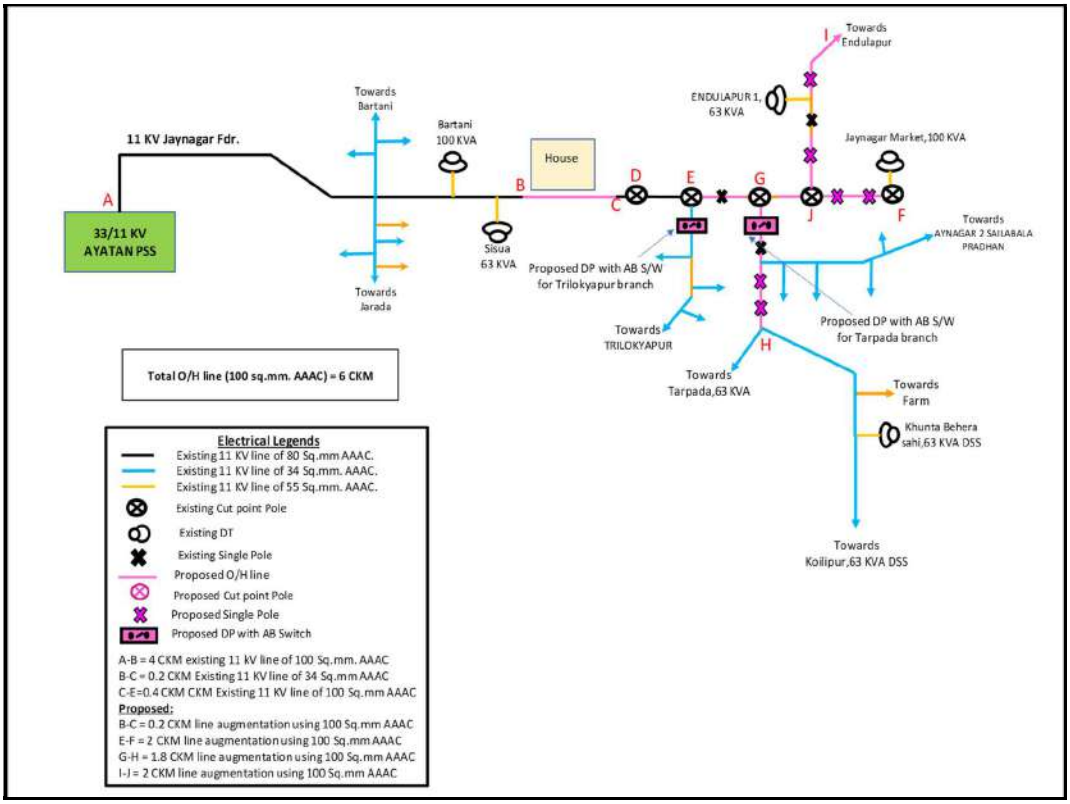
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Jaynagar feeder caters to prawn farming and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 2640 No's consumer connected to the 11KV Jaynagar feeder. No of 11KV feeder tripping in FY26 is 7 No's & 6 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Augmentation of 6 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC for strengthening of 11 kV Jaynagar feeder.
- Installation of 04 Nos 11 kV line protecting guarding for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 6 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. AAAC.
- Installation of 04 Nos of 11 kV line protecting guarding having span 30 Mtr.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.48		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-I	
Name of the Sub-Division : -	Aul	
Name of the Section : -	Rajkanika	
Name of the Work :-	Proposal for refurbishment of 6 CKM O/H line of 11 kV Jaynagar Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole for reliability improvement and overloading mitigation.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Augmentation of 6 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. AAAC (Refer PSLD BC, EF, GH & IJ)	8,780,295.38
2	PART B: Installation of 04 Nos of 11 kV line protecting guarding having span 30 Mtr. (Refer PSLD)	117,377.25
3	PART C: Dismantling Portion	298,675.98
4	**Total Amount**	**9,196,348.62**
	Total Amount (In Cr.)	**0.92**
Total estimated cost is Rs. 0.92 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.92 Cr. (For detailed BoQ refer Annexure-12.48)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 kV Jaynagar feeder and overloading issue will also be mitigated.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

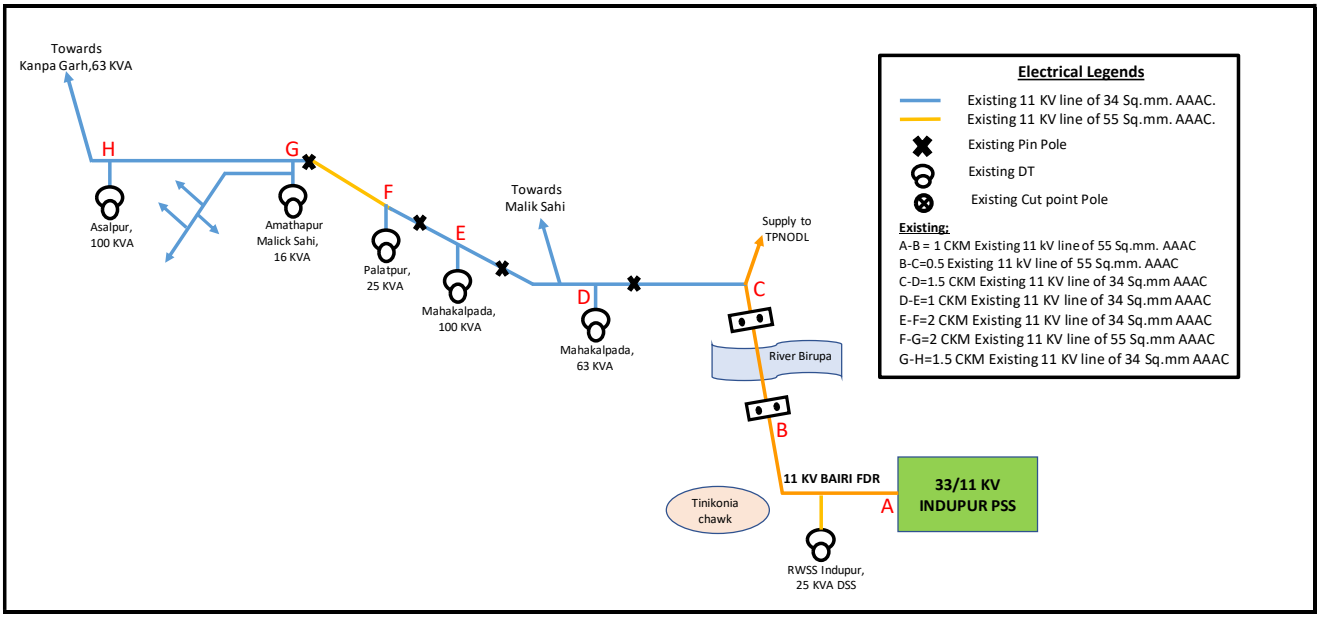
49.0 Proposal for Reliability improvement of 11kV Bairi Feeder:

Proposal:

Proposal for augmentation/refurbishment of 11 kV Bairi feeder for length 7.5 CKM for improvement of reliability.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Bairi Feeder.



Existing Scenario:

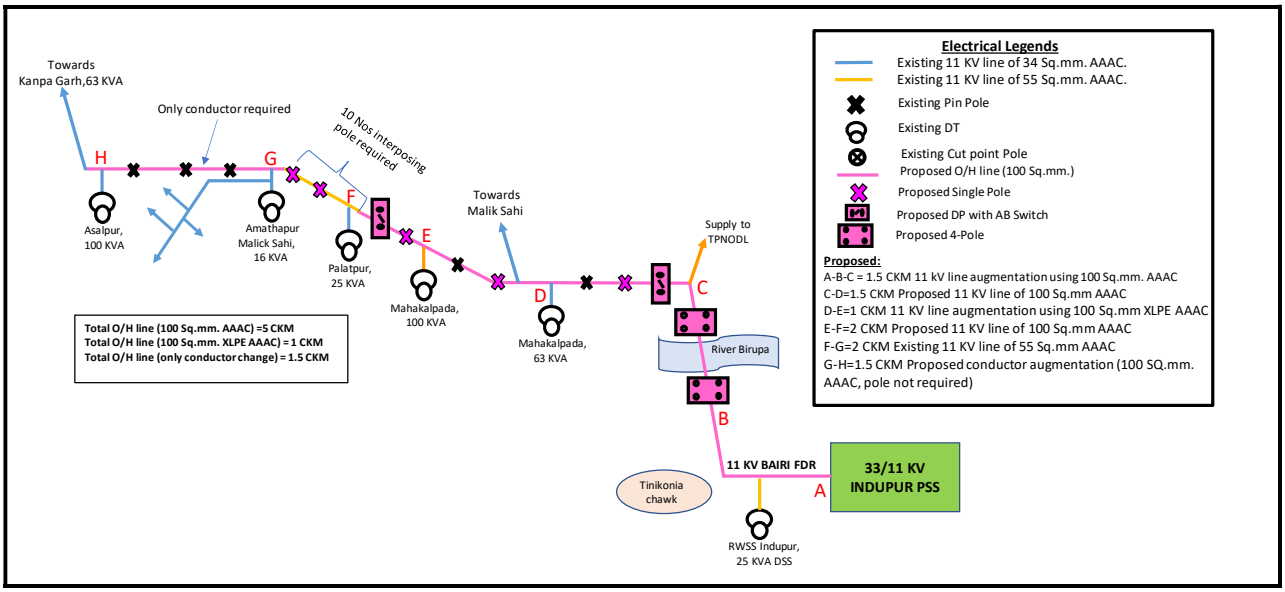
- At present, 11kV Bairi feeder is emanating from 33/11kV Indupur PSS. The total length of 11kV Bairi feeder is 19 km and peak load is 1.82 MVA.
- The trunk as well as branch conductor having lower size conductor and is in unsafe condition. Conductor are very old and in weak condition. Due to aging effect and brittleness, these conductors are snapping frequently. In addition, minimum ground clearance has not been maintained in several places over the feeder.
- Frequent tripping is observed in the 11KV Bairi feeder due to lower size and aged conductor.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Bairi feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 1621 No's consumer connected to the 11KV Bairi feeder. No of 11KV feeder tripping in FY26 is 90 No's & 32 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Augmentation of 6.5 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC for strengthening of 11 kV Bairi feeder.
- Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC at dense vegetation area near mahakalpada village.
- Installation of 02 Nos of 4-Pole for Birupa river crossing.
- Installation of 05 Nos 11 kV line protecting guarding for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 3.5 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC.
- Augmentation of 1.5 CKM 11 kV O/H line using 100 Sq.mm. AAAC & 11 Mtr. WPB Pole (interposing).
- Augmentation of 1.5 CKM 11 kV O/H line using 100 Sq.mm. AAAC(Pole is not required).
- Installation of 10 Nos interposing pole in existing line.
- Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 100 Sq.mm. XLPE AAAC
- Installation of 05 Nos of 11 kV line protecting guarding having span 30 Mtr.
- Installation of 02 Nos of 4-Pole without AB Switch.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.49		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-I	
Name of the Sub-Division : -	Kendrapara	
Name of the Section : -	Indupur	
Name of the Work :-	Proposal for refurbishment of 7.5 CKM 11 KV line of 11 kV Bairi Fdr. using 100 Sq.mm AAA Conductor & 11 Mtr. WPB Pole for reliability improvement.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: 1. Construction of 3.5 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. AAAC (Refer PSLD CD & EF) 2. Augmentation of 1.5 CKM 11 kV O/H line using 100 Sq.mm. AAAC & 11 Mtr. WPB Pole (interposing) (Refer PSLD A-B-C) 3. Augmentation of 1.5 CKM 11 kV O/H line using 100 Sq.mm. AAAC(Pole is not required) (Refer PSLD G-H) 4. Installation of 10 Nos interposing pole in existing line (refer PSLD F-G)	8,721,642.86
2	PART B: Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole(interposing) & 100 Sq.mm. XLPE AAAC (Refer PSLD DE)	1,652,525.03
3	PART C: Installation of 02 Nos of 4-Pole without AB Switch (Refer PSLD)	775,938.53
4	PART D: Installation of 05 Nos of 11 kV line protecting guarding having span 30 Mtr. (Refer PSLD)	146,721.57
5	PART E: Dismantling Portion	312,251.60
6	**Total Amount**	**11,609,079.59**
	Total Amount (In Cr.)	**1.16**
Total estimated cost is Rs. 1.16 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 1.16 Cr. (For detailed BoQ refer Annexure-12.49)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 kV Bairi feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

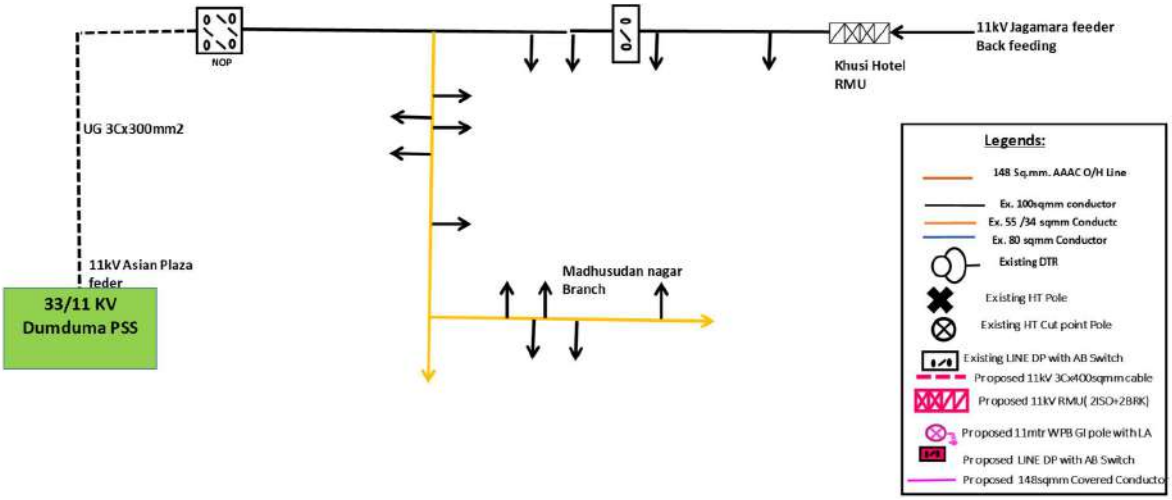
50.0 Proposal for Reliability improvement along with overloading mitigation of 11kV Asian Plaza Feeder:

Proposal:

Proposal for Load Diversion of existing 11 Asian Plaza Feeder load emanating from 33/11kV Dumduma PSS by linking with nearby Feeder.

Requirement/ Need of the proposal:

Objective: Reliability improvement along with overloading mitigation of 11kV Asian Plaza Feeder.



Existing Scenario:

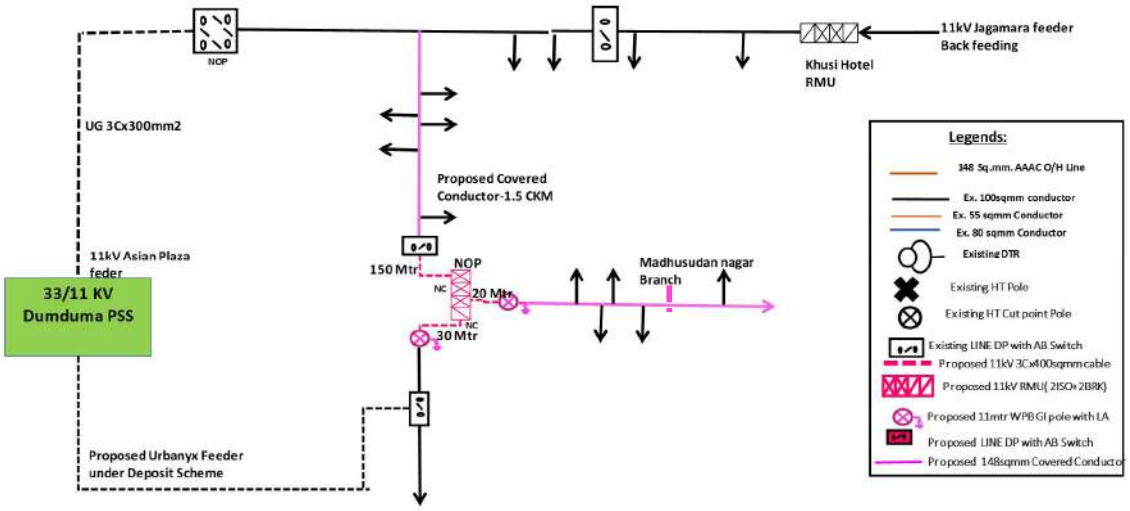
- At present, 11kV AsianPlaza feeder is emanating from 33/11kV Ranasingh Pur PSS. The total feeder length of 11kV Aiginia Feeder is 6.22 km and peak load is 1.6 MVA.
- The trunk conductor size of feeder is 55 sqmm and it passes through vegetation which is cause tripping due to tree touching.
- Frequent tripping is observed in the 11KV Asian Plaza feeder.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Asian Plaza feeder caters to an urban consumer and is experiencing frequent interruptions due to feeder tripping's, ageing network and repeated shutdown for restoration and maintenance activities. The no. of tripping's during the last year was 308 nos. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Installation of 1 No. of RMU in MS Nagar T-Off in Asian Plaza Feeder for Linking with 11kV Urbanyx Feeder.
- Augmentation of 11kV Asian Plaza feeder of length 1.5CKM.

GIS Map Proposed: -

Proposed SLD:

Scope of Work:

- Installation of 1 No. of RMU in MS Nagar T-Off in Asian Plaza Feeder for Linking with 11kV Urbanyx Feeder.
- Augmentation of 11kV Asian Plaza feeder of length 1.5CKM.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.50	
TP CENTRAL ODISHA DISTRIBUTION LIMITED	
Name of the Division: -	BCDD-II
Name of the Sub-Division: -	Khandagiri
Name of the Section: -	Khandagiri

Name of the Feeder: -	11kV Asian Plaza
Name of the Work: -	Proposal for Bifurcation of existing 11kV Asian Plaza feeder for mitigation of overloading.
Names of Schemes: -	TPCODL CAPEX (FY 2027-28)

Abstract of Estimate

Sl. No.	Description	Gross
1	Part-A: - 2. Installation of 1 No. of RMU in MS Nagar T-Off in Asian Plaza Feeder for Linking with 11kV Urbanyx Feeder.	44,72,530.56
2	Part-B: -Augmentation of 11kV Asian Plaza feeder of length 1.5CKM.	27,36,985.77
3	Part-C Dismantling.	72,634.25
4	**Total Gross**	**72,82,150.58**

Total estimated cost is Rs. 0.73Crore. (On TPCODL CAPEX Scheme)

Cost Estimate: ₹ 0.73 Cr. (For detailed BoQ referAnnexure-12.50)

I. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

II. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

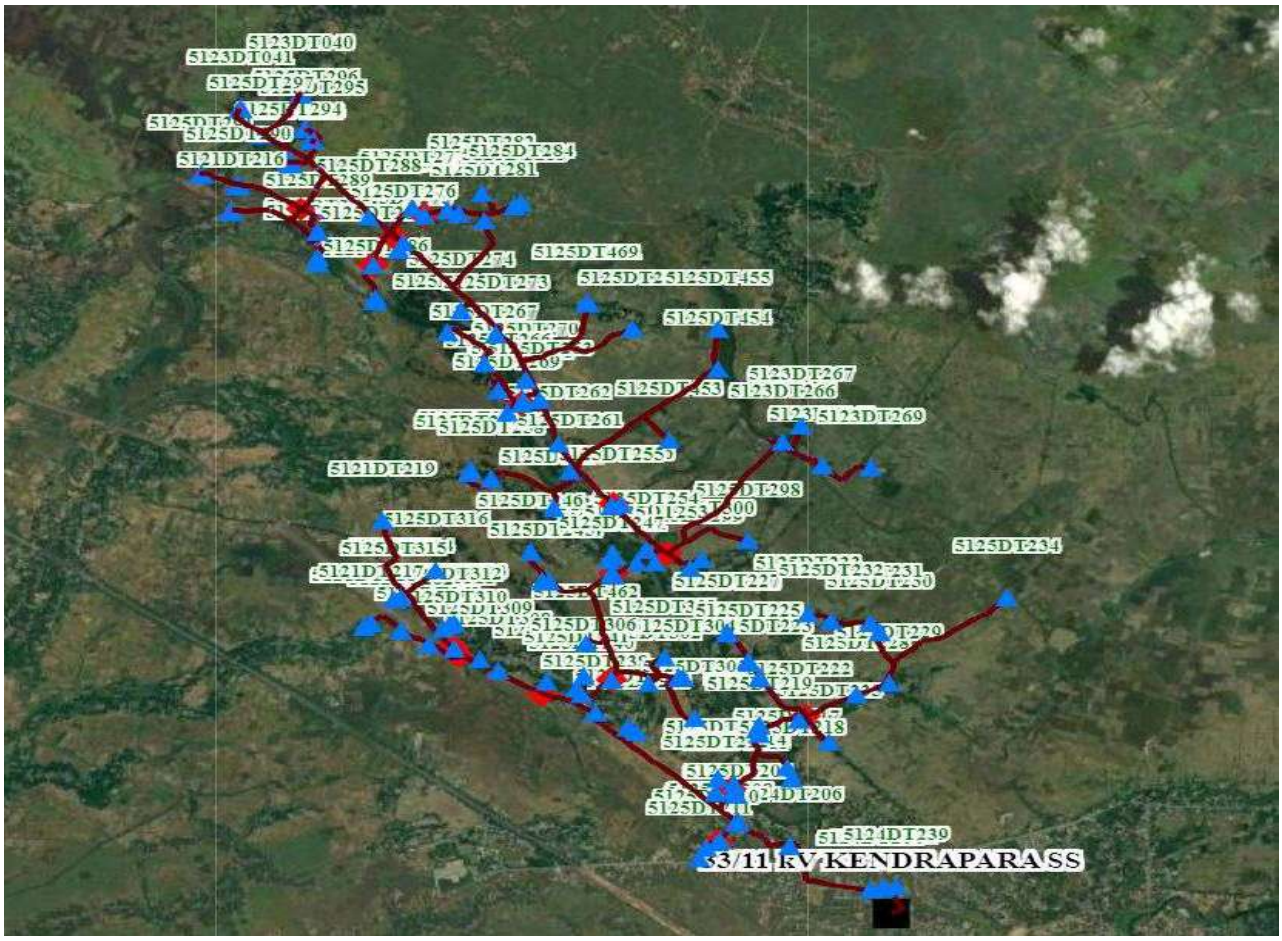
Benefit to the system and consumers:

- Improved Reliability there by overloading mitigation.
- Feeder restoration will be quick.
- By linking 11KV Asian Plaza feeder and 11KV Urbanyx feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential urban consumers.

51.0 Proposal for Reliability improvement of 11kV Thakurpatna Feeder:

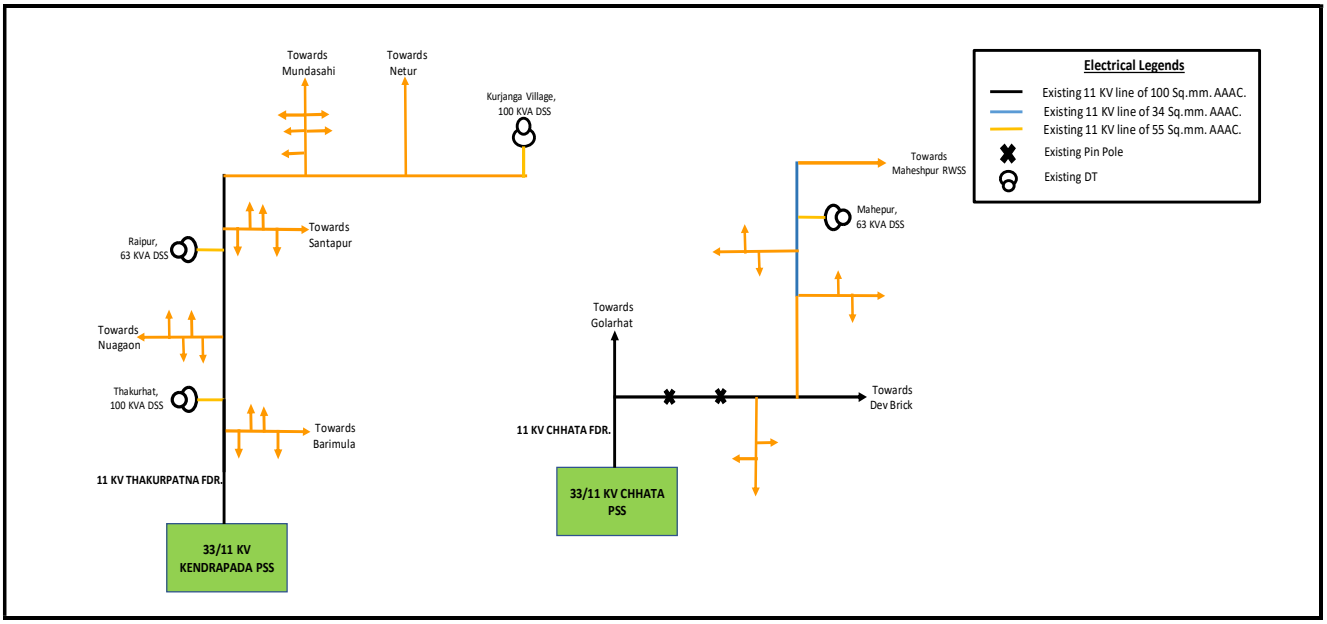
Proposal:

Proposal for construction of interlinking line between 11 kV Thakurpatna & Chhata feeder for length- 1.1 KM for reliability purpose.



Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Thakurpatna Feeder.



Existing Scenario:

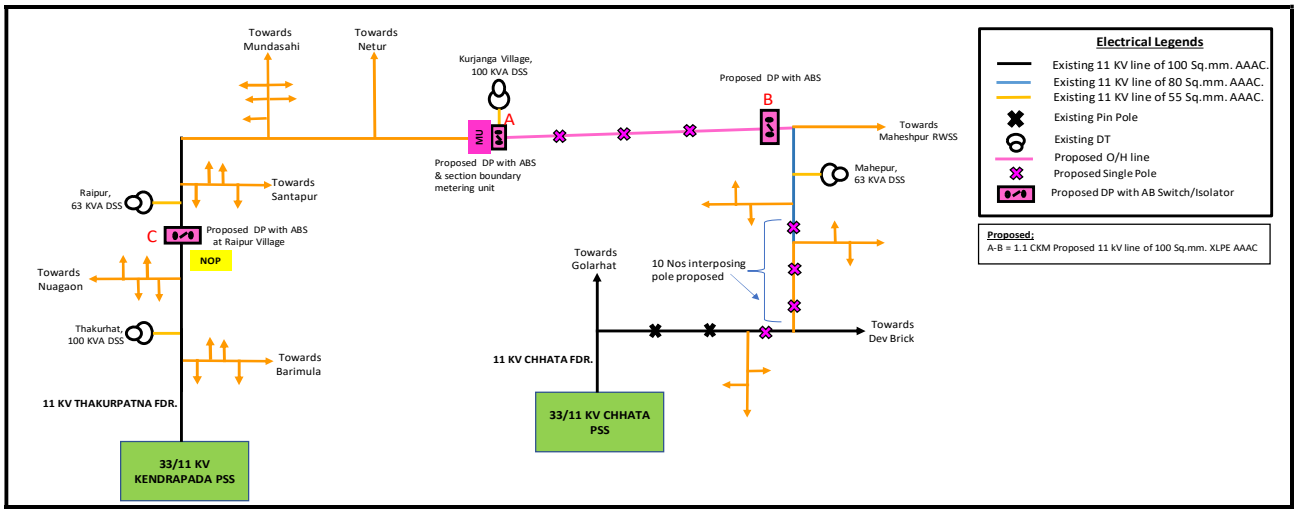
- At present, 11kV Thakurpatna feeder is emanating from 33/11kV Kendrapara PSS. The total length of 11kV Thakurpatna feeder is 44.4 km and peak load is 4.1 MVA.
- 11 kV Chhata feeder is nearby to 11 kV Thakurpatna feeder emanating from 33/11 kV Chhata PSS.
- Frequent tripping is observed in the 11KV Thakurpatna feeder which hampers the power supply reliability.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Thakurpatna feeder is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 5126 No's consumer connected to the 11KV Thakurpatna feeder. No of 11KV feeder tripping in FY26 is 387 No's & 101 No's till July 26.In case of any fault occurs whole feeder remain in dark as there is no N-1 connectivity for Thakurpatna feeder. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Construction of 1.1 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. XLPE AAAC for N-1 connectivity between 11 kV Thakurpatna & Chhata feeder.
- Installation of 01 No. HT Meter at the section boundary for energy auditing purpose.
- Installation of 10 Nos 11 Mtr. WPB Pole (interposing) in Chhata Fdr. for strengthening of existing line.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 1.1 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. XLPE AAAC (Refer PSLD AB)
- Installation of 10 Nos of 11 Mtr. WPB Pole (interposing) in 11 kV Chhata Fdr.
- Installation of 01 No. section boundary meter.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.51		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-I	
Name of the Sub-Division : -	Kendrapara	
Name of the Section : -	Chhata	
Name of the Work :-	Proposal for construction of 1.1 CKM 11 KV line using 100 Sq.mm XLPE AAA Conductor for N-1 connectivity between 11 kV Thakurpatna & Chhata Fdr.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: 1. Construction of 1.1 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. XLPE AAAC (Refer PSLD AB) 2. Installation of 10 Nos of 11 Mtr. WPB Pole (interposing) in 11 kV Chhata Fdr.	4,142,866.07
2	PART B: Installation of 01 No. section boundary meter (refer PSLD)	92,915.60
3	**Total Amount**	**4,235,781.67**
	Total Amount (In Cr.)	**0.42**
Total estimated cost is Rs. 0.42 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.42 Cr. (For detailed BoQ refer Annexure-12.51)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

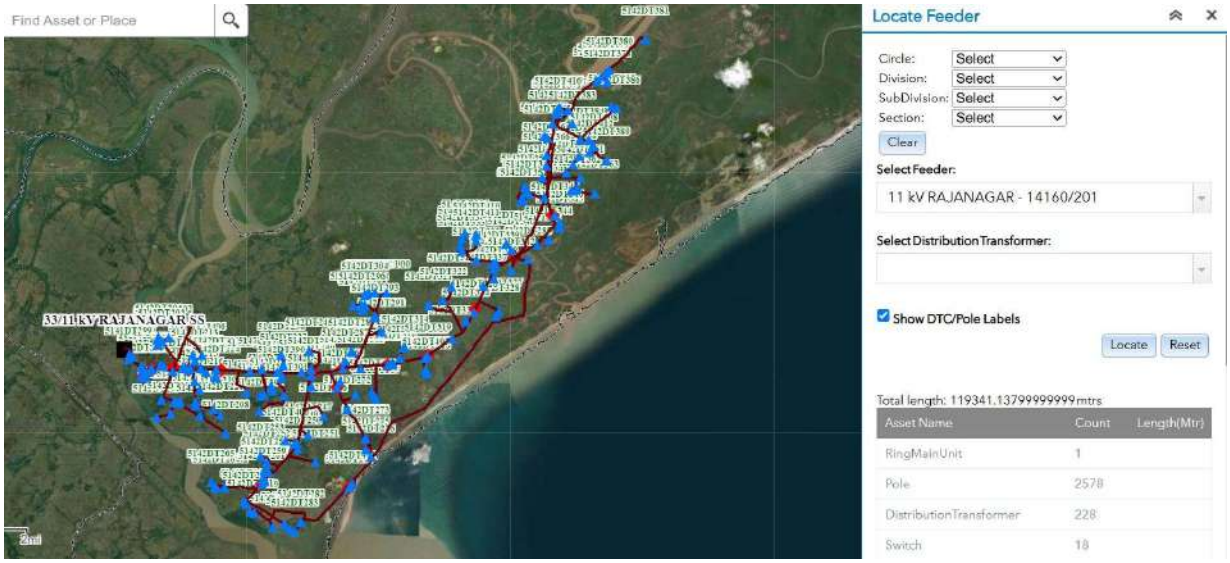
Benefit to the system and consumers:

- Reliability will be improved for 11 kV Thakurpatna as well as Chhata feeder by establishing N-1 connectivity.
- Feeder restoration will be quick.
- By linking 11KV Thakurpatna feeder and 11KV Chhata feeder can ensure load diversion in case of requirement to maintain reliability ensuring ring connectivity.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

52.0 Proposal for Length Reduction of 11kV Rajnagar Feeder:

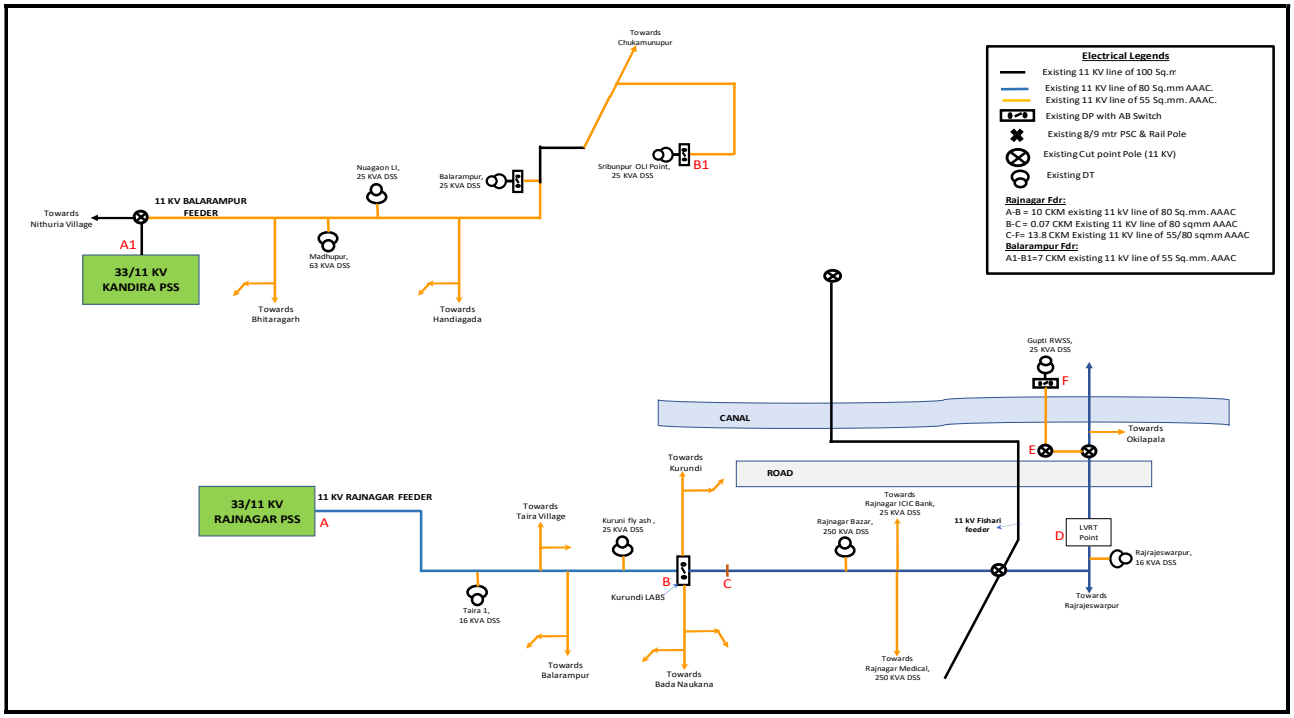
Proposal:

Proposal for reduction in length for 11KV Rajnagar feeder and reliability improvement.



Requirement/ Need of the proposal:

Objective: Length reduction and reliability improvement of 11kV Rajnagar Feeder.



Existing Scenario:

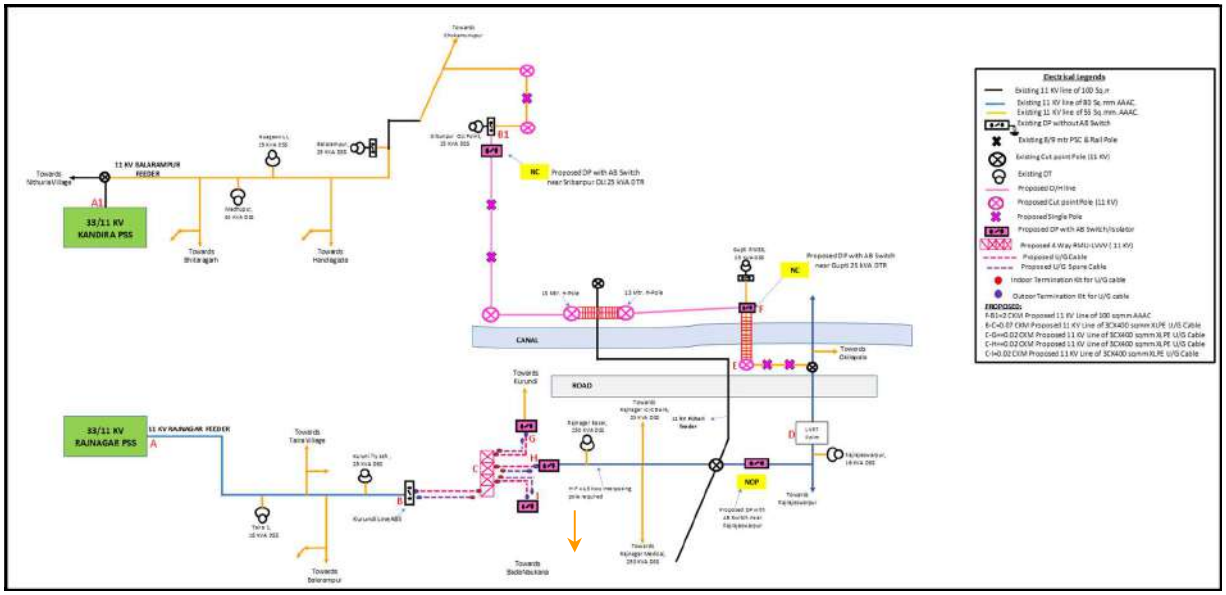
- At present, 11kV Rajnagar feeder is emanating from 33/11kV Rajnagar PSS having a feeder length of 119.3 Ckt. KM and peak load is 4.4 MVA.
- Entire 11kV Rajnagar Fdr is of 55/80 Sq.mm. AAAC.
- At present, as the feeder is lengthy in nature therefore consumers are facing low voltage issues at tail end.
- Since the feeder is very lengthy, during any breakdown fault finding takes longer duration and delays the power restoration.

GIS SLD:

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Rajnagar feeder is experiencing frequent interruptions due to feeder tripping, ageing network and repeated shutdown for restoration and maintenance activities. Total 10079 No's consumer connected to the 11KV Rajnagar feeder. No of 11KV feeder tripping in FY26 is 303 No's & 78 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- It is proposed for interlinking of existing 11KV Rajnagar feeder with nearby 11KV Balarampur feeder emanating from Kandira PSS for existing Rajangar feeder length reduction by construction of 2 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC.
- Installation of 01 No. 11 kV 4-way RMU (LVVV) along with required accessories at Market area for improving reliability of Market area.
- In case of any fault in OH line feeding rural area will be isolated on RMU breaker which will help to improve the reliability of Rajnagar market area. RMU Breaker & FPI will also help in quick fault identification & restoration.
- Installation of 02 Nos of 11 kV line protecting guarding having span 40 Mtr. for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Construction of 2 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC.
- Supply & laying of 0.13 kM 11 kV 3CX400 Sq.mm. XLPE U/G cable with one run spare in Open Trench method.
- Installation of 01 No. 11 kV 4-way RMU (LVVV).
- Installation of 02 Nos of 11 kV line protecting guarding having span 40 Mtr.
- Installation of interposing poles 15No's to improve Vertical clearances in the line.

Proposed Cost with Estimate Break-up:

ANNEXURE-12.52		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	KED-I	
Name of the Sub-Division : -	Rajnagar	
Name of the Section : -	Rajnagar-II	
Name of the Work :-	Proposal for construction of 2 CKM 11 kV new line for N-1 connectivity between 11 kV Rajnagar & Balarampur Fdr. along with installation of 01 No. of 11 kV 4-way RMU (LVVV) at Kurundi for improvement of reliability.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: 1. Construction of 2 CKM 11 kV O/H line using 11 Mtr. H Pole & 100 Sq.mm. AAAC (Refer PSLD) 2. Installation of 15 Nos 11 Mtr. WPB Pole (interposing) (Refer PSLD)	6,624,115.63
2	PART B: 1. Supply & laying of 0.13 kM 11 kV 3CX400 Sq.mm. XLPE U/G cable with one run spare in Open Trench method (refer PSLD) 2. Installation of 01 No. 11 kV 4-way RMU (LVVV) (Refer PSLD)	3,543,545.14
3	PART C: Installation of 02 Nos of 11 kV line protecting guarding having span 40 Mtr. (Refer PSLD)	60,874.38
	Total Amount	**10,228,535.15**
	Total Amount (In Cr.)	**1.02**
Total estimated cost is Rs. 1.02 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 1.02 Cr. (For detailed BoQ refer Annexure-12.52)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Compliance with the guidelines of voltage regulation in the distribution network.

c) Reduction of electrocution risk and public safety hazards.

d) Safe operation and isolation of the feeder.

e) Protection of electrical assets against lightening and surge related failure.

f) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- 11KV Rajnagar feeder length reduction from 119.3 CKM to 81.88 CKM.
- Feeder restoration will be quick.
- Ring connectivity is established between 11KV Rajnagar feeder and 11 kV Balarampur feeder which will be helpful for power supply restorations during breakdown and maintenance works.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

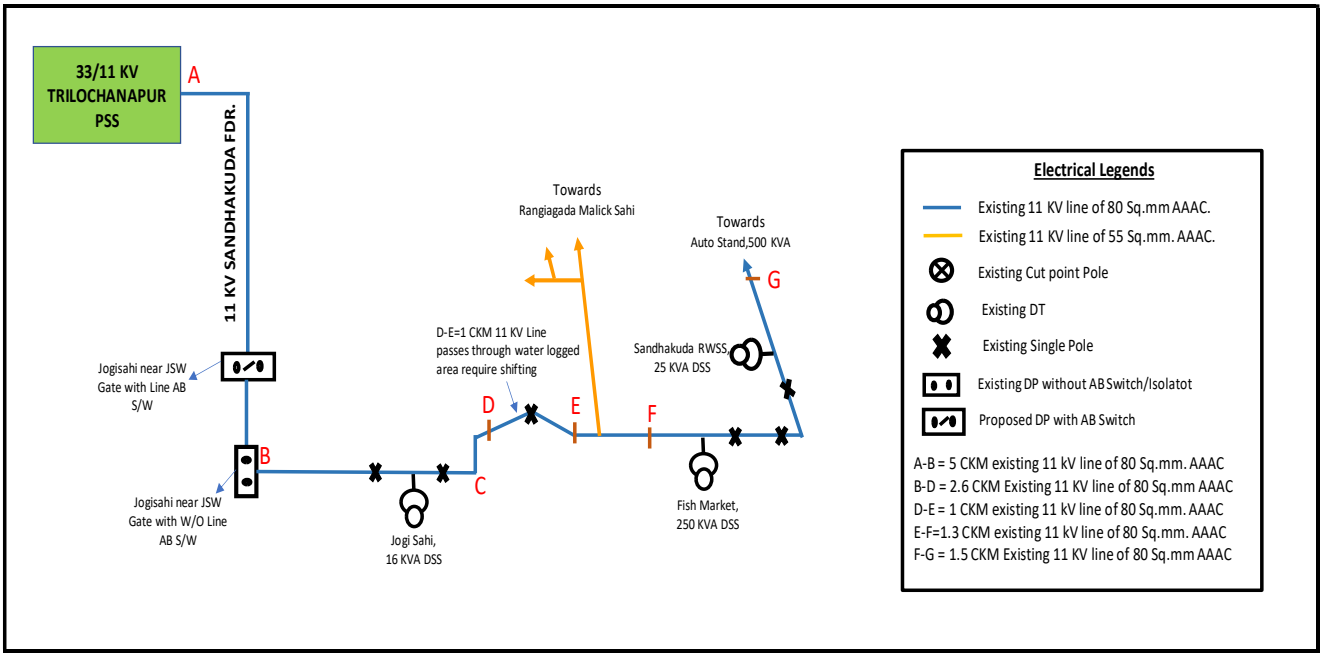
53.0 Proposal for Reliability improvement of 11kV Sandhakuda Feeder:

Proposal:

Proposal for augmentation/refurbishment of 11 kV Sandhakuda feeder for length 5.1 CKM for improvement of reliability.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Sandhakuda Feeder.



Existing Scenario:

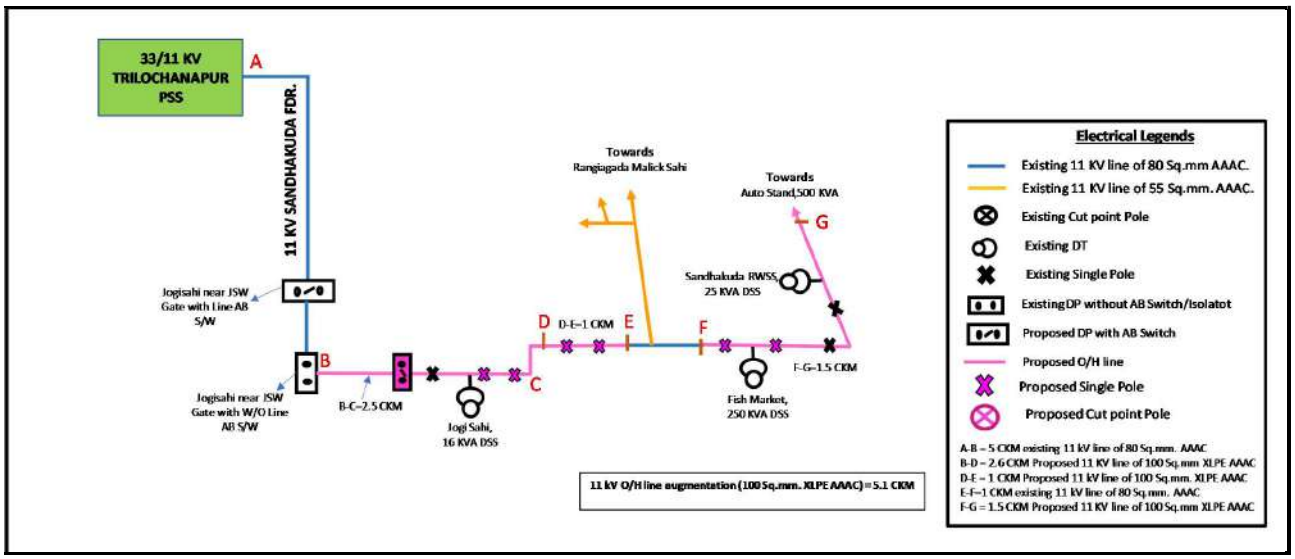
- At present, 11kV Sandhakuda feeder is emanating from 33/11kV Trilochanpur PSS. The total length of 11kV Sandhakuda feeder is 20.7 km and peak load is 1.4 MVA.
- Frequent tripping is observed in the 11KV Sandhakuda feeder due to lower size and aged conductor.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Sandhakuda feeder caters to rural area and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 2368 No's consumer connected to the 11KV Sandhakuda feeder. No of 11KV feeder tripping in FY26 is 63 No's & 17 No's till July 26. In addition, salinity effect along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Augmentation of 4.1 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC for strengthening of 11 kV Sandhakuda feeder.
- Construction of 1 CKM 11 kV O/H line using 11 Mtr. H-Pole & 100 Sq.mm. XLPE AAAC for shifting of line from water logging area.
- Installation of 01 Nos 11 kV line protecting guarding for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 4.1 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. XLPE AAA Conductor.
- Construction of 1 CKM 11 kV O/H line using 11 Mtr. H- Pole & 100 Sq.mm. XLPE AAA Conductor.
- Installation of 02 Nos of 11 kV line protecting guarding having span 30 Mtr.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.53		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	PDP	
Name of the Sub-Division : -	Kujanga	
Name of the Section : -	Chatua	
Name of the Work :-	Proposal for Augmentation of 4.1 CKM O/H line of 11 kV Sandhakuda Fdr. from 80 Sq.mm. AAAC to 100 Sq.mm. XLPE AAAC along with shifting of 1 CKM 11 kV line from water logging area.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART A: Augmentation of 4.1 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. XLPE AAA Conductor (Refer PSLD B-D,F-G)	6,722,502.79
2	PART B: Construction of 1 CKM 11 kV O/H line using 11 Mtr. H- Pole & 100 Sq.mm. XLPE AAA Conductor (Refer D-E PSLD)	2,891,791.19
3	PART-C: Installation of 11 KV line protecting guarding of 2 Nos having span 30 Mtr. Each (Refer PSLD)	58,688.63
4	PART D: Dismantling Portion	274,471.38
	Total Amount	**9,947,453.99**
	Total Amount (In Cr.)	**0.99**
Total estimated cost is Rs. 0.99 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.99 Cr. (For detailed BoQ refer Annexure-12.53)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 kV Sandhakuda feeder.
- Feeder restoration will be quick.

- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential consumers.

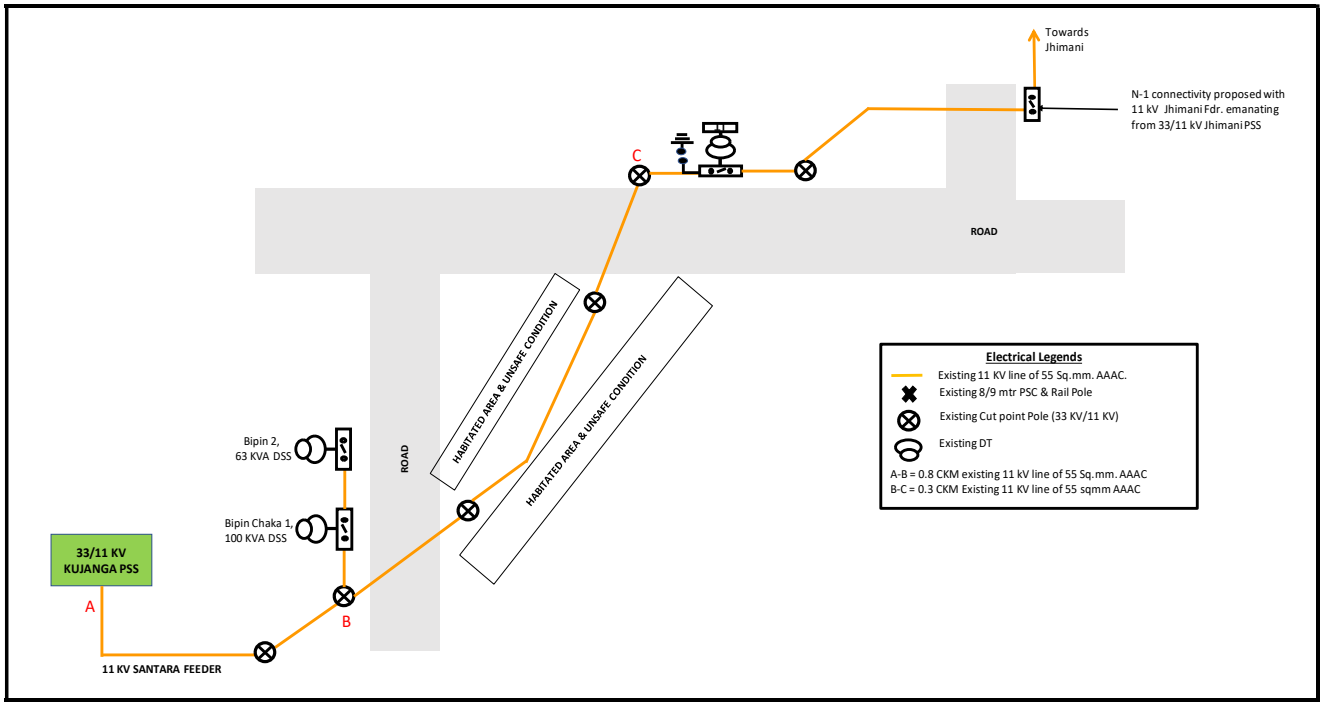
54.0 Proposal for Reliability improvement of 11kV Santara Feeder:

Proposal:

Proposal for conversion of 11 kV O/H network to U/G in dense habitation area having length 0.57 kM in safety ground.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Santara Feeder.

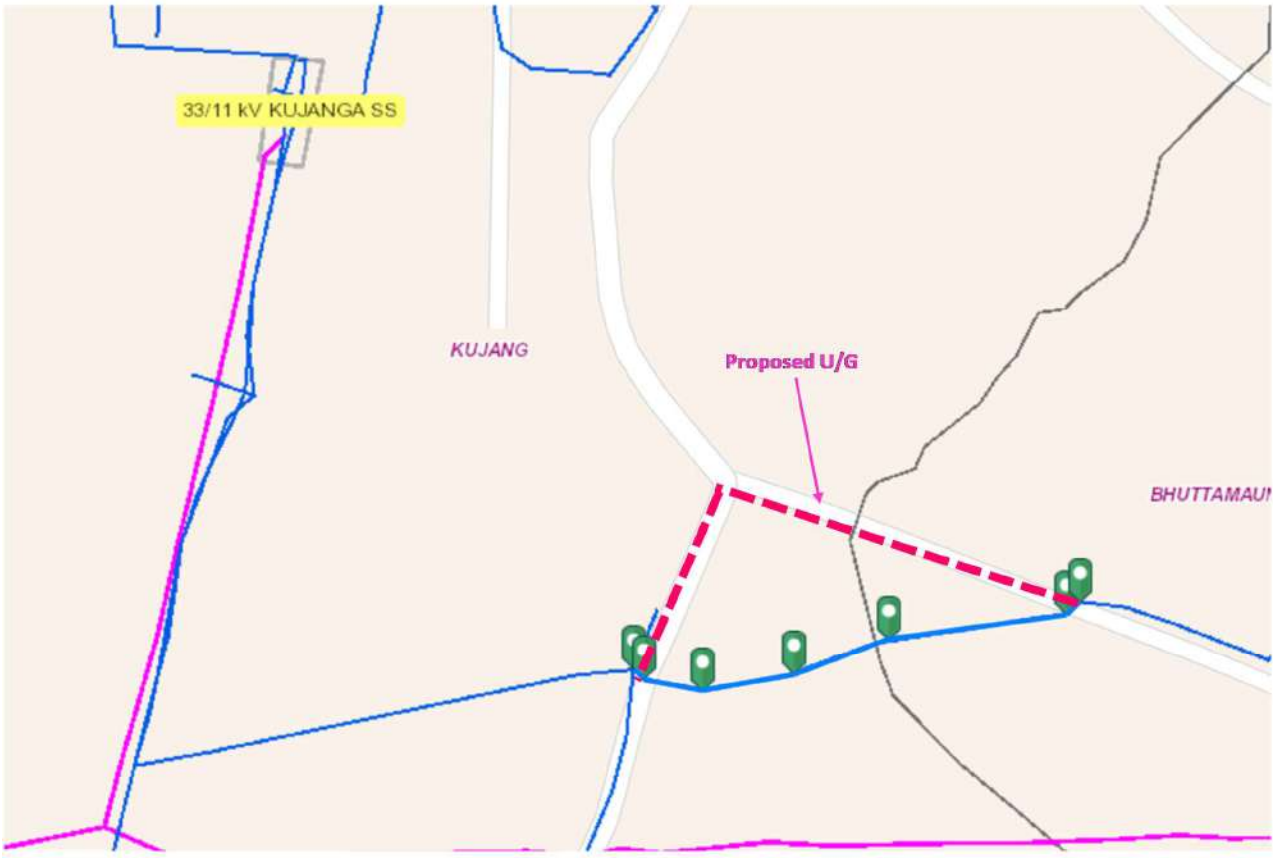


Existing Scenario:

- At present, 11kV Santara feeder is emanating from 33/11kV Kujanga PSS. The total length of 11kV Santara is 32.7 km and peak load is 4.5 MVA.
- Some part of 11 kV Santara feeder is passing through dense habitation area which is very unsafe and accident prone.
- It also create difficulties during maintenance.

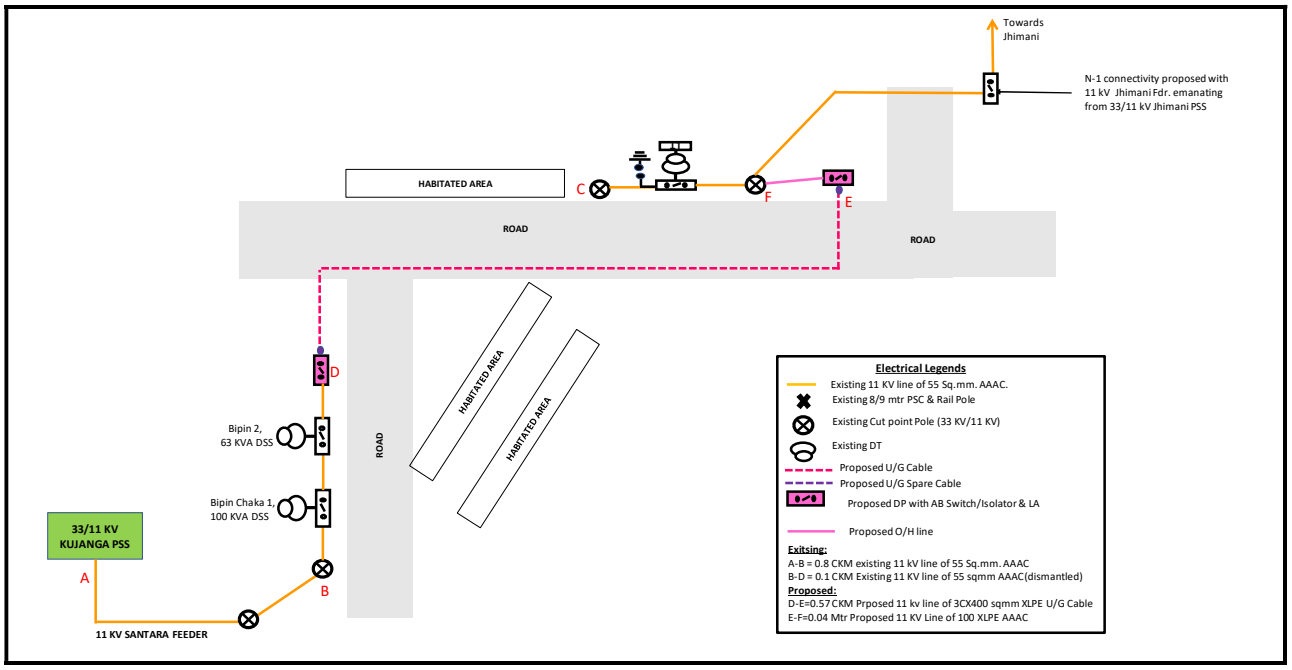
GIS MAP

Existing SLD:



Priority and Timeline of the Project:

Priority: Since the 11kV Santara feeder caters to sub urban and rural area and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 5026 No's consumer connected to the 11KV Santara feeder. No of 11KV feeder tripping in FY26 is 39 No's & 17 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Supply & laying of 0.57 kM 11 kV U/G line using 3CX400 XLPE U/G cable for shifting of O/H line from dense vegetation area at Balarampur village which will eliminate the unsafe part of the feeder.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Supply and laying of 11 kV 3C × 400 sq. mm XLPE U/G cable for 0.57 KM without spare run in HDD Method.
- Construction of 0.04 CKM 11 kV O/H line using 11 mtr. WPB Pole & 100 Sq.mm. XLPE AAA Conductor.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.54		
TP CENTRAL ODISHA DISTRIBUTION LIMITED		
Name of the Division :-	PDP	
Name of the Sub-Division :-	KUJANGA	
Name of the Section : -	KUJANGA	
Name of the Work :-	Proposal for conversion of 11 kV O/H line to U/G line using 3CX400 Sq.mm. XLPE U/G cable for the length of 0.57 kM for unsafe to safe.	
Names of Schemes: -	**TPCODL CAPEX (FY 27-28)**	
Abstract of Estimate		
Sl. No.	**Description**	**Gross**
1	PART-A: Supply and laying of 11 kV 3C × 400 sq. mm XLPE U/G cable for 0.57 KM without spare run in HDD Method (refer to Point D–E)	4,353,491.23
2	PART B: Construction of 0.04 CKM 11 kV O/H line using 11 mtr. WPB Pole & 100 Sq.mm. XLPE AAA Conductor.(Refer PSLD - E-F)	489,074.54
3	PART C: Dismantling Portion	18,106.71
	Total Amount	**4,860,672.49**
	Total Amount (In Cr.)	**0.49**
Total estimated cost is Rs. 0.49 Crore. (On TPCODL Capex Scheme)		

Cost Estimate: ₹ 0.49 Cr. (For detailed BoQ refer Annexure-12.54)

i. All rates considered in the estimate as per the Cost Data Book (CDB) approved by Energy Department (GoO), dt: 05.05.2026

ii. For items which are not covered under approved CDB, material supply, civil and erection rate have been considered as per latest Rate Contract (RC) after competitive bidding or based on Budgetary Quotations from OEMs.

Statutory and Safety Requirements:

The proposal has been made to maintain essential compliances with statutory safety regulations

a) Compliance with electrical safety regulation for distribution system.

b) Reduction of electrocution risk and public safety hazards.

c) Safe operation and isolation of the feeder.

d) Protection of electrical assets against lightening and surge related failure.

e) Improvement in operational safety for maintenance personnel and public.

Benefit to the system and consumers:

- Reliability will be improved for 11 kV Santara fedder.
- Unsafe zone will be eliminated from the feeder.
- Feeder restoration will be quick.
- Helps maintain voltage levels and reduce technical losses.
- Enables easier switching operations during faults or planned outages.
- The above arrangement will help to release power supply to upcoming potential Industrial consumers.

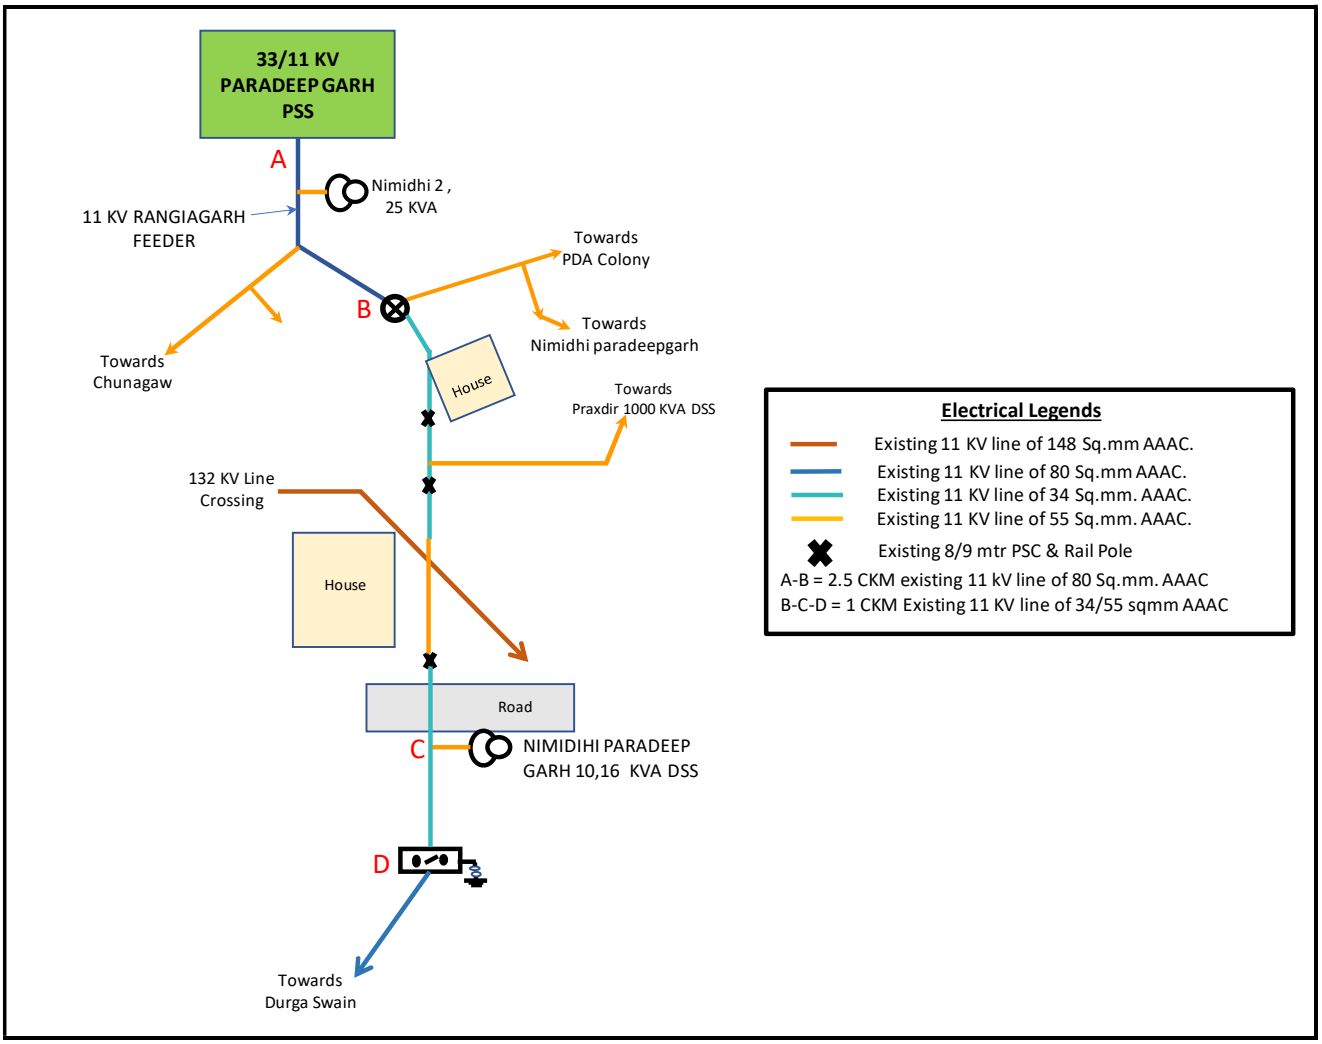
55.0 Proposal for Reliability improvement of 11kV Rangiagarh Feeder:

Proposal:

Proposal for augmentation/refurbishment of 11 kV Rangiagarh feeder for length 1 CKM for improvement of reliability.

Requirement/ Need of the proposal:

Objective: Reliability improvement of 11kV Rangiagarh Feeder.



Existing Scenario:

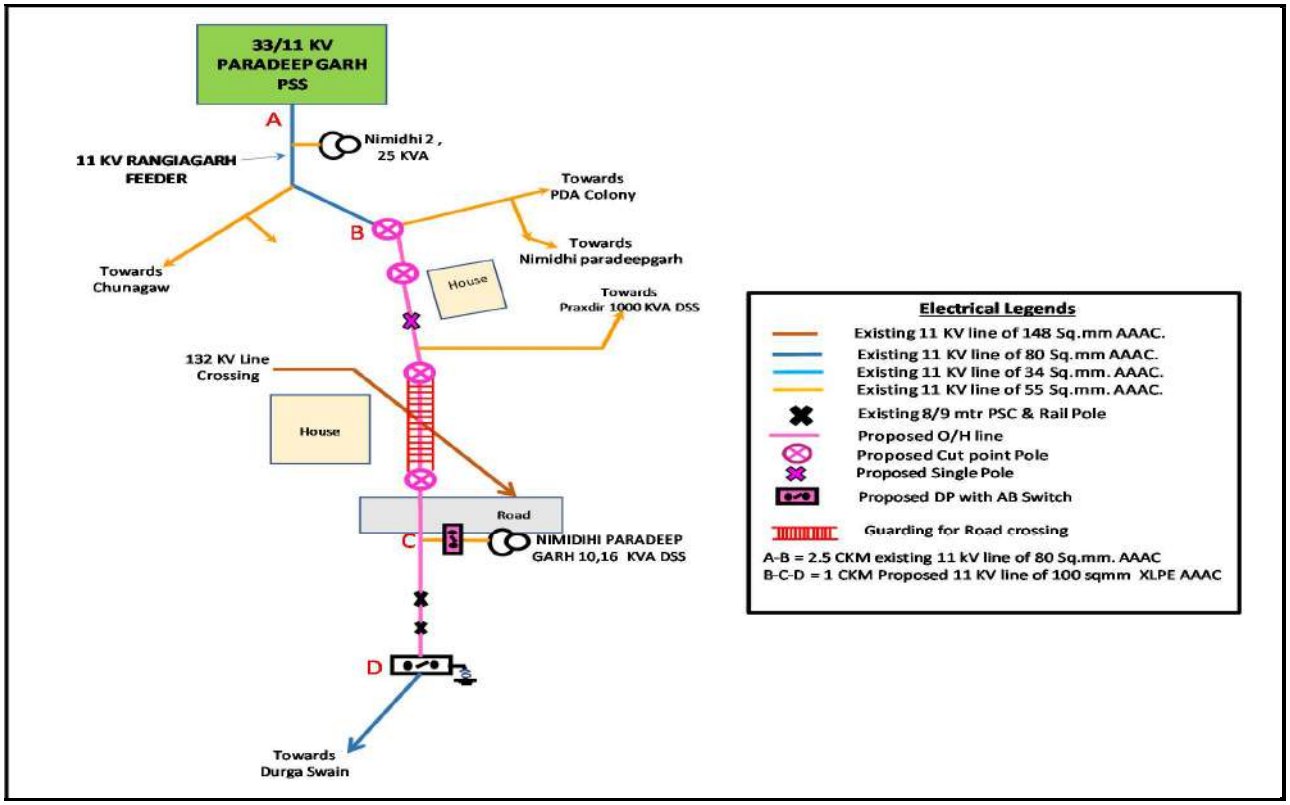
- At present, 11kV Rangiagarh feeder is emanating from 33/11kV Paradeepgarh PSS. The total length of 11kV Jaynagar feeder is 13.7 km and peak load is 2.6 MVA.
- Frequent tripping is observed in the 11KV Rangiagarh feeder due to lower size and aged conductor.
- At present frequent shutdowns are required for connecting feeder restoration.

GIS MAP

Existing SLD:

Priority and Timeline of the Project:

Priority: Since the 11kV Rangiagarh feeder caters to Industrial area and is experiencing frequent interruptions due to feeder trippings, ageing network and repeated shutdown for restoration and maintenance activities. Total 1912 No's consumer connected to the 11KV Rangiagarh feeder. No of 11KV feeder tripping in FY26 is 139 No's & 36 No's till July 26. In addition, substantial vegetation growth along the feeder corridor and ageing conductors increases the risk of faults, conductor snapping and supply interruptions, posing potential safety hazards to both the public and operating personnel. In the absence of reliability enhancement measures, consumers connected to the feeder will continue to face frequent and prolonged power supply interruptions.



Proposed Scenario:

- Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole & 100 Sq.mm. XLPE AAAC for strengthening of 11 kV Rangiagarh feeder.
- Installation of 01 No 11 kV line protecting guarding for road crossing.

GIS Map Proposed:-

Proposed SLD:

Scope of Work:

- Augmentation of 1 CKM 11 kV O/H line using 11 Mtr. WPB Pole (interposing) & 100 Sq.mm. XLPE AAA Conductor.
- Installation of 01 No of 11 kV line protecting guarding having span 40 Mtr.

Proposed Cost with Estimate Break-up:

ANNEXURE- 12.55
