CASE NO: ____ of 2026

In the matter of: **Application for approval of Annual Capital Investment Plan for the period FY 2027-28 in the Licensed Area of TP Western Odisha Distribution Limited in line with Board approval & in compliance with the Hon'ble Commission's direction vide Para 39 of the Vesting Order dated 28.12.2020 (Case No. 82 of 2020) and Para 3.2 of the OERC (Terms and Conditions for Determination of Wheeling and Retail Supply Tariff) Regulations, 2022.**

AND

In the matter of:

M/s. TP Western Odisha Distribution Ltd. (TPWODL)
Regd. Office Burla, Sambalpur, Odisha-768017

Most Respectfully Sheweth,

1. That, TPWODL has taken over the distribution business from erstwhile WESCO utility w.e.f. 01.01.2021 in accordance with the terms of Vesting Order.

2. That, TPWODL has a vast distribution area in western part of Odisha serving population of 95 lakhs with a consumer base of more than 29 lakhs and covering 48,373 sq.km, across 9 revenue districts of Odisha such as Bargarh, Balangir, Debagada, Jharsuguda, Kalahandi, Nuapada, Sambalpur, Sonpur and Sundaragada. For effective operations, license area is divided into 5 circles, which is further sub divided into 17 Divisions, 57 Sub-divisions and 201 Sections which manages the commercial and O&M activities in order to serve its consumer.

3. That, as per the commitment and mandate of Vesting Order, TPWODL has to invest Rs. 1663 Cr. towards CAPEX to ensure reliable power supply to the end customer. Since, such a huge investment would adversely affect tariff, so investment has been staggered in 5 years in the following manner:

(All in Rs. Cr.)

FY 2022	FY 2023	FY 2024	FY 2025	FY 2026	Total
306	500	333	322	202	1663

4. That, upon proposal of TPWODL regarding CAPEX requirement for FY 21-22, FY 22-23, FY 23-24, FY 24-25 & FY 25-26 (jointly filed), Additional CAPEX for FY 24-25 & FY 25-26 and CAPEX for FY 26-27, the Hon'ble Commission through regulatory proceedings approved the Capital Expenditure for the 6 years vide Orders dated 18.09.2021, 08.07.2022, 21.06.2023, 12.12.2023, 24.03.2025 and 15.05.2026 respectively. The following table provides the CAPEX approvals vis-à-vis the TPWODL proposals in the said years:

S. No.	Particulars	FY - 22	FY - 23	FY - 24	FY - 25	FY - 26	Addnl. CAPEX FY- 25 & 26	FY - 27
1	CAPEX proposed by TPWODL (Rs. Cr.)	462.42	582.18	398.84	571.97	403.13	175.93	525.30
2	CAPEX approved by Hon'ble Commission (Rs. Cr.)	333.13	477.72	381.91	493.77	336.6	111.13	383.90

5. That, as can be seen from the above table, the cumulative approval provided by the Hon'ble Commission is Rs. 2518.16 Cr. till FY 26-27 out of the Vesting Order committed CAPEX of Rs. 1663 Cr. for 5 years. Accordingly, the licensee has capitalized Rs. 1950.21 Cr. till June 2026.

6. That, the Hon'ble Commission, in its Retail Supply Tariff Order for FY 2026-27 dated 24.03.2026, has issued certain specific directives to the Licensee pertaining to safety, protection, metering, AT&C loss reduction, reliability and improvement of voltage profile in the distribution network. Compliance with these directives necessitates capital investment over and above the scope of the Annual Capex Plan already approved by the Hon'ble Commission for FY 2026-27 in Case No. 82 of 2025, dated 15.05.2026.

7. That, in order to ensure adherence to the aforesaid directives within the stipulated timelines, TPWODL has prepared and filed a Detailed Project Report (DPR) vide affidavit dated 05.06.2026, outlining the proposed investments under two broad categories namely: (A) Strengthening safety standards, reliability and improving the voltage profile across the licensed area; (B) DTR Metering for 63 kVA and above and AT&C Loss reduction of 11 kV feeders and associated DTs. The same has been admitted by the Hon'ble Commission as Case No. 60 of 2026.

8. That, the Hon'ble Commission, vide its Retail Supply Tariff Order for FY 2026-27 dated 24.03.2026, has issued the following key directives which constitute the basis and necessity of the present petition:

   a) Completion of metering of at least 2 to 3 nos. of 11 kV feeders in each division (with high revenue earning) and associated DTRs & consumers need to be completed in all respect by the end of financial year 2026-27 to assess actual technical loss and AT&C loss. (Para No. 267)
   b) Strengthening of DTR metering up to and including 63 kVA rating (Para No. 268 & 300)
   c) Targeted AT&C loss reduction measures in high-loss 11kV feeders. (Para No. 272)
   d) Installation of Guard Wires / Cradle Guards and provision of Underground Cables at National Highway / State Highway and other major road crossings on 33kV and 11kV overhead lines, to mitigate safety hazards. (Para No. 299)
   e) Provision of standardized HT and LT protection systems for all Distribution Transformers up to and including 63 kVA. (Para No. 300)
   f) Addressing low voltage issues in urban and major city areas through augmentation and addition of DTRs, extension of HT/LT networks, and conversion of single-phase LT networks to three-phase systems. (Para No. 301)

9. That, the Hon'ble Commission vide its Order dated 15.05.2026 in Case No. 82 of 2025 had directed the Licensee to ensure that priority of Capex investment is primarily for network strengthening, expansion of Distribution network and reduction of losses with objective to improve reliability of power supply. Accordingly, TPWODL while preparation of DPR for FY 27-28 has considered all the above factors and has proposed around 77% of total CAPEX proposed towards Network Reliability, Load Growth and Loss Reduction.

10. That, the present CAPEX proposal has been made by the Licensee for FY 27-28 majorly considering the following:

   a) Statutory, Safety and Security: TPWODL has proactively proposed several key safety initiatives which covers laying of UG cable, installation of cradle guard wire, intermediate poles and covered conductors at identified critical locations. Also, strengthening of infrastructure work at Primary substation (PSS) and Distribution substation (DSS) covering Boundary wall for PSS, DSS fencing, Earthing for PSS & DSS, construction of control room etc. aimed at ensuring adherence to regulatory standards, enhancing workplace safety for field staff and providing greater protection to public and assets by taking proactive measures. *Proposed CAPEX: Rs. 71.19 Cr. (11% of FY 2027-28 CAPEX)*

   b) **Loss Reduction**: Targeted investments in key initiatives such as Energy accounting measures, replacing LT bare conductors with LT AB cables and line length reduction of 33 kV and 11 kV feeders which will in turn help in identifying high-loss pockets and

NOTARY

enable data-driven planning of corrective measures, strengthen network safety and reliability, particularly in theft-prone and densely populated areas and minimize technical losses. *Proposed CAPEX: Rs. 94.77 Cr. (14% of FY 2027-28 CAPEX)*

c) **Network Reliability:** Investments include addition / augmentation of 33kV and 11kV Network Infrastructure, installation of HT & LT protection in PSS/DSS, lightning arresters, AB switches, isolators, Auto-reclosers/ Sectionalizers (AR/SR), Fault Passage Indicators (FPIs), and Ring Main Units (RMUs). *Proposed CAPEX: Rs. 185.83 Cr. (29% of FY 2027-28 CAPEX)*

d) **Load Growth:** Focus on construction of 33kV lines for power evacuation of upcoming Grid substation (GSS), establishment of new substations (PSS/DSS), construction of 33/11 kV lines, addition of Power transformers / Distribution transformers and expansion of LT Aerial Bunched (AB) cable networks. *Proposed CAPEX: Rs. 221.34 Cr. (34% of FY 2027-28 CAPEX)*

e) **Technology & Infrastructure:** TPWODL proposes to build and strengthen IT infrastructure, deployment of advanced IT applications, establishment of resilient data centres, enhancement of cybersecurity systems, modernization of hardware, deployment of operational technologies, establishment of centralized CCTV Control system and communication systems for network-wide surveillance and emergency response coordination to support efficient and secure utility operation. In addition, enhancement of technical and safety training centres, deployment of mobile training facility, construction of new division and section office infrastructure and improvement of store & admin facilities have also been proposed. *Proposed CAPEX: Rs. 80.80 Cr. (12% of FY 2027-28 CAPEX)*

11. That, TPWODL humbly submits that with the steady increase in consumer demand across LT and HT categories, a significant portion of new service connections necessitates network augmentation, system strengthening and expansion to ensure reliable and quality power supply. In certain cases of release of new connections, the service connection charges recovered from consumers are not sufficient to fully cover the actual cost incurred by DISCOM. Accordingly, the Hon'ble Commission has been allowing, as part of the CAPEX, the differential cost associated with the release of such new connections including the unrecovered portion of the service cable cost.

12. That, the Hon'ble Commission in Order dated 10.07.2025 vide Case No. 80 of 2024 has directed as under:

"23 (iv) The petitioner has submitted that in order to meet the increasing power demand, the existing distribution network infrastructure needs to be augmented / strengthened / expanded to release the new connection. The petitioner has proposed Rs.15.00 Crores for carrying out such work including the differential cost for LT line extension. Further, the petitioner has proposed Rs. 6.00 Cr to meet the differential cost (over the standard service connection charges) for providing new connections. The cost-of-service cable for new connection forms part of expenditure to be borne by the consumer. ***However, the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis."***

Further, the Hon'ble Commission in Order dated 15.05.2026 vide Case No. 77 of 2025 has directed as under:

". . . The Commission in Capex Order dated 10.07.2025 in the Case No.80/2024 has stipulated that the additional expenditure for new connection release would be considered by the Commission during the True Up exercise for the financial year on the actual basis. Following the same principle, ***the additional expenditure towards new connection release over and above the contribution of consumer(s) will be considered by the Commission during the Truing up exercise based on audited accounts."***

In light of the above, TPWODL respectfully prays that any additional expenditure incurred towards network upgradation, extension or differential cost for catering to new service connections may kindly be considered during the Truing Up exercise for the respective financial year on an actual basis.

13. That, since vesting, TPWODL has been undertaking systematic replacement of damaged, defective and aged service cables with a view to enhancing consumer safety, improving supply reliability and mitigating instances of electricity pilferage. However, during site inspections, it has been observed that a significant number of service connections continue to be served through defective, deteriorated or jointed service cables, which not only pose risks of electrocution and theft but also result in unmetered consumption and reduced billing efficiency. Such cases are primarily associated with elimination of theft, load enhancement where existing service cables are undersized, meter shifting requirements to facilitate proper installation at designated locations, and defective service cable replacement identified during field inspections. Continuation of these defective connections adversely impacts collection efficiency, increases AT&C losses and poses significant consumer safety hazards, thereby necessitating an extension of the replacement in a phased manner under the current CAPEX plan.

TPWODL is recovering such expenditure from the consumers wherever it is clearly established that the service cable has been damaged due to reasons attributable to the consumers. However, in most cases the reason for the damage

is not attributable to the consumers (e.g. service cable damage due to old age, due to harsh outdoor environmental conditions etc.) or it cannot be established, in such cases these service cables need to be replaced by DISCOM under CAPEX.

Further, the Hon'ble Commission in Order dated 15.05.2026 vide Case No. 77 of 2025 has directed as under:

> *"... The Commission is of the view that the replacement of service cables is generally recovered from consumers. However, the* ***differential expenditure of service cables (if any) over and above the consumer contribution will be considered at the time of true up exercise based on audited expenditure*** *after prudence check."*

In light of the above, TPWODL respectfully prays that any differential expenditure of service cables, over and above the consumer contribution, may kindly be considered during the Truing Up exercise for the respective financial year on an actual basis. It is also submitted that replacement shall be undertaken only in specific cases like elimination of pilferage of electricity, load enhancement, shifting of meters to accessible areas & defective cable replacement.

14. That, TPWODL has proposed the project completion timelines wherever applicable. While DISCOMs will endeavor all efforts to complete the schedules as per the mentioned timeline for each projects, however the proposed timelines are subject to timely receipt of necessary permissions, approvals and clearances from the concerned authorities/ agencies, including land/ Right of Way (RoW), site clearance, Forest Department/ agricultural field clearances and other statutory approvals, resolution of local/ site-related issues and concerns, timely receipt of materials, availability of required outages from OPTCL, suitable weather conditions and other factors beyond the reasonable control of the DISCOM.

15. That, the smart meter IT infrastructure encompassing the Head End System (HES) and Meter Data Management System (MDMS), along with associated components were initially designed to accommodate approximately 5 lakh Smart Meters. Over time, the infrastructure has been progressively scaled to accommodate the growing deployment base and currently supports approximately 9.5 lakh Smart Meters. With installations projected to reach 15 lakh Smart Meters, further augmentation of the underlying compute, storage, networking, database, server and software infrastructure is essential to ensure reliable system performance and avoid service degradation. Accordingly, TPWODL has proposed Rs. 18.86 Cr.

under Smart Meter IT Infrastructure. However, since the matter has come up at a later stage, there is no Board approval for FY 27-28 for the same. However, TPWODL ensures submission of necessary additional Board approval in the subsequent submission.

16. That, the Hon'ble Commission at Regulation 3.2.9 of the OERC (Terms and Conditions for Determination of Wheeling Tariff and Retail Supply Tariff) Regulations, 2022 had held that the Capital Expenditure Plan must be accompanied with approval from the Board of Directors (BoD).

17. That considering the decision of the Board of Directors (BoD), the DPR of CAPEX Plan for FY 27-28 is hereby proposed for an amount of Rs. 653.93 Cr. Accordingly, TPWODL is herewith enclosing a Certified True Copy of the resolution passed at the board meeting from Company Secretary with regards to Board's Approval as **ANNEXURE-A**.

18. That, as like of last five years, the Applicant proposes to invest its Capital Expenditure under five major heads in following manner:

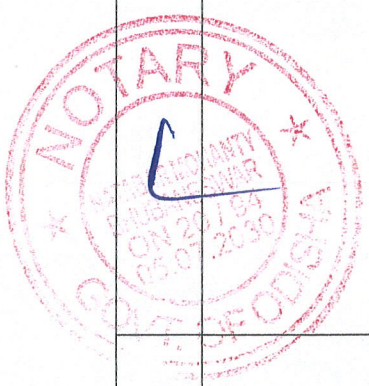
S. No.	Particulars	FY 27-28 (Rs. Cr.)	% Contribution
1	Statutory, Safety & Security	71.19	11%
2	Loss Reduction	94.77	14%
3	Reliability	185.83	29%
4	Load Growth	221.34	34%
5	Technology adoption & infrastructure	80.80	12%
TOTAL		**653.93**	**100%**

19. That, the details of proposed investment under different categories and sub-categories for FY 27-28 are summarized below:

Sl. No.	Category	Sub-Category	Scheme / Activity Description	CAPEX Proposed in FY 2027-28 (In Rs. Cr.)
1	**Statutory, Safety and Security**	Life enhancement of network and maintaining safe horizontal / vertical clearances	Laying of 33 kV Underground Cable at NH / SH crossing	5.09
			Laying of 11 kV Underground Cable at NH / SH crossing	5.07
			Installation of 33 kV Overhead Cradle Guard at Road Crossings (other than NH/SH/ Railway)	2.48

Sl. No.	Category	Sub-Category	Scheme / Activity Description	CAPEX Proposed in FY 2027-28 (In Rs. Cr.)
			Installation of 11 kV Overhead Cradle Guard Road Crossings (other than NH/SH/ Railway)	3.00
			Conversion of HT Bare Conductor with Covered Conductor	10.03
			Enhancing vertical clearance through interposing poles	10.04
		Establishment Meter Testing Lab and Procurement of Cable Fault locator (CFL) Van	Establishment of Meter Testing Lab (MTL)	5.00
			Procurement of Cable Fault Locator (CFL) Van	2.50
		Infrastructure works at Primary & Distribution Substation	Access Road for inside and outside of PSS	2.00
			Construction of Control Room Building in PSS	6.00
			PSS Boundary wall	5.99
			DSS Fencing	8.01
			Earthing for DSS	4.00
			Firewall for Power Transformers	1.98
Sub Total - Statutory, Safety and Security				**71.19**
2	**Loss Reduction**	Energy Audit Related Activity	Installation of Meters inside PSS for Energy Audit	3.10
			DTR Smart Metering for Energy Audit	20.02
			High Value Industrial Audit Point Metering	1.50
		Replacement of LT Bare Conductor with AB Cable	Replacement of LT Bare Conductor with AB Cable	25.06
		Installation of LT Distribution box on LT Pole	Installation of LT Distribution box with Armoured cable	20.17
		Feeder Length Reduction	33kV & 11kV lines for feeder length reduction	24.92
Sub Total - Loss Reduction				**94.77**
3	**Network Reliability**	Replacement / Addition of network component in 33 / 11 kV Primary Substation	Installation / Replacement of 33 kV Breaker / Group Breaker	6.03
			Installation / Replacement of 11 kV Breaker / Group Breaker	10.74
			Replacement of 33 kV and 11 kV CRP	8.25
			Installation of LA (33 kV & 11 kV) in PSS	2.99
			Technical & Safety compliance of PSS (Switchyard fencing, Bus heightening, Earth Pit water arrangement, Cable Trench, Trench Cover, Toe wall, etc.)	3.89
			Replacement of Aged PTR's	20.81
			Strengthening of 33KV Network infrastructure	49.62

Sl. No.	Category	Sub-Category	Scheme / Activity Description	CAPEX Proposed in FY 2027-28 (In Rs. Cr.)
		Replacement / Addition of Network Component in 11kV / 33kV Line	Strengthening of 11KV Network infrastructure	35.44
			Installation of 33 kV & 11 kV FPI	5.49
			Installation of 33 kV & 11 kV AB Switches, Isolator & RMU	5.10
			33 kV & 11 kV Polymer Insulator / LA for lines	2.49
			33 kV & 11 kV Auto Recloser / Sectionaliser	4.97
		Replacement / Addition of network component in Distribution Substation	Protection system on LV side of DTR	30.01
Sub Total - Network Reliability				**185.83**
4	**Load Growth**	Network Enhancement	Construction of new 33 kV Lines for power evacuation from upcoming GSS	21.95
			Construction of new 33 kV Lines for load growth	64.96
			Construction of new 11 kV Lines for load growth	33.03
			Construction of New PSS	27.00
			Addition / Augmentation of PTR	31.30
			Addition / Augmentation of DTR	23.09
			Addition of New LT ABC Network	20.01
Sub Total - Load Growth				**221.34**
5	**Technology & Infrastructure**	Technology Intervention – IT & Technology	Build & Strengthen DC-DR Infrastructure & End-User IT Hardware	15.00
			Augmentation of IT Applications & Software	5.00
			Enhancement of Cybersecurity Solutions	6.00
		Technology Intervention – OT & Technology	Geospatial analysis and Route Marking	2.00
			Mobile application for ADMS & OMS & Equipment to field team	2.50
			CCTV Control Centre & Equipment	5.00
			Set up Communication infrastructure for PSS	0.50
		Improvement of Civil Infrastructure	Construction of Office Buildings	18.00
			Establishment of Technical and Safety Training Centre and mobile training facility	2.92
		Enhancement of Store Infrastructure	Enhancement of Store Infrastructure	3.04
		Ready to Use assets for Offices	Ready to Use assets for Offices	1.98
		Smart Meter IT Infra	IT infrastructure supporting the Smart Metering system	18.86



Sl. No.	Category	Sub-Category	Scheme / Activity Description	CAPEX Proposed in FY 2027-28 (In Rs. Cr.)
Sub Total - IT & Infrastructure				**80.80**
GRAND TOTAL				**653.93**

The above capital investment (Rs. 653.93 Cr.) represents Hard Cost only. Other costs like employee cost, interest during construction and other cost exclusively incurred for project related work will be over and above and shall be allowed to be capitalised.

Also, Certain works proposed under the Capital Investment Plan for FY 2027-28 are critical in nature and need to be taken up on priority for improving system reliability, safety and quality of power supply to consumers. Some of these activities may overlap, either fully or partially, with activities proposed under the Licensee's various Capex Petitions, which are presently under consideration by the Hon'ble Commission and are at different stages of hearing.

Since, these activities are of high priority and are essential for the improvement of system reliability and quality of supply. Accordingly, they have also been included in the present Annual Capex Petition.

The Licensee, therefore, respectfully prays that the Hon'ble Commission may kindly take cognizance of above and consider and accord approval for FY 2027-28 either under the present Annual Capex Petition or under the respective Capex Petitions already under hearing before the Hon'ble Commission.

20. That, the Employee Cost associated with the projects covered under this Capital Investment Plan would also form a part of the CAPEX and would be eventually capitalized along with the respective capital expenditure scheme. The cost towards employees working on such projects shall be separate, i.e., in addition to the Hard Cost amount proposed in this petition.

21. That, considering the voluminous nature of the investment proposal, the Licensee has divided the CAPEX Plan into 2 volumes (Volume-I: Affidavit & CAPEX DPR) and (Volume-II: Annexures to the DPR).

22. That, all the expenditures are estimated based on comprehensive field studies and survey, which may vary on actual.

23. That, the funding of the proposed CAPEX of Rs. 653.93 Cr. shall be made with loan of 70% & balance 30% with equity contribution.

Prayer

TPWODL prays that the Hon'ble Commission may kindly be pleased to:

a) Approve the CAPEX plans to the extent of Rs. 653.93 Cr. for FY 27-28.
b) Allow actual expenditure incurred towards 'Damaged Service Cable Replacement' and 'New Connection Release' at time of Truing up in line with previous Capex Orders.
c) Allow Employee Cost, Interest During Construction and Other Cost related to Projects based on actuals to be capitalised over and above the Capex (Hard Cost) for FY 2027-28.
d) Permit carrying forward of the unspent CAPEX to subsequent years.
e) That, the petitioner craves leave for submission of further /additional submission as and when required by the Hon'ble Commission.
f) To kindly condone any inadvertent omission /errors/shortcoming and allow to make future submission as may be required in future to support this application in terms of modification /clarifications, if any.
g) Grant any other relief as deemed fit and proper in the facts and circumstances of the case.
h) Any other direction as the Hon'ble Commission may think appropriate.

Capital investment schemes details for In-Principal approval

Overview of the Detailed Project Report	
Particular	**Details**
Index with the documents	Attached in Page No. 4
Name of Applicant	TP Western Odisha Distribution Limited (TPWODL)
Name of the Capital Investment Work	Capital Investment Plan for FY 2027-28 covering Statutory, Safety & Security, Loss Reduction, Network Reliability, Load Growth and Technology & Infrastructure category
Nature of CAPEX Scheme (New / Resubmitted / Revised / Modified / Extended)	New – Capital Investment Plan for FY 2027-28
Details of the Location	TPWODL licensed area covering 5 Circles, 17 Divisions and 57 Sub-divisions across Western Odisha. The proposed works will be implemented at identified locations across the distribution network, including 33 kV/11 kV lines, Primary Substations (PSS), Distribution Substations (DSS) and associated IT/infrastructure facilities.
Date of Approval by Competent Authority designated by the Board of Directors of the Company	Date of Approval 18th July 2026
Category of DPR	As per Para 4.1 of Draft CAPEX regulation 2026
Objective of the Capital Investment	To strengthen and expand the distribution network to meet load growth, improve network reliability and quality of supply, reduce AT&C/technical losses, ensure statutory and safety compliance, strengthen digital/IT infrastructure, and improve operational efficiency and consumer service as part of Capital Investment Plan for FY 2027- 28
Need Analysis	The investment is necessitated by existing network constraints including overloading, undervoltage, ageing network components, inadequate safety clearances, reliability concerns, high-loss pockets and increasing consumer demand. Additional investment is also required for network expansion, new substations/lines, transformer capacity enhancement, energy accounting, cybersecurity and IT/OT infrastructure.
Overall Cost-Benefit Analysis	The proposed investment will improve network reliability and efficiency through loss reduction, voltage improvement, overloading mitigation, enhanced safety, and improved energy accounting and consumer service.

	For detailed CBA refer Annexure 85 to 91, 183 & 184
Brief Scope and Specifications of Work	The scope covers 33/11 kV network strengthening and new lines, PSS/DSS improvement, PTR/DTR augmentation, LT AB cable network, feeder length reduction, protection and switching equipment, energy-audit and DTR metering, safety works, IT/OT and cybersecurity infrastructure and civil infrastructure.
Estimated Cost (₹ Cr.)	Rs. 653.93 Cr.
Time Frame of the Expenditure	Please refer attached proposal for timelines.
Benefits / Impact	The proposed CAPEX will improve reliability and quality of power supply, reduce AT&C and technical losses, mitigate overloading and undervoltage, improve network redundancy and N-1 connectivity, reduce fault restoration time and outage duration, enhance safety and statutory compliance, strengthen energy accounting and monitoring, improve IT/OT resilience and cybersecurity, and support future consumer/load growth.
Need of the Investment	The investment is required to address existing network deficiencies and emerging system requirements, including load growth, ageing assets, overloading, undervoltage, feeder constraints, safety risks, loss-reduction requirements and increasing digitalisation of distribution operations. It will enable TPWODL to maintain adequate system capacity, improve reliability and resilience, comply with applicable regulatory/statutory requirements and provide safe, reliable and quality power supply to consumers.

INTRODUCTION

TP Western Odisha Distribution Limited (TPWODL) emerged from a collaborative effort under the Public-Private Partnership (PPP) model, with Tata Power taking the majority stake of 51% and the remaining 49% owned by the Government of Odisha.

The operation of TPWODL's utility business is conducted in accordance with the licensing terms prescribed by the Hon'ble Odisha Electricity Regulatory Commission (OERC). Hon'ble OERC plays a pivotal role in regulating the entire power sector in the state of Odisha. This oversight encompasses determining tariffs for end-users and establishing performance standards that primarily focus on loss reduction, ensuring the security and reliability of power supply and delivering quality services to consumers.

TPWODL's power supply is secured through its association with GRIDCO, a designated bulk supply aggregator tasked with procuring electricity in bulk from various generators located within Odisha, as well as the state's allocation of power from central generators. The transmission process starts with TPWODL receiving electrical power at a sub-transmission voltage of 33 kV, originating from the 220 / 132 / 33 kV Grid Substations managed by the Odisha Power Transmission Corporation Limited (OPTCL). TPWODL subsequently tailors the distribution to meet consumer demands, offering various voltage levels such as 33 kV, 11 kV, 440 V and 230 V as required by its diverse customer base.

With the objective of ensuring reliable power supply and ensuring best customer services to the end consumers, TPWODL, in the last 5 Year CAPEX submissions, has come up with capital investment plan in five major categories viz Statutory, Safety & Security, Network Reliability, Loss Reduction, Load Growth and Technology & Infrastructure. These same categories will continue for this year CAPEX plan also. The details of each head are subsequently mentioned along with estimated CAPEX requirement and associated activities.

TPWODL, in compliance with the provisions of the Vesting Order, is required to obtain approval for its Capital Expenditure Plan in accordance with the OERC (Terms and Conditions for Determination of Wheeling and Retail Supply Tariff) Regulations, 2022. As per the commitments made in its bid submitted in response to the RFP, TPWODL has proposed a capital expenditure of Rs 1663 Crores for the period FY 2021-22 to FY 2025-26, as detailed in Table – 1.

As detailed in Table – 2, TPWODL has proposed a Capital Expenditure of Rs. 3119.77 Crores for FY 2021-22 to FY 2026-27, against which the Hon'ble OERC has approved Rs. 2518.16 Crores.

The distribution system plays a vital role in the power delivery chain by ensuring last-mile connectivity to consumers, who remain the primary source of revenue for the power sector. Over the past five years in Odisha, TPWODL has implemented several initiatives focused on network strengthening, reduction of distribution losses, improvement of personnel and equipment safety, and resolution of metering and billing issues. These efforts have earned national recognition, with Odisha DISCOMs being ranked among the best-performing utilities in the country.

However, TPWODL recognizes that, given the existing consumer density and a consumer base predominantly comprising domestic customers, greater emphasis is still needed in certain areas. Key priorities include mitigating low-voltage problems, reducing high LT losses, enhancing supply reliability and availability and meeting evolving consumer expectations. Addressing these challenges is critical for TPWODL to strengthen its operational efficiency and achieve long-term financial sustainability as a distribution licensee.

In this context, TPWODL proposes a Capital Expenditure of ***Rs. 653.93 Crores in FY 2027-28*** across five major categories, namely:

1. **Statutory, Safety and Security:**

   TPWODL places the highest priority on regulatory compliance and enhancing safety across its distribution network. Through its FY 2027–28 CAPEX plan, the company has proactively proposed several key safety initiatives which covers laying of UG cable, installation of cradle guard wire, intermediate poles and covered conductors at identified critical locations. Also, strengthening of infrastructure work at Primary substation (PSS) and Distribution substation (DSS) covering Boundary wall for PSS, DSS fencing, Earthing for PSS & DSS, construction of control room etc.

   These initiatives are aimed at ensuring adherence to regulatory standards, enhancing workplace safety for field staff and providing greater protection to public and assets by taking measures such as underground cabling at National / State Highway crossing and installation of cradle guard wire at road crossing significantly reduce the risk of accidents, while the adoption of Covered conductors minimizes the likelihood of electrical hazards. Strengthening both physical and electrical safety will contribute to improved system reliability, reduction in outages and long-term resilience of the distribution system.

   With the above objectives, TPWODL proposes a CAPEX investment of Rs ***71.19 Crores under the Statutory, Safety & Security category****, which constitutes* ***11 % of the total Capital Expenditure planned for FY 2027-28****.*

2. Loss Reduction:

TPWODL recognizes that reducing distribution losses is critical for improving both financial sustainability and service quality. Under this category, the company proposes targeted investments in key initiatives such as Energy accounting measures, replacing LT bare conductors with LT AB cables and line length reduction of 33 kV and 11 kV feeders.

Energy audits will help in identifying high-loss pockets and enable data-driven planning of corrective measures. Replacement of LT bare conductors with AB cables will not only reduce technical losses but also strengthen network safety and reliability, particularly in theft-prone and densely populated areas. Reduction in the length of 33 kV and 11 kV feeders helps minimize technical losses enhance network reliability and enable more efficient power distribution.

With this objective, TPWODL proposes a CAPEX investment of ***Rs. 94.77 Crores under the Loss Reduction category****, which accounts for* ***14 % of the total Capital Expenditure planned for FY 2027-28****.*

3. Network Reliability:

Ensuring uninterrupted, safe and quality power supply to consumers remains a core priority for TPWODL. To achieve this, the company is focusing on strengthening its network through systematic upgradation of key assets, ensuring network redundancy particularly for city, town and other critical establishments and deployment of advanced technologies in phased manner. The proposed investments under this category include addition / augmentation of 33kV and 11kV Network Infrastructure, installation of HT & LT protection in PSS/DSS, lightning arresters, AB switches, isolators, etc.

In addition, TPWODL plans to install Auto-reclosers / Sectionalisers (AR/SR), Fault Passage Indicators (FPIs), and Ring Main Units (RMUs). These modern technologies will enhance grid automation, improve fault detection and enable faster isolation and restoration of supply in case of network disturbances. Such interventions will minimize outage durations, reduce supply interruptions and significantly improve system resilience.

With this objective, TPWODL proposes a CAPEX investment of ***Rs. 185.83 Crores under the Network Reliability category****, which represents* ***29 % of the total Capital Expenditure planned for FY 2027-28****.*

4. Load Growth:

To meet the growing electricity demand arising from rapid urbanization, industrialization and overall economic development in Western Odisha, TPWODL is prioritizing investments in network expansion and capacity enhancement for making the network future ready. Under this category, the focus will be on the

construction of 33kV lines for power evacuation of upcoming Grid substation (GSS), establishment of new substations (PSS/DSS), construction of 33/11 kV lines, addition of Power transformers / Distribution transformers and expansion of LT Aerial Bunched (AB) cable networks.

These initiatives will not only strengthen system capacity but also ensure that the distribution network is adequately prepared to cater to new service connections of domestic, commercial, and industrial consumers.

With this objective, TPWODL proposes a CAPEX investment of ***Rs. 221.34 Crores under the Load Growth category****, which constitutes* ***34 % of the total Capital Expenditure planned for FY 2027-28****.*

5. **Technology and Infrastructure:**

Investments under this category are proposed to strengthen both digital and physical infrastructure in line with TPWODL's operational and consumer service objectives. To strengthen cybersecurity, enhance operational visibility and enable real-time monitoring of critical assets, TPWODL proposes build and strengthen IT infrastructure, deployment of advanced IT applications, establishment of resilient data centres, enhancement of cybersecurity systems, modernization of hardware, deployment of operational technologies, establishment of centralized CCTV Control system and communication systems for network-wide surveillance and emergency response coordination to support efficient and secure utility operation.

In addition, TPWODL proposes enhancement of technical and safety training centres, deployment of mobile training facility, construction of new division and section office infrastructure and improvement of store & admin facilities. These investments are expected to enhance workforce capability, operational efficiency, and service delivery standards. Through the integration of digital technologies and robust physical infrastructure, TPWODL aims to build a smarter, more resilient distribution utility capable of delivering reliable, secure, and consumer-centric services.

With this objective, TPWODL proposes a CAPEX investment of ***Rs. 80.80 Crores under the head Technology & Infrastructure category*** *which constitutes* ***12 % of the total Capital Expenditure planned for FY 2027-28****.*

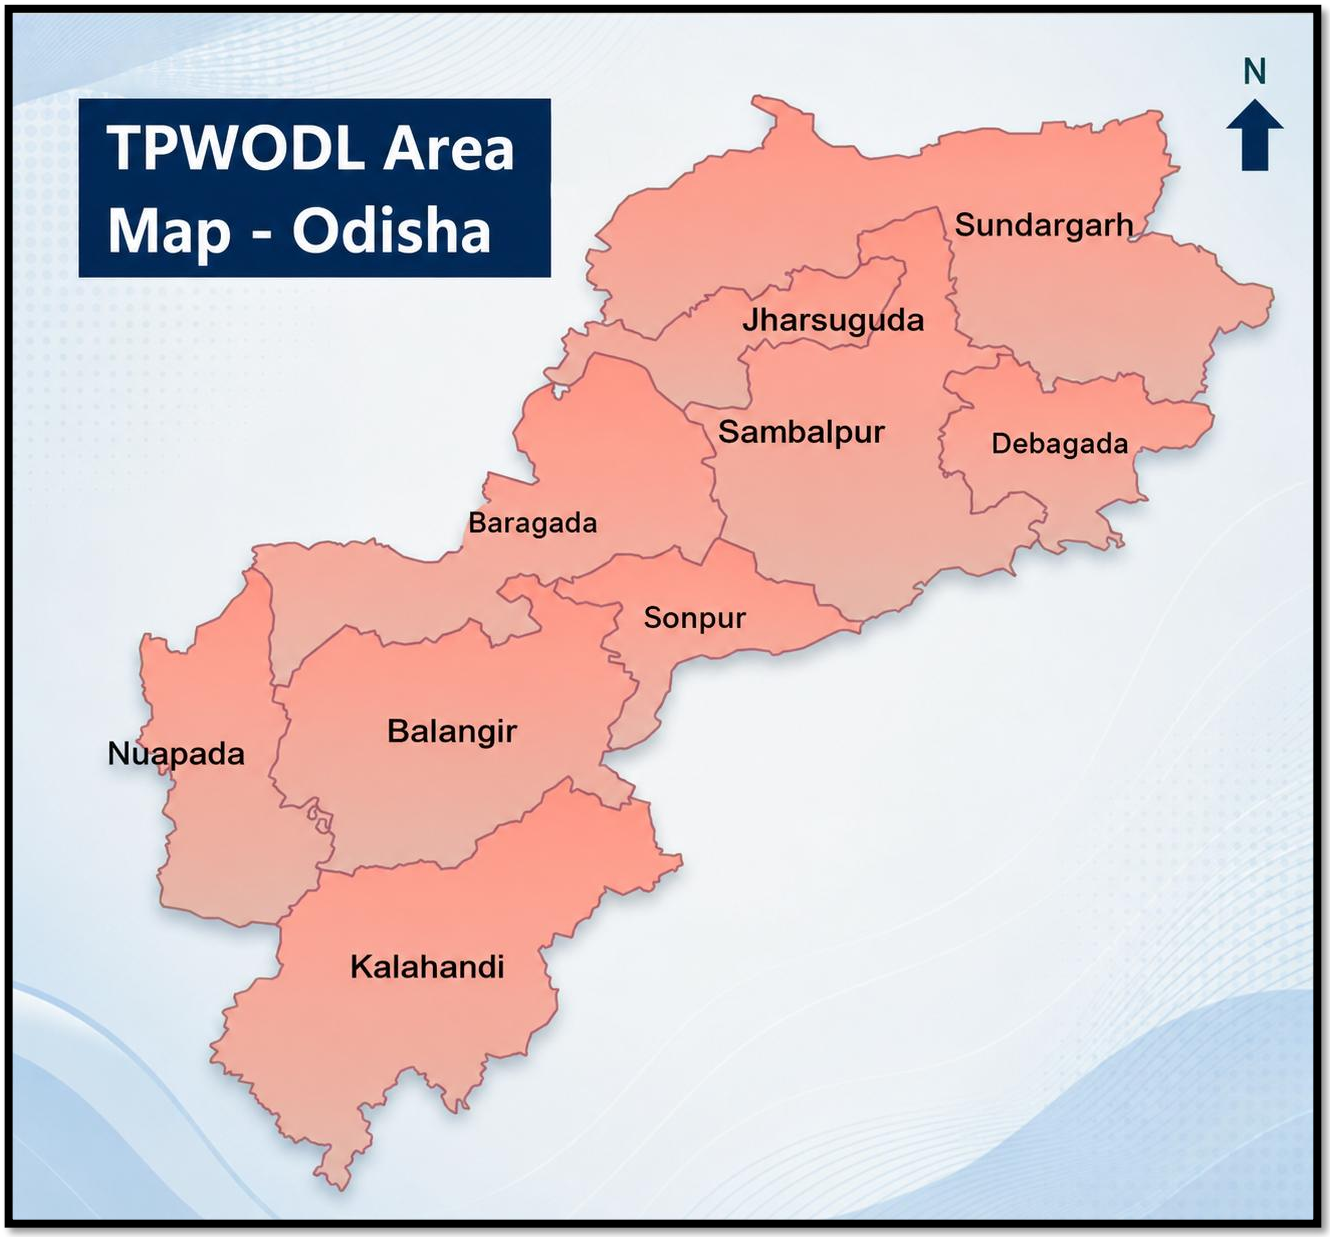
Note: Few of critical schemes earlier submitted under “DPR against RST directives FY26-27 27 i.e. TPWODL Multi-Year CAPEX for FY 26-27 to FY 30-31”, have been duly considered in this DPR proposal for FY 27-28, in view of their importance and urgency to improve reliability and reduce AT&C losses.

It is submitted that the above cost has been estimated excluding Employee Cost (5% of total CAPEX requirement) and Interest During Construction (IDC). Employee Cost associated with the projects or capex schemes would also form a part of the Capex and would be eventually capitalized with the capital expenditure scheme. We wish to submit that the cost towards Employees working on such projects would be separate i.e. in addition to the amount that is approved by the Hon’ble Commission under this proposal. Similarly, the Interest during Construction (IDC) is required to be worked out on the Debt Component (70%) of the Capex. The same would depend on the quantum of the capital expenditure spread during the year and hence the estimation has not been made at present in this proposal. However, we wish to submit that Interest during Construction amount would need to be added in addition to Hard Cost and Employee Cost to be capitalised.

TPWODL OVERVIEW



TP Odisha DISCOM is a joint venture between Tata Power and Government of Odisha with the majority stake being held by The Tata Power Company Limited (51%). Traditionally, the distribution network in Odisha is mainly divided into four divisions, TPCODL, TPNODL, TPWODL and TPSODL. TPWODL license area is spread over a geography of 48,373 sq. km with population served around 95 lakhs and serve the registered consumer base of approx. 20+ lakhs. TPWODL procures power from GRIDCO which is a state-owned company, engaged in the business of purchase of electricity in bulk from various generators located inside Odisha and the state share of power from Central generators for supply in all power distribution utilities, including TPWODL. It receives electrical power at a sub transmission voltage of 33 kV from Odisha Power Transmission Corporation

Limited's (OPTCL) 220 / 132 / 33 kV Grid Substations and then distributes the power at 33 kV / 11 kV / 440 V / 230 V depending on the demand of the consumers.

For making reliable power supply, along with prompt service to its consumers, this power distribution company (TPWODL) in Odisha has divided its area of power distribution into 5 Circles, 17 Divisions and 57 Sub-divisions as per Table – 5.

Distribution Network:

As on 31st March 2026, there are 235 numbers of 33 kV feeders with a combined circuit length of around 6,517 Ckt. kM, supplying power to 332 numbers of 33 / 11 kV Primary Substations. The 33 kV supply is stepped down to the 11 kV level through 726 numbers of 33 / 11 kV Power Transformers with a total installed capacity of 3,868 MVA at these primary substations. Further, around 1,259 numbers of 11 kV feeders emanate from the 33 / 11 kV Primary Substations, having a cumulative length of around 54058 Ckt. kM and supply power to HT consumers connected at the 11 kV level and LT customers connected through 11 / 0.415 kV and 11 / 0.230 kV distribution substations. A total of 86,878 numbers of Distribution Transformers are installed across all five circles, with a combined installed capacity of 4,549 MVA. The length of the LT network is around 75,167 Ckt. kM. These LT feeders supply power to both three-phase and single-phase consumers.

EXISTING NETWORK CONDITIONS

TPWODL's distribution network operates across diverse geographical terrains and system conditions. Certain sections of the network comprise long, aged, and vulnerable assets that pose safety risks to employees, the public and animals. These deficiencies adversely affect network safety, reliability, operational efficiency, and the overall quality of power supply.

To address these challenges, TPWODL has identified a number of critical interventions aimed at strengthening the distribution infrastructure, enhancing operational safety, ensuring compliance with statutory and regulatory requirements, and improving the reliability and quality of power supply to consumers.

The key challenges observed in the existing distribution network are as follows:

- Inadequate horizontal and vertical clearances in 33 kV, 11 kV, and LT distribution networks.
- Damaged and deteriorated conductors, poles, cross-arms, and stay wires.
- Inadequate earthing of poles, structures, and electrical installations.
- Absence of cradle guards on overhead lines at road crossings
- Poor condition / absence of fencing / boundary wall at the Distribution Substations and 33 / 11 kV Primary Substations (Structure's).
- Inadequate HT and LT protection system at PSS and DSS.
- Dilapidated civil infrastructure.
- Unsafe condition for employees, public and animal.
- Frequent power supply failure.
- Higher failure rate of distribution transformers.
- Aged power transformers.

Inadequate horizontal and vertical clearances in 33 kV, 11 kV, and LT distribution networks:

Since taking over the distribution operations in January 2021, TPWODL has undertaken several initiatives to improve statutory clearances across the distribution network. These efforts have significantly reduced the number of vulnerable locations. However, owing to the vast geographical spread of the licensed area, ageing infrastructure, long-span overhead lines, and changes in road levels over time, several locations continue to have inadequate horizontal and vertical clearances.

Many of the existing overhead lines were originally constructed on 8 m and 9 m poles with span lengths ranging from 60 m to 120 m, resulting in higher conductor sag, particularly during peak loading and high ambient temperatures. In addition, road widening, resurfacing, and changes in ground levels have further reduced conductor clearances at several locations, leading to non-compliance with statutory safety requirements.

To address these deficiencies, TPWODL proposes the installation of intermediate poles to reduce span lengths, improve conductor clearances, and enhance the mechanical strength of the existing network. The proposal also includes refurbishment and life-extension of existing HT and LT lines. Considering the large number of

remaining vulnerable locations, phased investments over the coming years will be required to achieve full compliance with statutory safety standards.

Photographs of feeders having unsafe horizontal / vertical clearances are as follows:

Damaged and deteriorated conductors, poles, cross-arms, and stay wires

Over the past few years, TPWODL has undertaken systematic replacement of damaged network assets under CAPEX schemes. These interventions have improved the overall condition of the distribution network. However, due to the extensive geographical coverage, ageing infrastructure, and exposure to adverse weather conditions, several network sections still require refurbishment and replacement.

Field inspections have identified damaged or tilted poles, deteriorated conductors, corroded cross-arms, defective stay wires, and weakened support structures at various locations. Natural calamities such as cyclones, Kalbaisakhi storms, floods, and continuous vegetation growth have further accelerated the deterioration of these assets.

Defective poles and stay arrangements reduce the mechanical stability of overhead lines, increase conductor sag, and make the network more susceptible to failures during adverse weather conditions. Similarly, undersized conductors, multiple joints, deteriorated binding wires, and poor jumper connections create hotspots, increase technical losses, and elevate the risk of conductor snapping.

To further strengthen the network, TPWODL proposes replacement of damaged poles, deteriorated conductors, defective stay assemblies, and associated accessories. The proposal also includes conductor re-sagging, installation of intermediate poles, and refurbishment of existing overhead lines to improve safety, reliability, and service continuity.

Photograph of conductors and poles in damaged condition are as follows:

Inadequate earthing of poles, structures, and electrical installations:

TPWODL has undertaken earthing improvement works at several Primary and Distribution Substations since 2021 as part of its network strengthening initiatives. Despite these efforts, field inspections indicate that earthing arrangements at certain locations remain inadequate due to ageing, corrosion, damaged earth connections, and increasing network expansion.

An effective earthing system is essential for personnel safety, equipment protection, and proper operation of protection systems. Inadequate earthing delays fault clearance, adversely affects relay performance, increases stress on electrical equipment, and poses a risk of electric shock to employees, the public, and animals.

To further strengthen the earthing system, TPWODL proposes construction of new earth pits, refurbishment of existing earthing arrangements, and replacement of damaged earth conductors at both Primary and Distribution Substations. These measures will improve equipment protection, enhance the effectiveness of protection systems, and ensure compliance with statutory safety requirements.

Absence of cradle guards on overhead line at road crossings:

Over the last few years, TPWODL has progressively installed cradle guards at several vulnerable locations as part of its safety improvement programme. However, considering the extensive overhead distribution network across the licensed area, many road crossings and public locations still require protective guarding.

Cradle guards play a critical role in preventing accidents arising from snapped conductors by ensuring rapid operation of the protection system and timely isolation of faulty feeders. Their absence at vulnerable crossings continues to pose a safety risk to the public, vehicles, and animals.

Accordingly, TPWODL proposes installation of cradle guards at major road crossings, school zones, hospital premises, market areas, and other identified vulnerable locations to further enhance public safety and statutory compliance.

Inadequate HT and LT protection system at PSS and DSS.

TPWODL has undertaken installation of HT and LT protection system at PSS & DSS since assuming distribution operations. However, a number of substations continue to operate with inadequate protection infrastructure. Field assessments indicate that some feeders are still connected through group breakers, while few Power Transformers and feeders continue to operate without dedicated circuit breakers.

Adequate LT protection is essential for safeguarding Distribution Transformers (DTRs) and consumer installations against faults such as short circuits, overloading, and earth faults. Although TPWODL has progressively introduced LT protection at several Distribution Substations under previous CAPEX programmes, a considerable number of substations are still operating without adequate LT protection arrangements.

The absence of LT protection results in delayed isolation of faults, exposing Distribution Transformers and associated network components to prolonged fault currents. This not only increases the likelihood of transformer failures and equipment damage but also leads to frequent supply interruptions, higher maintenance costs, and extended restoration time. In addition, faults on the LT side may propagate upstream, causing unnecessary tripping of 11 kV feeders and affecting a larger number of consumers.

To address these deficiencies, TPWODL proposes installation of suitable LT protection devices such as MCCBs, ACBs, LT distribution boxes, and associated protection equipment at vulnerable Distribution Substations. These measures will facilitate faster fault isolation, reduce transformer failures, improve personnel and equipment safety, minimize outage duration, and enhance the overall reliability and stability of the distribution network.

To strengthen substation reliability, TPWODL proposes installation of HT and LT protection at PSS and DSS to improve fault clearance, minimize equipment damage, and enhance overall system reliability.

Dilapidated civil infrastructure:

Since 2021, TPWODL has undertaken renovation and construction of several office buildings, substations, and operational facilities to support expanding business requirements. Nevertheless, considering the large number of offices and substations spread across the licensed area, several facilities continue to require modernization and infrastructure improvement.

Field inspections indicate that some office buildings, control rooms, cable trenches, switchyards, drainage systems, approach roads, and storage facilities have deteriorated due to ageing and prolonged usage. In addition, increasing manpower and operational activities have created a need for improved office infrastructure and better employee amenities.

TPWODL therefore proposes construction of new office buildings, development of new operational facilities wherever required, strengthening of store infrastructure, and improvement of substation civil works. These investments will enhance operational efficiency, employee safety, and customer service while providing a modern and sustainable working environment.

Photographs of condition of some poor office buildings are as follows:

Unsafe condition for employees, public and animal:

Safety continues to remain the highest priority for TPWODL. Since taking over the distribution operations, the utility has implemented several safety initiatives, including network strengthening, installation of protective devices, improvement of earthing systems, fencing of substations, and replacement of unsafe network components. These initiatives have contributed to improved safety performance across the licensed area.

However, accident analysis and field inspections indicate that certain vulnerable locations continue to pose safety risks due to ageing infrastructure, damaged equipment, inadequate clearances, and accessibility of live electrical parts. These deficiencies increase the likelihood of accidents involving employees, members of the public, and animals.

To further enhance safety, TPWODL proposes targeted investments in network refurbishment, intermediate poles, earthing systems, cradle guards, fencing, covered conductors, safety equipment, and other protective measures. These interventions will address the remaining vulnerable locations and support the utility's objective of establishing a safer, more reliable, and resilient distribution network.

Aged / Sick power transformers:

Over the period of operations of these PTRs, based on the various conditions, there are instances of failures which are attributable to multiple reasons. Some of these include overloading due to sudden increasing in load demand, insufficient protection schemes, multiple fault feedings on distribution network, ageing of the transformers leading to natural deterioration of the winding insulation.

TPWODL has taken prudent steps to ensure that external factors leading to these failures are arrested and eradicated. These include upgrading the protection schemes by having the latest numerical relays, ensuring coordinated tripping based on the fault, proactive replacement of protective elements like lightning arrestors across 33kV and 11 kV system and proactive steps of off-line testing of the equipment to have data and future trending to see the deterioration over time if any.

While the above-mentioned measures will help in ensuring a healthy and reliable system in the future, factors owing to ageing and load augmentation still needs to be addressed. Additionally, to ensure that system reliability is ensured through the (N-1) philosophy, there is a requirement of replacement of aged/ sick transformers and installing additional PTRs of suitable ratings. This will also ensure the availability of spare capacity to have in place necessary maintenance practices which will help in increasing the life of the asset.

Reasons for replacement of PTR:

1. Asset Health, Ageing & Condition-Based Replacement

A significant number of 33/11 kV Power Transformers (PTRs) in the TPWODL network have been in service for more than 25 years. In addition, Prolonged operation results in gradual deterioration of winding insulation and other internal components, thereby increasing the probability of transformer failure. Field verification and system reliability inspections have also identified PTRs that have undergone multiple repairs/rewinding following previous failures. Such repaired/rewound transformers have a higher likelihood of recurring failure and may not provide the same efficiency and service performance as newly designed transformers.

Further, periodic testing of PTRs has indicated deterioration in critical parameters such as winding insulation condition and oil quality in certain assets, indicating progressive degradation of transformer health. Continued operation of such vulnerable assets increases the risk of unplanned failures, supply interruptions and higher maintenance expenditure. Considering the age, repair history, test results and overall asset condition, planned and phased replacement of aged, repeatedly repaired and deteriorating PTRs with new energy-efficient transformers is technically and economically justified.

2. Capacity Augmentation & Reliability Enhancement through N-1 Redundancy

Increasing electricity demand and continuous network expansion have resulted in several PTRs operating close to or beyond their rated capacity. The addition of new Distribution Transformers (DTRs) and consumer connections further increases the loading on existing PTRs. TPWODL is adding approximately 70,000 new consumer connections annually, leading to continuous incremental loading on the existing distribution infrastructure. Operating aged transformers under such loading conditions further increases the probability of failure and adversely impacts system reliability.

LOAD FLOW ANALYSIS

TPWODL has completed the load flow studies for 33 kV and 11 kV network after modelling the existing GIS network in CYMDIST Software and prioritized the proposals based on the load flow study. Load flow study consists of 33 kV feeder loading report, PTR loading report, 11 kV feeder loading report, DTR loading report, abnormalities observed in 33 kV and 11 kV feeders. Load Flow study is also used to calculate the technical loss in the 33 kV and 11 kV network. Load flow study is done on Base – 1 (existing network) and Base – 2 (existing network with approved scheme after considering load growth).

This study is done for the following objectives:

- Modelling of detailed electrical network of 33 kV and 11 kV network with all relevant technical details for Base – 1 and Base – 2 study.
- Identification of abnormal conditions (under voltage, over loading, N-1 redundancy of critical feeders) in 33 kV and 11 kV network as per loading of year 2026 and future load growth of 2 years.
- Calculation of accurate technical losses with respect to different loading conditions of the network (for feeders and transformers).
- Plan mitigation proposals for identified abnormalities to cater future load demand.
- Prepare and submit detailed study report after load flow study to mitigate over loading, under voltage and N-1 of critical feeders.
- Ensuring adequacy of the network to serve the objectives of schemes to provide reliable and uninterrupted power supply for all consumers.
- All proposed schemes have been planned to remain sustainable for a minimum of 2 years and up to 5 years from a long-term planning perspective. However, for certain cases, short-term mitigation measures have been considered to optimize capital expenditure while addressing immediate network requirements.

A power system built on any electrical network develops gradually, in response to the growth in demand for electrical energy in the area it serves. The load growth is witnessed not only in terms of increment in its value at a given point, but also geographically, over the years. The unpredictable nature of load growth impacts the operation and performance of the distribution network.

To improve the performance of the network, we analyse the existing electrical network and optimize them so that they can cater the future load with high reliability and reduced losses.

The pre-requisites for this study are:

- Electrical network data / SLDs / diagram for considered voltage levels.

- Interconnections details with (NO and NC) points.
- Actual peak load details of 33 kV feeders, 11 kV feeders, PTRs and DTRs.
- Electrical network connectivity of approved proposals with major equipment details.

Modes of study:

Under this study it is planned to perform following assessment:

- Model detailed electrical network of existing 33 kV and 11 kV with all relevant technical details.
- Assessment of present network conditions and evaluate network adequacy for Distribution network.
- Identify the abnormal conditions in the network as per present loading conditions.
- Use method of load allocation as per 'Actual kVA method' to allocate loading on DTR loads and PTR loads.
- Perform load flow analysis on the existing network and identify the abnormal conditions (under voltage, overloading of equipment) in the network. Generate study report for loading and technical losses in the system.
- Model detailed electrical network of approved (YTS and WIP proposals) 33 kV and 11 kV networks with all relevant technical details.
- Perform load flow analysis on Base – 2 network and identify the abnormal conditions (under voltage, overloading of equipment) in the network. Generate study report for loading and technical losses in the system.
- Identify network reinforcement for catering future load demand.
- Discuss with field team and model the plan network after finalisation of proposals.
- Prepare and submit detailed study report on various system studies by following voltage limits which are specified in Electricity Supply Code for Study.

Voltage variation:

The Licensee shall maintain the voltage at the point of commencement of supply to a consumer within the limits (+6% and -9%).

The load flow analysis has been simulated using the Newton-Raphson unbalanced method for power flow for the current network in 2026 and for the network with forecasted load growth.

Load flow Study Outcome:

a. Existing Network Analysis Report for:
    - Voltage Regulation
    - Technical Losses
    - Overloading both Conductor / Cable and Power Transformers
    - N-1 Redundancy at Lines, Power Transformers and Sources (OPTCL / Other Discom)

- Network Inadequacy

b. Base – 2 Network Analysis Report for:
   - Voltage Regulation
   - Technical Losses
   - Overloading both Conductor / Cable and Power Transformers
   - N-1 Redundancy at Lines, Power Transformers and Sources (OPTCL / Other Discom)
   - Network Inadequacy

c. Mitigation Plan and Recommendations.

d. Planned Network Analysis Report for:
   - Voltage Regulation
   - Technical Losses
   - Overloading both Conductor / Cable and Power Transformers
   - N-1 Redundancy at Lines, Power Transformers and Sources (OPTCL / Other Discom)
   - Length Reduction

CAPITAL EXPENDITURE STATUS

With the completion of various projects undertaken under CAPEX schemes as well as other Government-funded initiatives, significant improvements have been observed in the condition of the existing distribution network. A glimpse of these improvements is reflected in the photographs provided. The table below presents the Capital Expenditure status for FY 2021-22, FY 2022-23, FY 2023-24, FY 2024-25, FY 2025-26 and FY 2026-27 (Till June-2026).

CAPITAL INVESTMENT PLAN FOR FY 2027-28

Capital investments are proposed under the following major categories that shall be aligned with multiple initiatives and schemes to reduce AT&C losses, improve system reliability and augment the network to support continuous load growth. Further, a need is also felt to improve the existing civil infrastructure and IT facilities to provide a better consumer experience and a modern, rich and conducive work environment to all employees for better performance.

The key activities proposed under each category are listed in table below:

1.1. Life enhancement of network and maintaining safe horizontal / vertical clearances

1.1.1. Laying of 33 kV and 11 kV Underground Cable at NH / SH Crossings:

A safe and reliable network across National / State highways is critical for ensuring uninterrupted electricity distribution. Presently, overhead lines crossing these highways pose significant challenges, such as frequent damage due to vehicular accidents, increased vulnerability to storms and safety hazards for commuters. By shifting to underground cabling at these critical crossings, TPWODL will enhance the reliability of supply, reduce the risk of outages and ensure compliance with statutory safety norms

Underground cabling is proposed at National Highway (NH) and State Highway (SH) road crossings to ensure the safety of the public and vehicles where electrical feeders must cross the roads. The underground cabling system enhances the reliability of the power supply to consumers and eliminates potential safety hazards associated with overhead crossings in high-traffic zones. The proposal is aligned with the provisions of the CEA (Measures Relating to Safety and Electric Supply) Regulations, 2023, which mandate adherence to safety requirements and risk mitigation at public road crossings. Further, as per NHAI guidelines, all 11 kV and 33 kV electrical lines crossing NH / SH corridors are required to be laid underground, thereby necessitating conversion from OH to UG at such locations.

In alignment with the directives issued by the Hon'ble Commission in the RST Order for FY 2026-27, Underground cable at NH / SH crossing have been proposed for implementation under CAPEX FY 2027-28, with

the objective of enhancing public safety, ensure compliance with statutory safety norms, minimize outage duration, and improve the overall reliability of the distribution network.

1.1.2. Installation of 33 kV & 11 kV Overhead Cradle Guard at Road Crossings:

TPWODL has installed cradle guards at several vulnerable road crossings under earlier CAPEX schemes. However, due to the vast overhead distribution network and the numerous road crossings within the licensed area, many locations still lack adequate guarding arrangements.

At road crossings (other than NH/SH), overhead 11kV lines are highly exposed to the risk of accidental contact with tall vehicles and construction equipment or the falling of conductors in the event of snapping. Such incidents can result in electrical faults and prolonged outages and more critically pose a severe threat to public safety. The installation of cradle guards at these crossings acts as an effective protective measure by preventing direct contact with live conductors in event of conductor snapping, thereby ensuring both system reliability and public safety.

Currently, most of the network is overhead and there is no provision for guard or cradle wires at several vulnerable locations. This poses a serious safety threat to the public, particularly considering deteriorated condition of legacy network, where the possibility of conductor snapping cannot be ruled out. In such scenarios, cradle guards play a critical role in preventing accidents caused by falling live conductors.

In alignment with the directives issued by the Hon'ble Commission in the RST Order for FY 2026-27, installation of 33 kV and 11 kV overhead cradle guards at identified vulnerable public locations have been proposed for implementation under CAPEX FY 2027-28, with the objective of enhancing public safety, ensure compliance with statutory safety norms, minimize outage duration, and improve the overall reliability of the distribution network.

1.1.3. Conversion of HT Bare Conductor with Covered Conductor:

Bare conductors used in HT distribution lines are prone to faults arising from contact with trees, birds, and other external elements, leading to frequent power interruptions, increased technical losses, and potential safety hazards. Converting existing bare conductor networks to covered conductors will substantially reduce the occurrence of earth faults, short circuits, and tripping incidents, thereby improving network reliability and ensuring safer operation in inhabited and roadside areas. Additionally, covered conductors provide enhanced protection against environmental and weather-related impacts, resulting in lower outage rates, improved system performance, and reduced maintenance requirements over the long term.

The conversion of HT bare conductors to covered conductors is essential to enhance the safety and reliability of the distribution network. covered conductors reduce the risk of accidental contact and outages caused by

vegetation. The long-term benefits include improved operational performance, reduced maintenance costs, and enhanced compliance with safety and regulatory standards.

Investment in this activity is essential for modernizing TPWODL's distribution network and aligning it with contemporary safety and reliability standards. The transition to covered conductors will minimize technical losses and lower the risk of electrical accidents. With CAPEX support, TPWODL will be able to replace critical stretches of bare conductor across its network, leading to higher operational efficiency, reduced downtime, and enhanced consumer satisfaction through a more stable and secure power supply.

		TOTAL			**10.03**	

1.1.4. Enhancing of vertical clearance by installation of Intermediate Poles:

Installation of intermediate poles in existing 33 kV and 11 kV line sections is essential in locations where statutory clearances have been compromised due to road widening, urban development, changing land use patterns and vegetation growth. Inadequate clearance between conductors and surrounding infrastructure poses significant safety risks, increases the likelihood of electrical accidents, and makes the network vulnerable to conductor snapping and forced outages. Raising the conductor height through strategically placed intermediate poles helps restore prescribed clearances, improve the mechanical strength of the line, and enhances overall system safety and operational reliability.

This investment is particularly important in residential areas, road crossing, along roads, high-traffic marketplaces as well as addressing sections with long spans, thereby strengthening the network thereby ensuring safe operations by maintaining phase to ground clearances as per statutory requirements.

Provision of additional intermediate poles will also help to reduce breakdowns, minimize supply interruptions and safeguard both public and utility assets. As directed by Honourable commission, a requirement of five or more poles has been considered for identified 11 kV and 33 kV feeders under CAPEX proposal.

1.2 Establishment Meter Testing Lab and Procurement of Cable Fault locator (CFL) Van

1.2.1. Establishment Meter Testing Lab

TPWODL serves a vast distribution area of 48,373 sq. km., and at the time of vesting, no dedicated in-house Meter Testing Laboratory (MTL) was available for carrying out statutory and routine meter testing activities. To strengthen the metering infrastructure, 3 Nos. of MTLs have since been established and are functioning successfully at Burla, Balangir, and Rajgangpur, catering to the testing requirements of their respective regions.

With the continuous growth in consumer connections, modernization of metering systems, and increasing compliance requirements under CEA Metering Regulations and other statutory provisions, the existing testing infrastructure is no longer sufficient to meet the needs of the entire operational area. To address this gap, TPWODL has planned the phased establishment of 6 additional MTLs under the CAPEX Plan in the coming years.

For FY27-28, It is proposed to establish 1 No. MTL at Kesinga to serve Kalahandi district (covering the Bhabanipatana and Nuapada areas). The primary purpose of establishing the Meter Testing Lab at Kesinga is to provide consumers with convenient access for testing their meters whenever they have doubts or concerns regarding the accuracy or functioning of smart meters. At present, the nearest Meter Testing Lab for consumers in the Bhabanipatana and Nuapada areas is located in Balangir, which are approximately 80-100 km away. Due to this considerable distance, many consumers are reluctant to travel to the lab to witness meter testing, which limits consumer confidence and satisfaction. Establishing a lab at Kesinga will significantly improve accessibility and transparency for consumers in these areas. Furthermore, Kesinga houses a major store where smart meters are received for installation in the Bhabanipatana and Nuapada areas. At present, these meters are not tested at TPWODL laboratories before installation, highlighting the need for a dedicated testing facility at Kesinga.

Overview of Total Scope, Achieved / Planned till FY 2026-27 and Plan for Balance Requirement:

1.2.2 Procurement of Cable Fault Locator (CFL) Van

Cable Fault Locator (CFL) Van is a critical testing equipment for rapid detection, testing and precise location of HT cable faults. The proposed van-mounted system will have an integrated cable fault testing system, power supply and accessories, enabling quick and independent deployment at the site for faster fault diagnosis and restoration.

At present, TPWODL has only 2 Nos. portable Cable Fault Testing Machines serving the entire network, which are inadequate to meet the increasing requirement due to the growing HT cable network and rising incidence of cable faults. It is therefore proposed to procure 5 Nos. Cable Fault Locator (CFL) Vans, one for each Circle, in a phased manner.

Deployment of dedicated CFL Vans will reduce dependency on centralized/shared equipment and improve mobility and maintenance efficiency. Faster fault location will reduce HT cable downtime, facilitate quicker restoration of supply, improve SAIDI and network reliability, and enhance customer satisfaction. 1 No. CFL Van is proposed for Sambalpur circle in FY 2027-28, with the remaining 4 Nos. planned in subsequent years based on operational requirements.

1.3 Infrastructure works at Primary & Distribution Substation

1.3.1 Access Road for inside and outside of PSS:

Primary Sub-stations (PSS) are critical assets in TPWODL's distribution network, and their efficient operation requires reliable access for routine maintenance, inspections, and emergency restoration activities. Several substations across western Odisha are located in remote and semi-urban areas where approach roads are

either inadequate or deteriorated, creating challenges in reaching the sites, particularly during adverse weather conditions and the monsoon season. Limited accessibility often delays fault response, maintenance works, and transportation of essential materials and equipment. Development and strengthening of access roads within and leading to PSS premises will facilitate smooth movement of personnel, maintenance vehicles, and heavy equipment, ensuring timely operational and emergency interventions.

This investment is essential for enhancing the reliability, maintainability, and operational efficiency of the distribution system. Improved access infrastructure will enable faster fault restoration, reduce outage durations, support better asset management, and ensure safe movement of manpower and machinery. CAPEX funding for this initiative will help TPWODL systematically develop durable and all-weather access roads to substations across its operational area. This will strengthen network resilience, improve service continuity, enhance emergency preparedness, and contribute to higher consumer satisfaction through reliable and uninterrupted power supply.

1.3.2 Construction of Control Room Building in PSS:

Primary Sub-station (PSS) Control Room buildings are vital for the safe and efficient operation of the distribution network, as they accommodate critical systems such as control and relay panels, SCADA equipment, communication infrastructure, and other operational assets. Across several substations within TPWODL's operational area, existing control room facilities are either aging, space-constrained, or structurally inadequate, limiting operational effectiveness and exposing valuable equipment to potential safety and environmental risks. Construction of new control room buildings will provide secure accommodation for critical equipment, improve working conditions for operating personnel, and ensure dependable functioning of monitoring, control, and protection systems.

Based on the condition assessment conducted at Non-ODSSP Primary Substations, existing Control Room Buildings (CRBs) were found to be inadequate in terms of space, structural integrity, functionality and operational safety. To address these deficiencies, a phased program for construction of new Control Room Buildings has been initiated.

The investment is crucial for enhancing the reliability, safety, and operational efficiency of substations. Modern and well-designed control room buildings will protect high-value assets, extend equipment life, and minimize the risk of operational disruptions caused by infrastructure deficiencies. CAPEX funding will enable TPWODL to systematically upgrade and modernize control room facilities at priority substations, facilitating improved system monitoring, quicker fault identification and restoration, and more effective network management. This initiative will strengthen overall distribution reliability, support future technological advancements, and ensure the sustainable operation of the power network.

1.3.3. PSS Boundary Walls:

The boundary wall around a Primary Substation (33/11 kV) is an important safety measure. This ensures public safety by preventing access to high voltage lines and equipment. It also prevents animals from entering the substation area, reducing the risk of electrical accidents. Construction of boundary wall improves the overall safety of the PSS, provides physical security, and helps prevent theft.

This investment is crucial for protecting critical infrastructure and ensuring uninterrupted operation of the distribution network. Robust boundary walls serve as an effective safeguard against theft, vandalism, and unauthorized access to valuable assets such as conductors, transformers, and other substation equipment. They also help maintain compliance with safety regulations by preventing public intrusion into potentially hazardous areas. CAPEX funding for boundary wall construction will enable TPWODL to systematically enhance the security of vulnerable substations, thereby reducing operational risks, strengthening asset protection, improving network reliability, and reinforcing consumer confidence in the safety and resilience of the power distribution system.

1.3.4 DSS Fencing:

Many Distribution Substations (DSS) do not have fencing, leaving live electrical equipment exposed. This poses a serious danger to people and animals who may unknowingly come too close to or enter these areas. There is a high risk of unauthorized entry, which can lead to severe accidents. In the past, there have been incidents of electrocution involving both humans and animals. To prevent such incidents and enhance safety, the installation of fencing around Distribution Substations is proposed.

Investment in this activity is essential for safeguarding critical distribution assets and enhancing overall network reliability. Installation of secure fencing around vulnerable DTR locations helps prevent transformer oil theft, vandalism, conductor damage, and unauthorized access, thereby reducing the risk of equipment failure and electrical accidents. CAPEX funding will support the systematic deployment of fencing at exposed DTR installations across western Odisha, strengthening asset security, improving public and operational safety.

1.3.5 Earthing for DSS:

Distribution Transformers (DTRs) are critical assets in the distribution network, and effective earthing is essential for their safe and reliable operation. In many locations, the existing earthing systems associated with DTRs have deteriorated over time, have high earth resistance values, or do not conform to prescribed technical and safety standards. Poor or damaged earthing adversely affects the performance of transformers and related equipment by limiting the effective dissipation of fault currents and lightning surges. As a result, transformers become more vulnerable to failures, leading to frequent interruptions in power supply, increased maintenance requirements, and higher operational costs. Inadequate earthing also poses significant safety risks to maintenance personnel and the public by increasing the possibility of electric shock, equipment damage, and fire hazards.

Investment under this scheme is essential for strengthening and standardizing the earthing system of DTs to improve network reliability, operational safety, and equipment protection. Proper earthing ensures effective fault current dissipation, minimizes the risk of transformer damage, enhances system stability, and reduces the likelihood of accidents. Additionally, it supports compliance with CEA safety regulations. CAPEX investment in this activity will enable TPWODL to systematically upgrade earthing systems across vulnerable DT locations, resulting in improved asset performance, reduced outage frequency, enhanced public safety and sustainable operation of the distribution network.

1.3.6. Firewall for Power Transformers:

Power Transformers (PTRs) installed at Primary Sub-stations (PSS) are among the most critical and high-value assets in TPWODL's distribution network. In many existing substations, adequate fire segregation arrangements are either unavailable or insufficient to contain and prevent propagation of fire from one transformer to another. This poses a significant threat to personnel safety, asset security, and continuity of power supply, potentially resulting in extensive damage to equipment and prolonged power outages.

Construction of firewalls between adjacent PTRs is essential to contain fire incidents within a limited area and prevent fire propagation and cascading damage. Firewalls act as a protective barrier against heat radiation, flames, and flying debris generated during transformer fire events, thereby minimizing the impact on nearby equipment and enhancing compliance with applicable CEA safety regulations. The proposed intervention will significantly enhance substation safety, improve operational resilience, and reduce the risk of large-scale service interruptions arising from transformer fire incidents.

This initiative will safeguard critical assets, reduce potential restoration time and replacement costs, enhance personnel safety, and improve the overall reliability and sustainability of the power distribution network. The project will also strengthen TPWODL's compliance with applicable statutory and regulatory safety requirements.

2. Loss Reduction

The proposed budget for **Loss Reduction** under CAPEX FY 27-28 is **Rs. 94.77 Cr.** The details of the same are as given in the table below:

Table – 15: Capital Expenditure under Loss Reduction

2.1. Energy Audit & Meter related activity

2.1.1. Installation of Meters inside PSS for Energy Audit:

Reliable metering at Primary Substations (PSS) is essential for accurate energy accounting and effective monitoring of power flow across the distribution network. However, the absence of required feeder and boundary metering at identified PSS limits the utility's ability to undertake comprehensive energy audits and assess network performance. Installation of meters at PSS will facilitate precise measurement of energy flow, enabling identification of loss pockets, improved load monitoring and data-driven network planning and operational decision-making.

The proposed investment will strengthen TPWODL's energy audit mechanism by providing reliable feeder-wise energy data for effective analysis and decision-making. Enhanced metering infrastructure will support the reduction of Aggregate Technical & Commercial (AT&C) losses through accurate energy accounting, timely identification of high-loss feeders, and implementation of suitable corrective measures. CAPEX support for this scheme will enable installation of advanced, tamper-proof metering systems at PSS, ensuring compliance with regulatory requirements, improving operational efficiency and enhancing performance of the distribution network.

Overview of Total Scope, Achieved / Planned till FY 2026-27 and Plan for Balance Requirement:

2.1.2. DTR Smart Metering for Energy Audit:

Distribution Transformers (DTRs) constitute the last major distribution asset before consumer connections, making DTR-level metering essential for effective energy accounting and loss assessment. Inadequate metering at the DTR level restricts visibility of energy flow and limits the identification and quantification of technical and commercial losses in the downstream network. Installation of smart meters on DTRs will enable accurate measurement of energy input, facilitate feeder-to-DTR energy audits, support load monitoring, and assist in identifying overloading, unauthorized consumption, and high-loss pockets, enabling timely corrective action.

The proposed investment will strengthen the utility's energy audit framework by providing reliable, granular and timely data for monitoring distribution system performance. DTR smart metering will facilitate accurate energy accounting, support reduction of Aggregate Technical & Commercial (AT&C) losses, and enable remote acquisition of metering data for improved operational monitoring and control. Provision of CAPEX under FY 2027–28 will enable phased deployment of smart metering infrastructure across the distribution network, ensuring compliance with regulatory requirements and improving the reliability and efficiency of the power distribution system.

In alignment with the directives of the Hon'ble Commission issued through the RST Order for FY 2026-27, a total of 368 high AT&C loss 11 kV feeders (AT&C losses of 50% and above) have been identified. Of these, 47 feeders have AT&C losses exceeding 80%, while 321 feeders fall within the 50%–80% loss band. Accordingly, 100% DTR metering for the 47 feeders with AT&C losses exceeding 80% has been planned for completion by March 2027. For FY 2027-28, priority has been considered for 100% DTR metering of 190 nos. of 11 kV feeders having AT&C losses in the 60%–80% band, followed by 33 nos of feeders out of the 131 feeders having AT&C losses in the 50%–60% band with the objective of strengthening energy accounting, improving loss visibility, and facilitating targeted loss-reduction measures.

2.1.3. High Value Industrial Audit Point Metering:

High-value industrial consumers form a significant share of TPWODL's energy demand and revenue base. Accurate and reliable metering of these consumers is essential to ensure correct billing, prevent revenue leakage and maintain transparency in energy accounting. In many cases, existing metering arrangements need upgradation to modern, high-accuracy meters with advanced features such as tamper detection, remote data

acquisition, and load profiling. Establishing dedicated audit point metering for high-value industrial consumers will provide precise measurement, reduce commercial losses, and enable timely detection of anomalies. Investment in this activity is critical as it directly impacts financial sustainability and compliance with regulatory requirements. Advanced metering at industrial audit points will improve billing efficiency, enhance consumer confidence through transparent measurement, and support better demand forecasting. CAPEX funding for this initiative will allow TPWODL to implement robust metering infrastructure for its most critical consumer segment, thereby strengthening revenue assurance, improving operational efficiency, and aligning with the broader objectives of accurate energy accounting and loss reduction.

2.2. Replacement of LT Bare Conductor with AB Cable

A considerable portion of the existing LT distribution network comprises bare conductors, which are prone to unauthorized tapping, frequent interruptions, and faults arising from contact with vegetation, animals, and other external agencies. These conditions adversely affect network reliability, contribute to higher Aggregate Technical & Commercial (AT&C) losses and create safety risks to the public. Replacement of LT bare conductors with Aerial Bunched (AB) Cables will mitigate these risks by providing an insulated distribution system that restricts unauthorized tapping, minimizes fault occurrences and enhances operational and public safety. The compact design of AB Cables also facilitates installation in congested areas with reduced right-of-way requirements.

The proposed investment is aimed at strengthening the LT distribution network by conversion of LT bare conductors to AB cables in identified high-loss pockets in accordance with specific directions issued by Hon'ble Commission in RST order FY 2026-27 for reduction high AT&C losses and enhancing power distribution efficiency. This intervention will also minimize breakdowns, reduce maintenance requirement, enhance safety and improve overall system reliability.

2.3. Installation of LT Distribution Box & Armoured Cable:

A significant portion of the rural distribution network, particularly in villages exhibiting high Aggregate Technical & Commercial (AT&C) losses, was originally developed with basic LT infrastructure comprising unarmoured cables and direct service connections from poles without provision of LT Distribution Boxes (LTDBs).

Although network strengthening has been undertaken under various schemes after vesting, infrastructure deficiencies continue to persist in several high-loss pockets. These include unprotected LT cables that are susceptible to faults and unauthorized tapping, absence of LTDBs affecting sectionalization and fault isolation,

loose service connections and congestion of service cables on poles resulting in No Current complaints, and uneven distribution of connected load. These shortcomings adversely impact system reliability, contribute higher losses and create unsafe operating conditions.

The proposed scheme envisages installation of LT Distribution Boxes along with armoured cables in identified high-loss pockets . The intervention will strengthen the LT distribution network, improve fault management, reduce system losses, enhance operational safety, and ensure reliable power supply through improved network configuration.

Overview of Total Scope, Achieved / Planned till FY 2026-27 and Plan for Balance Requirement:

		Replacement of Unarmoured cable by armoured cable	Mtr.	70000	15.07	

2.3. Feeder length reduction

Lengthy 33 kV and 11 kV feeders result in higher technical losses, poor voltage regulation, and reduced supply reliability, particularly in remote and heavily loaded areas. Such feeders also increase fault restoration time and constraint the operational flexibility of the distribution network. Construction of new 33 kV and 11 kV lines for feeder bifurcation and length reduction will enable optimum load distribution, improve voltage profiles, and enhance network reliability through shorter and better-balanced feeder configurations.

The proposed investment will strengthen the distribution network through feeder bifurcation, load redistribution, and network reconfiguration. Reduction in feeder length will minimize technical losses, improve supply quality, enhance operational flexibility, and facilitate faster fault isolation and restoration. Accordingly, CAPEX provision under FY 2027-28 is proposed for the construction of new 33 kV and 11 kV lines to reduce

feeder lengths, thereby improving overall system performance and reliability and contributing to the reduction of Aggregate Technical & Commercial (AT&C) losses.

As directed by the Hon'ble Commission, due emphasis has been given to reducing the length of 33 kV and 11 kV feeders to improve voltage profile, reduce technical losses and enhance network reliability. Priority has been given to identified feeders exceeding 30 ckm for 33 kV and 50 ckm for 11 kV, particularly those having overloading, undervoltage and high technical losses issues.

Sub Total - Network Reliability				**185.83**

3.1 Replacement / Addition of network component in 33 / 11 kV Primary Substation

3.1.1 Installation / Replacement of 33 kV and 11 kV Breaker and CRP:

Circuit breakers constitute a critical component of the protection system in the 33 kV and 11 kV distribution network, ensuring rapid isolation of faulty sections to maintain system stability, equipment safety, and continuity of power supply. Obsolete/defunct VCB in TPWODL's network have exceeded their useful service life or exhibit deteriorated operational performance due to ageing and repeated fault operations. Such conditions increase the probability of protection failures, prolonged outage duration, equipment damage, and adverse impact on network reliability. Replacement of obsolete breakers and installation of new breakers at identified locations are therefore essential to enhance the overall protection system and ensure reliable network operation.

The proposed capital investment is aimed at strengthening the protection infrastructure of the distribution system in accordance with prudent utility practices and evolving operational requirements. Deployment of modern circuit breakers with improved interrupting capacity, enhanced operational reliability, and reduced maintenance requirements will facilitate faster fault clearance, minimize supply interruptions, and improve asset protection. The proposed works will enhance the reliability and safety of the distribution network, reduce consumer interruptions, and support the delivery of quality and uninterrupted power supply in compliance with applicable regulatory and technical standards.

3.1.2 Installation of LA (33 kV & 11 kV) in PSS:

Lightning arresters (LAs) are critical protective devices that safeguard substation equipment against transient over voltages arising from lightning strikes and switching operations. Transformers, circuit breakers, control panels, and other substation equipment are vulnerable to such surges, which may result in equipment failure, supply interruptions, and increased restoration costs. Installation of Lightning Arresters at the 33 kV and 11 kV levels in Primary Substations is essential to provide effective surge protection by safely diverting transient over voltages to earth, thereby protecting critical assets and ensuring reliable operation of the distribution system. The proposed capital investment is intended to strengthen the protection infrastructure of Primary Substations and improve the resilience of the distribution network against surge-related disturbances. Provision of adequately rated and properly coordinated Lightning Arresters will minimize the risk of equipment damage, reduce outage incidences, and lower operation and maintenance requirements. The proposed works will enhance asset reliability, extend the service life of substation equipment, and support the delivery of safe, reliable, and quality power supply to consumers in compliance with applicable regulatory and technical standards.

3.1.3. Technical & Safety compliance of PSS (Switchyard fencing, Bus heightening, Earth Pit water arrangement, Cable Trench, Trench Cover, Toe wall, etc.):

Primary Substations (PSS) are integral to the reliable operation of the distribution network and require well-maintained civil and electrical infrastructure to ensure safe and efficient functioning. Presently in non-ODSSP PSS, essential switchyard infrastructure such as toe walls, yard PCC, gravelling, cable trenches with trench covers, water pipeline arrangement for earthing, and yard fencing are not available or in dilapidated condition. In the absence of these facilities, the switchyard does not meet the required technical and safety standards as per prevailing regulations. Therefore, provision of essential switchyard infrastructure is essential to ensure personnel safety, improve earthing effectiveness, and enhance overall system reliability.

Provision of Switchyard Fencing, Bus Heightening / reconfiguration, Cable Trench, Trench Cover, Toe Wall, Metal Spreading, Water Supply for Earth pits, yard PCC and associated work is proposed at non-ODSSP PSS to achieve Technical & Safety compliance. The proposed works will improve personnel safety, facilitate efficient operation and maintenance, enhance asset reliability, and minimize outages arising from infrastructure deficiencies. The investment will also extend the service life of existing assets, strengthen network resilience, and support the delivery of safe, reliable, and quality power supply to consumers while ensuring compliance with applicable regulatory and statutory requirements.

3.1.4 Replacement of Aged / Sick PTRs:

Power Transformers (PTRs) are critical assets in Primary Substations, facilitating efficient voltage transformation and ensuring reliable power supply across the distribution network. Several existing PTRs in TPWODL's network have exceeded their useful service life or exhibit accelerated deterioration in health assessment study due to ageing, overloading, insulation degradation and prolonged exposure to field conditions. Such transformers are more susceptible to forced outages, deterioration in operating efficiency, increased maintenance requirements, and premature failure, thereby affecting supply reliability and quality of service. Replacement of these aged/sick PTRs with modern, energy-efficient transformers of appropriate capacity is therefore essential to maintain system reliability and cater to the growing load growth.

TPWODL has taken various initiatives to reduce transformer failures, including upgradation of protection schemes through the deployment of numerical relays, ensuring coordinated tripping based on fault conditions, proactive replacement of protective equipment such as VCBs and lightning arresters across the 33 kV and 11 kV systems, and periodic offline testing of transformers. In addition, transformer health assessment and condition monitoring are carried out to evaluate transformer condition, determine the remnant life of transformers, identify deteriorating/sick transformers, and facilitate timely preventive interventions. Further, to maintain the N-1 reliability philosophy, replacement of identified aged/sick PTRs with suitable-rated transformers is required to strengthen system reliability, provide adequate spare capacity, facilitate planned maintenance, and minimize the risk of prolonged outages.

The proposed capital investment will replace identified aged/sick PTRs with suitable rated, thereby enhancing system reliability, reducing the risk of transformer failures and forced outages, improving operational efficiency, and ensuring reliable and quality power supply to consumers.

3.2 Strengthening of 33KV and 11KV Network infrastructure

3.2.1 Strengthening of 33 kV Network Infrastructure

The 33 kV network forms the primary sub-transmission backbone of the distribution system, facilitating bulk power transfer from Grid Substations to Primary Substations and further downstream to the 11 kV distribution network. Several existing 33 kV lines within TPWODL's distribution network have exceeded their intended service life and are exhibiting deterioration of conductors, support structures, insulators, and associated line components due to prolonged operation and environmental exposure.

Further, increasing load demand driven by industrial development, agricultural growth, rural electrification, and overall system expansion has resulted in overloading of certain 33 kV line sections. These constraints contribute to voltage drops, increased technical losses, reduced power transfer capability, and deterioration in the reliability and quality of power supply.

Accordingly, augmentation and strengthening of the identified 33 kV network sections through reconductoring with higher-capacity conductors, replacement of deteriorated poles and associated line hardware, and strengthening or realignment of the network, wherever technically required, is proposed. The proposed

interventions are aimed at addressing existing network constraints and ensuring that the sub-transmission infrastructure is adequately equipped to cater to present and anticipated load requirements.

The proposed capital investment is expected to enhance the capacity, reliability, and operational resilience of the 33 kV network in line with prudent utility practices and applicable technical standards. The proposed works will improve power transfer capability, mitigate overloading and undervoltage conditions, reduce technical losses, and minimize forced outages. The investment will also facilitate improved voltage regulation, accommodate future load growth, strengthen overall network resilience, and support the delivery of safe, reliable, and quality power supply to consumers while ensuring compliance with applicable regulatory and statutory requirements.

3.2.2 Strengthening of 11 kV Network Infrastructure Proposals

The 11 kV distribution network forms a critical component of the electricity distribution system, facilitating power transfer from Primary Substations to Distribution Transformers for further supply through the low-voltage distribution network to consumers. Several existing 11 kV line sections within TPWODL's distribution network have reached or are approaching the end of their intended service life and are affected by ageing and deterioration of conductors, poles, insulators, and other associated line components due to prolonged operation and environmental exposure. Further, increasing consumer demand and network expansion have resulted in overloading of several 11 kV feeders and line sections, leading to voltage regulation issues, increased technical losses, frequent supply interruptions, and reduced reliability of power supply. Accordingly, augmentation and strengthening of the identified network sections through reconductoring, replacement of deteriorated line components, strengthening of support structures, and feeder load redistribution, wherever technically required, is proposed to address existing network constraints and improve system capacity and reliability. The proposed capital investment is expected to strengthen the 11 kV distribution infrastructure in line with prudent utility practices and applicable technical standards. The proposed works will enhance feeder performance, alleviate overloading and undervoltage conditions, improve voltage profiles, reduce technical losses, and minimize supply interruptions. The investment will also improve overall network reliability and operational resilience, accommodate future load growth, enhance operational safety, and support the delivery of safe, reliable, and quality power supply to consumers while ensuring compliance with applicable regulatory and statutory requirements.

3.2.3 Installation of 33 kV & 11 kV FPI:

Fault Passage Indicators (FPIs) are proposed to be installed on identified 33 kV and 11 kV feeders to enhance fault detection capability and facilitate faster fault localization and network restoration. At present, identification of fault locations on these feeders largely depends on manual patrolling, which is time-intensive and can result in prolonged supply interruptions. Installation of FPIs at strategically identified locations will enable quick identification of the faulted section, facilitate faster isolation of the affected network, and expedite restoration of supply to healthy sections.

The proposed investment will strengthen operational efficiency by reducing fault localization time and minimizing dependence on extensive field patrolling. Real-time fault indication will support Operation and Maintenance (O&M) teams in making timely decisions and responding more effectively to network contingencies, thereby reducing fault restoration time.

The proposed CAPEX intervention is expected to improve the reliability and resilience of the distribution network by reducing outage duration and improving the efficiency of restoration activities, thereby contributing to improved SAIDI and SAIFI performance. The scheme will also optimize O&M efforts and enhance the continuity and quality of power supply to consumers across the TPWODL distribution area.

3.2.4 Installation of 33 kV & 11 kV AB Switches, Isolator & RMU:

The installation of Air Break (AB) switches, isolators, and Ring Main Units (RMUs) is proposed to enhance the operational flexibility, reliability, and safety of the 33 kV and 11 kV distribution network. At present, several sections of the network have inadequate sectionalizing and isolation facilities, which restrict operational flexibility, increase fault restoration time, and pose challenges during planned maintenance and emergency operations. Deployment of these switching devices at strategically identified locations will facilitate safe isolation of faulted sections, enable load transfer to alternate feeders wherever feasible, and minimize the extent and duration of supply interruptions.

The proposed investment will improve the maintainability and resilience of the distribution system by enabling faster restoration of supply and reducing the impact of network faults on consumers. RMUs are particularly suitable for urban and densely populated areas due to their compact design, enhanced operational safety, and compatibility with future distribution automation initiatives. AB switches and isolators will provide reliable switching and isolation facilities for routine maintenance and contingency operations. The proposed CAPEX intervention is expected to improve network reliability, strengthen operational safety, reduce outage duration, and enhance the quality and continuity of power supply across the TPWODL distribution area.

3.2.5 33 kV & 11 kV Polymer Insulator / LA (other than PSS):

The installation of polymer insulators and lightning arresters (LAs) is proposed to enhance the reliability and safety of the 33 kV and 11 kV distribution network. A significant number of existing porcelain insulators and ageing lightning arresters have deteriorated due to prolonged service and exposure to adverse environmental conditions, resulting in flashovers, insulation failures, equipment damage, and frequent supply interruptions. Replacement of these components with polymer insulators and modern lightning arresters will improve insulation performance, enhance mechanical strength, and provide effective protection against transient overvoltages caused by lightning and switching surges.

The proposed investment will strengthen the overall reliability and resilience of the distribution system by reducing equipment failures, minimizing forced outages, and improving network performance under adverse weather conditions. Polymer insulators offer advantages such as superior contamination resistance, lower weight, higher mechanical durability, and reduced maintenance requirements compared to conventional porcelain insulators. Modern lightning arresters will provide enhanced surge protection for network assets, thereby extending the service life of distribution equipment. The proposed CAPEX intervention is expected to reduce maintenance requirements, improve operational reliability, and ensure safe and uninterrupted power supply across the TPWODL distribution area.

3.2.6 33 kV & 11 kV Auto Recloser / Sectionaliser:

The installation of Auto Reclosers and Sectionalisers is proposed to improve the reliability, operational efficiency, and resilience of the 33 kV and 11 kV distribution network. The network is frequently affected by transient faults arising from lightning, vegetation contact, animal interference, and other temporary disturbances, which often result in unnecessary supply interruptions. In the existing system, restoration of supply in such cases largely depends on manual fault identification and switching operations, leading to increased outage duration and operational delays.

Deployment of Auto Reclosers and Sectionalisers at strategically identified locations will enable automatic fault detection, isolation, and restoration of supply. Auto Reclosers will automatically clear transient faults through predefined reclosing sequences, while Sectionalisers will coordinate with upstream protective devices to

isolate permanent faulted sections, thereby maintaining continuity of supply to healthy portions of the network.

The proposed investment will strengthen network reliability by reducing the frequency and duration of sustained outages, improving fault management, and enhancing operational flexibility. These devices will minimize the need for manual switching and extensive field patrolling, resulting in faster restoration of supply and optimized operation and maintenance activities.

In addition, Auto Reclosers and Sectionalisers are compatible with SCADA and future distribution automation initiatives, supporting the development of a smarter and more resilient distribution system. The proposed CAPEX intervention is expected to improve SAIDI and SAIFI performance, enhance system reliability, reduce operational expenditure, and ensure a safe, reliable, and uninterrupted power supply across the TPWODL distribution area.

3.3 Replacement / Addition of network component in Distribution Substation

3.3.1. Provision of LT Protection (ACB / MCCB) for DTR:

The provision of Low Tension (LT) protection through Air Circuit Breakers (ACBs) or Moulded Case Circuit Breakers (MCCBs) is proposed for Distribution Transformers (DTRs) to enhance the safety, reliability, and operational performance of the distribution network. A number of DTRs are presently operating without adequate LT-side protection, making them susceptible to faults arising from overloading, short circuits, unbalanced loading, and downstream network abnormalities. In the absence of suitable protection, such faults can result in transformer damage, prolonged supply interruptions, increased maintenance requirements, and higher replacement costs. Installation of ACBs/MCCBs on the LT side will ensure prompt isolation of fault conditions, thereby protecting the transformer and associated network assets from severe damage.

The proposed investment will improve the reliability and maintainability of the distribution system by reducing transformer failure rates and minimizing outage duration. Standardization of LT protection across the DTR network will enhance operational safety, facilitate effective fault management, and improve the overall performance of the distribution system. The proposed CAPEX intervention is expected to extend the service life of distribution transformers, optimize operation and maintenance expenditure, reduce technical losses associated with repeated equipment failures, and ensure reliable and uninterrupted power supply to consumers across the TPWODL distribution area.

4.1 Network Enhancement

4.1.1 Construction of 33 kV New Lines for power evacuation from upcoming GSS

The construction of new 33 kV lines from the upcoming OPTCL Grid Substations (GSSs) at Koira, Kutra, and Sarasmal has been proposed to cater to the load demand within the Western Odisha licensed area. The proposed network additions are also intended to address feeder overloading, mitigate undervoltage issues, and facilitate the creation of a ring network.

TPWODL will endeavour to match the project activity in sync with OPTCL project schedule to ensure proper utilization of the infrastructure.

4.1.2 Construction of 33 kV New Line for load growth:

The existing 33 kV network is experiencing increasing loading and operational constraints due to rising consumer demand, industrial and agricultural load growth and new infrastructure development. This has resulted in feeder overloading, voltage regulation issues and limited alternate supply arrangements in certain areas.

Accordingly, construction of new 33 kV lines is proposed to strengthen network capacity, facilitate load bifurcation and feeder length reduction, improve voltage profile, provide alternate supply paths and support ring/N-1 connectivity. The proposed investment will address present network constraints and provide adequate capacity to meet anticipated load growth, thereby improving reliability, resilience and operational flexibility of the TPWODL distribution network.

4.1.3 Construction of 11 kV New Line for load growth:

The 11 kV distribution network forms a key component of the power distribution system, delivering electricity from 33 kV substations to distribution transformers and ultimately to end consumers. Across several locations in western Odisha, increasing consumer demand, expansion of rural electrification, and growth in industrial and agricultural loads have significantly increased the loading on existing 11 kV feeders. Many feeders are operating near or beyond their optimal capacity, resulting in voltage fluctuations, higher technical losses, frequent tripping, and reduced reliability of supply. Construction of new 11 kV lines is essential to decongest overloaded feeders, improve voltage regulation, and strengthen the overall distribution network.

Investment in this activity is crucial for meeting present and future electricity demand while ensuring quality power supply to consumers. New 11 kV lines will facilitate effective load distribution, enhance network flexibility during maintenance and fault conditions, and improve system reliability through better feeder management. The proposed augmentation will also support integration of new consumer loads and ongoing infrastructure development across the region. CAPEX funding will enable TPWODL to strategically expand and reinforce its 11 kV network, thereby reducing technical losses, minimizing supply interruptions, improving operational efficiency, and ensuring reliable, sustainable, and consumer-centric power distribution across western Odisha.

4.1.5 Addition / Augmentation of PTR:

Power Transformers (PTRs) are critical assets within the substation network, responsible for stepping down power from transmission voltage levels to the distribution system and ensuring reliable electricity supply to consumers. Across western Odisha, continuous growth in residential, commercial, agricultural, and industrial demand has led to increased loading on several existing PTRs, with many operating close to or beyond their rated capacity. Such overloading adversely impacts transformer efficiency, increases technical losses, accelerates insulation deterioration, and heightens the risk of unexpected failures and prolonged supply interruptions. Addition of new PTRs and augmentation of existing transformer capacities are therefore essential to accommodate rising demand, improve voltage regulation, and enhance the reliability of power supply.

Investment in this activity is crucial for strengthening the substation infrastructure and meeting both present and future load growth requirements. Augmentation of PTR capacity will facilitate effective load sharing, reduce transformer overloading, improve operational efficiency, and provide flexibility for load transfer during maintenance activities or emergency conditions. It will also enhance network resilience by minimizing the likelihood of transformer outages and ensuring continuity of supply. CAPEX funding will enable TPWODL to strategically augment and expand PTR capacities across identified substations, thereby reducing technical losses, improving voltage profiles, strengthening system reliability, and supporting sustainable growth of the power distribution network across western Odisha.

When a Power transformer loading exceeds 80% of the rated capacity of the transformer in planned year (FY 28-29), then it is considered as overloaded PTR with projected annual load growth.

We have found out 100 nos. of PTRs whose loading exceeds 80% of rated capacity. However, in order to optimize the investment, we have considered only 56 nos. of PTRs where load exceeds 90% of the rated capacity in the planned year (FY 28-29).

4.1.6 Addition / Augmentation of DTR:

Distribution Transformers (DTRs) are vital components of the distribution network, serving as the final voltage transformation point before electricity is supplied to consumers. Across various parts of western Odisha, increasing demand from domestic, agricultural, commercial, and rural electrification sectors has placed substantial loading on existing DTRs. Many transformers are operating beyond their optimal capacity, leading to frequent failures, excessive technical losses, voltage fluctuations, and deterioration in service quality. Additionally, a number of aging DTRs have completed their useful service life and are unable to meet present load requirements reliably. Installation of new DTRs in high-load growth areas and augmentation of existing transformer capacities at overloaded locations are essential to ensure balanced load distribution, improved voltage regulation, and dependable power supply.

Investment in this activity is critical for strengthening the last-mile distribution infrastructure and enhancing consumer satisfaction. Addition and augmentation of DTRs will reduce transformer overloading, minimize failure rates, improve power quality, and lower technical losses across the network. The proposed intervention will also improve operational flexibility, facilitate future load growth, and support reliable supply to both urban and rural consumers. CAPEX funding will enable TPWODL to systematically deploy new and upgraded DTRs at

identified locations, thereby improving network stability, reducing outages, enhancing distribution efficiency, and ensuring sustainable and consumer-centric power distribution across western Odisha.

4.1.7 Addition of New LT ABC Network:

LT networks are the backbone to provide last mile connectivity to the consumers. Due to significant addition of load in the TPWODL operational area, the existing LT feeders are facing problems related to overloading and undervoltage. Further to accommodate the future load growth at LT level, The LT network shall be adequately developed at the high load growth area. To address the above issues LT network needs to be strengthened to take up future load. Hence, ABC networks are proposed to be added in our operational area.

The proposed investment is necessary to address existing overloading and under-voltage issues that adversely impact power quality, network performance, and consumer satisfaction. By augmenting the network capacity, the system will be able to accommodate increasing load demand while maintaining acceptable voltage levels

across the supply area. The investment will also help maintenance activities, or emergency conditions, thereby enhancing supply reliability and system resilience. Furthermore, it will support future load growth arising from expansion of residential, commercial, agricultural, and industrial consumers, ensuring uninterrupted, reliable, and sustainable power supply while strengthening the overall distribution infrastructure.

5.1 Technology Intervention – IT & Technology

5.1.1 Build & Strengthen DC-DR Infrastructure & End-User IT Hardware:

The proposed scheme aims to establish resilient, scalable, and future-ready IT infrastructure to support TPWODL's growing digital ecosystem and business operations. The scheme includes augmentation of Data Centre (DC) and Disaster Recovery (DR) infrastructure through enhancement of compute, storage, backup, networking, and business continuity capabilities, along with modernization of end-user IT assets such as laptops, desktops, printers, routers, switches, LAN infrastructure, UPS systems, biometric devices, and collaboration tools. These investments will support the expanding application landscape, increasing data volumes, Smart Metering, GIS, and other digital transformation initiatives, while ensuring secure, reliable, and uninterrupted IT services across all operational locations. The proposed CAPEX intervention is expected to improve system availability, cyber resilience, operational efficiency, business continuity, employee productivity, and application performance, while reducing technology-related downtime and maintenance costs. The scheme will establish a standardized enterprise IT environment capable of supporting future business growth and enhancing overall service delivery to consumers across the TPWODL distribution area

5.1.2 Augmentation of IT Applications & Software:

The proposed scheme aims to establish a secure, resilient, and scalable enterprise software ecosystem to support TPWODL's digital transformation initiatives and evolving business requirements. The scheme includes the deployment and renewal of critical software platforms, such as backup and replication solutions, database and server operating system licences, Network Management System (NMS), patch management solutions, password reset tools, productivity software, and enterprise automation applications. These investments will strengthen data protection, disaster recovery preparedness, IT governance, cybersecurity, infrastructure monitoring, and business process automation, while supporting the growing application landscape, Smart Metering, GIS, analytics platforms, and other digital initiatives. The proposed CAPEX intervention is expected to improve application availability, business continuity, operational efficiency, cyber resilience, employee productivity, and customer service delivery by reducing system downtime, enhancing IT service management, and providing a robust software foundation for future digital utility operations across the TPWODL distribution area.

5.1.3 Enhancement of Cybersecurity Solutions:

The proposed scheme aims to strengthen TPWODL's cyber resilience and safeguard critical Information Technology (IT) and Operational Technology (OT) infrastructure by deploying advanced cybersecurity solutions aligned with ISO/IEC 27001, applicable CERT-In advisories, the Digital Personal Data Protection (DPDP) Act, 2023, and relevant guidelines issued by the Ministry of Power and the Ministry of Electronics and Information Technology (MeitY). The scheme includes the implementation of Network Intrusion Prevention System (NIPS)

and Network Detection and Response (NDR), Zero Trust Network Access (ZTNA), Virtual Private Network (VPN), Web Application Firewall (WAF), URL filtering, endpoint security solutions, and centralized Security Operations Centre (SOC) capabilities to enable continuous security monitoring, proactive threat detection, secure remote access, and timely incident response. The proposed CAPEX intervention will strengthen cybersecurity governance, enhance protection against cyber threats, malware, and ransomware, improve data security and regulatory compliance, strengthen business continuity, and provide a secure and resilient digital environment to support critical utility operations, enterprise applications, Smart Metering, GIS, and other digital transformation initiatives across the TPWODL distribution area.

5.2. Technology intervention- OT and Technology:

5.2.1. AI-Based Geo Spatial Analysis & Build GIS DR Infrastructure

TPWODL has undertaken large-scale Smart Meter deployment and GIS-based asset digitization to enhance operational efficiency and support digital transformation of the distribution network. While GIS systems maintain geo-referenced information of electrical assets and consumer locations, the actual connectivity between Smart Meter consumers and their corresponding Distribution Transformers (DTs) is often not fully validated. Additionally, Meter Data Management (MDM) systems store critical consumer and metering data separately, creating gaps in consumer indexing, energy accounting, and network analysis.

The proposed project will leverage Artificial Intelligence (AI), Geospatial Analytics, and Route Mapping techniques to integrate GIS and MDM data and establish an accurate consumer-to-network connectivity model. This validated digital network framework will enable precise DT-wise energy audits, improved AT&C loss identification, enhanced asset utilization, and effective network planning. The investment will reduce dependence on manual field surveys, lower operational costs, and support data-driven decision-making. It will also facilitate efficient load management, infrastructure optimization, and integration of future technologies, thereby improving the reliability, efficiency, and sustainability of TPWODL's distribution network.

5.2.1	Technology Intervention – OT and Technology	AI-Based Geo Spatial Analysis & Build GIS DR Infrastructure	LS	-	2	***Annexure-40 for detailed proposal & location details***

5.2.2. GIS-Integrated FCC Mobile Application

At present, the FCC is primarily utilized for consumer complaint management and lacks integrated visibility of the electrical network, outage locations, and field assets. Consequently, complaint resolution and outage restoration activities largely depend on manual coordination between the Control Centre and field personnel, resulting in delays in fault identification, field deployment, restoration, and communication of outage status to consumers. The proposed **GIS-integrated FCC Mobile solution** will address these gaps by providing a comprehensive geospatial view of feeders, Distribution Transformers (DTs), consumers, and network assets through a single platform. Integration with GIS and existing operational systems will enable location-based complaint tracking, outage visualization, asset monitoring, and real-time tracking of field activities and resources. This will facilitate faster fault localization, more efficient crew deployment and outage management, and informed operational decision-making, thereby improving response and restoration efficiency and enhancing consumer service.

The proposed investment is therefore aimed at strengthening FCC capabilities through real-time network visibility, GIS-based asset management, and mobile-enabled field operations. The solution will reduce dependence on manual coordination, improve the efficiency of field workforce deployment, strengthen monitoring of network assets and outage conditions, and support faster complaint resolution and restoration. The initiative will also strengthen the integration of GIS, FCC, and field operations, supporting TPWODL's digital transformation and contributing to improved operational efficiency, network reliability, and consumer service.

5.2.2	Technology Intervention – OT and Technology	GIS-Integrated FCC Mobile Application	LS	-	2.5	***Annexure-41 for detailed proposal & location details***

5.2.3. CCTV Control room setup:

TPWODL has deployed CCTV systems at various substations and critical facilities to improve security and asset monitoring. However, surveillance is currently managed locally, limiting centralized visibility and response capabilities. It is proposed to establish a Centralized CCTV Control Room equipped with Video Management System (VMS), video wall, operator workstations, communication infrastructure, and storage facilities. The control room will enable real-time monitoring of critical installations, strengthen security, improve incident

response, enhance operational oversight, and support centralized management of surveillance systems across the utility. The project will be implemented in phases with provision for future expansion.

Investment in this activity is essential to establish a centralized surveillance system for real-time monitoring of critical electrical assets across TPWODL's operational area. It will enhance asset security, enable faster incident detection and response, improve operational safety, support effective emergency management, and strengthen coordination among various departments. The CCTV Control Room will also provide scalable infrastructure for future expansion and ensure better protection of critical utility infrastructure.

5.2.3	Technology Intervention – OT and Technology	CCTV Control room setup	LS	-	5	***Annexure-42 for detailed proposal & location details***

5.2.4. Set-up communication infrastructure for PSS:

TPWODL is undertaking extensive substation automation and digitalization initiatives across its Primary Substations (PSS). However, existing communication infrastructure at many locations is inadequate to support growing data requirements from SCADA, RTUs, CCTV systems, protection relays, energy meters, and other digital applications. It is proposed to deploy a standardized communication network comprising industrial-grade Ethernet switches, wireless communication systems, structured LAN infrastructure, redundant architectures, and cybersecurity features. The proposed solution will enable reliable, secure, and scalable data exchange between field devices and central monitoring systems, supporting remote monitoring, automation, and future network expansion requirements.

The proposed investment is essential for establishing a reliable, secure, and standardized communication network across Primary Substations. It will enable seamless integration of SCADA, CCTV, protection relays, and automation systems, ensuring real-time data exchange and remote monitoring. The project will improve operational efficiency, enhance cybersecurity, reduce communication failures, support faster fault restoration, and provide a scalable foundation for future smart grid and digitalization initiatives, thereby strengthening overall system reliability and network performance.

5.3. Improvement of Civil Infrastructure

5.3.1 Construction of Office Buildings:

TPWODL has made significant progress in upgrading infrastructure and developing new facilities, including the transition from rented premises to company-owned offices. However, several existing offices have deteriorated due to aging infrastructure, resulting in roof leakages during monsoons, wall cracks, and inadequate workplace conditions. To provide a safe, clean, and conducive working environment, phased infrastructure improvements are proposed for FY 2027-28. This investment will enhance employee comfort, safety, and productivity while supporting efficient operations and improved service delivery, ultimately contributing to organizational excellence and better customer satisfaction.

5.4 Enhancement of Technical & Safety Training Infrastructure and Mobile Training Facility (Training on Wheels):

TPWODL has established 05 Nos. of Technical & Safety training Centres in all 5 circles under FY 2024-25 CAPEX. These centres provide employees and Business Associates (Contractor) with practical / simulated training environments that will significantly enhance technical competency and reduce workplace incidents.

Hence, to increase the positive coverage of this initiative, TPWODL has proposed enhancement of Technical & Safety Training centre at remote locations of Hamirpur (Rourkela), Bhangabari (Bhawanipatna) , Jharsuguda. Additionally, it has been proposed to procure and deploy specially designed "Training on Wheels" vehicles to spread mass technical and safety awareness at various work / public locations.

5.5 Enhancement of Store Infrastructure

The proposed scheme aims to strengthen store infrastructure to support efficient, safe, and uninterrupted material management. Existing store locations face persistent challenges such as waterlogging during monsoons, uneven and unpaved yard surfaces, inadequate material storage and handling facilities, and limited security surveillance infrastructure. These constraints can result in material damage, operational delays, unsafe working conditions, and increased repair and maintenance requirements.

The proposal includes construction/renovation of drainage systems, development of concrete/paver-block platforms and yard areas, construction of a security watch tower, and procurement of material storage and handling equipment at identified store locations. These interventions will improve all-weather accessibility, protect stored materials, facilitate safe and efficient loading and unloading, strengthen security surveillance, and improve overall store operational efficiency. The scheme will support year-round continuity of store operations, enhance workplace safety, reduce material damage and maintenance requirements, and provide adequate infrastructure to accommodate future growth in inventory volumes and operational requirements.

5.6 Ready to Use assets for Offices

TPWODL is continuously strengthening its office infrastructure to support expanding operations, a growing workforce, and evolving business requirements. Several existing administrative assets have exceeded their useful life, require frequent maintenance, or are inadequate for current needs, impacting operational efficiency and workplace standards. The proposed Administrative CAPEX for procurement of ready-to-use office assets will facilitate infrastructure standardization, improve employee productivity, enhance workplace safety and compliance, ensure business continuity, and reduce recurring maintenance costs. The investment will also support future growth, improve stakeholder experience, and create a modern, efficient, and conducive working environment across all office locations.

The proposed investment is essential for providing a safe, efficient, and employee-friendly workplace through modernization of office infrastructure, power backup, communication systems, welfare facilities, and mobility assets. It will enhance operational efficiency, ensure business continuity, improve employee productivity and well-being, support statutory compliance, reduce maintenance costs, and strengthen administrative capabilities to meet current and future organizational requirements.

5.7 Smart Meter IT Infrastructure

TPWODL has installed approximately 9.5 lakh Smart Meters within its licensed area under the ongoing Smart Metering Program. The cumulative installed base is projected to increase to 12 lakh by FY 2026–27 and 15 lakh by FY 2027–28, in line with the Licensee's rollout schedule. The effective realisation of the intended benefits of Smart Metering depends on the adequacy of the supporting IT infrastructure.

The Head End System (HES) and Meter Data Management System (MDMS), along with associated components, were initially designed to accommodate approximately 5 lakh Smart Meters and have been progressively enhanced in line with the installation growth. The existing infrastructure currently supports approximately 9.5 lakh Smart Meters. With the projected increase to 15 lakh meters, augmentation of the underlying compute, storage, networking, database, server and software infrastructure is required to ensure reliable system performance and avoid service degradation.

Accordingly, the proposed project provides for augmentation of the existing IT infrastructure to seamlessly support the projected 15 lakh Smart Meter base by FY 2027–28, ensuring scalability, reliability, cybersecurity and uninterrupted operation of HES and MDMS.

ANNEXURE 1

Scheme Name: Laying of 33kV and 11kV Underground Cable at NH / SH Crossings

Background

Underground cabling is provided at National Highway (NH) and State Highway (SH) where electrical network are crossing the road to ensure the safety of the public and vehicles. The underground cabling system enhances the reliability of the power supply to consumers and eliminates potential safety hazards associated with overhead crossings in high-traffic zones. The proposal is aligned with the provisions of the CEA (Measures Relating to Safety and Electric Supply) Regulations, 2023, which mandate adherence to safety requirements and risk mitigation at public road crossings. Further, as per NHAI guidelines, all 11 kV and 33 kV electrical lines crossing NH / SH corridors are required to be laid underground, thereby necessitating conversion from OH to UG at such locations.

Conversion of these crossings to underground cable systems provides a safe, reliable, and permanent solution. By laying 33 kV and 11 kV underground cables at identified NH/SH crossings, TPWODL will eliminate risks associated with overhead conductors, reduce supply interruptions, and ensure compliance to operational and safety requirements. The proposed works will also minimize recurring maintenance interventions and network modifications at these strategically important locations.

ANNEXURE 2

Scheme Name: 33 kV and 11 kV Overhead Cradle Guard at Road Crossing

Background

At road crossings (other than NH/SH), overhead 11kV lines are highly exposed to the risks of accidental contact with tall vehicles and construction equipment, or phase to earth fault in the event of conductor snapping. Such incidents can result in electrical faults and prolonged outages, and more critically pose a severe threat to public safety. The installation of cradle guards at these crossings acts as an effective protective measure by preventing direct contact with live conductors, thereby ensuring both system reliability and public safety.

Currently, most of the network is overhead and there is no provision for guard or cradle wires beneath the conductors. This poses a serious safety threat to the public, especially given the deteriorated condition of the legacy network, where the possibility of conductor snapping cannot be ruled out. In such scenarios, cradle guards play a critical role in preventing accidents caused by falling live conductors.

TPWODL has installed cradle guards at several vulnerable road crossings under earlier CAPEX schemes. However, due to the vast overhead distribution network and numerous road crossings within the licensed area, many locations still lack adequate guarding arrangements. The balance requirement will be covered in phases under CAPEX scheme.

Proposal

Provision of cradle guards at road crossings to reduce the risk of accidental contact with overhead conductors in the event of conductor snapping, thereby enhancing public safety and network reliability.

Requirement/ Need of the Proposal

- Current system exposes the network to safety hazards from accidental contact with overhead conductors in the event of conductor snapping
- Frequent interruptions, accidents, and non-compliance with CEA safety regulations occur in the absence of cradle guards.
- Cradle guards will safeguard lines in road crossing thereby reducing outages.

ANNEXURE 3

Scheme Name: Conversion of Bare to Covered Conductor

Background

At the time of inception, the 33kV & 11KV distribution network was predominantly constructed using bare conductors (AAAC/ACSR). These lines, though economical, are prone to frequent transient interruptions due to tree contacts, bird faults, snapping during storms, and safety hazards in congested / market areas, forest regions and Tree plantation areas.

Since vesting, certain high-fault-prone stretches have been addressed by installation of covered conductors in 33kV & 11KV feeders. However, a large portion of 33kV & 11KV feeders is still operating with bare conductors. The remaining stretches will be progressively converted to covered conductors under subsequent year's CAPEX plans in a phased manner.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Accordingly, the FY 2027-28 DPR has been prepared incorporating the requirements identified for complete Network.

1.	33kV Bare to Covered Conductor	CKM	1025	9	1016
2.	11kV Bare to Covered Conductor	CKM	6950.9	52.62	6898.28

Proposal

It is proposed to replace the existing bare conductors in identified 33kV & 11KV feeders with **insulated covered conductors**. The selection of feeders will be based on high fault incidence, dense vegetation, urban/congested corridors, and safety-sensitive locations.

Requirement/ Need of the Proposal

Existing Deficiency/ Scope for Improvement:

- Frequent feeder tripping due to tree branch contact, bird nesting, and accidental touches.
- High risk of conductor snapping leading to safety hazards and prolonged outages.
- Increased HT interruptions resulting in customer dissatisfaction and degradation of regulatory performance standards.

Statutory / Regulatory Compliance:

- As per CEA Safety Regulations, utilities must ensure adequate safety of lines passing through habitations and near trees. Bare conductors in such areas pose non-compliance risks.
- Conversion to covered conductors ensures compliance with these safety requirements and mitigates regulatory observations

Benefit to the System and Consumers

System Benefits:

- Substantial reduction in feeder interruptions and SAIFI/SAIDI indices.
- Improved life of associated equipment like transformers and switchgear due to fewer faults.
- Lower O&M cost by reducing patrolling and fault restoration efforts.
- Improved compliance with safety and regulatory standards.

Consumer Benefits:

- Enhanced reliability of power supply with fewer outages.
- Better quality of power (less flicker and interruptions).
- Improved public safety in urban, roadside, and habitation areas.
- Greater customer satisfaction and improved utility reputation.

ANNEXURE 4

Scheme Name: Installation of 33kV & 11kV Intermediate Pole

Background

At inception, several 33kV & 11kV lines were constructed with long spans between poles resulting in excessive sagging, mechanical stress on conductors, and safety risks.

Since vesting, some sag-prone stretches have been reinforced with intermediate poles, but many feeders still require strengthening. The remaining stretches will be addressed in phases under future CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Proposal

Installation of **intermediate poles** in long-span sections of 33kV & 11kV lines to reduce sag, improve mechanical strength, and enhance safety.

Requirement/ Need of the Proposal

- Existing long spans cause sagging, higher risk of snapping, and unsafe clearances.
- Intermediate poles will ensure compliance with CEA safety norms for ground clearance.
- Strengthening will improve system reliability and reduce faults in vulnerable stretches.

ANNEXURE 5

Scheme Name: Establishment of Meter Testing Lab (MTL) at Kesinga

Background

TPWODL has a large distribution area of 48,373 Sq. Km. At the time of inception (vesting), there were no dedicated in-house Meter Testing Labs (MTLs) available for statutory and routine meter testing. Post vesting, three MTLs have been successfully established and are operational at Burla, Balangir, and Rajgangpur. These labs are currently catering to the meter testing needs of their respective regions.

However, with increasing consumer base, enhancement of metering systems, and strict enforcement of CEA Metering Regulations and other statutory standards, the existing capacity is inadequate to cater to the entire operational area. Hence, to meet the growing demand and statutory compliance, an expansion plan for establishing six (6) additional MTLs in a phased manner has been envisaged under CAPEX.

For FY27-28, It is proposed to establish 1 No. MTL at Kesinga to serve Kalahandi district (covering the Bhawanipatna and Nuapada areas). The primary purpose of establishing the Meter Testing Lab at Kesinga is to provide consumers with convenient access for testing their meters whenever they have doubts or concerns regarding the accuracy or functioning of smart meters. At present, the nearest Meter Testing Lab for consumers in the Bhawanipatna and Nuapada areas are in Balangir, which are approximately 80-100 km away from nearest meter testing lab. Due to this considerable distance, many consumers are reluctant to travel to the lab to witness meter testing, which limits consumer confidence and satisfaction.

Establishing a lab at Kesinga will significantly improve accessibility and transparency for consumers in these areas. Also, Kesinga houses a major store where smart meters are received for installation in the Bhawanipatna and Nuapada areas. At present, these meters are not tested at TPWODL laboratories before installation, highlighting the need for a dedicated testing facility at Kesinga.

Proposal

This proposal seeks CAPEX funding of **Rs 5 Cr.** for setting up a fully equipped Meter Testing Lab at Kesinga, which will be capable of testing single-phase, three-phase, and CT-operated meters as per statutory guidelines.

The lab will be built to support:

- Statutory testing as per CEA guidelines.
- Periodic and routine testing.
- Testing of disputed, faulty, and new meters.
- Pre-installation accuracy verification.

The Kesinga (Kalahandi) MTL will reduce pressure on existing labs and will act as a nodal facility for the surrounding operational areas.

Requirement / Need of the Proposal

While three MTLs are operational, their geographic spread is insufficient to efficiently cater to all divisions.
Currently:

- Kesinga and nearby areas are dependent on the Balangir lab, leading to logistical delays and increased turnaround time.
- Statutory testing obligations are not being met within the prescribed timeline due to limited lab capacity.
- Consumer complaint resolution related to metering is delayed, impacting consumer satisfaction and regulatory compliance.

By establishing a dedicated MTL at Kesinga:

- Statutory compliance under CEA Metering Regulations and Electricity Act provisions will be ensured.
- Meter testing will become more timely, cost-effective, and reliable.
- Enhanced metering infrastructure will support smart metering rollout in future phases.
- Testing of meters as per **IS 13779, IS 14697, IS 16444 Part 1 & 2** in laboratory conditions before deployment.

At present, TPWODL operates three Meter Testing Laboratories located at Balangir, Burla, and Rajgangpur, with the following capacities:

Sl. No.	Lab Location	Meter Test Bench Details	Nos	Capacity to Test Meters per day
1	Burla	3 Ph Meter Testbench – 20 positions	1 No.	100-120 Meters / day
		1 Ph Meter Testbench – 20 positions	2 Nos.	200-250 Meters / day

3	Rajgangpur	3 Ph Meter Testbench – 20 positions	1 No.	100-120 Meters / day
		1 Ph Meter Testbench – 20 positions	1 No.	100-120 Meters / day

In view of the phased replacement of existing meters with smart meters, a new Meter Testing Lab is proposed at Kesinga to serve Kalahandi district (covering the Bhawanipatna and Nuapada areas).

Scheme Name: Procurement of Cable Fault Locator (CFL) Van.

Background:

HT Cable Fault testing machine is a critical equipment in maintaining HT Cable healthiness, fault detection and location. The Van mounted Cable fault machine will ensure quick deployment at site. With all built in System and Power Supply it can independently perform the testing of Cable fault and its location.

Proposal:

It is proposed to procure 1 No. of HV Cable fault testing Van.

S. No.	Description	Qty
1	HV Cable fault Machine built on Van with accessories.	1

Requirement/ Need of the Proposal

The objective of this project is to make each division self-sufficient by providing dedicated and independent Cable Fault Testing Machines. Presently we have two Nos portable Machines used for testing in entire TPWODL. With the increasing no of Cable faults, these machines are falling short in meeting the requirement. We propose to procure 5 Nos Cable fault testing Vans to be located in each circle. This will improve the mobility with advance Cable fault location machine and power supply built on a compact VAN. Also, this will eliminate dependency on centralized or shared kits, reduce downtime, and enhance the efficiency and effectiveness of preventive and breakdown maintenance activities.

ANNEXURE 7

Scheme name: Access Road for inside and outside of PSS

Background:

At present, there are some non-ODSSP Primary Substation (PSS) where dedicated all-weather approach / access road is not available. The existing road is an unpaved, uneven earthen track prone to severe deterioration during the monsoon season. This lack of a proper access road result in:

- Restricted movement of operational staff, vehicles, and equipment
- Safety hazards due to slippery and unstable surfaces
- Delays in transportation of critical spares and materials, especially during emergencies
- Difficulty in mobilizing cranes, testing vehicles, and fire tenders

In view of these operational challenges and safety concerns, it is essential to construct a properly designed access road to ensure uninterrupted, safe, and efficient connectivity to the PSS.

Proposal :

We have already completed approach road for 87 nos. PSS till FY 25-26 and planned to complete 20 in current year (FY 26-27) for non ODSSP PSS as per criticality of existing condition. While these works will address a substantial portion of the balance scope, certain PSS Road will continue beyond FY 2027–28, to be taken up in subsequent years as part of the phased development plan.

Requirement / Need of the Proposal:

Need of constructing a road at the Primary Substation (PSS) is to provide safe, durable, and all-weather access for operation, maintenance, and emergency response activities. A properly constructed internal road enhances the movement of personnel, vehicles, and equipment within the substation premises, thereby ensuring timely maintenance of critical electrical infrastructure. It also improves overall safety by facilitating the smooth transportation of heavy machinery and materials required for substation operations. Additionally, the road infrastructure strengthens physical security, supports efficient logistics, and contributes to the long-term sustainability and functionality of the PSS.

Scope of Work:

The scope of this project includes the complete civil construction of RCC Concrete Road in Primary Substation (PSS) premises under the TPWODL area to ensure the smooth transportation of heavy machinery and materials required for substation operations.

Proposed cost with estimate Break-up

For the Financial Year 2027–28, a target has been set for the construction of 20 Nos. Substation (PSS) approach/internal roads across various locations. The proposed cost for the construction of these 20 roads is estimated at ₹2.00 Crore.

Benefits of the System and consumers

Investment in the construction of RCC (Reinforced Cement Concrete) roads at Primary Substations (PSS) brings long-term operational, safety, and economic benefits to the organization. RCC roads provide a strong and durable surface that ensures smooth access for vehicles, equipment, and personnel throughout the year, regardless of weather conditions. Improved road infrastructure at substations enhances mobility for operation and maintenance teams, enabling quick response during emergencies and reducing downtime in critical situations. From a safety perspective, RCC roads minimize the risks of accidents caused by uneven or damaged surfaces, supporting safe working conditions for staff and contractors.

ANNEXURE 8

Scheme name: Construction of Control Room Building in PSS

Background:

The Control Room Building (CRB) is the nerve center of every Primary Substation (PSS), housing critical electrical and communication assets such as SCADA panels, protection and control relays, battery banks, communication equipment, metering systems, and other auxiliary facilities essential for reliable power distribution and real-time network monitoring. Maintaining a safe, secure, and operationally efficient control room environment is crucial for ensuring uninterrupted power supply and the safety of operating personnel.

The company operates and maintains **166 Non-ODSSP Primary Substations** across its network. Based on condition assessment conducted at these substations, a large number of Control Room Buildings were found to be inadequate in terms of space, structural integrity, functionality, and operational safety. To address these deficiencies, a phased program for construction of new Control Room Buildings was undertaken.

Despite the progress achieved, **18 Nos. Control Room Buildings of Non-ODSSP Primary Substations** remain in **severely deteriorated condition** and require urgent new CRB works to ensure safe and reliable operation. Many of these substations continue to face one or more of the following issues:

- Inadequate space for accommodation of Control & Relay Panels
- Severe deterioration of building structures due to age, dampness, water seepage, and weather-related damage.
- Cracked walls, damaged roof slabs, deteriorated flooring, flaking plaster, and weakened structural components.
- Obsolete electrical wiring systems, inadequate illumination, and insufficient ventilation arrangements.
- Damaged doors, windows, sanitary facilities, and other essential building services.
- Lack of suitable workspace and operational facilities for field staff.
- Inadequate fire protection and safety provisions for safeguarding critical electrical equipment.

Considering the strategic importance of these Primary Substations and the critical nature of the equipment housed within the Control Room Buildings, New CRB **12 Nos. severely deteriorated CRBs** is proposed during **FY 2027-28**. The proposed works will enhance operational reliability, improve

safety standards, provide adequate space for control and protection equipment, and extend the service life of the substations, thereby ensuring uninterrupted and efficient power distribution across the network.

Proposal :

We propose 12 Nos Control Room in FY 27-28 While these works will address a substantial portion of the balance scope, certain New Control Room will continue beyond FY 2027–28, to be taken up in subsequent years as part of the phased development plan.

Requirement / Need of the Proposal:

Requirement of new CRB is essential as the control room is the nerve center of any Primary Substation (PSS), housing critical equipment such as SCADA panels, protection relays, communication systems, battery banks, and other auxiliary electrical infrastructure. The safe, clean, and operationally efficient condition of the control room is crucial for uninterrupted power distribution and real-time network monitoring.

Scope of Work:

The scope of this project comprises the complete construction and finishing of an RCC (Reinforced Cement Concrete) framed building, including all structural, architectural, plumbing, sanitary, and finishing works required for making the facility fully functional and ready for occupancy.

Location of PSS are as follows:

SL NO	Circle	Division	PSS NAME

Proposed cost with estimate Break-up

For the Financial Year 2027–28, a target has been planned for the **construction of 12Nos. new Control Room buildings** at identified substations, based on operational priority. These new buildings are proposed as the existing structures are in a deteriorated condition and no longer meet the safety, durability, and functional requirements of substation operations.

The **proposed cost for construction is ₹50.00 Lakhs per Control Room building**, leading to a total estimated investment of **₹6.00 Crores** for all 12 buildings. This investment will significantly improve operational efficiency, reduce safety risks, and enhance the long-term sustainability of substation infrastructure.

Cost Benefit Analysis

Benefits of the System and consumers

Over time, ageing infrastructure develops structural weaknesses, electrical faults, leakage, and inadequate working conditions that can hinder smooth operation and maintenance activities. Construction of new Control Room addresses these challenges by improved structural stability, upgrading electrical and firefighting systems, and creating a safe and efficient workplace for staff.

From a financial perspective, construction of new control room reduces recurring maintenance costs, it also improves workplace conditions, boosting employee morale and productivity. Overall, the investment ensures sustainable infrastructure, operational reliability, and long-term cost savings for the organization.

ANNEXURE 9

Scheme name: Construction of Boundary wall for PSS

Background:

To ensure the safety, security, and long-term sustainability of electrical infrastructure, the construction of permanent boundary walls around Primary Substations (PSS) has been a key initiative under TPWODL's civil infrastructure development program. Boundary walls serve as a critical element in safeguarding high-voltage installations by restricting unauthorized access, protecting valuable equipment, and reducing risks to public safety. These walls also prevent encroachment, theft, vandalism, and damage by stray animals, which can otherwise lead to supply disruptions, equipment failure, and increased maintenance costs.

Since its inception in FY 2021–22, the TPWODL has made significant progress in this direction as per available budget.

We have already completed 118 Nos. PSS Boundary Walls up to FY 2025–26. With the available budget, an additional 12 Nos. PSS Boundary Walls for non-ODSSP PSSs are planned for completion during FY 2026–27.

Proposal:

It is proposed to undertake 28 Nos. PSS Boundary Wall works during FY 2027–28, prioritizing locations where the existing boundary walls are in critical and deteriorated condition. These works will address a substantial portion of the remaining requirement. However, 8 Nos. PSS Boundary Wall works are expected to be taken up in subsequent years, as they are presently affected by land litigation issues and can be executed only after the necessary clearances are obtained, in line with the phased development plan.

Note : Out of 28 locations, 6 PSSs do not have boundary walls, while the remaining PSSs have severely deteriorated walls that are beyond repair and pose safety, security, and operational risks.

Requirement / Need of the Proposal

Primary Substations (33/11 kV) are critical installations in the power distribution network of TPWODL. These substations house high voltage equipment such as transformers, circuit breakers, and control systems which are essential for uninterrupted power supply.

Many PSS locations currently lack proper boundary wall enclosures, or have dilapidated or partially damaged boundary structures, which poses a serious threat to safety and security.

The construction of boundary walls around PSS is vital due to the following reasons:

- Public Safety: Prevents unauthorized or accidental access by people, especially children, to high-voltage areas
- Animal Intrusion Control: Restricts entry of stray cattle and wildlife that may come in contact with live equipment, causing faults or electrocution
- Theft Prevention: Acts as a physical barrier against theft of expensive equipment, copper wires, and transformer oil
- Infrastructure Protection: Safeguards the physical and electrical infrastructure from external damage and vandalism
- Compliance & Safety Standards: Aligns with safety regulations issued by CEA and State Electricity Regulatory Authorities

Scope of Work:

The scope of this project includes the complete civil construction of brick boundary walls around selected Primary Substation (PSS) premises under the TPWODL area to ensure the physical security, operational safety, and long-term protection of critical electrical infrastructure.

Proposed cost with estimate Break-up

In order to enhance the physical security, operational safety, and boundary demarcation of our Primary Sub Station (PSS), it is proposed to undertake the construction of 28nos brick Boundary wall at selected PSS locations across the TPWODL operational area during the financial year 2027–28.

Benefits of the System and consumers

Investing in a boundary wall for a PSS is a strategic decision with multifaceted returns. Primarily, it delivers significant risk and loss mitigation: integrating such security measures during the construction phase is markedly more cost-effective than retrofitting later, reducing vulnerability to theft, vandalism, and physical damage to vital assets. Furthermore, a boundary wall enhances safety and security, deterring unauthorized access and lowering accident risks for both people and equipment. It also supports site management and compliance, simplifying surveillance, perimeter monitoring, and adherence to regulatory standards. In essence, allocating budget for a boundary wall is not merely a protective measure—it is a prudent investment that safeguards infrastructure, strengthens continuity, and maximizes long-term value.

ANNEXURE 10

Scheme name: Installation of Fencing at Distribution Substation (DSS)

Background:

Distribution Substation are located at various locations catering the power supply requirement to the consumers. Since these are installed at various scattered locations along the Road, public places, near the commercial areas etc. During the survey, it is observed that boundary walls or fencing are either do not exist or severely deteriorated (beyond repair), thus posing a safety threat to stray animals and public at large.

At many of the DSS locations, it was found that the condition of the DSS Fencing / boundary wall is in a very bad condition. Ensuring safety of People & equipment is very much needed for safe operation. Hence it is proposed for construction of fencing for DSS.

We have already completed 3401 nos DTR Fencing up to FY 25-26 and with the available budget we will complete 600 Nos DTR Fencing in this FY 26-27

Proposal:

We propose 708 Nos DTR Fencing in FY 27-28.

Priority areas	Qty

TOTAL	**708**

Requirement / Need of the Proposal

A large number of Distribution Substations (DSS) across TPWODL are currently without fencing or secured boundaries. This has left live electrical equipment exposed to the open environment, posing a significant threat to public and animal safety.

There have been multiple incidents in the past involving electrocution of both humans and animals due to accidental or unauthorized entry into DSS areas. The absence of proper fencing increases the risk of:

- Unauthorized access and theft of critical electrical components
- Serious injuries or fatalities due to contact with live equipment
- Safety non-compliance with regulatory and electrical standards
- In light of the above risks and with a strong focus on public and employee safety, TPWODL proposes to install fencing at all Distribution Substations (DSS) across its licensed area. This will ensure that:
- Access to live electrical installations is controlled and restricted
- Accidental human and animal contact is prevented
- Theft and vandalism of valuable infrastructure are minimized
- DSS facilities comply with safety guidelines

Benefits of the System and consumers

The construction of fencing around Distribution Substations (DSS) in the TPWODL area offers significant operational safety and infrastructure management benefits. One of the primary advantages is enhanced security. Fencing acts as a strong physical barrier that prevents unauthorized access, theft, and vandalism of valuable electrical assets such as transformers, cables, and other substation equipment. Additionally, the fencing ensures public and animal safety by clearly demarcating high-voltage zones, thereby minimizing the risk of accidental contact with live electrical infrastructure. It also reduces the likelihood of legal or public grievances related to safety lapses

ANNEXURE 11

Scheme Name: Earthing of DSS

Background

At inception, many Distribution Transformers (DTs) were installed with inadequate or deteriorated earthing systems. This exposed equipment and consumers to safety risks and increased fault levels.

Since vesting, earthing improvements have been carried out at select DTs, but a large number are still pending. The balance requirement will be addressed in phases under upcoming CAPEX.

For FY 2026–27, the scope was initially frozen based on surveys of Main Town and peripheral areas. Subsequently, a comprehensive PAN-TPWODL survey was conducted for the RST and FY 2027–28 DPRs. Now the FY 2027–28 DPR incorporates the complete survey data.

Requirement/ Need of the Proposal

- Existing earthing at many DTs is either damaged, high resistance, or non-standard.
- This leads to frequent equipment failure, safety hazards, and non-compliance with CEA safety guidelines.

ANNEXURE 12

Scheme Name: Firewall for Power Transformers

Background

Presently in many **PSS**, there is **no firewall protection** between Power Transformers due to legacy network. Transformers are kept at ground level with insufficient plinth height, exposing them to fire hazards and oil spill risks. In case of transformer fire, absence of firewalls can lead to **cascading failures**, damaging adjacent equipment and threatening personnel safety.

Proposal

It is proposed to construct firewalls between PTRs in identified 33/11kV PSS to improve fire safety**,** containment, and reliability of the electrical network. The firewalls will act as physical barriers, preventing fire spread and ensuring compliance with statutory safety norms.

Requirement/ Need of the Proposal

Firewall construction between Power Transformers (PTRs) is a critical safety compliance measure mandated by regulatory standards to prevent the spread of transformer fires. By acting as a physical barrier, firewalls ensure that any fire incident is contained within a single transformer bay, thereby protecting adjacent transformers and switchyard equipment from damage. This risk mitigation significantly reduces the chances of cascading failures and large-scale outages, safeguarding both assets and personnel.

Scope of Work

The scope of work includes construction of RCC firewalls between PTRs as per standard design, raising transformer plinths to maintain statutory ground clearance, providing oil drain arrangements to safely channel transformer oil leakage, integrating the firewall with the earthing system for safety compliance, and painting with appropriate signage for visibility and awareness. These measures will ensure that the substation infrastructure is upgraded to meet modern safety standards.

ANNEXURE 13

Scheme Name: Installation of Meter for Energy Audit purpose inside PSS

Background

At the time of vesting, metering infrastructure in TPWODL's network was partially available and largely non-communicable. Several feeders, PSS incomers, and PTR locations were equipped with non-DLMS, defective, or non-communicable meters, which restricted effective energy accounting.

Since vesting, TPWODL has undertaken systematic initiatives to strengthen metering systems.

A. **PSS incomer and outgoing metering**
B. **PTR metering on 33KV Side & 11KV Side**

Proposal

The proposal aims to complete 100% metering coverage at PSS incomer, PSS outgoing, and PTR locations with communicable DLMS-compliant meters, PTs/CTs, and NB-IoT modems to ensure reliable integration with the AMR system in phase manner. This will enable accurate input energy calculation up to section level, enhance energy audit capabilities, and provide a robust basis for AT&C loss reduction initiatives.

Requirement / Need of the Proposal

- **Deficiency in Existing System**: Current metering is partially incomplete. Many installed meters are non-DLMS or defective, leading to gaps in energy accounting. PTR metering is largely non-communicable.

- **Scope for Improvement:** Completing PSS and PTR metering will provide end-to-end visibility of energy flow, reduce reliance on manual data collection, and enable real-time monitoring.

- **Statutory Compliance**: Hon'ble OERC mandates accurate energy accounting and periodic reporting. Without 100% PSS/PTR metering, compliance gaps persist. The proposed scheme ensures full statutory compliance.

- **Organizational Benefit**: Improved energy balancing at PSS, feeder, and PTR level will directly support loss reduction targets, enhance system reliability, and protect revenue.

Scope of Work

A. **PSS Metering (33 kV Incomer/Outgoing)**

For effective input energy calculation up to the section level, PSS metering is critical. To sustain accuracy and reliability of input energy, the metering system must remain fault-free.

After field survey, it was observed that, Total incomer and outgoing metering points are 524, out of which 477 will be completed by FY 27 and remaining 47 are proposed for metering in FY28.

B. 33/11 kV PTR Metering on 11KV Side

- Out of a total of 726 PTRs metering on 33kV side, 156 PTRs are metered and remaining PTR Metering will be covered in FY27 CAPEX.
- Out of 726 PTR, metering is completed on 85 PTRs and remaining 641 PTRs can be covered in FY28.

Circle wise total quantity for metering*: Refer Annexure 57 and 58 for location details.*

Benefit to the System and Consumers

The proposed metering initiatives will create a transparent, reliable, and efficient energy accounting framework. This will provide significant advantages both at the **system level** and for **end consumers**.

System Benefits

- **Accurate Energy Accounting** – Enables precise measurement at all network levels, ensuring a robust energy audit system.
- **Monitoring of Asset & network health -** Monitors peak demand and voltage profile, improving system reliability, facilitates precise energy balancing across transformers, Supports identification of technical losses at transformer level.
- **Loss Reduction** – Helps identify and minimize technical and commercial losses, directly contributing to AT&C loss reduction targets.
- **Revenue Protection** – Prevents under-billing and revenue leakage through real-time monitoring of high-value consumers and critical network points.
- **Operational Efficiency** – Strengthens load management, peak demand monitoring, and system planning through reliable data insights.
- **Regulatory Compliance** – Ensures adherence to Hon'ble OERC guidelines and supports transparent reporting.

Consumer Benefits

- **Improved Reliability of Supply** – With better monitoring at each level, outages and technical issues can be identified and resolved faster.
- **Fair and Transparent Billing** – Accurate metering minimizes billing disputes and ensures consumers are charged only for actual consumption.
- **Enhanced Service Quality** – Smart metering enables quick response to consumer grievances related to billing and supply interruptions.

ANNEXURE 14

Scheme Name: DT Smart Metering for Energy Audit

Background

At the time of vesting, Distribution Transformer (DT) level metering in TPWODL's license area was negligible, limiting visibility of energy consumption patterns at the last-mile level. This resulted in difficulties in performing **feeder-to-DT energy balancing** and identifying localized technical and commercial losses.
Since vesting, TPWODL has initiated large-scale DT Smart Metering, prioritizing DTs based on capacity and criticality. As of FY26 total 9826 DT Smart Meters have been installed mostly having capacity 100KVA and above.

As per the OERC order, the DT meters shall be installed on all DTs and on Feeders having AT&C loss more than 50% for loss reduction activity

Proposal

The proposal aims to install **smart meters (LTCT and whole-current type)** on identified DTs across the TPWODL license area. The scheme includes meters with **DLMS compliance, AMR/AMI integration, Ring CT arrangements, control cables, and meter boxes**.

The installation will enable accurate energy accounting at the DT level, allowing for **feeder-to-DT loss analysis**, which is critical for targeted loss reduction initiatives.

In alignment with the directives of the Hon'ble Commission issued through the RST Order for FY 2026-27, a total of 368 high AT&C loss 11 kV feeders (AT&C losses of 50% and above) have been identified. Of these, 47 feeders have AT&C losses exceeding 80%, while rest 321 feeders fall within the 50%–80% loss band. Accordingly, 100% DTR metering for the 47 feeders with AT&C losses exceeding 80% has been planned for completion by March 2027. For FY 2027-28, priority has been considered for 100% DTR metering of **11 kV feeders** having AT&C losses in the **60%–80%** band, followed by few feeders having AT&C losses in the **50%–60%** band with the objective of strengthening energy accounting, improving loss visibility, and facilitating targeted loss-reduction measures.

Requirement / Need of the Proposal

Deficiency in Existing System:
- Incomplete DT metering coverage limits visibility of localized losses.
- Manual or sample-based energy audit at DT level is ineffective and often inaccurate.

Scope for Improvement:
- Comprehensive DT metering enables real-time monitoring of loss pockets, improves feeder segregation analysis, and enhances billing efficiency.
- Facilitates transformer health monitoring by identifying overloaded/underutilized DTs.

Statutory Compliance:
- Hon'ble OERC mandates reliable energy accounting for AT&C loss monitoring.
- Full DT metering ensures compliance by providing transparent and verifiable data down to the last mile.

Organizational Benefit:

- Supports AT&C loss reduction by identifying specific DTs contributing to higher losses.
- Enhances planning for network strengthening, load balancing, and Capex prioritization.

Scope of Work

DTs to be covered:

- 63KVA & above DTs: All remaining unmetered DTs.
- DTs of All KVA capacity which are connected to High Loss Feeders (AT&C More than 50%)

Activities:

- Installation of DT Smart meters (smart LTCT and whole-current types).
- Installation of Ring CTs, control cables, and SMC boxes.

Quantity (as per survey):

1. As per survey, Total 51325 DTs are taken for Metering as target. Out of 51325, total 9826 DT Meters are installed and Remaining are 41499.
2. Out of 41499, total 10930 DT Metering will be covered in FY27.
3. 10000 DTs are proposed in FY28 Capex ensuring to cover 11KV Feeders having Loss more than 50%
4. Remaining will be covered in FY29.

For detail locations refer annexure 59

Benefit to the System and Consumers

The proposed metering initiatives will create a transparent, reliable, and efficient energy accounting framework. This will provide significant advantages both at the **system level** and for **end consumers**.

Loss Reduction:

- Enables precise feeder-to-DT energy balancing, identifying high-loss DTs.
- Facilitates targeted actions (metering audits, theft control, network strengthening).

Revenue Protection:

- Prevents energy leakage and under-billing by pinpointing unaccounted consumption.
- Ensures billing efficiency for consumers connected to DTs under HRF/industrial feeders.

System Benefits:

- Improves planning of network reinforcement based on actual DT load data.
- Reduces transformer failures by monitoring load and imbalance trends.
- Strengthens energy audit capability at the last-mile level.
- Enhances loss identification and corrective planning.
- Provides reliable data for load forecasting and Capex prioritization.
- Improves transformer reliability and reduces downtime.

Consumer Benefits:

- Results in fair and transparent billing by reducing hidden technical and commercial losses.
- Enhances supply quality and reliability by preventing overloading of DTs.
- Builds consumer trust through data-driven service delivery improvements.

ANNEXURE 15

Scheme Name: High Value Industrial Audit Point Metering

Background

At the time of vesting, TPWODL had no dedicated **independent audit point metering** for monitoring industrial consumer groups or single high-value industrial consumers. Revenue billing relied solely on consumer-end meters, which created vulnerabilities due to possible CT/PT failures, meter inaccuracies, or tampering risks.

Since vesting, TPWODL has initiated audit point metering for select **industrial feeders and group consumers** to improve energy audit accuracy and strengthen revenue assurance. This has enabled detection of discrepancies between consumer billing and actual supply, contributing to improved accountability.

Current Status (as of FY26):

- Audit point metering has been initiated in a **limited number of high-value industrial locations**.
- However, coverage is still incomplete, with significant **balance work to be undertaken in phases** under subsequent CAPEX years.

Balance Work:

here are 37 Industrial Consumer are having energy intensive and there is no mechanism for carrying out Energy Audit. Hence these 37 industries are proposed for Audit Metering with communicable meters so that meter data can be easily accessible for low flow studies and energy audit.

.

Proposal

The proposal is to install **independent metering units at high-value industrial single and group audit points**, equipped with:

- 33 kV DP structures ,
- Metering Units (MU- 0.2s Class)
- Smart HT Meters (0.2s Class)

This arrangement will ensure **independent, verifiable measurement of industrial consumption** and support precise energy auditing for loss reduction.

Requirement / Need of the Proposal

Deficiency in Existing System:

- Lack of independent audit point metering for industrial loads increases vulnerability to billing inaccuracies.
- Current dependency on consumer-installed meters poses risk of under-billing, unaccounted energy, and disputes.

Scope for Improvement:

- Audit point metering provides a reference point for cross-verifying consumer billing.
- Enables identification of feeder/group-level energy losses and supports corrective actions.

Organizational Benefit:

- Protects revenue from potential under-billing.
- Provides a reliable mechanism for loss analysis, theft detection, and revenue protection in industrial segments.

Scope of Work

Activities:

- Installation of 33 kV DP structure with complete Metering Unit (MU).
- Installation of DLMS-compliant meters with NB-IoT/GPRS modems for AMR integration.
- Provision of all related accessories, including cables, panels, and site services.

Quantity (as per survey):

- 16 nos. High Value Industrial Audit Points to be completed in FY27.

For location details refer annexure 60.

Physical Target

Completion of installation of 37 nos. High Value Industrial Audit Points as identified in field survey by Mar'28.

Cost Benefit Analysis

Not applicable

Benefit to the System and Consumers

System Benefits:

- Provides a **robust independent reference point** for industrial consumption monitoring.
- Reduces commercial losses by strengthening HT consumer energy audit.
- Enhances transparency in energy flow and strengthens regulatory reporting.

Revenue Protection:

- Independent audit points provide a parallel measurement reference, reducing risk of under-billing.
- Ensures transparency and prevents revenue leakage from metering inaccuracies.

Loss Reduction:

- Identifies discrepancies at industrial feeder/group level.

- Enables targeted actions for reducing AT&C losses in industrial clusters.

Statutory Compliance:
- Strengthens adherence to OERC guidelines on energy audit of high-value consumers.

Consumer Benefits:
- Ensures **fair and transparent billing**, reducing chances of disputes.
- Builds consumer confidence by providing verifiable consumption data.
- Supports long-term service quality improvements through better system planning.

ANNEXURE 16

Scheme Name: Conversion of LT Bare conductor with AB Cable

Background

Initially, most LT networks were constructed using bare conductors, which are prone to high technical losses, theft, safety hazards, and frequent interruptions due to tree contact and snapping.

Since vesting, AB cables have been introduced in theft-prone and congested areas, showing improved performance. However, a large portion of LT lines is still bare and will be progressively converted under subsequent CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Accordingly, the FY 2027-28 DPR has been prepared incorporating the requirements identified for complete Network.

2.	LT Bare to AB 120 sq mm	CKM	1099.02	390.43	708.59

Proposal

Conversion of existing **LT bare conductors to Aerial Bunched (AB) Cable** in theft-prone, tree-lined, and congested stretches to improve safety, reliability, and efficiency.

TPWODL has proposed 95 sq. mm and 120 sq. mm LT AB cables considering the projected future load growth. The proposed 120 sq. mm LT AB considered where the existing distribution transformers are planned to be augmented to adequately meet the anticipated load growth.

Requirement/ Need of the Proposal

- Bare LT lines cause high theft, losses, and frequent interruptions.
- Non-compliance with CEA safety norms in congested and habitation areas.
- AB cables will improve reliability, reduce theft, improve safety, and ensure compliance with statutory guidelines.

ANNEXURE 17

Scheme Name: Installation of LT Distribution Box with Armoured Cable

Background

At the time of inception, majority of rural villages, including those with high AT&C losses, were served through basic distribution infrastructure—primarily comprising un-armoured LT cables with multiple joints and direct connections from poles without any intermediate protection or isolation devices like LT Distribution Boxes (LTDBs).

Post vesting, infrastructure strengthening has been undertaken under various schemes. However, villages with high loss levels still suffer from inadequate infrastructure, including:

- Unprotected LT cables prone to faults and pilferage.
- Absence of LTDBs limiting system control and fault management.
- Loose connections and clustering of Service cables on poles leading to No Current Complaints.
- Un-balanced load distribution

These deficiencies have contributed to high technical losses, increased outages, and unsafe operating conditions. To address this, such villages are now identified and designated as **Model Villages** for better managed infrastructure under phased CAPEX plans.

Proposal

This proposal seeks CAPEX approval of ₹20.17 Crore for:

- Replacement of existing un-armoured LT cables with armoured cables in high-loss villages.
- Installation of pole-mounted LT Distribution Boxes (LTDBs) to enhance network control, and operational flexibility.

The proposal focuses on improving reliability, safety, and loss reduction in these identified Model Villages.

Requirement / Need of the Proposal

Existing Deficiencies:

- Un-armoured cables are vulnerable to theft, damage, and weather exposure, leading to high outages and losses.
- Lack of LTDBs results in poor fault isolation, increased restoration time, and safety risks for field staf.
- The existing infrastructure lacks sufficient provisions of the **CEA Safety Regulations**, especially with respect to load segregation, and public safety.

Benefits of the Proposal:

The proposed investment aims to address the identified gaps by regularisation of illegal connections, system strengthening, improvement in metering and billing efficiency. Hence, TPWODL requests that the submitted proposal may be considered under CAPEX FY 27-28.

In FY 26 TPWODL have worked in 337 High Loss Pockets and installed armoured cables to consumer premises where consumers illegally tapped from exposed joints in cables. This has led to improvement in Billing efficiency by 22% in last 6 months. This model needs to be scaled up to other high loss pockets as well. TPWODL have identified 368 such high loss 11 KV feeders where losses are >50%. To bring down the losses, already 100% DT metering work is being undertaken as per OERC approved CAPEX and smart meters are also being installed. It is

proposed to provide armoured cables under CAPEX to effectively improve the billing efficiency in these areas. Despite having a large rural consumer base, TPWODL has made significant improvement in Billing Efficiency at LT level which currently stands at approximately 70%. However, 30% loss level is a significant number & is spread across all Divisions. Accordingly, proposal has been made for villages contributing high losses in each division.

This proposal aligns with the organization's strategic goals of reducing distribution losses and improving consumer service reliability.

Scope of Work

The scope of work under this CAPEX initiative includes:

Sl. No.	Description	Quantity	Location
1	Replacement of un-armoured LT cables with armoured XLPE cables (2C x 6 mm²)	~1400000 meters (70000 Consumers)	Across 1600 identified high-loss villages (designated as Model Villages) under different Divisions of TPWODL
2	Supply and installation of LT Distribution Boxes (8 Way)	20000 Nos	Same villages

- **Villages Covered**: 1600 high-loss rural villages identified as Model Villages
- **Cable Replacement**: 100% of targeted locations (~70000 meters)
- **LTDB Installations**: 20000 Nos across selected poles

Cost Benefit Analysis

Parameter	Without Proposal	With Proposal
Technical Losses	High due to long unprotected LT runs	Reduction by ~15-20% in targeted areas
Theft and Damage	Frequent incidents	Reduction in possibility of theft
O&M Expenses	High recurring cost due to cable failures	Lowered due to durable infrastructure
Regulatory Compliance	Partially compliant	Compliance with CEA Safety Regulations

Benefit to the System and Consumers

Consumer Benefits:

- Reliable and uninterrupted power supply.
- Reduced outage duration and quicker service restoration.
- Improved consumer satisfaction in high-loss rural areas.

System Benefits:

- Strengthened LT infrastructure enabling **loss reduction** and **reliability improvement**.
- Improved operational control and fault management through **LTDBs**.
- Enhanced system safety for both personnel and equipment.

This proposal forms a critical component of the organization's ongoing effort to modernize rural distribution systems and bring high-loss areas under control through targeted infrastructure upgrades. We seek approval for the CAPEX of **₹20.17 Crore** under the **FY 2027–28** plan for execution under the scheme "Loss Reduction and Reliability Enhancement in Model Villages."

Proposal for Length reduction of 33kV NIT feeder:

Proposal:

Construction of new 33kV Line from Bondamunda PSS to Bisra PSS.

Requirement/ Need of the proposal:

Objective:

To reduce the length of 33kV NIT feeder (High Revenue) which comes under Rourkela City area and address the Low voltage issues in Bisra-Jareilkela area. The proposed 33 kV link line from Bondamunda PSS to Bisra PSS is aimed to reduce the length of 33kV NIT feeder by strengthening the reliability of the 33kV NIT High revenue feeder, improving voltage regulation, and minimizing technical losses.

Existing Scenario:

- Presently, 33 kV NIT feeder is an HRF feeder emanating from Chhend GSS, supplying power to NIT PSS, Bisra PSS, Jareikela PSS and 8 nos. of HT consumers. NIT and PGCIL is the major HT consumer takes power from NIT feeder which comes under Rourkela City Area. The feeder has a total line length of 52 CKm with conductor sizes of 148 sq.mm and 232 sq.mm. The peak load for FY 2026-27 is 21.7 MVA. And Load Growth considered is 4.88%.
- The severe storm on 25th May 2026 exposed a major weakness in the existing network due to non-availability of reliable power source at NIT PSS.
- Bisra PSS provides supplies to around 14500 domestic, commercial and industrial consumers. This PSS also provides supply to Jareikela PSS and Jareikela Megalift. Hence, NIT feeder is the only 33KV source for this PSS, power supply hampers during any breakdown of this feeder and affects large nos of consumer base. Considering these vulnerabilities, there is an urgent need to establish an additional reliable source from a separate GSS to ensure N-1 redundancy and maintain uninterrupted power supply to this vital rural region.
- Currently 33/11KV Bondamunda PSS and Madhusudanpali PSS are receiving power supply from 33kV Bisra feeder, which emanates from Rourkela GSS. Peak Loading of Bisra feeder is 138.3 Amp; conductor size is 232 AAAC and circuit length is approx. 10.00 Ckm. In order to provide alternate supply to Bisra PSS, an interconnector line can be erected between Bondamunda and Bisra PSS.
- During the storm (Kaalbaishakhi), more than 30 large trees were uprooted and fell on both feeder simultaneously, resulting in the outage of feeders. Due to the extensive tree damage, restoration activities became extremely challenging and time-consuming. Even with the deployment of three ODRAF teams, it took nearly three days to clear the fallen trees from the line corridor and restore the network. Consequently, consumers experienced a prolonged power interruption of more than 8 hours.
- The incident clearly demonstrated that the existing overhead line failure during severe weather conditions. Therefore, it is proposed to construct 33kV new link line from Bondamunda PSS to Bisra PSS to eliminate outages caused by tree falls, improve network resilience, ensure effective utilization of backup supply arrangements, and provide reliable power supply during adverse weather conditions.

Proposal for 33kV New Link Line from Mundrajore PSS to Jhariabahal PSS:

Proposal:

The proposed 33 kV link line from Mundrajore PSS to Jhariabahal PSS is aimed at strengthening the reliability of the 33kV Laikera & Jhariabahal feeder by establishing a new link line feeder, improving voltage regulation, and minimizing technical losses.

Requirement/ Need of the proposal:

Objective:

To provide N-1 reliability to 33kV Laikera & Jhariabahal feeder and address the Low voltage issues in area.

Existing Scenario:

- The 33 kV Laikera feeder presently emanates from Khandakata GSS and supplies power to Pokharsale, Sodamal, Laikera, Kirmira, and Mundrajore PSSs. The feeder has a total line length of 53 CKm and is constructed with conductor sizes of 80 sq.mm, 100 sq.mm, and 232 sq.mm. The peak load for FY 2026-27 is 5 MVA, with an expected annual load growth rate of 6.34%.
- The 33 kV Laikera feeder also provides N-1 reliability support to two High Revenue Feeders (HRFs), namely the 33 kV Kolabira feeder (13 MVA) and the 33 kV Bagdihi feeder (8 MVA).
- The 33 kV Bamra feeder, a High Revenue Feeder (HRF), emanates from Bamra GSS and supplies power to Jhariabahal PSS. The feeder has a total line length of 15 CKm and is constructed with a 148 sq.mm conductor. The peak load for FY 2026-27 is 1.5 MVA.
- The proposed scheme is essential for providing N-1 reliability support to the 33 kV Laikera feeder and the 33 kV Bagdihi HRF.
- During maintenance activities or in the event of a breakdown at Khandakata GSS, the 33 kV Laikera feeder becomes unavailable, resulting in power outages in the affected areas.
- The proposed interconnecting line between Mundrajore PSS and Jhariabahal PSS will establish ring connectivity between Khandakata GSS and Bamra GSS. This will enhance system reliability, ensure continuity of power supply during contingencies, and reduce technical losses.

11kV new line from Pipalkani Feeder to 11kV Tepren feeder

Proposal:

11kV Link Line between Pipalkani Feeder and Tepren Feeder to mitigate undervoltage and N-1 reliability.

Requirement/ Need of the proposal:

Objective:

To shift load of 11kV Pipalkani feeder to 11kV Tepren feeder for length reduction, low voltage problem mitigation and to provide N-1 source connectivity essential for managing flooding situation during rainy season due to backwater of lower suktel project.

Existing Scenario:

- In present scenario, the 11kV Pipalkani feeder emanates from 33/11kV Chudapali PSS.
- The length of the feeder is 105.28CKm and the conductor size of the feeder is 55sqmm.
- The peak demand of the feeder in Fy26-27 is 2.79MVA.
- Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 3.24MVA.
- Under the projected loading condition of Fy28-29 the feeder will face low voltage problem, and the lowest voltage shall be 9.22kV which is below the permissible limit of 10.01kV.
- During rainy season due to Lower Suktel Project the feeder gets submerged. So, it is also essential to have a N-1 source for Pipalkani Feeder.
- The 11kV Tepren feeder emanates from 33/11kV Budhabahal PSS. The length of the feeder is 21.26CKm and the conductor size of the feeder is 100 & 55sqmm. The peak demand of the feeder in Fy26-27 is 0.7MVA. Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 0.8MVA.
- To mitigate the above problems, it is proposed to shift load to 11kV Tepren feeder of Budabahal PSS through a link line.

Proposed Scenario:

- For load shifting of 11kV Pipalkani Feeder to 11kV Tepren feeder, 4CKm 11kV link line shall be constructed between Kuhakahan of Pipalkani Feeder to Goilpita of Tepren Feeder of Budabahal PSS.
- Out of 4CKm link line, 3CKm shall be constructed using 100sqmm AAA conductor and 1CKm shall be constructed using 100sqmm AAA covered conductor and 11mtr WPB poles.
- It shall be also noted that a new 11kV feeder is also planned under Lower Suktel Project Fund to bifurcate the Uparbahal branch of Pipalkani feeder. However, to mitigate the Low Voltage problem and to reduce the length of the Pipalkani feeder it is essential to erect the proposed link line.

- The total technical loss of the 11kV Pipalkani feeder shall be reduced from 357.92kW to 170.76kW at peak load.
- The tail end voltage of the feeder shall be improved from 9.22kV to 10.34kV.
- Initially the Pipalkani feeder was 105.28CKm and Tepren Feeder was 21.26CKm, after implementation of the proposals under Capex FY27-28 and Lower Suktel Project Fund the Pipalkani feeder shall become 43.14CKm, Tepren Feeder 46.14CKm and Uparbahal feeder planned under LSP fund will be 44.08CKm.
- Establish N-1 contingency connectivity for 11kV Pipalkani Feeder.

Proposal for Undervoltage mitigation and length reduction of 11kV Sarsara Feeder:

Proposal:

11 kV new line from Bagbadi PSS for undervoltage mitigation and length reduction of 11kV Sarsara feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency by reducing the 11kV length of the 11 kV Sarsara feeder, improvement in voltage regulation, ensure N-1, and reduction in technical losses.

Existing Scenario:

- Presently, the 11 kV Sarsara feeder emanates from the 33/11 kV Turunga PSS and serves to the villages such as Rengalpali, Sarsara, Talicharpali, Tentel tikira, Mutu Tikira, Naulia, Kudiatikira, Khuntpali. Also, this feeder is feeding power supply to around 15 numbers of industries, RTO office etc.
- The total route length of the 11 kV Sarsara feeder is 64.3Ckm with having 100/55/34 sq.mm conductors. The feeder is carrying a peak demand of 4.3 MVA during FY 2026-27 with tail end voltage of 9.2kV.
- Based on the projected load growth of 8.71% per annum, the feeder peak load is projected to reach 4.7 MVA by FY 2028-29, while the tail-end voltage is expected to decline to 9.14 kV.
- Total consumer hour loss of feeder is 1474754 consumer hrs in FY25-26.

Physical Target:

March 2028

Cost Benefit Analysis (Refer Annexure No- 89):

- Revenue Return- 94.26 %
- Pay Back Period- 1.06 Years.

Benefit to the system and consumers:

- The tail-end voltage of the feeder is expected to improve from 9.14 kV to 10.3 kV, resulting in a significant reduction in technical losses from 12.6% to 6.2% at peak load conditions.
- Total losses at peak loading the 11 kV feeders will be reduced from 510.14 kW to 186.70 kW, leading to substantial energy savings and enhanced overall system efficiency.

- The total feeder length of existing 11kV Sarsara feeder will be reduced from 64.3 Ckm to 33.5 Ckm & feeder length of newly proposed 11kV Sarsara feeder will be 31.4 Ckm, improving network reliability and operational effectiveness.
- N-1 contingency support will be established for both 11 kV feeders, ensuring improved supply reliability and operational flexibility during feeder outages or maintenance activities.
- The proposed system strengthening will ensure a reliable, safe, and high-quality power supply to approximately 15 industries connected to the 11 kV Sarsara feeders.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.

Proposal for Length Reduction and Undervoltage mitigation of 11kV Gobra Feeder:

Proposal:

11kV link line between 11kV Gobra feeder and 11kV Chheliamal feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length for network reliability and efficiency by load bifurcation through link line with 11kv Chheliamal feeder.

Existing Scenario:

- In present scenario, the 11 kV Gobra Feeder emanates from the 33/11 kV Bandhopala PSS and serves a significant number of LI Consumers, village and Domestic consumer in Gobra area.
- This 11kV feeder is an old feeder with a route length of 80CKm and having 55/100 sq.mm conductor. The feeder is carrying a peak demand of 0.87MVA during FY 2026-27 and the tail end voltage of the feeder s 10.2 KV.
- Considering the anticipated load growth of 6.8 % per annum, the feeder peak load is expected to reach 1.01MVA by FY28-29 and the tail end voltage of the feeder will be 10.01 KV.
- 11kV Cheliamal Feeder emanates from 33/11 kV Karlapada PSS. The length of the Feeder is 23.67 Ckm with conductor size of 55/100 sq.mm AAAC. The peak demand of the feeder in FY 26-27 is 0.38 MVA. Considering the load growth of 6.78% per annum, the feeder load is expected to reach 0.44 MVA by FY 28-29 and tail end voltage of the Feeder will be 10.78kV.
- To mitigate the low voltage and reliability problems of 11kV Gobra feeder it is proposed to erect link line with 11kV Cheliamal feeder for load shifting.
- Total consumer hour loss of 11kV Gobra feeder & 11kV Chelimal feeder is 1644911 and 265494 consumer hours in FY25-26.

Proposal for Length Reduction and Undervoltage mitigation of 11kV Kalopala Feeder:

Proposal:

11 kV Link Line between 11kV Kalopala Feeder and 11kV Nandigaon feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length of 11 KV Kalopala Feeder for network reliability and efficiency by creating a link Line between Kalopala Feeder and Nandigaon feeder.

Existing Scenario:

- In present scenario, the 11 kV Kalopala Feeder emanates from the 33/11 kV Mahichala PSS and serves a significant number of LI Consumers and Domestic Consumers in Kalopala area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 64.22 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 1.17 MVA during FY 2026-27 and the tail end voltage of the feeder s 10.06 KV.
- Considering the anticipated load growth of 8.37 % per annum, the feeder peak load is expected to reach 1.53 MVA by FY28-29 and the tail end voltage of the feeder will be 9.7 KV.
- 11kV Nandigaon Feeder emanates from 33/11 kV Mahichala PSS. The length of the Feeder is 16.98 Ckm with conductor size of 55 sq.mm. The peak demand of the feeder in FY 26-27 is 0.43 MVA. Considering the load growth of 6.78% per annum, the feeder load is expected to reach 0.51 MVA by FY 28-29 and tail end voltage of the Feeder will be 10.8kV.
- To mitigate the low voltage and reliability problems of 11kV Kalopala feeder it is proposed to erect link line with 11kV Nandigaon feeder for load shifting.
- Total consumer hour loss of 11kV Kalopala feeder & 11kV Nandigaon feeder is 1070425 and 164645 consumer hours in FY25-26.

Proposal for Length Reduction and Undervoltage mitigation of 11kV Sarabong Feeder:

Proposal:

11kV new line from Sarabong PSS for the bifurcation 11kV Sarabong Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length for network reliability and efficiency by emanating a new feeder from Sarabong PSS.

Existing Scenario:

- In present scenario, the 11 kV Sarabong Feeder emanates from the 33/11 kV Sarabong PSS and serves a significant number of LI Consumers and Domes in Nuapada area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 86.58 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 1.58 MVA during FY 2026-27 and the tail end voltage of the feeder is 10.0 KV.

Proposal for length reduction & Reliability improvement of 11kV Sarsara Feeder:

Proposal:

11kV new line from Tuniapali PSS to Sarsara to bifurcate Sarsara Feeder.

Requirement/ Need for the proposal:

Objective:

To reduce the length, technical loss & Improve reliability of the 11 kV Sarsara Feeder.

Existing Scenario:

- The 11 kV Sarsara Feeder, emanating from 33/11 kV Tuniapali PSS, supplies power to domestic consumers across several revenue villages.
- Due to its long route length of 130 CKm and coverage of remote areas, feeder reliability is adversely affected by faults and interruptions.
- Total tripping and consumer hour loss of Sarsara feeder is 75nos. and 1474754 consumer hours respectively in FY25-26, resulting in frequent supply interruptions to consumers.

Payback Period- 25.9Years

Benefit to the system and consumers:

- The proposed bifurcation will reduce the length of the existing 11 kV Sarsara Feeder from 130CKm to 65CKm, resulting in improved voltage regulation and reduced technical losses from 36kW to 30kW.
- The scheme will also establish N-1 supply reliability for 11kV Sarsara feeder, ensuring continuity of power supply during feeder outages and maintenance activities.
- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.

Proposal for Overloading & Undervoltage mitigation with Length Reduction of 11KV Kinjirkela Feeder

Proposal:

11kV new line for bifurcation of Kinjirkela feeder to mitigate overloading and undervoltage.

Requirement/ Need of the proposal:

Objective:

To mitigate the overloading & undervoltage issue at tail end & reduce feeder length for network reliability and efficiency of 11KV KINJIRKELA Feeder which will also improve in reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV KINJIRKELA Feeder emanates from the 33/11 kV KINJIRKELA PSS and serves a significant number of consumers in KINJIRKELA, town area with other Rural area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 188.7 CKm. The feeder is carrying a peak demand of 5.3 MVA during FY 2026-27 and the tail end voltage of the feeder is 9.5 KV.
- Considering the anticipated load growth of 4.25 % per annum, the feeder peak load is expected to reach 5.7 MVA by FY28-29 and the tail end voltage of the feeder will be 8.8 KV.

Benefit to the system and consumers:

- Improvement in tail end voltage from 9.3 kV to 10.28 kV.
- The total technical losses at peak loading on 11 kV feeders will decrease from 759.69 kW to 203.51 kW, leading to enhanced energy savings and system performance.
- This proposal will reduce the existing feeder length from 188 Ckms to 60 Ckms, resulting in easier maintenance & reliable supply with N-1 connectivity.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to consumers in KINJIRKELA, town area with other Rural area.

Proposal for Length Reduction of 11KV Tudalaga Feeder

Proposal:

11kV link Line for load shifting of Tudalaga feeder for N-1 connectivity & technical loss reduction.

Requirement/ Need of the proposal:

Objective:

To reduce feeder length for network reliability, ease in maintenance and efficiency of 11KV TUDALAGA Feeder which will also improve in reduction in technical losses with N-1 connectivity.

Existing Scenario:

- In present scenario, the 11 kV TUDALAGA Feeder emanates from the 33/11 kV BADGAON PSS and serves a significant number of consumers in BARGAON & TUDALAGA area with other Rural area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 55 CKm. The feeder is carrying a peak demand of 1.97 MVA during FY 2026-27 and the tail end voltage of the feeder is 10.20 KV.
- Considering the anticipated load growth of 4.25 % per annum, the feeder peak load is expected to reach 2.29 MVA by FY28-29 and the tail end voltage of the feeder will be 10.1 KV.
- Total tripping and consumer hour loss of Tudalaga feeder is 204nos. and 1128607 consumer hours respectively in FY25-26.

Proposal for Length Reduction and Undervoltage mitigation of 11kV Thianal Feeder:

Proposal:

11kV new line from the Bhaktbadkudar PSS for bifurcation of 11kV Thianal feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11 kV Thianal Feeder to mitigate undervoltage, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- The 11 kV Thianal feeder emanates from the 33/11kV Bhaktbadkudar PSS having conductor size of 50sqmm ACSR.
- The feeder has a length of approximately 102.3 CKM, making fault identification and patrolling difficult, particularly in the rural sections of the feeder.
- The peak load of the feeder is 1.4 MVA, with tail-end voltage of 10.1kV in FY 26-27.
- Considering the anticipated load of 3.48%, the feeder peak load will rise to 1.9 MVA with a tail-end voltage of 9.9kV in Fy 28-29.
- Due to the long feeder length and difficult fault identification, frequent interruptions are likely to result in prolonged restoration time, affecting supply reliability, revenue realization, and customer satisfaction.
- Total consumer hour loss of feeder is 1148691 consumer hours in FY25-26.

Loading Scenario (FY26-27) and Projected Loading (FY28-29):

Existing SLD:

Note: - Yellow indicating the undervoltage sections

Proposed Scenario:

- New 11kV feeder is proposed from Bhaktbadkudar PSS to Gursang and shall be connected with existing 11kV Thianal feeder.
- The new line is proposed to be constructed using one 11kV indoor VCB & 10 Ckm line using 11Mtr WPB poles with 1 no. of NH crossing to be laid with UG cable. A 4-pole with two AB-switch shall install at gursang for N-1 between existing and proposed feeder.
- Upon completion of the scheme, a portion of the load currently served by the 11kv Thianal Feeder will be shifted to the new feeder. In addition, feeder length will be reduced so fault restoration will be easier, technical loss will be reduced.

Cost Benefit Analysis: - (Refer to Annexure No-89 for details.)

Revenue Return- 5.15%

Pay Back Period- 19.41 Years

Benefit to the system and consumers:

- The total technical losses at peak loading on 11 kV feeders will decrease from 112.03 kW to 74.35 kW, leading to enhanced energy savings and system performance.
- Improvement in reliability is expected by reduction in consumer hours by around 10-15% after execution of proposal.
- Total length of 11kV Thianal feeder will reduce from 102.3 Ckm to 49.6 CKm and length of new feeder will be 57.3 Ckm.
- Improvement in tail end voltage from 9.9 kV to 10.6 kV.
- Establish N-1 contingency support for 11KV Thianal feeders.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to rice mills, and Lift Irrigation (LI) consumers in thianal areas, supporting uninterrupted industrial and agricultural operations.

Proposal for Length Reduction of 11kV Jujomura Feeder:

Proposal:

11kV new line from Jujomura PSS to bifurcate 11kV Jujomura feeder.

Requirement/ Need for the proposal:

Objective:

- To provide reliable power supply at Jujumura Block area where all the government offices, block, schools, medical and Commercial complex present.

Existing Scenario:

- In present scenario, 11Kv Jujomura feeder emanates from 33/11kV Jujomura PSS, having approximate consumer base4100 Numbers.
- The length of the feeder is 124 Ckm and the conductor size of the feeder is 55 sqmm. The peak demand of the feeder in Fy26-27 is 1.39MVA.
- Considering the load growth of 4.94% per annum, the expected demand in Fy28-29 shall be 1.70 MVA with tail-end voltage of 10.31kV.
- The feeder route passes through forest areas and identified elephant corridor zones of Jujomura. As a result, there is frequent disturbance of power supply due to line faults and outages at Jujomura HQ where all the government offices, block, schools, medical and market complexes are running.
- Due to the extended feeder length, fault patrolling and location identification require considerable time.
- Total tripping and consumer hour loss of feeder is 298 nos and 577085 consumer hours in FY25-26.

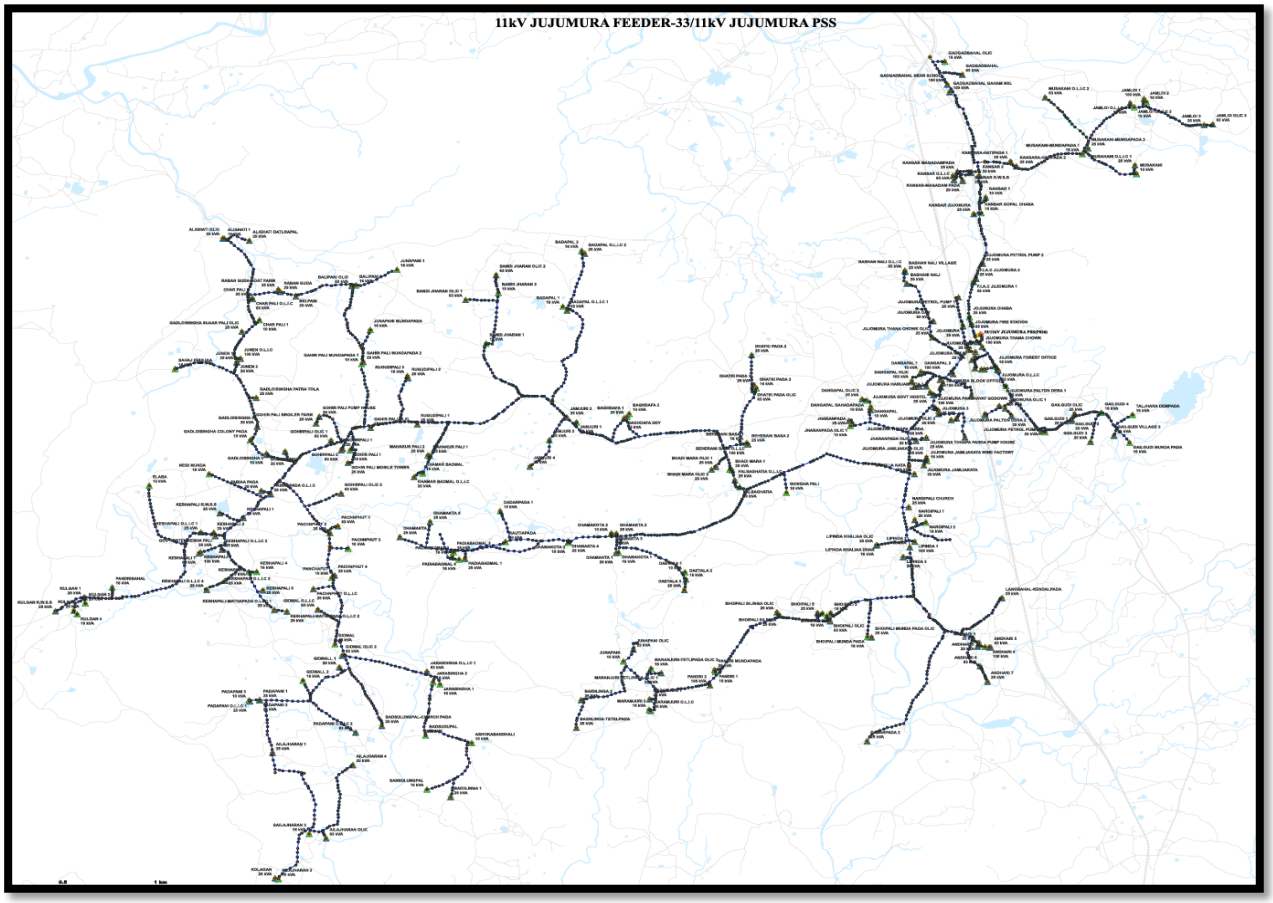
(11kV JUJOMURA Feeder)



Proposed Scenario:

- To provide reliable power supply at Jujomura HQ where all the government offices, block, schools, medical and market complexes are running, it is proposed to bifurcate 11KV Jujomura feeder by constructing a new 11kV feeder (Kesapali) of 6.45 Ckm from Jujomura PSS to near Jujomura Railway station.
- For the 11kV line, 6.0 Ckm 100 Sqmm Cover conductor and 2*0.45 ckm (2 -Run), 3C*300sqmm XLPE cable shall be laid for NH & Railway crossing.
- 11kV bay with Indoor VCB shall be installed at Jujomura PSS for evacuation of new feeder.
- After segregation reliable Power supply available at Jujomura HQ where all the government offices, block, schools, medical and market complexes.

Proposals for length reduction and undervoltage mitigation of 11 kV Balanda Feeder

Proposal:

11kV Link Line between 11kV Piplikani Feeder and 11kV Balanda Feeder.

Requirement/ Need of the proposal:

Objective:

- To reduce the overall route length and to mitigate undervoltage issue of existing 11 kV Balanda Feeder by providing a new 11 kV link with the existing Piplikani Feeder which will improve reliability as well as establishing N-1 connection between both the feeders.

Existing Scenario:

- At present, the 11 kV Balanda and 11 kV Pipalkani Feeders emanate from Bandhbahal PSS and Pandri PSS, respectively. Both feeders are predominantly constructed using 55 sq. mm ACSR conductor, with route lengths of approximately 71.1 Ckm and 22.9 Ckm, respectively. The feeders carry peak loads of 1.61 MVA and 0.42 MVA, with tail-end voltages of 10.1 kV and 10.9 kV respectively in FY 26-27.
- Considering an anticipated load-growth of 6.79%, peak load of 11kV Balanda & 11kV Piplikani feeders will be 1.83 MVA and 0.47 MVA, with tail-end voltage of 9.9kV and 10.8kV respectively.
- Total consumer hour loss of 11kV Balanda feeder & 11kV Piplikani feeder are 398278 and 72771 consumer hours in FY25-26.

Existing SLD:

Proposed Scenario:

- A 0.5 Ckm new 11 kV link line is proposed from the existing 11 kV Pipalkani Feeder towards the 11 kV Balanda Feeder using 100 sq. mm AAAC conductor, supported on 11 mtr WPB poles.
- The proposed link line will interconnect the two feeders, enabling load transfer from the 11 kV Balanda Feeder to the existing 11 kV Pipalkani Feeder and facilitating effective load sharing between the two feeders.
- Two sets of 11 kV DP AB Switches (400 A) are proposed at the respective ends of the link line to provide operational flexibility for feeder isolation, load transfer, and restoration during breakdowns or maintenance activities.

ANNEXURE 20

Scheme Name: Installation/Replacement of 33kV & 11kV VCB and Control Relay Panel

Background

At the time of inception, it was observed that the 33kV PSS incomer feeders, PTRs, and 11kV outgoing feeders were operating without adequate protection, relying solely on HG fuses. This poses significant risks to system reliability, personnel safety, and asset longevity.

Obsolete/defunct VCB have already exceeded ten thousand operations, with spare parts no longer available due to OEM product discontinuation i.e. *(Schneider, Vijai Electricals, BHEL, Easun Reyrolle, and Megawin)*, leaving many units beyond repair.

Sl. No.	Activity	UOM	Total Scope across System	Work Covered so far (up to FY'27DPR)	Balance Requirement	Remarks
			A	B	C=A-B	
1	33 KV FDR VCB	No	172	147	25	No VCB cases – 6
2	33 KV PTR VCB	No	202	176	26	No VCB cases – 2
3	11 KV PTR VCB	No	211	142	69	No VCB cases – 11
4	11 KV Feeder VCB	No	549	325	224	No VCB cases – 16
	TOTAL		**1134**	**790**	**344**	

Most of the old Control and Relay Panels (CRPs) are non-communicable with SCADA systems, and their deteriorated condition makes them unsuitable for modern automation requirements. To address these critical gaps, replacement of non-communicable CRPs with SCADA-compatible panels is essential to enable real-time monitoring, fault isolation, and automation.

3	Replacement of 11KV CRP	No	467	362	105	
	TOTAL		**923**	**758**	**165**	

CAPEX investment in breaker replacement and protection upgrades is therefore vital to ensure regulatory compliance, operational safety, and long-term reliability of the sub-transmission network.

Proposal

It is proposed to install new **Vacuum Circuit Breakers (VCBs)** in 33kV incomer feeders, PTRs, and 11kV outgoing feeders, and to replace Obsolete/defunct VCBs of OEMs such as Schneider, Vijai Electricals, BHEL, Easun Reyrolle, and Megawin, whose spare part manufacturing has been discontinued.

	Replacement of 11 KV VCB for PTR Protection	Nos.	14
TOTAL			**148**

In addition, the replacement of non-communicable Control & Relay Panels (CRPs) with SCADA-compatible panels is proposed. This initiative will strengthen the protection system, enhance supply reliability, and align the sub-transmission network with modern automation and monitoring requirements.

Description	Sub-Description	UoM	Qty
Replacement of 33KV CRP	Replacement of 33KV FDR CRP with cabling	Nos.	16
	Replacement of 33KV PTR CRP with cabling	Nos.	28
Replacement of 11KV FDR CRP	Replacement of 11KV FDR CRP with cabling	Nos.	54
TOTAL			**98**

Requirement/ Need of the Proposal

The existing feeders and PTRs are operating with HG fuses, which pose significant risks to system reliability, personnel safety, and asset longevity. Several circuit breakers have already exceeded ten thousand operations, with OEM support discontinued, leaving many units beyond repair.

Also, most of the old CRPs are non-communicable with SCADA systems, and their deteriorated condition makes them unsuitable for automation. Replacement with SCADA-compatible CRPs and new VCBs is therefore essential to enable real-time monitoring, fault isolation, and automation, while ensuring compliance with safety and reliability standards.

Scope of Work

The scope of work includes installation of 33kV, and 11kV bays equipped with VCBs, and SCADA-compatible CRPs, along with associated control cables. The work will cover testing, commissioning, and integration with SCADA systems to enable automation and remote monitoring. It also involves removal of obsolete HG fuses, aged circuit breakers from discontinued OEMs, and non-communicable CRPs, thereby modernizing the protection system and ensuring long-term reliability of the sub-transmission network.

Benefit to the System and Consumers

1. Ensures reliable isolation of faults, preventing minor issues from escalating into widespread outages and thereby improving SAIDI and SAIFI indices.
2. Enables faster restoration of supply after interruptions, directly contributing to improved SAIDI performance and reduced consumer inconvenience.
3. Rapid fault interruption minimizes stress on transformers and other equipment by reducing the duration of fault current flow.
4. Reduces the risk of catastrophic equipment failure, extending the operational life of transformers and avoiding costly replacements.
5. VCBs can be integrated with Supervisory Control and Data Acquisition (SCADA) systems for remote operation, minimizing the need for personnel to be near energized high-voltage equipment.

ANNEXURE 21

Scheme Name: Installation of 33 KV & 11KV Lightning Arrestors in PSS

Background

At the time of inception, it was found that in large no of Non ODSSP PSS, LAs are missing at various locations inside PSS. Lightning Arresters (LAs) are essential for protecting electrical equipment from damage caused by lightning strikes. In Odisha, where lightning occurrences are frequent, it is necessary to provide LA protection for electrical installations to safeguard them against such natural events. Investing in effective lightning protection measures is a proactive step toward building a safer, more reliable, and disaster-resilient electrical network.

Proposal

It is being proposed to install LAs on both sides of PTRs on priority to protect expensive equipment like PTRs and to ensure the stability and reliability of the electrical system.

Requirement/ Need of the Proposal

Installation of Lightning arrestors are essential as they serve as the first line of defence against transient over voltages caused by lightning strikes and switching operations.

Scope of Work

Scope includes installation of 33KV & 11 KV LAs along with earthing. Installation of 33kV LA and 311 Sets of 11kV LA on both sides of all the Power Transformers in entire TPWODL area.

Refer annexure 63 for location details.

Cost Benefit Analysis

Benefit to the System and Consumers:

Prevents insulation damage: Lightning can induce extremely high-voltage surges that can exceed the insulation's dielectric strength, causing it to break down.
An arrester diverts this energy to the ground before it can damage the transformer's delicate internal windings and insulation.

Avoids catastrophic failure: A direct hit or a surge can cause an internal flashover, which can lead to winding failure, oil ignition, and a transformer explosion. By diverting the surge, the arrester prevents these destructive events, protecting the rest of the substation infrastructure from collateral damage.

Extends equipment lifespan: Even surges that don't cause immediate failure can degrade a transformer's insulation over time. This premature aging shortens the equipment's useful life. Arresters mitigate this stress by clamping the voltage at a safe level.

Mitigates flashovers: A lightning strike on or near a sub-transmission line can cause a high-voltage surge that travels along the conductor. This surge can cause a flashover across the line's insulators, resulting in a line-to-ground or line-to-line fault. This can interrupt the power supply and trip circuit breakers.
Protects downline equipment: By clamping the surge on the line, arresters prevent the overvoltage from propagating toward sensitive equipment at the end of the line, such as distribution transformers and consumer meters. This coordinated protection prevents widespread damage and ensures a more reliable power supply for customers

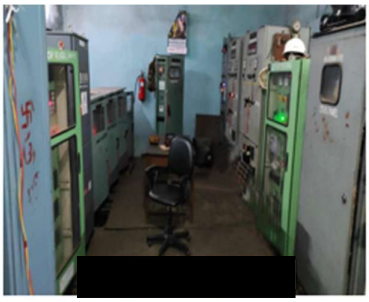
ANNEXURE 22

Scheme Name: Technical and Safety compliance of PSS (provision of Switchyard Fencing, Bus Heightening, Cable Trench, Trench Cover, Toe Wall, Metal Spreading, Water Supply for Earth pits, yard PCC and associated work)

Background

Presently in non-ODSSP PSS, there is no Toe wall & Gravelling, trenches are filled with dust, trench covers are found damaged/missing. There were multiple joints in bus conductors, more over bus conductors found under sized. No fencing available on the periphery of switch yard posing a threat to human. PTRs are kept at ground level (insufficient plinth height), no statutory ground clearance was being maintained.



Proposal

It is proposed to achieve Technical and Safety compliance of PSS by provision of Switchyard Fencing, Bus Heightening, Cable Trench, Trench Cover, Toe Wall, Metal Spreading, Water Supply for Earth pits, yard PCC and associated work to improve safety and reliability of electrical network.

Requirement/ Need of the Proposal

Technical and Safety compliance of PSS is necessary to address safety risks, improve operational reliability, and extend the lifespan of equipment due to aging, wear, and environmental exposure. This will ensure compliance with new safety standards, mitigates failures caused by factors like flashovers and aging equipment, and maintains a stable power supply by replacing outdated components.

Scope of Work

Construction of switchyard Fencing, Bus Heightening, Cable Trench, Trench Cover, Toe Wall, Metal Spreading, Water Supply for Earth pits, yard PCC and associated work.

Cost Benefit Analysis

Benefit to the System and Consumers

1. **Refurbishment of 33/11 kV switchyard** is a critical activity to ensure the substation's long-term reliability, safety, and operational efficiency. As infrastructure ages, these components can degrade, compromising the entire system.
2. **Toe wall** holds the gravel in place and prevents the gravel layer in the switchyard from spreading out over time. This maintains the gravel's uniform depth, which is crucial for safety.
   It acts as a physical boundary, clearly separating the high-voltage gravel-filled area from surrounding areas, enhancing safety for personnel.
3. It helps manage the flow of rainwater, preventing erosion of the substation's foundation and maintaining the integrity of the earth mat.
4. **The gravel** provides a high-resistivity surface layer that increases the resistance between a person's feet and the ground during an earth fault. This significantly **reduces the risk of electric shock from step and touch potential,** which is a major safety concern in high-voltage areas.
5. A dense layer of gravel **suppresses the growth of weeds and grass, reduces the fire risks and prevent electrical hazards,** especially when dry.
6. In case of an oil spill from a transformer, the porous gravel layer can absorb the oil, helping to contain and suppress fire.
7. **Cable trenches** are crucial for organizing and protecting the vast network of control and power cables in a switchyard. Refurbishment is often required for the following reasons:
   Over time, concrete trenches and covers can crack and crumble due to age, weather, and physical stress. Refurbishment ensures **cables are protected from mechanical damage, water ingress, and animal intrusion.**
   Cracked or broken trench covers are a significant tripping hazard for personnel. Reconstructing the covers ensures a safe, level surface for walking and access to cables for maintenance.
   New trenches and covers can provide better organization for a growing number of cables, preventing clutter and making future maintenance and cable replacement easier
8. **Bus conductors** connect the various circuit breakers, transformers, and lines within the switchyard. Reconfiguration improves reliability and flexibility as a substation's load demands change, its bus configuration become outdated or insufficient. Reconfiguring the bus, provide greater operational flexibility and higher reliability.
9. To accommodates new equipment bus conductor must be reconfigured to higher capacity.
10. Installation/replacement of 33KV & 11KV Isolators for increased O&M flexibility.

ANNEXURE -23

Scheme Name: Replacement of Aged / Sick Power Transformers

- **Background:**

Power Transformers (PTRs) are critical assets in the distribution network and play a vital role in maintaining safe, reliable and uninterrupted power supply to consumers. Many of PTRs in the TPWODL network have been in service for more than 25 years and have undergone prolonged electrical, thermal and environmental stresses.

With ageing, PTRs are subject to insulation ageing, repeated thermal cycling, moisture ingress, oil deterioration, bushing deterioration, winding insulation degradation and other associated equipment-related issues, which may adversely affect their condition and increase the risk of failures, unplanned outages and higher maintenance requirements.

Overloading due to load growth, ageing, operating conditions, and historical fault events may further accelerate the deterioration of transformer health. Failure of a PTR can result in prolonged supply interruptions, emergency restoration arrangements and increased operational and maintenance requirements.

Based on remnant life assessment, condition monitoring, transformer age, loading, site conditions, failure history and other health parameters, TPWODL has identified aged/outlived and sick PTRs requiring replacement. Considering the asset condition, reliability requirements, future load growth and life-cycle cost, replacement with new PTRs of suitable ratings has been proposed under the CAPEX programme.

The proposed replacement will improve transformer reliability, provide adequate capacity for present and projected demand, reduce the risk of forced outages, and support the N-1 reliability philosophy.

- **Proposal:**

It is proposed to replace aged Power Transformers (PTRs) identified based on their age, operational condition, failure history, loading pattern and overall asset-health assessment, in a phased manner.

The proposed replacement will focus on PTRs where continued operation poses a comparatively higher risk of failure and supply interruption. Replacement of such aged PTRs will help improve system reliability, reduce forced outages and strengthen the overall distribution network.

- **Requirement/ Need of the Proposal:**

Replacement of aged PTRs is required to mitigate the increasing risk associated with continued operation of ageing critical distribution assets. The requirement of the proposal is based on the considerations such as ageing of insulation, increased probability of failure, increased losses, reduction in equipment functionality due to ageing, decreased supply reliability, equipment and personnel safety considerations, asset renewal and long-term network sustainability.

Proposal for overloading mitigation of 33kV Titlagarh Feeder:

Proposal:

33kV Line Augmentation from Laltikra GSS to Industrial Estate PSS.

Requirement/ Need of the proposal:

Objective:

To improve network reliability by increasing feeder capacity, voltage profile and reduction in technical loss of network and mitigate overloading by augmentation of existing 33kV Titlagarh Feeder.

Existing Scenario:

- At present, 33kV Titlagarh feeder is an HRF feeder emanating from Laltikra GSS and feeding power to Industrial Estate PSS and HT Consumer. The feeder is radial, having length of 4.4Ckm with conductor size of 100 sq.mm and the peak load demand in FY26-27 is 14.97MVA with minimum voltage of 32.1kV.
- Considering projected load growth for 2 years @5.75% per year, 33kV Titlagarh feeder will experience a projected load of 16.84 MVA with minimum voltage of 32kV .

Existing FY26-27 Loading and projected load at 33kV Feeder:

Proposal for reliability improvement of 33kV Kantabanji Feeder:

Proposal:

33kV Line Augmentation from Mohanty pada to Nearby railway crossing.

Requirement/ Need of the proposal:

Objective:

To improve network reliability, voltage profile and reduction in technical loss of network by refurbishment of existing 33kV Kantabanji Feeder.

Existing Scenario:

- At present, 33kV Kantabanji feeder is emanating from Kantabanji GSS and feeding power to Kantabanji PSS and serves as N-1 to 33kV Kantabanji Industrial feeder. The feeder is having length of 4.14Ckm with conductor size of 100/232 sq.mm and the peak load demand in FY26-27 is 8.92MVA with minimum voltage of 32.5kV.
- The feeder is passing in the closer proximity to nearby urban houses of the Kantabanji town area and is in unsafe condition. These conductors are snapping frequently because they have become very old and weak due to aging and brittleness. In addition, the poles are 8 Mtr/9 Mtr PSC and minimum ground clearance has not been maintained in several places over the feeder. The line shifting is not possible due to presence of railway and private residential area.
- Considering projected load growth for 2 years @5.75% per year, 33kV Kantabanji feeder will experience a projected load of 11.04 MVA with minimum voltage of 32.4kV.

Proposal for overloading mitigation of 33kV Bisora Feeder:

Proposal:

33kV Line Augmentation from Nuapada GSS to Bisora PSS T-off.

Requirement/ Need of the proposal:

Objective:

To improve network reliability by increasing feeder capacity, voltage profile and reduction in technical loss of network and mitigate overloading by augmentation of existing 33kV Bisora Feeder.

Existing Scenario:

- At present, 33kV Bisora feeder is emanating from Nuapada GSS and feeding power to Bisora PSS and Saipala PSS. The feeder is having length of 44.18Ckm with conductor size of 55/100 sq.mm and the peak load demand in FY26-27 is 15.08MVA with minimum voltage of 27.57kV.
- Considering projected load growth for 2 years @7.26% per year, 33kV Bisora feeder will experience a projected load of 18.01 MVA with minimum voltage of 26.5kV.

Existing FY26-27 Loading and projected load at 33kV Feeder:

Proposal for reliability improvement of 33kV Junagarh Feeder:

Proposal:

33kV Line Augmentation from Kalampur PSS T-off to Th Rampur PSS.

Requirement/ Need of the proposal:

Objective:

To improve network reliability and reduction in technical loss of network by augmentation of existing 33kV Junagarh Feeder.

Existing Scenario:

- At present, 33kV Th. Rampur feeder is emanating from Kashipur GSS and feeding power to Kalampur, Th. Rampur, Gunupur and Adri PSS as well as HT Consumers. The feeder is radial, having length of 100.17 Ckm with conductor size of 100/148 sq.mm and the peak load demand in FY26-27 is 10.65 MVA with minimum voltage of 27.7kV.
- From Th. Rampur PSS to Kalampur PSS the existing feeder part is traversing through dense forest area which is creating reliability issue for Kalampur PSS by causing frequent transient tripping. In Future 1 Nos. of Megalift (Megalift Th Rampur-1987 KVA) is getting charged through this feeder.
- Considering projected load growth for 2 years @7.26% per year, 33kV Th. Rampur feeder will experience a projected load of 11.93 MVA with minimum voltage of 27.18kV.

Requirement/ Need of the proposal:

Objective:

To improve network reliability by increasing feeder capacity, voltage profile and reduction in technical loss of network through augmentation of existing 33kV Belgaon Feeder.

Existing Scenario:

- At present,33kV Belgaon feeder is emanating from Kesinga GSS and feeding power to Nunmath, Karlamunda, Juradubra PSS and 3nos of HT consumer under Kalahandi circle and 1no. of PSS and 4nos. of HT Consumer under Bolangir Circle. The feeder has a length of 102.6Ckm with conductor size of 100/232 sq.mm and the peak load demand in FY26-27 is 7.93 MVA with minimum voltage of 31.20kV.
- The existing feeder infrastructure from Amath chowk to Rajapada is in deteriorated condition and the line passes through forest cover and some part passes through elephant movement area.

Proposal for Reliability Improvement of 33kV Laikera Feeder:

Proposal:

A) 33kV Line Augmentation from Badbahal chowk to Kolabira PSS

B) 33kV Line Augmentation from Badbahal Chowk to Laikera PSS

Requirement/ Need of the proposal:

Objective:

To reliability improvement by strengthening of existing 33kV Laikera Feeder. Line augmentation of the 33 kV Laikera feeder from Badbahal Chowk to Kolabira PSS and Laikera PSS is proposed to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses

Existing Scenario:

- Presently, the 33 kV Laikera feeder emanates from Khandakata GSS and supplies power to Pokharsale, Sodamal, Laikera, Kirmira, and Mundrajore PSSs. The feeder has a total line length of 53 CKm with conductor sizes of 80 sq.mm, 100 sq.mm, and 232 sq.mm. The peak load for FY 2026-27 is 5 MVA, and the expected annual load growth is 6.34%.
- The 33 kV Laikera feeder also provides N-1 reliability support to two High Revenue Feeders (HRFs), namely 33 kV Kolabira feeder (13 MVA) and 33 kV Bagdihi feeder (8 MVA).
- The line section from Badbahal Chowk to Laikera PSS is very old and in a deteriorated condition, resulting in frequent tripping, breakdowns, and power supply interruptions.
- The line section from Badbahal Chowk to Kolabira PSS is constructed with 80/100 sq.mm conductors. During contingencies, particularly when the Kolabira feeder gets faulty from the Sarasmal GSS end, the existing 80 sq.mm conductor section is unable to carry the transferred load, thereby affecting system reliability. The current carrying capacity of 80 Sqmm AAAC conductor is 237 Amp.
- Therefore, augmentation and reconductoring of the 33 kV Laikera feeder is proposed to improve the reliability of the Laikera feeder, enhance the N-1 reliability of the Kolabira and Bagdihi HRFs, reduce outages and maintenance requirements, and ensure uninterrupted power supply to consumers in the area.

Proposal for reliability improvement of 33kV Airport-1 Feeder:

Proposal:

33kV Line Augmentation from Budhipadar GSS to Airport PSS.

Requirement/ Need of the proposal:

Objective:

To improve the reliability of power supply by strengthening the existing 33 kV Airport-1 feeder network. Augmentation of the existing 33 kV Airport-1 feeder from Buddhipadar GSS to Airport PSS will enhance feeder reliability, improve voltage profile, increase power capacity, and reduce technical losses in the network.

Existing Scenario:

- Presently, the 33 kV Airport-1 feeder emanates from Budhipadar GSS and supplies power to Airport PSS, Durlaga PSS & DHH Medical PSS. The feeder has a total route length of 18.62 Ckm with conductor sizes of 100sq.mm. The peak load for FY 2026-27 is 8.5 MVA, with an annual load growth of 6.34%.
- The 33 kV Airport-1 feeder also provides N-1 reliability support to High Revenue Feeders (HRFs) 33 kV Bagdihi feeder (8 MVA).
- The 33kV Airport-1 feeder from Budhipadar GSS to Medical PSS is constructed with 100 sq.mm conductors. During contingencies, particularly when the 33kV Bagdihi feeder get faulty from the Budhipadar GSS end, the existing 100 sq.mm conductor section is unable to carry the transferred load, thereby affecting system reliability. During N-1 the loading of 33kV Airport feeder will be 308.2 Amp (17.62 MVA). The current carrying capacity of 100sqmm AAAC conductor is 272 Amp.
- Therefore, augmentation of the 33 kV Airport-1 feeder is proposed to improve the reliability of the Airport-1 feeder, enhance the N-1 reliability of the Bagdihi HRFs, reduce outages and maintenance requirements, and ensure uninterrupted power supply to consumers in the area.

Proposal for Reliability Improvement of 33kV Kusmi Feeder:

Proposal:

33kV Line Augmentation from Laidaguna to Baunsa Godam.

Requirement/ Need of the proposal:

Objective:

To reliability improvement by strengthening of existing 33kV Kusmi Feeder. Line augmentation of the 33 kV Kusmi feeder from Laidaguna to Baunsa Godam is proposed to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses

Existing Scenario:

- Presently, the 33 kV Kusmi Feeder emanates from Khandakata GSS and supplies power to Hadipali, Laida, Fasimal, Kusmi, and Burda PSSs. The feeder has a total route length of 93.34 CKM with a conductor size of 148 sq.mm. The projected peak load for FY 2026-27 is 5.7 MVA, with an annual load growth of 6.34%.
- The line section from Laidaguna to Baunsa Godam is strung with 148 sq.mm conductors and passes through a dense forest area, adversely impacting system reliability. The corridor is highly prone to thunderstorms, falling trees, and adverse weather conditions. Additionally, the area falls within an elephant movement corridor, resulting in frequent faults and outages.
- Due to the long feeder length and challenging geographical terrain, restoration during breakdowns often takes longer, leading to extended supply interruptions and increased maintenance efforts.
- Therefore, augmentation of the 33 kV Kusmi Feeder is proposed to strengthen the network, improve system reliability, reduce outage frequency and restoration time, enhance voltage profile, and ensure uninterrupted power supply to consumers in the area.

Proposal for Overload mitigation & reliability improvement of 33kV Katarbaga Feeder:

Proposal:

24.10-33kV Line Augmentation from Lapanga PSS to Golamal AB switch (Reliable Industries)

Requirement/ Need of the proposal:

Objective:

To mitigate present and future overloading and improve the reliability of power supply by strengthening the existing 33 kV Katabaga feeder network. Laying of one new cable incomer section up to the inline RMU (Bhushan Steel RMU) and augmentation of the existing 33 kV network from Lapanga PSS to Golamal AB Switch is proposed to mitigate overloading of the existing cable section and strengthen the 33 kV Katabaga feeder. The proposed work will enhance feeder reliability, improve voltage profile, increase power transfer capability, and reduce technical losses in the network.

Existing Scenario:

- Presently, the 33 kV Katabaga HRF feeder emanates from Lapanga GSS and supplies power to 9 HT consumers and Katabaga PSS. The feeder has a total route length of 44 Ckm with conductor sizes of 148 sq.mm and 232 sq.mm. The peak load for FY 2026-27 is 22.6 MVA, with an annual load growth of 6.34%.
- The existing 400 sq.mm incomer cable section between Lapanga PSS and the inline RMU (Bhushan Steel RMU) is experiencing overloading. Loading on said line cable section is 376.2 Amp (21.4 MVA) and the current carrying capacity of 400Sqmm XLPE cable is 306 Amp.
- Under the existing network configuration, the conductor section from the RMU (near Lapanga PSS) to the tail end at Katabaga PSS is of 148 sq.mm size. The present loading on this section is approximately 315 A against its rated capacity of 350 A, leaving very little spare capacity. With the increasing demand from existing and prospective consumers, this conductor section is expected to become overloaded in the near future in the Lapanga-Katabaga area.
- Therefore, to mitigate present and future overloading, accommodate load growth, enhance feeder reliability, and increase the power-carrying capacity of the 33 kV Katabaga feeder, it is essential to lay a new cable section from the DP to the 33 kV Incomer RMU and augmentation from the RMU to Golamal AB Switch. This proposed strengthening will ensure reliable power supply and support future load requirements in the area.

Proposal for Reliability Improvement of 33kV Purnapani-1 Feeder:

Proposal:

33kV Line Augmentation from PLDQ to Nuagaon PSS.

Requirement/ Need of the proposal:

Objective:

To reliability improvement by strengthening of existing 33kV Purnapani-1 Feeder. Line augmentation of the 33 kV Purnapani-I feeder from PLDQ to Nuagaon PSS is proposed to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses.

Existing Scenario:

- Presently, 33 kV Purnapani-1 feeder is an HRF feeder emanating from Kuarmunda GSS, supplying power to Hatibari PSS, Nuagaon PSS, and 6 nos. of HT consumers. The feeder has a total line length of 63 CKm with conductor sizes of 100 sq.mm and 232 sq.mm. The peak load for FY 2026-27 is 18 MVA. And Load Growth considered is 4.88%.
- The feeder section from PLDQ to Nuagaon PSS is in a deteriorated condition and has been in service for approximately 30-35 years. Due to its ageing infrastructure and poor condition, the feeder is experiencing reliability and maintenance challenges, necessitating refurbishment/reconductoring to ensure safe and reliable power supply.
- Total tripping and consumer hour loss of Purnapani-1 feeder is 41 nos. and 1485708.87 consumer hours respectively in FY25-26.

Proposal for Augmentation of 33kV K.Balang Feeder:

Proposal:

33kV Line Augmentation from Ganighasa to Barsuan PSS.

Requirement/ Need of the proposal:

Objective:

To enhance feeder capacity by Augmenting the existing 33kV K.Balang Feeder from Ganighasa to Barsuan PSS. Augmentation of 33kV K.Balang feeder from Ganighasa to Barsuan PSS to enhance feeder capacity, reliability, improvement of voltage profile, and reduction of technical losses.

Existing Scenario:

- At present, the 33 kV K. Balang feeder, emanating from Bonai GSS, supplies power to Barsuan PSS, K. Balang PSS, and Kalta PSS. A new 33 kV link line between Barsuan PSS and Tensa PSS is currently under construction. Upon its completion, an additional load of approximately 3-4 MVA, presently catered through the 33 kV Tensa feeder, is proposed to be transferred to the 33 kV K. Balang feeder.
- The K. Balang feeder has a total line length of 70.75 Ckm and is constructed with 148 sq.mm and 232 sq.mm conductors. The feeder recorded a peak load of 4.3 MVA in FY 2026-27, and an annual load growth rate of 4.88% has been considered for future demand projections.
- Following the proposed load transfer from the Tensa feeder, the loading on the K. Balang feeder is expected to increase to approximately 5-7 MVA. Owing to the considerable feeder length, this additional loading will significantly increase the voltage drop along the feeder during peak load conditions. Consequently, maintaining the voltage profile within the statutory limits may become challenging.
- Furthermore, the 33 kV line section from Ganighasa to Barsuan PSS passes through a dense forest corridor and is presently constructed with 120 sq.mm covered conductor. Considering the anticipated increase in power flow and the strategic importance of this section in supplying Barsuan, Kalta, K. Balang, and future Tensa loads, strengthening of this line section is essential to ensure reliable and efficient power transfer.
- Load flow studies indicate that, after transferring an additional 2-3 MVA load from the 33 kV Tensa feeder to the 33 kV K. Balang feeder, the voltage at Tensa PSS dropped to 29.9 kV. However, after conductor augmentation, the voltage is projected to improve to 30.04 kV, thereby enhancing the voltage profile of the network.
- Therefore, upgradation of the critical line sections with higher-capacity conductors is required to accommodate the additional load, minimize voltage drop, reduce technical losses, improve feeder reliability, and ensure compliance with statutory voltage regulations while supporting future load growth.
- Total tripping and consumer hour loss of Tensa feeder is 81 nos. and 1192695.767 consumer hours respectively in FY25-26. And Total tripping and consumer hour loss of K. Balang feeder is 21 nos. and 359195.67 consumer hours respectively in FY25-26.

Proposal for Reliability Improvement of 33kV NIT Feeder:

Proposal:

33kV Line Augmentation from Rourkela GSS to Koelnagar PSS.

Requirement/ Need of the proposal:

Objective:

To reliability improvement by UG conversion of existing 33kV NIT Feeder. Conversion of Overhead line to Underground cable from Chhend GSS to Koelnagar PSS of NIT feeder to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses.

Existing Scenario:

- Presently, 33 kV NIT feeder is an HRF feeder emanating from Chhend GSS, supplying power to NIT PSS, Bisra PSS, Jarikela PSS and 8 nos. of HT consumers. NIT and PGCIL is the major HT consumer takes power from NIT feeder which comes under Rourkela City Area. The feeder has a total line length of 52 CKm with conductor sizes of 148 sq.mm and 232 sq.mm. The peak load for FY 2026-27 is 21.7 MVA. And Load Growth considered is 4.88%.
- The severe storm on 25th May 2026 exposed a major weakness in the existing network.
- During the storm, more than 30 large trees were uprooted and fell on both circuits simultaneously, resulting in the outage of both feeders. Due to the extensive tree damage, restoration activities became extremely challenging and time-consuming. Even with the deployment of three ODRAF teams, it took nearly three days to clear the fallen trees from the line corridor and restore the network. Consequently, consumers experienced a prolonged power interruption of more than 8 hours.
- Total tripping and consumer hour loss of 33kV NIT feeder is 7 nos. and 46078.32 consumer hours respectively in FY25-26.
- The incident clearly demonstrated that the existing overhead line failure during severe weather conditions. Therefore, it is proposed to lay underground (UG) cable between Chhend GSS to Koelnagar PSS to eliminate outages caused by tree falls, improve network resilience, ensure effective utilization of backup supply arrangements, and provide reliable power supply during adverse weather conditions.

- *Pay Back Period- 6.29 Years.*

Benefit to the system and consumers:

- *Reliability improvement of 33kV NIT (HRF) feeder.*
- *Improve the voltage profile of NIT feeder from 28.7 kV to 30.2 kV.*
- *Reduction in technical losses from 1453.45 kW to 868.95 kW at peak loading resulting in annual energy savings of 2.6 Mus.*
- *Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.*
- *As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.*
- *Ensure reliable & quality power supply to the consumers of Rourkela Town (NIT-Bisra Area) and HT consumers.*

Proposal for N-1 power supply to 33kV Belgaon Feeder:

Proposal:

Construction of new 33kV Line from Amath 6-Pole to Amath AB Switch for reliability improvement.

Requirement/ Need of the proposal:

Objective:

To improve reliability, voltage profile and provide N-1 connectivity from Amath 6-Pole to Near Amath Chowk AB Switch to provide ring connectivity between 33kV Belgaon Feeder and 33kV Negalift-2 Feeder for power supply during fault of 33kV Belgaon Feeder.

Existing Scenario:

- At present, 33kV Belgaon feeder is emanating from Kesinga GSS and feeding power to Belgaon and Karlamunda PSS as well as HT consumers. The feeder has a length of 102.6Ckm with conductor size of 100/232 sq.mm and the peak load demand in FY26-27 is 7.93 MVA with minimum voltage of 31.20kV.
- The 33kV Megalift feeder is emanating from Kesinga GSS and feeding power to 5nos of HT Megalift consumer. The feeder is having length of 76.36Ckm with conductor size of 100 sq.mm and the peak load demand in FY26-27 is 3.29 MVA with minimum voltage of 30.98kV.
- Whenever the 33 kV Belgaon feeder experiences fault, power supply is restored through a link line from the 33 kV Megalift-2 feeder. Since the link line is located at the tail end of both feeders, operation under N-1 conditions results in a significant voltage drop at the tail end. Moreover, as the existing link line passes through an elephant movement area, receiving power through this arrangement is not reliable**.**
- Therefore, to ensure a reliable power supply and improve the tail-end voltage during a fault on the 33 kV Belgaon feeder, it is proposed to establish a dedicated link between the 33 kV Belgaon feeder and the 33 kV Megalift-2 feeder from Amath 6-Pole to Amath,Bijkhaman**.**
- Considering projected load growth for 2 years @7.26% per year, 33kV Belgaon feeder will experience a projected load of 8.65 MVA with minimum voltage of 30.96kV and 33kV Megalift feeder will experience a projected load of 3.23 MVA with minimum voltage of 30.98kV.

Proposal for 33kV New Line from Hirakud GSS to Badbazar PSS:

Proposal:

Construction of new 33kV Line from Hirakud GSS to Badbazar PSS for reliability improvement.

Requirement/ Need of the proposal:

Objective:

To ensure a safe and reliable power supply to Badbazar PSS from Hirakud GSS and provide N-1 reliability to Badbazar PSS, thereby strengthening the power supply system within the Sambalpur city area. The proposed 33 kV line from Hirakud GSS to Badbazar PSS aims to enhance the reliability of the Sambalpur city distribution network by establishing a new underground feeder. The project will improve voltage regulation, reduce technical losses, and ensure a more reliable power supply to consumers in the area.

Existing Scenario:

- At present, the 33 kV Cheruapada feeder is emanating from Ganeshnagar (Sambalpur) GSS. The feeder has a total route length of 11.6 CKM and peak load of 26.8 MVA. It is strung with 232 sq.mm AAAC conductor and is currently operating under overloaded conditions.
- Approximately 80-85% of the Sambalpur city load is being supplied through the 33 kV Cheruapada feeder. Any breakdown or outage on this feeder significantly affects the reliability of power supply across the city. Considering the existing overloading condition and anticipated future load growth, the construction of a new feeder from Hirakud GSS to Badbazar PSS is proposed to share the load, reduce feeder overloading, and improve system reliability.
- The proposed feeder will ensure a secure and reliable power supply to both commercial and domestic consumers in the service area.
- Badbazar PSS caters to a critical urban load centre covering the Cheruapada and Badbazar areas of Sambalpur City, serving a large number of residential, commercial, and institutional consumers.
- Existing network constraints and feeder outages have resulted in widespread power interruptions, affecting not only the Badbazar area but also other parts of Sambalpur City.
- In view of these vulnerabilities, there is an urgent need to establish an additional power source from a separate GSS to provide N-1 redundancy, enhance network reliability, and ensure uninterrupted power supply to this important urban load centre.

Proposal for Reliability improvement of 11kV Balangir-2 Feeder:

Proposal:

11kV Augmentation of Balangir-2 Feeder from Laltikra PSS to Gandhi Stadium to mitigate overloading.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of 11kV Balangir-2 feeder of Laltikra PSS and to ensure "N-1" connectivity.

Existing Scenario:

- In present scenario, the 11kV Balangir-2 feeder emanates from 33/11kV Laltikra PSS. It is a HRF and an urban feeder.
- The length of the feeder is 6.72CKm and the conductor size of the feeder is 100 & 55sqmm. The peak demand of the feeder in Fy26-27 is 3.98MVA.
- Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 4.56MVA.
- Under the projected loading condition of Fy28-29 the feeder shall be overloaded by 123.85%.

- In present scenario, the 11kV Samara Feeder emanates from 33/11kV Tusura PSS.
- The length of the feeder is 33.13CKm and the conductor size of the feeder is 34sqmm. The peak demand of the feeder in Fy26-27 is 1.26MVA.
- Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 1.45MVA.
- The conductor of trunk line is very old and has become worn out with multiple bindings. The operations team has also reported about conductor snapping during peak time. Hence Conductor augmentation is very essential.
- Total tripping and consumer hour loss of feeder is 120 nos and 485383 consumer hours respectively in FY25-26.

Benefit to the system and consumers:

- Improvement in reliability will be achieved due to replacement of old conductor.
- Feeder loading reduced from 69.84% to 47.39%, resulting in substantial reduction in technical loss percentage from 2.95% to 2.41% at Peak Load condition.
- The total technical loss of the 11kV Loisingha Feeder shall be reduced from 67.79kW to 54.88kW at peak load condition.
- The tail end voltage of the feeder shall be improved from 10.79kV to 10.86kV.
- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.

11kV link line for shifting load from Sujia Feeder to Kandajuri Feeder:

Proposal:

11kV Link Line between Sujia Feeder and Kandajuri Feeder to improve reliability.

Requirement/ Need of the proposal:

Objective:

To shift load of 11kV Sujia feeder to 11kV Kandajuri feeder for low voltage problem mitigation, to provide N-1 source connectivity and to improve reliability of industrial consumers located at the tail end of Sujia feeder.

Existing Scenario:

- In present scenario, the 11kV Sujia feeder emanates from 33/11kV Chhatamakhna PSS.
- The length of the feeder is 45.09CKm and the conductor size of the feeder is 55sqmm.
- The peak demand of the feeder in Fy26-27 is 1.61MVA. Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 1.86MVA.
- Under the projected loading condition of Fy28-29 the feeder will face low voltage problem, and the lowest voltage shall be 9.91kV which is below the permissible limit of 10.01kV.
- Apart from undervoltage problem, the tail end industrial consumers are also facing reliability problem.
- In present scenario, the 11kV Kandajuri feeder emanates from 33/11kV Bhadra (Kandajuri) PSS. The length of the feeder is 23.12CKm and the conductor size of the feeder is 100 & 55sqmm. The peak demand of the feeder in FY26-27 is 0.65MVA. Considering the load growth of 6.78% per annum, the expected demand in FY28-29 shall be 0.74MVA.
- To mitigate the low voltage and reliability problems of 11kV Sujia feeder it is proposed to erect link line with Kandajuri feeder of Bhadra PSS for load shifting.

11 kV Augmentation of Bhatipada Feeder from nearby railway track to Goshala 100 KVA DTR.

Proposal:

11kV augmentation of 11kV Bhatipada Feeder emanating from Titlagarh PSS for overloading mitigation.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency, mitigate the overloading & reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV Bhatipada Feeder emanates from the 33/11 kV Titlagarh PSS and serves critical consumers of Titlagarh's major school, irrigation colony area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 18.3 CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 3.4 MVA during FY 2026-27.
- Considering the anticipated load growth of 4.52% per annum, the feeder peak load is expected to reach 3.71 MVA by FY28-29.

Benefit to the system and consumers:

- Feeder loading will be optimized in a substantial reduction in technical losses at peak from 8.76% to 7.43%.
- The total technical losses at peak loading on 11 kV feeder will decrease from 204.04 kW to 168.38 kW, leading to enhanced energy savings and system performance.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to Ghasian area, Barpadar GP, Ganjaudar area etc, supporting uninterrupted operations.
- Voltage Improvement from 9.7 to 9.9 after 5 yr projection.

11kV Augmentation of Sahala feeder from Cherupali PSS to Sahala Village.

Proposal:

11kV Augmentation of Sahala feeder for undervoltage mitigation.

Requirement/ Need of the proposal:

Objective:

To mitigate undervoltage of 11kV Sahala Feeder of Cherupali PSS.

Existing Scenario:

- In present scenario, the 11KV Sahala Feeder emanates from the 33/11 kV Cherupali PSS and serves a significant number of consumers and rice mills in Sahala Salepali Area.
- This 11kV feeder has a length of 36.9 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 2.7 MVA during FY 2026-27.
- Considering the anticipated load growth of 5.88% per annum, the feeder peak load is expected to reach 3 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.64 KV, which is below the statutory permissible limit.
- As the under-voltage issue could not be resolved even after the proposed augmentation of the 11 kV Sahala Feeder by 5 CKM, an additional link line proposal has been recommended for bifurcation of the Sahala Feeder.

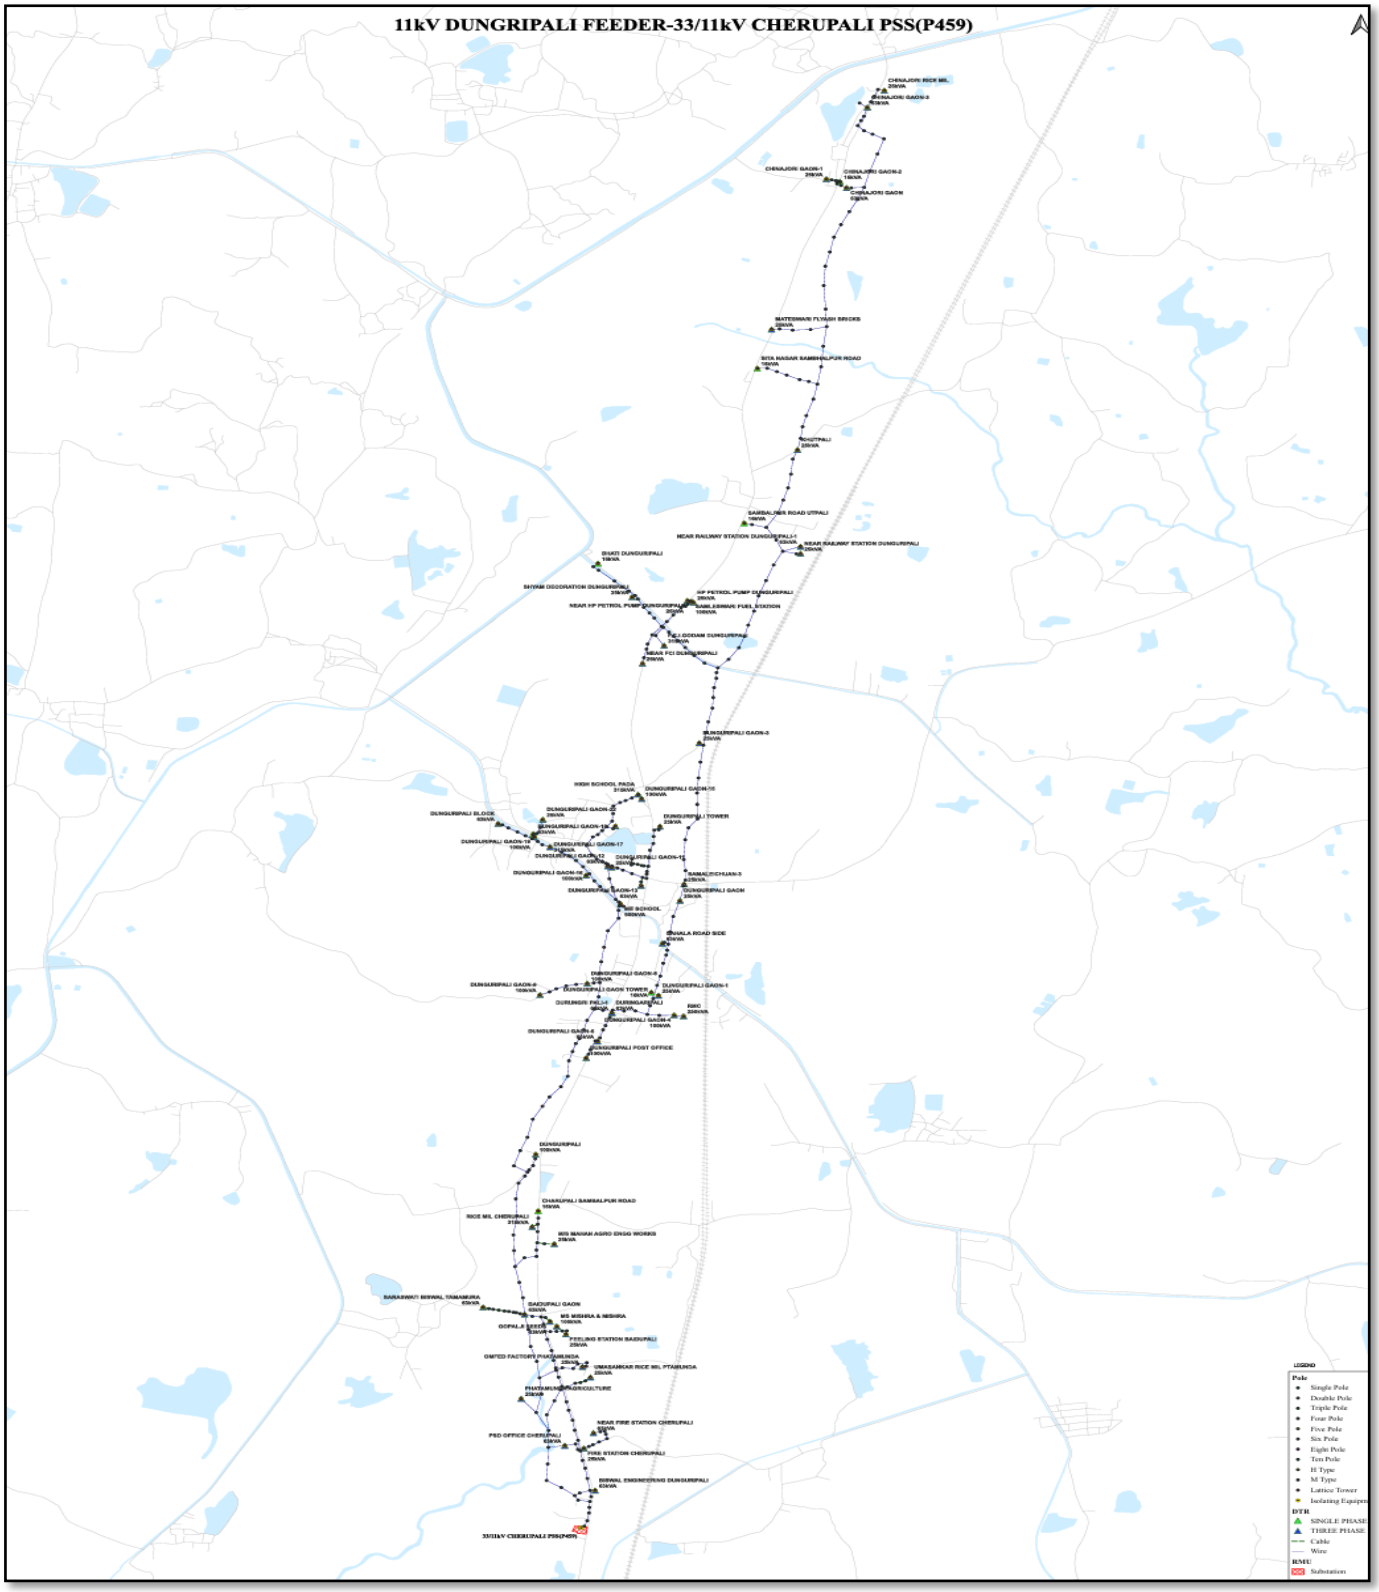
(11kV Dunguripali Feeder)



Proposed Scenario:

- To mitigate the underloading of 11kV Sahala Fdr, it is proposed to augment 5CKm line from Cherupali PSS to Sahala Village
- For augmentation, 5CKm 100sqmm AAA bare conductor and Some Intermediate Pole for conductor sagging.
- 11kV New Link line proposed from nearby Rampur dungripalii fdr to Dungripali Village DSS.
- The proposed 11 kV line shall be laid using 3C × 300 sq.mm XLPE cable over a length of 300 meters, considering the presence of a railway crossing along the route, where underground cable is required for safety and statutory compliance.
- Upon completion of the scheme, a portion of the load currently served by the 11 kV Sahala Feeder will be shifted to 11KV Dungripali feeder. In addition, both Feeders will be provided with mutual N-1 contingency support from independent sources.

Load shifting of 11kV Badkarle feeder to singhjuba feeder:

Proposal:

11 kV Link Line between Singhijuba and Kadlipali Feeders for bifurcation of 11 kV Badkarley Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11 kV Badkarley feeder to mitigate, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- In present scenario, the 91524204_11KV Badkarley emanates from the 33/11 kV Pandkital PSS and serves a significant number of consumers and rice mills in Pandkital area.
- This 11kV feeder has a length of 56.3 CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 2.3 MVA during FY 2026-27.
- Considering the anticipated load growth of 5.88% per annum, the feeder peak load is expected to reach 3.1 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.61 kV, which is below the statutory permissible limit.
- Whereas, in present scenario the 11KV Singhijuba Fdr and 11KV Kadlipali fdr having the length of 22.5 Ckm and 41.5 Ckm respectively and the Voltage Status is within Limit.
- It shall also be noted that after load shifting to Kadlipali feeder of Bishalpali PSS, Kadlipali Feeder will face low voltage problem and to resolve its low voltage issue, 5CKm line Augmentation is planned in Capex Fy27-28 under.
- Total tripping and consumer hour loss of feeder is 172 nos and 1566466 consumer hours respectively in FY25-26.

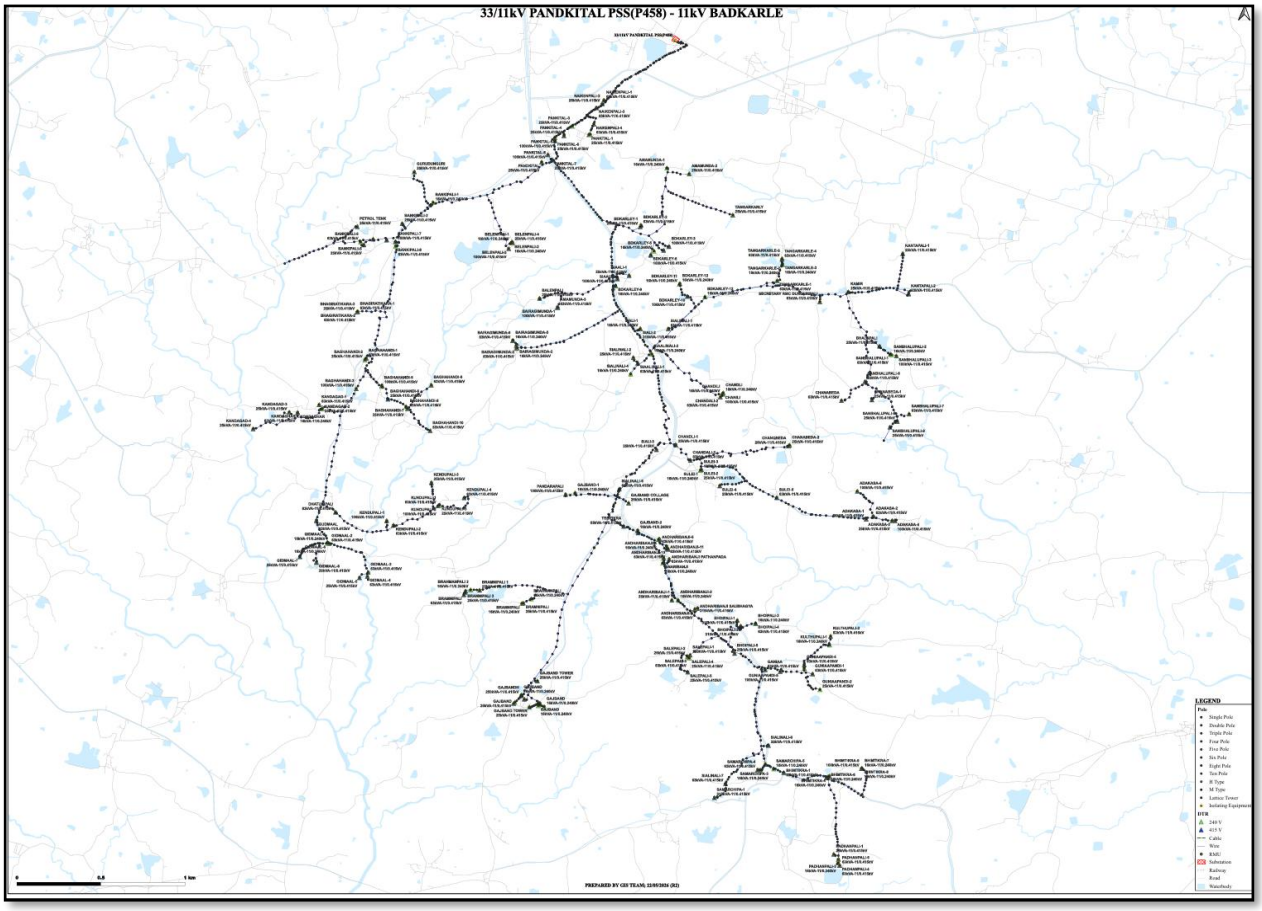
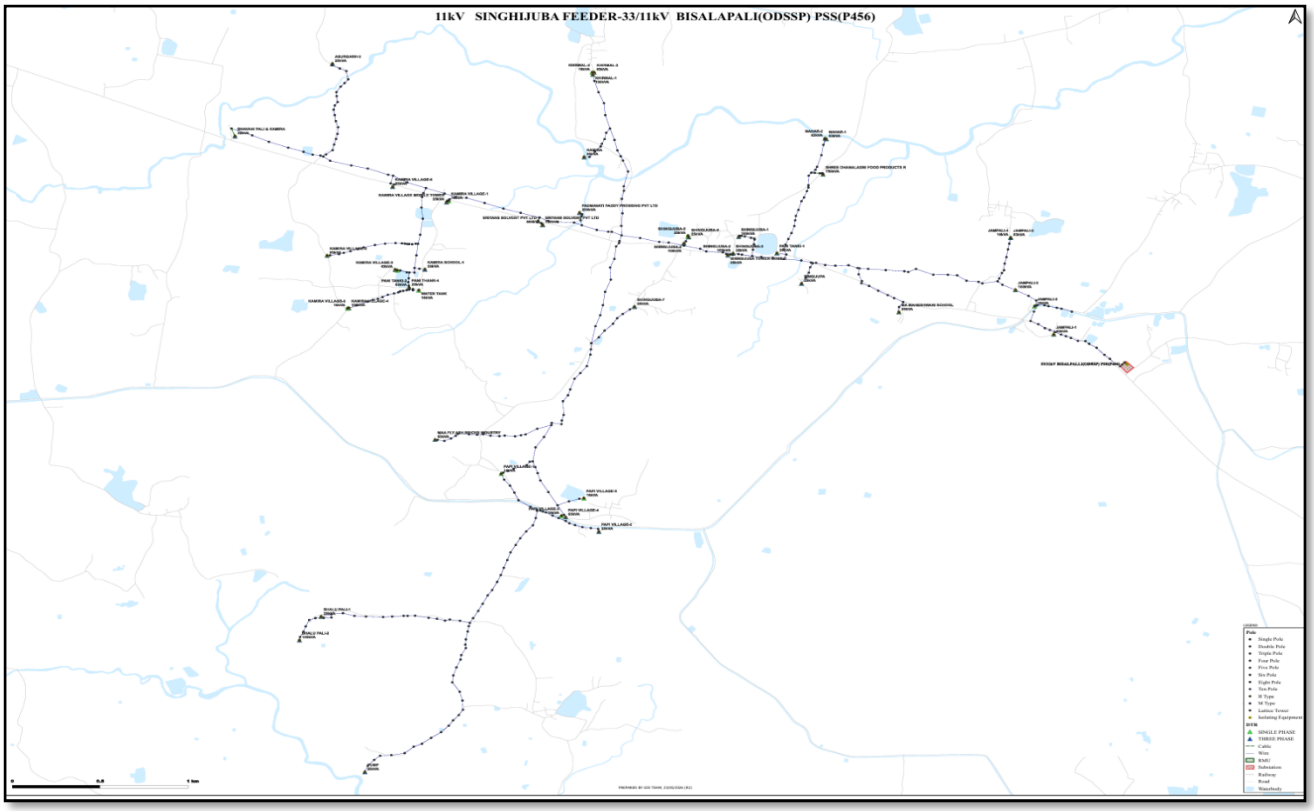
Existing SLD:

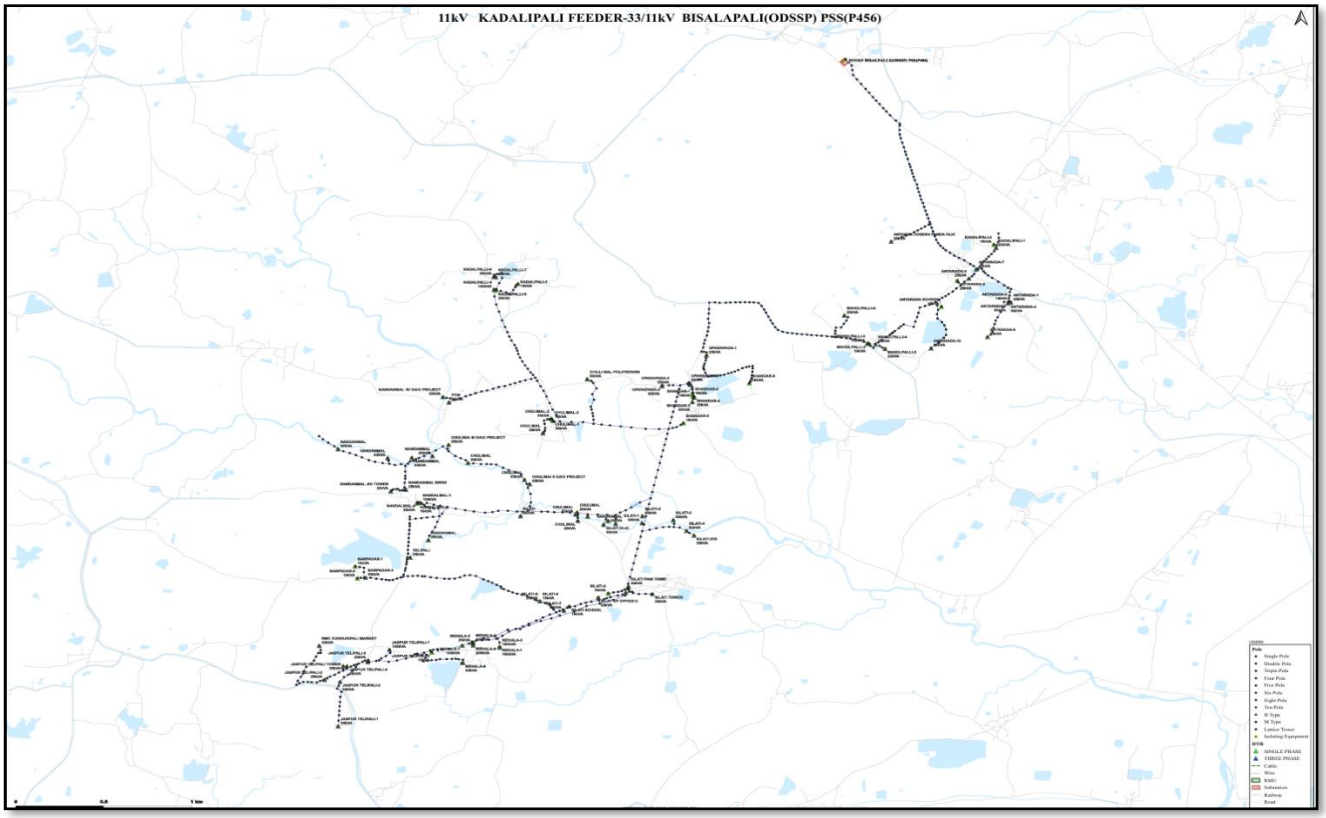
(11Kv Badkarley Feeder)



(11kV Singhijuba Feeder)



(11kV Kadalipali Feeder)



Proposed Scenario:

- For bifurcation and to mitigate low voltage of 11 kV Badkarley Feeder, two proposed link lines are required.
- One proposed link line will be established between 11 kV Badkarley Feeder and 11 kV Sighijuba Feeder, and another proposed link line will be established between 11 kV Badkarley Feeder and 11 kV Kadalipali Feeder to ensure reliability, and improvement of Voltage profile in the area.
- For the proposed linkline -1 between 11KV Badkarley FDR and 11KV Singhijuba FDR of length 3CKm will be erected using 11mtr WPB Pole , out of which 2CKm is Bare conductor + 1 Ckm will be Covered Conductor because it passes through dense forest corridor.
- For the proposed linkline -2 between 11KV Badkarley FDR and 11KV Kadalipali FDR of length 1CKm will be erected using 11mtr WPB pole.
- For the purpose of Isolation of the feeder, proposed 3 Nos of Ab Switch with 11mtr DP structure shall be used.
- Upon completion of the scheme, a portion of the load currently served by the 11 kV Badkarley Feeder will be shifted to 11KV Singhijuba feeder and 11KV Kadalipali FDR. In addition, Feeders will be provided with mutual N-1 contingency support from independent sources.
- After bifurcation of 11KV Badkarley feeder with 11KV Singhijuba and Kadlipali Feeder , Kadlipali Feeder tendence to be under voltage with a tail end voltage of 9.9KV (Before Mitigation of under voltage of kadlipali feeder).
- To mitigate the undervoltage of 11kV Kadalipali Fdr, it is proposed to augment 5CKm line from Bishalapali PSS to mahulpali Village(Binka Section).
- For augmentation, 5CKm 100sqmm AAA bare conductor and Some Intermediate Pole for conductor sagging.

Note :

- **Hence, conductor augmentation of the 11 kV Kadalipali Feeder has been proposed for a length of approximately 5.0 CKM to address the existing load growth and improve feeder performance. However, considering the projected increase in demand and future load addition in the area, the proposed augmentation is expected to provide an adequate and sustainable solution for the next three years.**
- **For long term sustainable purpose, we planned new PSS under Capex/Govt Scheme to maintain voltage within permissible limit.**

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11 kV Manikpur feeder to mitigate, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11KV MANIKPUR emanates from the 33/11 kV Mursundi PSS and serves a significant number of consumers and rice mills in Manikpur area.
- This 11kV feeder has a length of 86.45 CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 1.18 MVA during FY 2026-27.
- Considering the anticipated load growth of 5.88% per annum, the feeder peak load is expected to reach 1.42 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.67 kV, which is below the statutory permissible limit.
- Total tripping and consumer hour loss of feeder is 402 no's and 1213280 consumer hours respectively in FY25-26.

Proposal for Reliability improvement of 11kV Kangaon Feeder:

Proposal:

11kV line augmentation of 11kV Kangaon feeder from Sohela PSS to nearby Badipali DTR to improve the reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency through augmentation of the trunk section to improve in voltage regulation, and reduction in technical losses.
- Aging and deteriorated conductors and fittings increase fault risk (snap, hot spots) and maintenance costs replacing them improves reliability and safety.
- Replacing weak poles reduces line sag and mechanical failure risk under wind loading events.

Existing Scenario:

- The existing 11kV Kangaon feeder emanates from the 33/11kV Sohela PSS and supplies power to various categories of consumers, including Domestic, Agricultural and commercial establishments in and around Kangaon and adjoining areas.
- The trunk line conductor is a 55sqmm conductor that has been in service for more than 25 years, and the span lengths are excessively long, making the line susceptible to reliability and maintenance issues and there are multiple joints are present.
- This 11kV feeder operates in a radial configuration with a route length of 20.3CKm and 55sqmm conductor. The feeder is carrying a peak demand of 2.12MVA during FY 2026-27.
- Considering the anticipated load growth of 8.51% per annum, the feeder peak load is expected to reach 2.53MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage shall be 10.08kV.
- Total tripping and consumer hour loss of feeder is 24 nos and 138331 consumer hrs in FY25-26.

Cost Benefit Analysis (Refer Annexure No- 90):

- Revenue Return- 62.80%
- Pay Back Period- 1.6 Years

Benefit to the system and consumers:

- The total losses at peak loading on 11 kV feeders will decrease from 187.14kW to 154.13kW leading to enhanced energy savings. (Technical loss will be reduced from 8.74% to 7.09%)
- Improvement in reliability is expected by reduction in tripping and consumer hrs by around 10-15% after execution of proposal.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to various categories of consumers, including Domestic, Agricultural and local commercial establishments in the service areas.

Proposal for overload mitigation of 11kV Nadikhandi Feeder:

Proposal:

11 kV link line between 11kV Nadikhandi & 11kV Panchayat College feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate the overloading issue through load bifurcation of the 11 kV Nadikhandi feeder, enabling N-1 support, improved voltage regulation, and reduced technical losses.

Existing Scenario:

- The existing 11 kV Nadikhandi Feeder emanates from the 33/11 kV Town-I PSS and provides power supply to Bargarh Municipality areas.
- This 11kV feeder is considered as a high-revenue feeder & operates in a radial configuration with a route length of 10.6CKm and 100/55/34 sq.mm conductor. The feeder is carrying a peak demand of 5.33 MVA during FY 2026-27.
- Considering the anticipated annual load growth rate of 8.71%, the feeder peak load is projected to increase to 6.97 MVA by FY 2028-29, within the next two years.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.94 kV, which is below the statutory permissible limit.
- Total consumer hour loss of feeder is 401158 consumer hrs in FY25-26.

- The new 11kV link line is proposed to construct using AAAC 100Sqmm & 11Mtr WPB poles.
- Upon completion of the scheme, a portion of the load currently served by the 11 kV Nadikhandi Feeder will be shifted to the 11kV Panchayat Collage feeder. In addition, both High-Revenue Feeders (HRFs) will be provided with mutual N-1 contingency support from independent sources.

Cost Benefit Analysis (Refer Annexure No- 90):

- Revenue Return- 43.54%
- Pay Back Period- 2.3 Years

Benefit to the system and consumers:

- Feeder loading will be reduced from 133% to 79%, resulting in a substantial reduction in technical losses from 7.12% to 4.5% at peak loading conditions.
- The total losses at peak loading on 11 kV feeders will be reduced from 432.3 kW to 160.4 kW, leading to enhanced energy savings and system performance.

- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.
- Establish N-1 contingency support for 11 Nadikhandi feeder.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to urban consumers, Govt. offices, Police stations, PHD etc of Bargarh town.

Proposal for Undervoltage mitigation of 11kV Bardol Feeder:

Proposal:

11 kV new line from Khedapali PSS for load bifurcation of the existing Bardol Feeder.

Requirement/ Need of the proposal:

Objective:

Reliability improvement & undervoltage mitigation through load bifurcation of the 11 kV Bardol Feeder, ensure N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- Presently, the 11 kV Bardol Feeder emanates from the 33/11 kV Khedapali PSS and serves to Baragada Town areas, Kendriya Vidyalaya, Baragada DHH, Schools etc.
- The total route length of the 11 kV Bardol feeder is 33.4 Ckm with having 100/80/55/34 sq.mm conductors. The feeder is carrying a peak demand of 3.75 MVA during FY 2026-27 with tail end voltage of 10.07kV.
- In addition, a branch line of approximately 5CKm supplies power to exclusively rural areas. Frequent faults and interruptions on this branch line adversely affect the overall feeder performance, resulting in outages to important consumers and essential establishments connected to the feeder.
- Considering the anticipated load growth of 8.71% per annum, the feeder peak load is expected to reach 4.51 MV by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.9 kV, which is below the statutory permissible limit.
- Total consumer hour loss of feeder is 890247 consumer hrs in FY25-26.

Proposed Scenario:

- The new 11kV feeder is proposed from the existing Khedapali PSS to near backside of ACC factory and shall be connected with existing 11kV Bardol feeder.
- It is proposed to construct the new line utilizing the 11kV indoor VCB available at Khedapali PSS and 5.1Ckm new line using 11Mtr WPB poles. Also, for crossing of the railway crossing exists on proposed route, underground cable using 3C-300Sqmm XLPE is being proposed.

Proposal for Reliability improvement of 11kV Gurudwara Feeder:

Proposal:

11kV line augmentation of 11kV Gurudwara feeder to improve reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency through augmentation of the trunk section to improve in voltage regulation, and reduction in technical losses.
- Aging and deteriorated conductors and fittings increase fault risk (snap, hot spots) and maintenance costs replacing them improves reliability and safety.
- Replacing weak poles reduces line sag and mechanical failure risk under wind loading events.

Existing Scenario:

- The existing 11kV Gurudwara feeder emanates from the 33/11kV Pradhanpali PSS and supplies power to Bargarh town areas which includes important establishment like fire station, Collector residency, PHD etc.
- The trunk line conductor of 11kV Gurudwara feeder is of 100sqmm conductor, however the proposed sections is having 34sqmm conductor and has been in service for more than 25 years, and the span lengths are excessively long, making the line susceptible to reliability and maintenance issues and there are multiple joints are present.
- This 11kV feeder operates in a radial configuration with a route length of 6.5CKm and 34sqmm conductor. The feeder is carrying a peak demand of 1.45MVA during FY 2026-27.
- Considering the anticipated load growth of 8.71% per annum, the feeder peak load is expected to reach 1.71MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage shall be 10.9kV.
- Total tripping and consumer hour loss of feeder is 395349 nos and 18 consumer hrs in FY25-26.

Cost Benefit Analysis (Refer Annexure No- 90):

- Revenue Return- 133.92%
- Pay Back Period- 0.7 Years

Benefit to the system and consumers:

- The total losses at peak loading on 11 kV feeders will decrease from 132.92kW to 130.08kW leading to enhanced energy savings. (Technical loss will be reduced from 3.42% to 3.34%)
- Improvement in reliability is expected by reduction in tripping and consumer hrs by around 10-15% after execution of proposal.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to Bargarh town, Hospitals & schools.

Proposal for Undervoltage mitigation of 11kV Boringpader Feeder:

Proposal:

11kV line augmentation of 11KV Boringpader feeder From Jolko chowk to Chicharla-2, 63KVA DTR to mitigate undervoltage issue.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as network reliability and efficiency through augmentation of the 11kV Boringpader feeder to mitigate under voltage issue and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11kV Boringpader feeder emanates from the 33/11kV Kesinga PSS and serves a significant number of industrial consumers and rice mills in Kesinga area.
- This 11kV feeder is classified as an Industrial feeder as well as a HRF feeder & operates in a radial configuration with a route length of 43.08 CKm and having 55/148 sq.mm conductor.
- The feeder is carrying a peak demand of 2.47 MVA during FY 2026-27 and the tail end voltage of the feeder s 10.4 KV.
- Considering the anticipated load growth of 6.8% per annum, the feeder peak load is expected to reach 2.85 MVA by FY28-29 and the tail end voltage of the feeder will be 10 KV.

Proposed Scenario:

- To mitigate the Low Voltage issue and to improve the reliability of power supply of 11KV Boringpader feeder hereby it is proposed to augment 6Ckm of the feeder from Jolko chowk to Chicharla-2, 63KVA DTR from 55 sqmm AAAC to 100 sqmm AAAC.
- This augmentation work required 3Ckm Aug. using 100sqmm AAAC Bare conductor and 3 Ckm Aug using 100sqmm AAAC Insulated conductor as the line passes through private plantation & vegetation growth.
- 1 no of DP with AB Switch (400 A) will be required for the maintenance purpose.

Proposal for Reliability Improvement of 11kV College Feeder:

Proposal:

11kV line augmentation of 11KV College feeder from Irrigation colony Lane-21 to Manikeswari chowk to improve reliability.

Requirement/ Need of the proposal:

Objective:

To improve the network reliability, ensuring N-1 arrangement, to enhance quality of power supply and reduction in technical losses through augmentation of the 11kV College feeder.

Existing Scenario:

- In present scenario, the 11kV College feeder emanates from the 33/11kV Kusadungri PSS and serves to a significant number Govt. Institutions, college as well as domestic consumer in Bhabanipatana town area.
- This 11kV feeder is classified as a critical feeder & have a route length of 14.5 CKm and having 55/100 sq.mm conductor.
- This part of feeder consists of conductor size of 55 sqmm AAAC and 9/11mtr PSC/RSJ Poles which is in deteriorated condition.
- The ground clearance of feeder in this area is low, and the conductor is in damaged condition which leads to frequent conductor snapping.
- As well as this feeder is connected to another 11kv HRF feeder named Manikeswari feeder which feeder major district head quarter part of Bhabanipatana town area, so augmentation is required to provide reliable power supply during N-1 condition.
- The feeder is carrying a peak demand of 1.3MVA during FY 2026-27 and the tail end voltage of the feeder s 10.91 KV.
- Considering the anticipated load growth of 6.8% per annum, the feeder peak load is expected to reach 1.52MVA by FY28-29 and the tail end voltage of the feeder will be 10.89 KV.
- Total tripping and consumer hour loss of feeder is 91 nos and 439105 consumer hours in FY25-26.

Proposal for Reliability Improvement of 11kV Pokharibandh Feeder:

Proposal:

11kV line augmentation of 11KV Pokharibandh feeder from Biswanathpur PSS to Junirguda to improve reliability.

Requirement/ Need of the proposal:

Objective:

To improve the network reliability and efficiency of power supply as well as tail end voltage improvement and reduction in technical losses through augmentation of the 11kV Pokharibandh feeder.

Existing Scenario:

- In present scenario, the 11kV Pokharibandh feeder emanates from the 33/11kV Biswanathpur PSS and serves to a significant number domestic consumer as well as LI point in Pokharibandh area.
- This is a radial feeder with a route length of 25Ckm.
- This is an old feeder with existing conductor size of 55 sqmm AAAC and 8/9mtr PSC Poles which is in deteriorated condition as well as some part of the feeder passes through vegetation growth which leads to transient fault.
- The feeder is carrying a peak demand of 0.18 MVA during FY 2026-27 and the tail end voltage of the feeder is 10.90 KV.
- Considering the anticipated load growth of 6.80% per annum, the feeder peak load is expected to reach 0.24 MVA by FY28-29 and the tail end voltage of the feeder will be 10.87 KV.
- Total tripping and consumer hour loss of feeder is 118 nos and 202395 consumer hours in FY25-26.

Proposal for undervoltage mitigation of 11kV Dhanpur Feeder:

Proposal:

11 kV new line from Karchala PSS for the bifurcation of 11 KV Dhanpur Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length of 11 KV Dhanpur Feeder for network reliability and efficiency by emanating a new feeder from Sarabong PSS.

Existing Scenario:

- In present scenario, the 11 kV Dhanpur Feeder emanates from the 33/11 kV Badkutru PSS and serves a significant number of LI Consumers and Domes in Dhanpur area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 94.26 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 2.2 MVA during FY 2026-27 and the tail end voltage of the feeder is 9.49 KV **(8 Ckm of Augmentation Work of Dhanpur Feeder has been approved in CAPEX FY 26-27**).

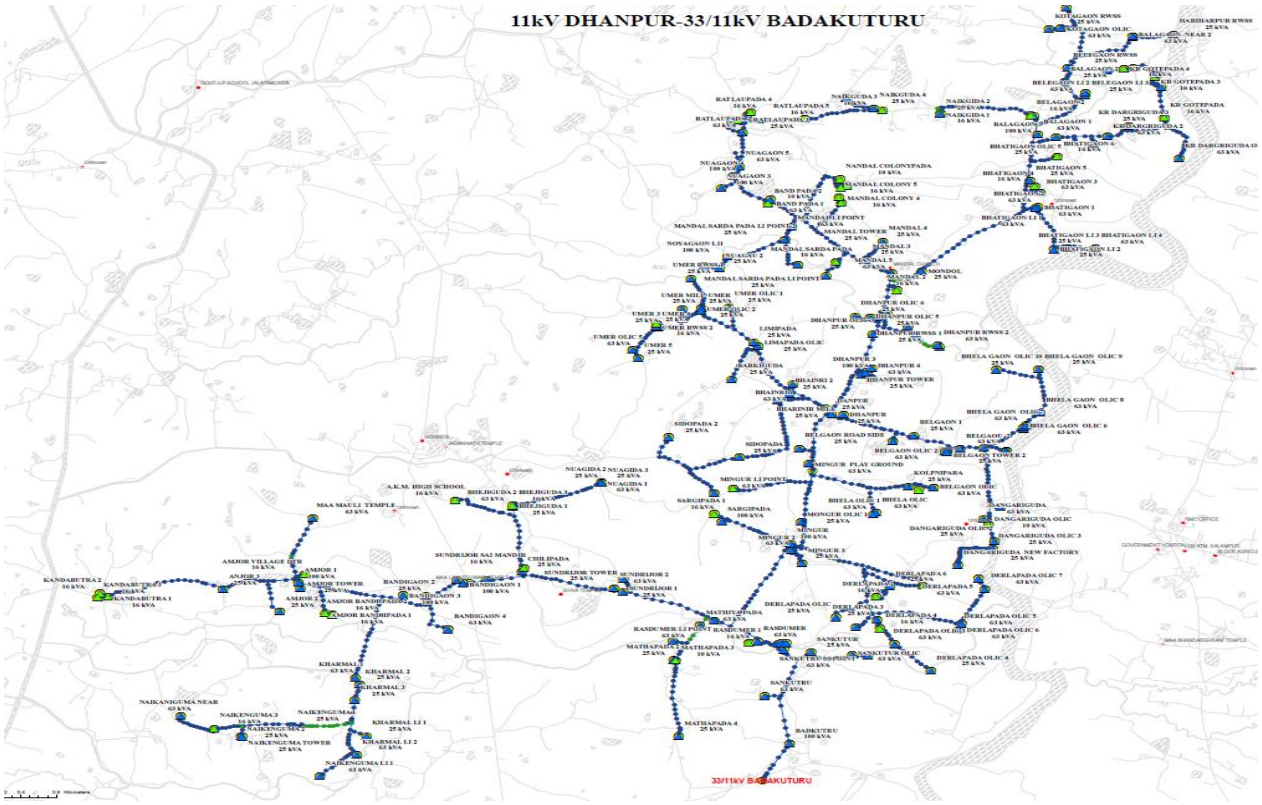
(11Kv Dhanpur Feeder)



Proposed Scenario:

- To mitigate the Low Voltage issue as well as to reduce the length of the existing Dhanpur feeder hereby it is hereby, proposed to erect a new Link Line of 1.5 Ckm from Kotgaon Bastipada DTR to Kotgaon-II DTR and erect a new 2 Ckm Link Line from Kotgaon 16 KVA to Ratalpada 63 KVA.
- 1 no of DP with AB Switch will be required for NO & NC operation
- Upon completion of the scheme, the new feeder will bifurcate the existing Dhanpur feeder as well as the new feeder will carry some Load of the existing feeder.

Note: 11kV Habaspur feeder originating from Karchala PSS is in ideal condition. So, new 11kV Bay arrangement is not required.

Benefit to the system and consumers:

- Improvement in tail end voltage from 10.0 kV to 10.4 kV.
- Establishment of N-1 Connectivity between 11kV Dhanpur Feeder & 11kV Habaspur Feeder.
- The total technical losses at peak loading on 11 kV feeders will decrease from 170.16 kW to 153.38 kW, leading to enhanced energy savings and system performance.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to industrial consumers, rice mills, and Lift Irrigation (LI) consumers in the Dhanpur area, supporting uninterrupted industrial and agricultural operations.

Proposal for Reliability improvement of 11kV Farang Feeder:

Proposal:

11kV line augmentation of 11 KV Farang feeder from Payal Infra OLIC to Funda LI Point 12 to improve reliability.

Requirement/ Need for the proposal:

Objective:

To enhance the network reliability and efficiency through augmentation of the 11 kV Farang Feeder to mitigate reliability issue and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV Farang Feeder emanates from the 33/11 kV Daspur PSS and serves a significant number of LI consumers and rice mills in Farang area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 70.6 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 1.08 MVA during FY 2026-27 and the tail end voltage of the feeder is 10.5 KV.
- This Feeder is a 30-years old feeder having Old 34/55 smm AAAC Conductors stringing on old 9 Mtr PSC Poles which is creating safety as well as reliability issue
- Considering the anticipated load growth of 8.37 % per annum, the feeder peak load is expected to reach 1.39 MVA by FY28-29 and the tail end voltage of the feeder will be 10.3 KV.
- Total tripping and consumer hour loss of feeder is 80 nos and 902295 consumer hours in FY25-26.

- In present scenario, the 11 kV Kuruguda Feeder emanates from the 33/11 kV Junagarh PSS and serves a significant number of industrial consumers and rice mills in Junagarh area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 60.3 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 2.14 MVA during FY 2026-27.
- This Feeder is a 30-years old feeder having Old 34-55 sqmm AAAC Conductors stringing on old 9 Mtr PSC Poles which is creating safety as well as reliability issue.
- Approximate 3 Ckm of the feeder is Passing through Taljaring Forest corridor for which is creating Frequent transient trippings and creating reliability issues.
- Total tripping and consumer hour loss of the feeder is 541 nos and 2745927 consumer hours in FY25-26.

Note- After Charging of Junagarh E-House the total Load (1.258 MVA) and Length of the 11 KV Kuruguda feeder will be reduced.

Benefit to the system and consumers:

- The total technical losses at peak loading on 11 kV feeders will decrease from 76.49 kW to 58.09 kW, leading to enhanced energy savings and system performance.
- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to industrial consumers, rice mills, and Lift Irrigation (LI) consumers in the Ranmal area, supporting uninterrupted industrial and agricultural operations.

Proposal for undervoltage mitigation of 11kV Sakhatora Feeder:

Proposal:

11kV Link Line between 11kV Sakhatora Feeder and 11kV Banka Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length for network reliability and efficiency through a link line between Sakhatora feeder and Banka Feeder.

Existing Scenario:

- In present scenario, the 11 kV Sakhatora Feeder emanates from the 33/11 kV Nuapada PSS and serves a significant number of industrial consumers and rice mills in Nuapada area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 30.72 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 2.41 MVA during FY 2026-27 and the tail end voltage of the feeder s 9.8 KV.
- Considering the anticipated load growth of 6.78 % per annum, the feeder peak load is expected to reach 3.35 MVA by FY28-29 and the tail end voltage of the feeder will be 9.4 KV.
- 11kV Banka Feeder emanates from 33/11 kV Khariar Road PSS. The length of the Feeder is 19.24 Ckm with conductor size of 100 sq.mm ACSR. The peak demand of the feeder in FY 26-27 is 1 MVA. Considering the load growth of 6.78% per annum, the feeder load is expected to reach 1.2 MVA by FY 28-29 and tail end voltage of the Feeder will be 10.96kV.
- To mitigate the low voltage and reliability problems of 11kV Sakhatora feeder it is proposed to erect link line with 11kV Banka feeder for load shifting.
- Total consumer hour loss of 11kV Sakhatora feeder & 11kV Banka feeder 171753 and 159400 consumer hours in FY25-26.

Benefit to the system and consumers:

- Improvement in tail end voltage from 9.4 kV to 10.5 kV.
- Establishment of N-1 Connectivity between 11kV Sakhatora feeder & 11kV Banka feeder.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hours by around 20% in case of tripping in any of the feeders after execution of scheme.
- The total technical losses at peak loading on 11 kV feeders will decrease from 417.79 kW to 181.2 kW, leading to enhanced energy savings and system performance.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to industrial consumers, rice mills, and Lift Irrigation (LI) consumers in the Sakhatora area, supporting uninterrupted industrial and agricultural operations.

Proposal for Reliabilty improvement of 11kV Babebir Feeder:

Proposal:

11kV line augmentation of 11 KV Babebir feeder From Timanpur PSS to T-off Khaibadi to improve reliability.

Requirement/ Need of the proposal:

Objective:

To enhance the network reliability and efficiency through augmentation of the 11 kV Babebir Feeder.

Existing Scenario:

- In present scenario, the 11 kV Babebir Feeder emanates from the 33/11 kV Timanpur PSS and serves a significant number of LI consumers and Domestic Consumers in Sinapali area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 45.5 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 0.55 MVA during FY 2026-27 and the tail end voltage of the feeder s 10.7 KV.
- The conductor is in a severely deteriorated condition due to ageing and environmental exposure, posing a significant risk to network reliability and continuity of supply. So, to enhance system performance and ensure a consumer-centric, reliable power supply it is required to augment the Feeder.
- Considering the anticipated load growth of 6.78 % per annum, the feeder peak load is expected to reach 0.697 MVA by FY28-29 and the tail end voltage of the feeder will be 10.6 KV.
- Total tripping and consumer hour loss of feeder is 56 nos and 586894 consumer hours in FY25-26.

Benefit to the system and consumers:

- The feeder loading will reduce from 76% to 57% & the technical loss will decrease from 39kW to 35kW, leading to enhanced energy savings and system performance.
- The feeder has a ring system that allows quick isolation of the faulty part and restoration of the healthy section from the other end**.**
- More Reliable, safe & quality power supply to consumers inside Rourkela (RMC) Area.
- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.

Proposal for improving reliability & Voltage of 11kV Kashira Feeder:

Proposal:

11kV augmentation of Kashira Feeder from Koira PSS to IOCL bypass.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and strengthen the 11 kV Kashira Feeder to reduction in technical loss & improving the voltage.

Existing Scenario:

- In present scenario, the 11 kV Kashira Feeder emanates from the 33/11 kV Koira PSS and serves power to Outskirts of koira town & Industrial (Mining) consumer.
- The total length of Kashira feeder is 36Ckm.The existing conductor size is 55Sqmm, AAAC on 9Mtr. PSC Pole. The tail end voltage of this feeder is around 10.00kV.
- The ageing conductor, coupled with multiple joints and uneven span lengths, causes frequent line breakdowns, thereby compromising the reliability of the power supply.
- Total tripping and consumer hour loss of Kashira feeder is 35nos. and 175071 consumer hours respectively in FY25-26.

- Multiple conductor joints, tilted poles and cross-arms, damaged pole coping, and uneven span lengths (60-80 m) have been observed along the line. These defects lead to frequent line breakdowns, thereby compromising the reliability and quality of power supply to consumers.
- There are 145No's of tripping with loss of 0.17MU recorded in FY-26.
- Total tripping and consumer hour loss of Roxy feeder is 172nos. and 1327493 consumer hours respectively in FY25-26.

Proposal for upgradation of dilapidated conductor at 11kV Bambua Feeder:

Proposal:

11kV augmentation of Bambua feeder for reliability improvement.

Requirement/ Need of the proposal:

Objective:

To mitigate conductor snapping, transient fault, low ground clearance of 11 kV Bambua feeder to address transient fault, feeder breakdown, reduce technical losses, and strengthen network reliability.

Existing Scenario:

- The existing 11 kV Bambua Feeder emanates from the 33/11 kV Bisra PSS and serves a significant number of commercial and domestic consumers in Bisra and Bambua area.
- This 11kV feeder is classified as a rural feeder & operates in a N-1 configuration with Bhalulata feeder. Route length of this feeder is 30.61 CKm and 34 sq.mm ACSR conductor at trunk line. The feeder is carrying a peak demand of 1.155 MVA during FY 2026-27.
- Considering the anticipated load growth of 4.88% per annum, by FY 2028-29 the feeder peak load expected to reach 1.277 MVA.
- The conductor of this feeder has been in service for more than 50 years and is associated with long span lengths (greater than 80 m), multiple joints, and low ground clearance due to sagging. Furthermore, the existing 8 m RS joist poles are heavily corroded, resulting in significant deterioration of their mechanical strength and posing reliability and safety concerns.
- During the last financial year FY25-26, the feeder experienced 40 tripping incidents, resulting in a SAIDI of 158.38 hours, SAIFI of 252 interruptions, and an estimated energy loss of 0.018 MU and consumer hour loss of 151730 hours.
- The feeder has N-1 connectivity with 11KV Bhalulata feeder (emanating from 33/11KV Jareikela PSS) with an AB switch.
- Therefore, augmentation of this feeder along with associated system strengthening measures are essential to ensure reliable power supply, accommodate future load growth, and maintain network operation within permissible loading limits.

Proposal for upgradation of dilapidated conductor at 11kV Dhadari Feeder:

Proposal:

11KV augmentation of Dhadari feeder for reliability improvement.

Requirement/ Need of the proposal:

Objective:

To mitigate conductor snapping, transient fault, low ground clearance of 11 kV Dhadari feeder to address transient fault, feeder breakdown, reduce technical losses, and strengthen network reliability.

Existing Scenario:

- The existing 11 kV Dhadari Feeder emanates from the 33/11 kV Bisra PSS and serves a significant number of commercial and domestic consumers in Bisra area.
- This 11kV feeder is classified as a rural feeder & operates in a N-1 configuration with Jamshera feeder. Route length of this feeder is 16.78 CKm and 34 sq.mm ACSR conductor. The feeder is carrying a peak demand of 1.574 MVA during FY 2026-27.
- Considering the anticipated load growth of 4.88% per annum, by FY 2028-29 the feeder peak load expected to reach 1.738 MVA.
- The conductor of this feeder has been in service for more than 50 years and is associated with long span lengths (greater than 80 m), multiple joints, and low ground clearance due to sagging. Furthermore, the existing 8 m RS joist poles are heavily corroded, resulting in significant deterioration of their mechanical strength and posing reliability and safety concerns.
- During the last financial year FY25-26, the feeder experienced 17 tripping incidents, resulting in a SAIDI of 115.15 hours, SAIFI of 183 interruptions, and an estimated energy loss of 0.022 MU and a consumer hour loss of 61953 hours.
- The feeder has N-1 connectivity with 11KV Jamshera feeder (emanating from 33/11KV Dalposh PSS) with a 3C,95 sqmm interconnecting cable under Railway track of Bangurkela railway cabin This interconnecting cable has no spare.
- Therefore, augmentation of this feeder along with associated system strengthening measures are essential to ensure reliable power supply, accommodate future load growth, and maintain network operation within permissible loading limits.

Benefit to the system and consumers:

- The proposed system strengthening will ensure a reliable, safe, and quality power supply to commercial and domestic consumers in the Dhadari area supporting uninterrupted operations.
- Upon completion of this scheme, the feeder will strengthen with higher capacity conductor, conductor snapping, multiple joints, low ground will be mitigated.
- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.

Proposal for upgradation of dilapidated conductor at 11kV Jareikela Feeder:

Proposal:

11kV augmentation of Jareikela feeder for reliability improvement.

Requirement/ Need of the proposal:

Objective:

To mitigate conductor snapping, transient fault, low ground clearance of 11 kV Jareikela feeder to address transient fault, feeder breakdown, reduce technical losses, and strengthen network reliability.

Existing Scenario:

- The existing 11 kV Jareikela Feeder emanates from the 33/11 kV Bisra PSS and serves a significant number of commercial and domestic consumers in Jareikela area.
- This 11kV feeder is classified as a rural feeder & operates in a N-1 configuration with Bhurtabahal feeder. Route length of this feeder is 24.83 CKm and 34 sq.mm ACSR conductor. The feeder is carrying a peak demand of 1.154MVA during FY 2026-27.
- Considering the anticipated load growth of 4.88% per annum, by FY 2028-29 the feeder peak load expected to reach 1.274 MVA.
- The conductor of this feeder has been in service for more than 50 years and is associated with long span lengths (greater than 80 m), multiple joints, and low ground clearance due to sagging. Furthermore, the existing 8 m RS joist poles are heavily corroded, resulting in significant deterioration of their mechanical strength and posing reliability and safety concerns.
- During the last financial year FY25-26, the feeder experienced 73 tripping incidents, resulting in a SAIDI of 226.54 hours, SAIFI of 267 interruptions, and an estimated energy loss of 0.055 MU and and 350456 consumer hour loss.
- The feeder has N-1 connectivity with 11KV Bhurtabahal feeder (emanating from 33/11KV Jareikela PSS) with AB switch.
- Therefore, augmentation of this feeder along with associated system strengthening measures are essential to ensure reliable power supply, accommodate future load growth, and maintain network operation within permissible loading limits.

Proposal for Reliability improvement of 11kV MS Pali Feeder:

Proposal:

11kV augmentation of MS Pali Feeder for reliability Improvement.

Requirement/ Need for the proposal:

Objective:

- To improve the reliability of the 11 kV feeder by converting the overhead bare conductor section traversing dense vegetation into covered conductor.
- This will reduce vegetation-related faults and feeder tripping, enhance supply continuity, improve voltage regulation, reduce technical losses, and contribute to lower SAIDI and SAIFI values.

Existing Scenario:

- The existing 11kV MS Pali feeder emanates from the 33/11kV Gopabandhu Pali PSS and supplies power to around 2,000 domestic and commercial consumers.
- One branch line of this feeder caters to critical Government establishments, namely All India Radio (AIR) and the BSNL Office situated in the hilltop area.
- The branch line conductor is a ACSR 50 sq.mm bare conductor passing through a forest area, resulting in frequent feeder tripping due to tree contacts and other environmental factors. This leads to recurring power supply interruptions to the AIR and BSNL installations and sometimes trips the entire feeder.
- During the last financial year FY25-26, the feeder experienced 18 tripping incidents, resulting in a SAIDI of 79.57 hours, SAIFI of 76 interruptions, and an estimated energy loss of 0.0678 MU and 201957 consumer hour loss.
- To improve feeder reliability and ensure uninterrupted power supply to critical consumers, it is proposed to replace the existing bare conductor section through the forest area with 11 kV Covered Conductor, thereby reducing vegetation-related faults, feeder tripping's, and SAIDI/SAIFI indices.
- This 11kV feeder operates in a radial configuration with a route length of 4.32CKm and 100/55sqmm conductor. The feeder is carrying a peak demand of 1.94MVA (101.25 A) during FY 2026-27.
- Considering the anticipated load growth of 4.88% per annum, the feeder peak load is expected to reach 111.65A by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.80 kV.

Cost Benefit Analysis: - (Refer Annexure No-90)

Revenue Return- 50.82%

Pay Back Period- 1.97 Years

Benefit to the system and consumers:

- Improvement in tail end voltage from 09.34 kV to 10.38 kV.
- The total technical losses at peak loading on 11 kV feeders will decrease from 393.72 kW to 249.11kW, leading to enhanced energy savings and system performance.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to consumers in Town area of Mandiakudar & Laing area.

Proposal for Overload & Undervoltage mitigation of 11KV DUDUKA Feeder:

Proposal:

11KV Augmentation of Duduka feeder to mitigate overloading & undervoltage.

Requirement/ Need of the proposal:

Objective:

To mitigate the overloading & undervoltage issue & enhance network reliability and efficiency through augmentation of the 11KV Duduka Feeder is required, which will also improve in reduction in technical losses.

Existing Scenario:

- In present scenario, the 11KV Duduka Feeder emanates from the 33/11 kV GARJANBAHAL PSS and serves a significant number of consumers with feeding industrial connection in Town area of Kalobahal, Laikira & Duduka.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 52.06 CKm and having 55 sq.mm conductor in trunk line. The feeder is carrying a peak demand of 3.51 MVA during FY 2026-27 and the tail end voltage of the feeder s 9.41 KV.
- Considering the anticipated load growth of 4.25 % per annum, the feeder peak load is expected to reach 4.1 MVA by FY28-29 and the tail end voltage of the feeder will be 9.40 KV.

Proposal for Reliability improvement & Overload Mitigation of 11kV Talpatia Feeder

Proposal:

11kV line augmentation of 11kV Talpatia feeder from Durlaga PSS to Jharsuguda Sub Jail to mitigate overloading & improve reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency through augmentation of the trunk section to improve in voltage regulation, and reduction in technical losses.
- Old/deteriorated conductors and fittings increase fault risk (snap, corona, hot spots) and maintenance costs; replacing them improves reliability and safety.
- Replacing weak poles reduces line sag and mechanical failure risk under wind loading events.

Existing Scenario:

- The existing 11kV Talpatia feeder emanates from the 33/11kV Durlaga PSS and supplies power to various categories of consumers, including Domestic, commercial, establishments in and around Durlaga, Talpatia, Airport chowk and adjoining areas.
- The trunk line conductor is of 50 mm^2 ACSR conductor that has been in service for more than 25 years, and the span lengths are excessively long, making the line susceptible to reliability and maintenance issues.
- This 11kV feeder operates in a radial configuration with a route length of 40.4 CKMs and conductor size of 100 mm^2 AAAC/ 50 mm^2 ACSR. The feeder is carrying a peak demand of 3.6 MVA during FY 2026-27.
- Considering the anticipated load growth of 6.12% per annum, the feeder peak load is expected to reach 4.1 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.39 KV.

Proposal for Reliability improvement of 11KV Kalimandir NEW Feeder:

Proposal:

11kV line augmentation of 11kV Kalimandir New feeder from Niharika DSS to Bharat General Store to improve reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency through augmentation of the trunk section to improve in voltage regulation, and reduction in technical losses.
- Old/deteriorated mainly copper conductors and fittings increase fault risk (snap, corona, hot spots) and maintenance costs; replacing them improves reliability and safety.
- Replacing weak poles reduces line sag and mechanical failure risk under wind loading events.

Existing Scenario:

- The existing 11kV Kalimandir NEW feeder emanates from the 33/11kV Purna PSS and supplies power to various categories of consumers, including Domestic, commercial, establishments in and around Gandhi chowk, old bus stand, railway station, main market road and adjoining areas.
- The major load of this feeder is concentrated in the tail end portion of the said feeder from Niharika substation to Bharat General store which comes under main market road of Jharsuguda town.
- In the said portion the conductor size is mostly of 34 mm^2 copper conductor that has been in service for more than 25 years, and the span lengths are excessively long, making the line susceptible to reliability and maintenance issues.
- This 11kV feeder operates in a radial configuration with a route length of 10 CKMs and conductor size of 100 mm^2 AAAC/ 50 mm^2 ACSR/34 mm^2 copper. The feeder is carrying a peak demand of 2.8 MVA during FY 2026-27.
- Considering the anticipated load growth of 6.12% per annum, the feeder peak load is expected to reach 3.2 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.1 KV.

Benefit to the system and consumers:

- The total losses at peak loading on 11 kV feeders will decrease from 227 KW to 221 kW leading to enhanced energy savings. (Technical loss will be reduced from 6.323% to 6.174%)
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to various categories of consumers, including Domestic, commercial establishments in the main market area of Jharsuguda town.

Proposal for Reliability improvement of 11KV Collectorate Feeder:

Proposal:

11kV line augmentation of 11kV Collectorate feeder from Durlaga PSS to Kishan Chowk Road to improve reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency through augmentation of the trunk section to improve in voltage regulation, and reduction in technical losses.
- Old/deteriorated conductors and fittings increase fault risk (snap, corona, hot spots) and maintenance costs; replacing them improves reliability and safety.
- Replacing weak poles reduces line sag and mechanical failure risk under wind loading events.

Existing Scenario:

- The existing 11KV Collectorate feeder emanates from the 33/11kV Durlaga PSS and supplies power to various categories of consumers, including Domestic, commercial, establishments in and around Durlaga, Kishan Chowk, district police office, SDO Colony, Police quarters, new revenue colony, Tahasil office, Leprosy Colony, Brundaban colony, Narayan Complex, Ganesh Apartment, District Court Complex and adjoining areas.
- The trunk line conductor is of 50 mm^2 ACSR conductor that has been in service for more than 25 years, and the span lengths are excessively long, making the line susceptible to reliability and maintenance issues.
- This 11kV feeder operates in a radial configuration with a route length of 8.5 CKMs and conductor size of 50 mm^2 ACSR. The feeder is carrying a peak demand of 2.57 MVA during FY 2026-27.
- Considering the anticipated load growth of 6.12% per annum, the feeder peak load is expected to reach 2.91 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.69 KV.

Proposal for N-1 supply of 11kV Budharaja Feeder:

Proposal:

11 kV Link line from Jagannath Colony Chowk to Shanti Nagar DSS to provide N-1 supply to Budharaja feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through N-1 supply of the 11 kV Budharaja Feeder for providing reliable power supply to the consumers of Sambalpur town.

Existing Scenario:

- In present scenario, the 11 kV Budharaja Feeder emanates from the 33/11 kV Ainthapali PSS and serves a significant number of domestic, commercial, Hotels, Private Hospitals of Sambalpur town area.
- This 11kV feeder is classified as a HRF urban feeder with a route length of 4 CKm and having 100 sq.mm AAAC conductor. The feeder is carrying a peak load of 3.3 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, the feeder peak load is expected to reach 3.8 MVA by FY28-29.
- Similarly, 11 KV Fatak feeder emanates from 33/11 KV Ainthapali PSS to route length of 2.3 Ckm catering a load of 1.3 MVA in FY 26-27 and expected to be 1.5 MVA in FY 28-29 with load growth of 9.07%.
- Also, there is no N-1 supply to these feeders.
- Total consumer hour loss of 11kV Budharaja feeder & 11kV Fatak feeder is 85273 and 193592 consumer hours in FY25-26.

Benefit to the system and consumers:

- Establish N-1 contingency support for 11 Budharaja Feeder.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hours by around 20% in case of tripping in any of the feeders after execution of scheme.
- The total losses at peak loading on 11 kV feeders will decrease from 121.32 kW to 108.41 kW, leading to enhanced energy savings and system performance.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to significant number of domestic, commercial, shopping malls & private hospitals of Sambalpur town area.

Proposal for overload mitigation of 11kV Balibandha Feeder:

Proposal:

11kV line augmentation of 11kV Balibandha feeder from Agriculture DSS (250 KVA) to Tablapada DSS to mitigate overloading.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of the 11 kV feeder, reduce technical losses, and strengthen network reliability.

Existing Scenario:

- The existing 11 kV Balibandha feeder emanates from the 33/11 kV Cheruapada PSS and serves a large nos. of domestic & commercia consumer of old Sambalpur town.
- This 11kV feeder is classified as a urban feeder with a route length of 4.1 CKm and almost 100 sq.mm conductor. But some part 0.5 CKM of the above feeder is of 50 sqmm. The feeder is carrying a peak loading of 4 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load expected to reach 4.83 MVA.
- Under the projected loading conditions, the part of the feeder with 55 sqmm ACSR conductor will be overloaded

Proposal for overload mitigation of 11kV College Feeder during N-1 Condition:

Proposal:

11kV line augmentation of 11kV College feeder from Ainthapali PSS to GM College to mitigate overloading during N-1 Condition.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of the 11 kV College feeder during N-1 condition when load transferred from 11 KV N.Guha feeder to the said feeder.

Existing Scenario:

- The existing 11 kV College Feeder emanates from the 33/11 kV Ainthapali PSS and serves a large nos. of domestic, commercial consumer, GM College, Hostels, of Sambalpur town.
- This 11kV feeder is classified as a urban feeder with a route length of 2.5 CKm and 50 sq.mm conductor. The feeder is carrying a peak loading of 1.9 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load expected to reach 2.2 MVA.
- Similarly, 11 KV N.Guha feeder emanates from 33/11 kV Cheruapada PSS is running to route length of 6.4 CKm and with 3c 300sqmm XLPE cable & 100 sqmm conductor with a load of 3.5 MVA.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load of 11 KV N.Guha feeder expected to reach 4.1 MVA.
- Both the feeder are interconnected by DP with ABS arrangement for N-1 supply.
- Under the projected loading conditions, the 11 KV College feeder with 50 sqmm ACSR conductor will be overloaded during N-1 condition when supply will be back feed.

Existing Scenario:

- The existing 11 kV Fatak Feeder emanates from the 33/11 kV Ainthapali PSS and serves a large nos. of domestic, commercial consumer, hotels of Sambalpur town.
- This 11kV feeder is classified as a urban feeder with a route length of 3.3 CKm and 50 sq.mm conductor. The feeder is carrying a peak loading of 1.3 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load expected to reach 1.6 A.
- Simillarly 11 KV Budharaja feeder is running to route length of 4 CKm and 100 sqmm conductor with a load of 3.3 MVA.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load of 11 KV Budharaja feeder expected to reach 4 MVA.
- Both the feeder are inter connected with 300 sqmm UG cable and RMU arrangement for N-1 supply.
- Under the projected loading conditions, the 11 KV Fatak feeder with 50 sqmm ACSR conductor will be overloaded during N-1 condition when supply will be back feed.

Benefit to the system and consumers:

- Over Loading mitigation of 11 kV Fatak feeder during N-1 contingency with 11 kV Budharaja feeder.
- The total losses at peak loading on 11 kV feeders will decrease from 121.32 kW to 108.41 kW leading to enhanced energy savings.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to domestic, commercial consumers, hotels & shopping malls of Sambalpur Town.

Proposal for Reliability Improvement of 11kV Gopalpali Feeder:

Proposal:

11kV Link Line from Duanpali S/S to PHD S/S of 11kV Gopalpali feeder to improve reliability.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability of urban area by constructing a new line section of the 11 kV Gopalpali Feeder and diverting load to 11 KV New Remed feeder to mitigate frequent power interruption and outage duration in urban area.

Existing Scenario:

- In present scenario, the 11 kV Gopalpali Feeder emanates from the 33/11 kV Ainthapali PSS and serves a significant number of domestic, commercial, shopping malls & private hospitals of Sambalpur urban area.
- The above feeder is also feeding large nos of villages, running through areas having considerable trees/vegetation growth resulting frequent transient faults and subsequent tripping and these repeated interruptions affect the continuity and reliability of power supply, particularly to the urban area.
- This 11kV feeder is classified as a HRF feeder with a route length of 18.36 CKm and having 100/80 sq.mm AAAC conductor. The feeder is carrying a peak load of 2.4 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, the feeder peak load is expected to reach 2.8 MVA by FY28-29.
- Further 11 kV New Remed Feeder emanates from 33/11 KV Remed PSS with a route length of 3.5 Ckm and peak load of 1 MVA.
- Under the projected loading conditions, though the loading of the feeder is within the permissible limit, but feeder interruption will be same or might be increased.
- To improve feeder reliability and reduce frequent outages on the 11 kV Gopalpali feeder, load diversion is necessary.
- Total tripping and consumer hour loss of feeder is 86 nos and 171954 consumer hrs in FY25-26.

Proposed Scenario:

- New 11kV line section is proposed from Duanpali DSS to PHD DSS and shall be connected with existing 11kV Gopalapali feeder through DP & AB switch arrangement.
- The new line is proposed to be constructed using 100 sqmm Cover conductor & 11 Mtr WPB pole. The total length of new feeder is 1.5 cKM.
- Upon completion of the scheme, the reliability of supply in urban area improves by bifurcation of rural load which shall be shifted to 11 KV New Remed feeder.

Note:- After commissioning the new section line, the load of the 11 kV Gopalpali Feeder will be bifurcated and partially shifted to the 11 kV New Remed Feeder, thereby improving the reliability of power supply in the urban area.

Benefit to the system and consumers:

- Reduction in frequent transient fault and tripping of 11 kV Gopalpali feeder and improvement in reliability is expected by reduction in tripping and consumer hrs by around 10-15% after execution of proposal.
- Substantial reduction in technical losses at peak from 2.88% to 2.26%.
- The total losses at peak loading on 11 kV feeders will decrease from 104.56 kW to 96.48 kW, leading to enhanced energy savings and system performance.
- Improvement in tail end voltage from 10.58 kV to 10.85 kV.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to significant number of domestic, commercial, shopping malls & private hospitals of urban area of Sambalpur town by reducing in tripping and outage duration.

Proposal for overload mitigation of 11kV PHD Feeder:

Proposal:

11kV line augmentation of 11kV PHD feeder from Sambalpur DHH to Swimming pool to mitigate overloading.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of the 11 kV feeder, reduce technical losses, and strengthen network reliability.

Existing Scenario:

- The existing 11 kV PHD feeder emanates from the 33/11 kV Cheruapada PSS and serves a large nos. of domestic, commercial consumer, hotels & private hospitals of Sambalpur town.
- This 11kV feeder is classified as a urban feeder with a route length of 5.3 CKm and almost 100 sq.mm conductor. But some part 0.8 CKM of the above feeder is of 50 sqmm. The feeder is carrying a peak loading of 4 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, by FY 2028-29 the feeder peak load expected to reach 4.8 MVA.
- Under the projected loading conditions, the part of the feeder with 50 sqmm ACSR conductor will be overloaded

Proposal for reliability improvement of 11kV Jayantpur feeder

Proposal:

11kV Link Line from Nuapali to Aurobindo School of 11kV Jayantpur feeder to improve reliability.

Requirement/ Need of the proposal:

Objective:

To improve reliability of tail end HT consumers of Jayantpur feeder (Padiabahal PSS) and avoid forest crossing.

Existing Scenario:

- In present scenario, 11kV Jayantpur feeder (Padiabahal PSS) feeder emanates from 33/11kV Padiabahal PSS.
- The length of the feeder is 51.96 Ckm and the conductor size of the feeder is 100 & 55 sqmm.
- The peak demand of the feeder in Fy26-27 is 2.76 MVA. Considering the load growth of 4.94% per annum, the expected demand in Fy28-29 shall be 3.0 MVA.
- Tail end consumers of Kendghati Village and some HT consumers are facing low voltage and reliability issue due feeder passed through Forest area.
- To improve reliability and Low voltage issue 11KV Link line from 11kV Jayantpur feeder near Nursing Collage to 11kV Jayantpur feeder near Nuapali – Aurobindo School is proposed.
- Total tripping and consumer hour loss of feeder is 293 nos and 567472 consumer hrs in FY25-26.

Proposal for Reliability improvement of 11kV Kilasama Feeder:

11kV line augmentation of 11kV Kilasama feeder from Rengali PSS to Mangalpur to improve reliability.

Requirement/ Need for the proposal:

Objective:

To replace old conductor to improve reliability of 11kV Kilasama Feeder of Rengali PSS.

Existing Scenario:

- In present scenario, the 11kV Kilasama Feeder emanates from 33/11kV Rengali PSS.
- Length of the feeder is 32.3CKm and conductor size of feeder is 34 &55sqmm. The peak demand of the feeder in Fy26-27 is 1.13MVA.
- Considering the load growth of 4.94% per annum, expected demand in Fy28-29 shall be 1.24MVA.
- The conductor of trunk line is very old and has become worn out with multiple bindings. The operations team has also reported about conductor snapping during peak time. Hence Conductor augmentation is very essential.
- Total tripping and consumer hour loss of feeder is 237 nos and 306114 consumer hours in FY25-26.

To enhance network reliability and to reduced tripping of 11 kV Pravasuni feeder by improving voltage regulation and reduction in technical losses.

Existing Scenario:

- Currently, the 11 kV Pravasuni feeder originates from the 33/11 kV Tileibani PSS and is a high-revenue feeder, catering to a significant consumer base. The conductor size of this feeder is 50sqmm ACSR and length of 28.2ckm.
- The feeder passes through a dense forest area, resulting in frequent transient faults due to tree branches and wildlife interference, thereby affecting the reliability of power supply.
- Fault identification and restoration time are considerably high because of the inaccessible forest terrain, leading to prolonged supply interruptions and reduced system reliability.
- The existing span length between poles is around 70–80 meters, causing inadequate ground clearance at several locations and posing potential safety hazards.
- Many of the existing V-cross arms are damaged, poles are tilted, and conductors are in deteriorated condition, resulting in frequent tripping, increased breakdowns, and unsafe operating conditions.
- Therefore, to improve feeder reliability, reduce outage duration, enhance safety, and ensure uninterrupted power supply to this high-revenue feeder, it is proposed to augment the existing 11 kV Pravasuni feeder by replacing the deteriorated poles, damaged cross arms, and worn-out conductors with new infrastructure.
- Total tripping and consumer hour loss of feeder is 119 nos and 202651 consumer hours in FY25-26.

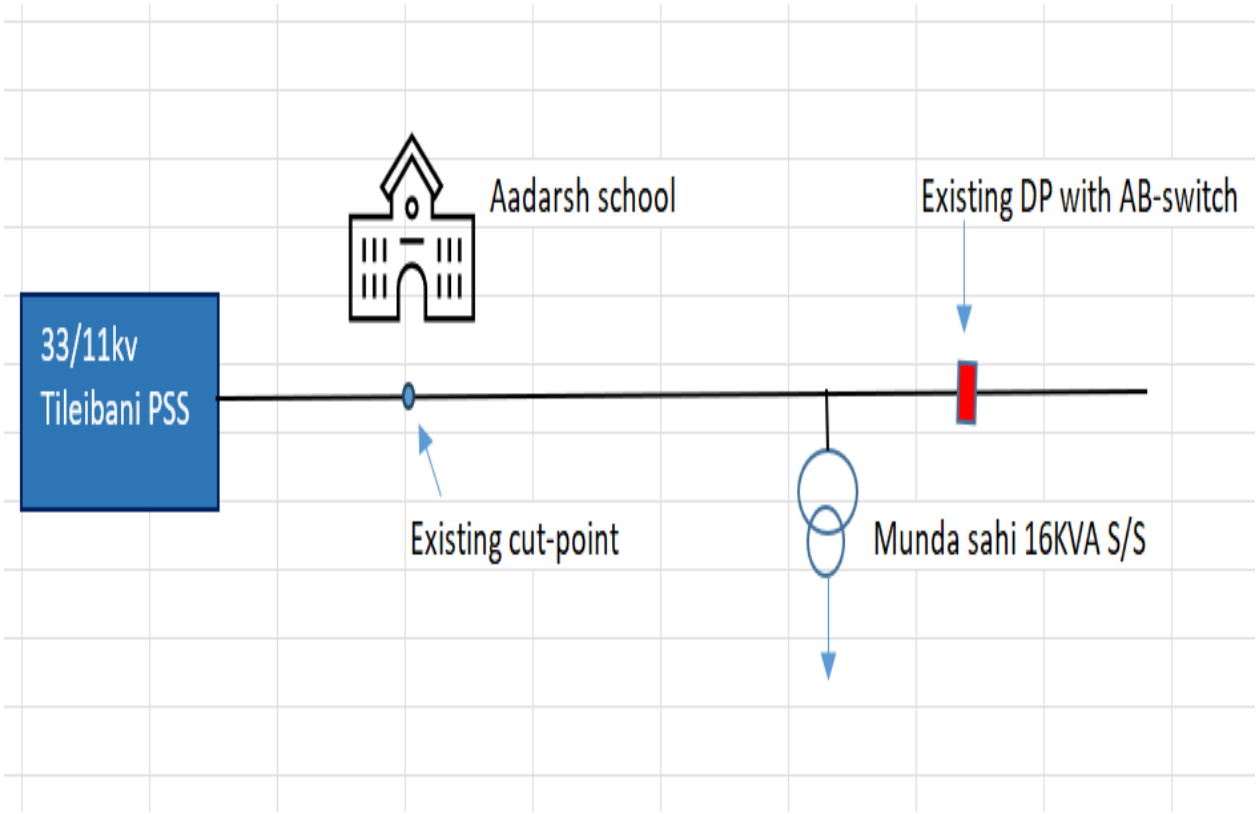
Existing SLD:

(11Kv Old-Industrial Feeder)



Proposed Scenario:

- To mitigate frequent tripping and transient faults caused by the forest corridor, it is proposed to augment 2.5 Ckm of the trunk line from Adarsh School to the AB Switch.
- The existing 55 sq.mm AAA conductor shall be replaced with 100 sq.mm AAA covered conductor using 9 m and 11 m WPB poles to improve feeder reliability and minimize faults due to tree contact.
- For the river crossing section, 5 Nos. of 11 m WPB poles are proposed to ensure the required statutory ground clearance and safe line crossing.
- Since the existing line is predominantly constructed on 9 m poles, 21 Nos. of 9 m intermediate WPB poles are proposed to maintain the required span length and improve the mechanical strength of the line.
- Additionally, damaged V-cross arms and pin insulators shall be replaced to enhance system safety, reduce breakdowns, and improve the overall reliability of the 11 kV feeder.

Proposals for N-1 Power supply between 11kv Gohira Feeder & Kansar Feeder:

Proposal:

11kV Link Line between the 11 kV Gohira Feeder and 11 kV Kansar Feeder.

Requirement/ Need of the proposal:

Objective:

To establish an 11kV interlink between the Gohira and Kansar feeders to improve supply reliability, facilitate effective load sharing and load transfer, provide an alternate supply path during contingencies, and enhance the overall operational flexibility and resilience of the 11 kV distribution network.

Existing Scenario:

- At present, the 11 kV Gohira and 11 kV Kansar Feeders emanate from Rengalbeda PSS and Tileibani PSS and supplies power to various categories of Consumers, including Domestic, and small shop and local commercial establishments in and around Bandhbahal and Ganeshnager area.
- The length of 11 kV Gohira and 11 kV Kansar Feeders are 75.3 Ckm and 138.6 Ckm and constructed using 55/100 sq. mm ACSR conductor.
- The feeders carry peak loads of 0.66 MVA and 0.72 MVA, with tail-end voltages of 10.6 kV and 10.2 kV, respectively, during FY 2026-27.
- Considering an anticipated load growth of 3.48%, peak load of 11kV Gohira feeder & 11kV Kansar feeder will be 0.72 MVA and 0.82 MVA, with tail-end voltages of 10.5kV and 10.1kV.
- Total consumer hour loss of 11kV Gohira feeder and 11kV Kansar feeder is 652697 and 1668494 consumer hrs in FY25-26.

Existing SLD:

Proposed Scenario:

- The proposed 11 kV link line shall be constructed between the existing 11 kV Gohira Feeder and 11 kV Kansar Feeder to establish an interconnection between the two feeders. The proposed link line will have a route length of approximately 1.5 Ckm, using 100 sq. mm AAAC conductor supported on 11 mtr WPB poles.
- At the proposed interconnection point, 1 No. four pole with two nos of AB-switch shall be installed to facilitate safe switching, remote monitoring, and operational control of the interconnected network.
- The proposed interlink will enable load transfer and load sharing between the Kansar and Gohira feeders, thereby providing an alternate supply path during feeder outages and improving the overall reliability, operational flexibility.

Benefit to the system and consumers:

- Improved power supply reliability by providing an alternate supply path between the 11kv Gohira and Kansar feeders.
- Enhanced network resilience and N-1 reliability by establishing an interconnection between the two feeders.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.
- Reduced interruption time to consumers and improved overall quality and continuity of power supply.

Proposal for Reliability Improvement of 11kV Town-3 Feeder:

Proposal:

11kV line augmentation of 11kv Town-3 feeder from Deogarh PSS to RCMS sub-station to improve reliability.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and access safety concerns and to reduced tripping of 11 kV Town-3 feeder which will improve public safety and reduced technical losses.

Existing Scenario:

- The existing 11 kV Town-3 feeder emanates from the 33/11 kV Deogarh PSS and caters to a significant consumer base within the Deogarh town area. The feeder comprises 34 sqmm AAAC and 50 sqmm ACSR conductors.
- The feeder passes through densely populated town areas, where the existing conductors are in a deteriorated condition, increasing the possibility of faults, breakdowns, and supply interruptions.
- During Ganesh Puja and other public functions, the Deogarh town area becomes highly congested, resulting in increased public movement and activities near the existing 11 kV network.
- The feeder also passes close to residential buildings, offices, and other establishments, creating significant electrical safety concerns due to the deteriorated conductors and their proximity to the public.
- The existing network condition poses a risk of accidental contact, conductor snapping, and electrical hazards, particularly in crowded locations and during peak public gatherings.
- Therefore, to enhance public safety, improve reliability, and ensure secure power supply, it is proposed to augment the feeder by replacing/covering the existing deteriorated conductors with suitable covered conductor infrastructure.
- Total tripping and consumer hour loss of feeder is 12 nos and 130711 consumer hours in FY25-26.

Proposals for N-1 Power supply between 11kv Bandhbahal Feeder & Ganeshnagar Feeder

Proposal:

11kV Link Line between 11kV Bandhbahal Feeder and 11kV Ganeshnagar Feeder.

Requirement/ Need of the proposal:

Objective:

The objective of the proposal is to establish a new 11 kV link between the existing 11 kV Bandhbahal Feeder and 11 kV Ganeshnagar Feeder to improve the overall reliability and operational flexibility of the distribution network.

Existing Scenario:

- The 11 kV Bandhbahal Feeder and 11 kV Ganeshnagar Feeder emanate from 33/11kV Bandhbahal PSS and supplies power to various categories of Consumers, including Domestic, and small shop and local commercial establishments in and around Bandhbahal and Ganeshnager area.
- The 11 kV Bandhbahal Feeder is 28.8 Ckm and 55 sq. mm ACSR/AAAC conductor, while the 11 kV Ganeshnagar Feeder is 6.7 Ckm and constructed using 55/148 sq. mm ACSR/AAAC conductor.
- The feeders carry peak loads of 1.10 MVA and 1.18 MVA, with tail-end voltages of 10.8 kV and 10.95 kV, respectively, during FY 2026-27.
- Considering an anticipated load growth of 4.41%, peak load of 11kV Bandhbahal feeder & 11kV Ganeshnagar feeder will rise to 1.23 MVA and 1.33 MVA respectively, with a tail end voltage of 10.78kV and 10.94kV.
- Total consumer hour loss of 11kV Bandhbahal feeder & 11kV Ganeshnagar feeder is 200901 & 30623 consumer hours in FY25-26.

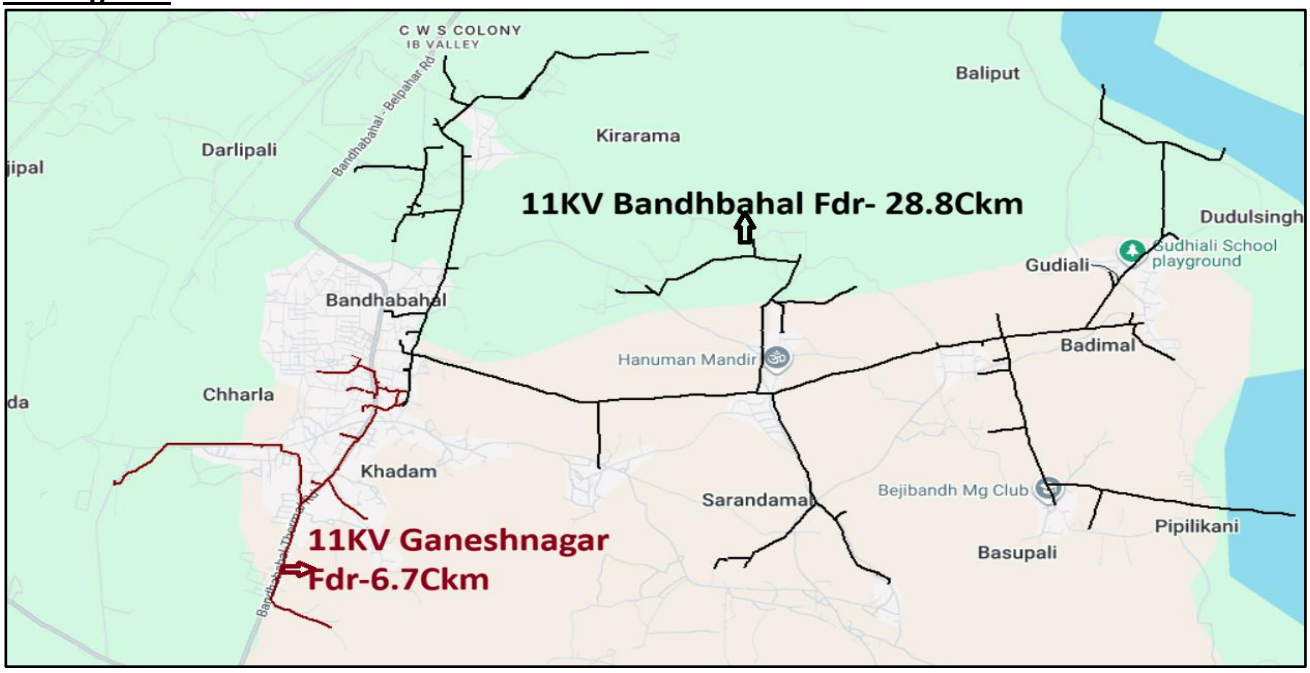
Existing SLD:



Proposed Scenario:

- A 0.65 Ckm 11 kV new link line shall be constructed from Infront of Sai sradha dresses (21.747813,83.869306) to Bakery Factory 100KVA DSS (21.752225,83.87007), which is in between the existing 11 kV Bandhbahal Feeder and 11 kV Ganeshnagar Feeder using 100 sq. mm AAAC Covered Conductor, supported on 11 mtr WPB poles.
- The proposed link line shall provide interconnection between the two feeders to facilitate load sharing and load transfer, including shifting of a portion of the Bandhbahal Feeder load to the Ganeshnagar Feeder during normal operation.
- Two sets of DP AB Switches (400 A) shall be installed at suitable locations on the proposed link line to provide necessary isolation, sectionalization, and operational flexibility between the two feeders.
- The proposed arrangement will enable safe and effective switching operations during normal load management, planned maintenance, and contingency conditions, thereby improving the overall reliability and flexibility of the 11 kV distribution network.

ABSTRACT OF ESTIMATE			
Sl. No.	**Part**	**Description**	**Amount**
1	A	PART A: 11KV New line using 100 sqmm AAAC (Refer Annexure-168)	1,50,817.00
2	B	PART B: RMU 4-Way (Refer Annexure-199)	23,68,800.00
3	C	PART C: 2set of DP AB-switch (Refer Annexure- 134)	3,48,642.00
		Total Amount	**28,68,259.00**
		Total Amount (In Cr)	**0.29**
Total estimated cost is Rs. 0.29 Crore. (On TPWODL CAPEX Scheme)			

Cost Estimate: ₹0.29Cr.

Physical Target:

March 2028

Cost Benefit Analysis: (Refer to Annexure No-90 for details)

Revenue Return- 44.50%

Pay Back Period- 2.25 Years

Benefit to the system and consumers:

- Improved power supply reliability by providing an alternate supply path between the 11 kV Lamtibahal and Telenpali feeders.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.
- Reduced interruption to consumers and improved overall quality and continuity of power supply.

ANNEXURE 26

Scheme Name: Installation of 33kV & 11kV Fault Passage Indicator

- ***Background***

At inception, 33kV & 11kV feeders had no automated tools to identify fault locations. This resulted in prolonged patrolling during outages. Since vesting, approx. 878 FPIs have been installed / planned on critical feeder for improving fault restoration time. However, most feeders are still without FPIs. The balance will be covered in phased manner under upcoming CAPEX schemes.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Accordingly, the FY 2027-28 DPR has been prepared incorporating the requirements identified for complete Network.

ANNEXURE 27.1

Scheme Name: Installation of AB Switch

- ***Background***

Initially, feeders had limited switching points, mostly manual and outdated. Since vesting, some AB switches have been added and pilot motorised switches installed in 11kV Gopal Pali Feeder in Sambalpur, but large portions of the network still lack proper sectionalizing. Balance requirement will be completed in phases under CAPEX.

For FY 2026–27, the scope was initially frozen based on surveys of Main Town and peripheral areas. Subsequently, a comprehensive PAN-TPWODL survey was conducted for the RST and FY 2027–28 DPRs. While the RST DPR considered only DTR proposals, the FY 2027–28 DPR incorporates the complete survey data. The AB Switch provision for DTRs is in line with the RST order, while other requirements are based on the comprehensive field survey.

Annexure 27.2

Scheme Name: Installation of 33kV Isolators

- ***Background***

The installation of 33kV isolator is proposed to enhance the operational flexibility, reliability, and safety of the 33 kV network. At present, several sections of the network have inadequate sectionalizing and isolation facilities, which restrict operational flexibility, increase fault restoration time, and pose challenges during planned maintenance and emergency operations. Deployment of these switching devices at strategically identified locations will facilitate safe isolation of faulted sections and minimize the extent and duration of supply interruptions. The proposed investment will improve the maintainability and resilience of the distribution system by enabling faster restoration of supply and reducing the impact of network faults on consumers.

For FY 2026–27, the scope was initially frozen based on surveys of Main Town and peripheral areas. Subsequently, a comprehensive PAN-TPWODL survey was conducted for FY 2027–28 . Mostly AB switches are installed & these old ones to be replaced and while other requirements are based on the comprehensive field survey.

Annexure 27.3

Scheme Name: Installation of 33kV & 11KV Ring Main Unit

- ***Background***

At inception, most urban 33kV & 11kV networks were built in radial configuration with limited switching flexibility. This resulted in large outages during faults or maintenance.

RMUs have been installed in a few critical urban feeders, improving reliability, but a major portion of the network still operates on conventional switchgear. The balance requirement will be taken up in phases under future CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. ANNEXURE 28.1

Scheme Name: Installation of 33kV & 11kV Polymer Insulators (Other than PSS)

- ***Background***

At inception, most 33kV & 11kV were equipped with porcelain insulators. Over time, these insulators developed cracks, punctures, and surface leakage issues, especially in polluted and coastal zones, leading to frequent outages.

Since vesting, some portions of the network have been upgraded to polymer insulators, but a large volume is still pending and will be taken up in phases under future CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Annexure 28.2

Scheme Name: Installation of 33kV & 11kV Lightning Arrestor

- ***Background***

At inception, many Distribution Transformers (DTs) and 33kV & 11kV feeders were commissioned without adequate lightning protection. This has led to frequent failures of DTs and equipment during lightning and switching surges.

Since vesting, lightning arrestors have been installed at some selected locations, but a large portion of the network remains unprotected. The balance requirement will be covered in phases under upcoming CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Scheme Name: 33kV & 11kV Auto-recloser and Sectionalizer

- ***Background***

At inception, feeders were built with minimal automation and relied on manual switching, which caused prolonged outages. Frequent **transient faults** (like tree contacts, lightning, bird faults) resulted in unnecessary feeder trippings, as no automatic restoration was available. Since vesting, 196 installations of Auto-Reclosers and Sectionalisers have been done, showing positive impact in improving reliability. However, a large part of the network is still without automated fault management. The remaining requirement will be completed in phases under upcoming CAPEX.

For the FY 2026-27 DPR, the scope was initially finalized based on field surveys conducted in the major town areas and adjoining peripheral locations. Subsequently, in compliance with the directions given in the FY 2026-27 RST Order, TPWODL undertook a comprehensive PAN-TPWODL network survey. Accordingly, the FY 2027-28 DPR has been prepared incorporating the requirements identified for complete Network. However, considering the high value of AR/SR, FPI is primarily proposed for large, trip-prone feeders to ensure cost-effective deployment.

ANNEXURE 30

Scheme Name: LT Protection (ACB/MCCB)

- ***Background***

At the time of inception of TPWODL, most Distribution Transformers (DTs) in the licensed area were commissioned without adequate LT side protection. The arrangement typically consisted of only HT side protection through fuses/AB switches, leaving the LT side vulnerable to faults such as short-circuits, overloading, and unbalanced loading.

Since vesting, significant progress has been made in strengthening the DT network by installing new DTs, upgrading capacity, and ensuring LT protection through ACBs, MCCBs, LTDB, Feeder Pillar. However, the coverage of LT side protection remains limited. A substantial portion of DTs are still operating without dedicated LT protection devices. The balance requirement will be completed in a phased manner under subsequent year's CAPEX plan.

FY-27-28 DPR is in line with RST DPR submission where LT protection scope is only considered for 25KVA & above DTR.

Sl. No.	Activity	UOM	Total Scope across System	Work Covered so far (up to FY'27 DPR)	Balance Requirement
			A	B	C=A-B
1.	LT Protection (ACB/MCCB)	Nos.	68963	7246	61717

- ***Proposal***

It is proposed to provide LT protection arrangements on Distribution Transformers across the network. This will include installation of LT ACB/MCCBs with appropriate rating and features (short circuit, overload, and earth fault protection) on the LT side of each DT.

- ***Requirement/ Need of the Proposal***

Existing Deficiency: Presently, absence of LT side protection leads to direct exposure of DT windings and LT feeders to faults, resulting in frequent DT burnouts, prolonged outages, and safety hazards.

Scope for Improvement: Installation of LT protection will isolate LT faults quickly, preventing damage to DT windings and minimizing outage durations.

Statutory / Regulatory Compliance: Current standards and safety guidelines mandate provision of adequate protection on both HT and LT sides of DTs. The proposed arrangement ensures compliance with these statutory requirements, thereby mitigating audit observations and regulatory risks.

Proposal for Power Evacuation from upcoming Koira GSS:

Proposal:

A) Construction of new 33kV Line from Upcoming Koira(220/33kV) GSS to Koira PSS (Koira OG industry)

B) Construction of new 33kV Line from Upcoming Koira(220/33kV) GSS to Koira PSS (Koira-Tensa Load)

C) Construction of new 33kV Line from Upcoming Koira(220/33kV) GSS to Bandindpur Village (Koira PSS)

D) Construction of new 33kV Line from Upcoming Koira(220/33kV) GSS to Bandindpur Village (industry toward Joda)

Requirement/ Need of the proposal:

Objective:

To address the Low voltage issue, meet load requirement from Mining consumer and reliability improvement in Joda-Koira-Tensa area. 33kV New Lines is proposed to Power evacuation from upcoming Koira GSS to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses

Existing Scenario:

- Presently, the 33 kV Tensa feeder is an HRF feeder emanating from Joda GSS, supplying power to Koira PSS, Tensa PSS, and 8 HT consumers. The major consumers connected to this feeder are Rungta Mines, ArcelorMittal, Barsuan Mines, and JSW (Narayanposhi). The feeder has a total line length of 48 CKm and is constructed with 100 sq.mm conductors.
- The existing Tensa feeder line structures are more than 55 years old, many of which pass through active mining zones. As a result, they are highly vulnerable to frequent trippings and outages.
- A new 33 kV Double Circuit line from Joda GSS to Tensa PSS is currently under construction. The existing 33 kV Tensa feeder will be dismantled after the commissioning of the new line.
- The projected peak loads of the proposed 33 kV Koira New and Tensa New feeders for FY 2026-27 are 16.2 MVA and 10.2 MVA, respectively. The corresponding minimum voltages are expected to be 27.9 kV and 30.0 kV. A load growth rate of 4.88% has been considered.
- The Joda-Tensa-Koira region is a critical industrial and mining belt of the state, hosting iron ore mines, steel plants, and associated downstream industries.14 applications with an aggregate demand of approximately 68 MVA are pending in the Koira, Tensa, Barsuan, Sagasahi, and Narayanposhi areas.
- Proposal of Koida GSS is considered in the **15th Intra-State Transmission plan for Odisha for the period for period FY2027-28 to FY2034-35**.And Timeline for completion is FY2028-29.
- To improve the voltage profile, enhance reliability, release new load and ensure the delivery of quality power to consumers, the construction of new 33 kV lines from the upcoming Koira GSS is required.

Proposal for Power Evacuation from upcoming Kutra GSS:

Proposal:

A) Construction of new 33kV Line from Proposed Kutra GSS to Kutra-Garposh Line

B) Construction of new 33kV Line from Proposed Kutra GSS to Birangatoli PSS

Requirement/ Need of the proposal:

Objective:

To address the Low voltage issue, meet load requirement from industry consumer and reliability improvement in Rajgajgpur-Kutra-Bargaon area. 33kV New Lines is proposed to Power evacuat ion from upcoming Kutra GSS to enhance network reliability through feeder upgradation, improvement of voltage profile, and reduction of technical losses

Existing Scenario:

- The 33kV Kutra feeder emanating from Rajgangpur GSS is supplying power to Garposh PSS, Birangatoli PSS and HT consumer like Scan Steel, Scan Steel Unit 2, Sita Cement, Shiva Cement with a total feeder length of 57 Ckm and peak loading of 21.3 MVA. Due to lengthy feeder, Garposh - Birangatoli area is experiencing low-voltage issues (Min 27.8kV at Birangatoli PSS 33kV bus and 27.8kV at Scan Steel Unit-II).
- HT consumers in the Rajgangpur-Kutra-Bargaon area have requested power supply connections with an estimated load demand of 21 MVA in the Rajgangpur-Kutra-Bargaon region.
- Out of 21 MVA, M/S Scan Steel Unit-II (CD: 9.5 MVA) have requested for load enhancement of 11 MVA (from 14 MVA to 25 MVA) and submitted application for the same. Additional load of 10 MVA is anticipated from upcoming and expected consumers.
- Proposal of Kutra GSS is considered in the **15th Intra-State Transmission plan for Odisha for the period for period FY2027-28 to FY2034-35**. And Timeline for completion is FY2028-29.
- To improve the voltage profile, enhance reliability, release new load and ensure the delivery of quality power to consumers, the construction of new 33 kV lines from the upcoming Kutra GSS is required.

Proposal for undervoltage mitigation of 33kV Binka Feeder:

Proposal:

Construction of new 33kV Line from Sarasmal GSS to Balitikra PSS & Bisalpalli PSS.

Requirement/ Need of the proposal:

Objective:

To improve reliability through length reduction and load bifurcation of 33kV Binka Feeder.

Existing Scenario:

- At present, 33kV Binka feeder is emanating from Sonepur GSS and feeding power to Headtikra, Seledi and Binka PSS as well as HT Consumers. The feeder is having length of 44.44Ckm with conductor size of 100/232 sq.mm and the peak load demand in FY26-27 is 19.62MVA with minimum voltage of 28.10kV.
- Considering projected load growth for 2 years @5.75% per year, 33kV Binka feeder will experience a projected load of 22.23 MVA with minimum voltage of 27.34kV.

Existing FY26-27 Loading and projected load at 33kV Feeder:

GSS Name	33kV Feeder Name	Feeder Capacity (MVA)	Existing Loading FY26-27				Projected Loading FY28-29

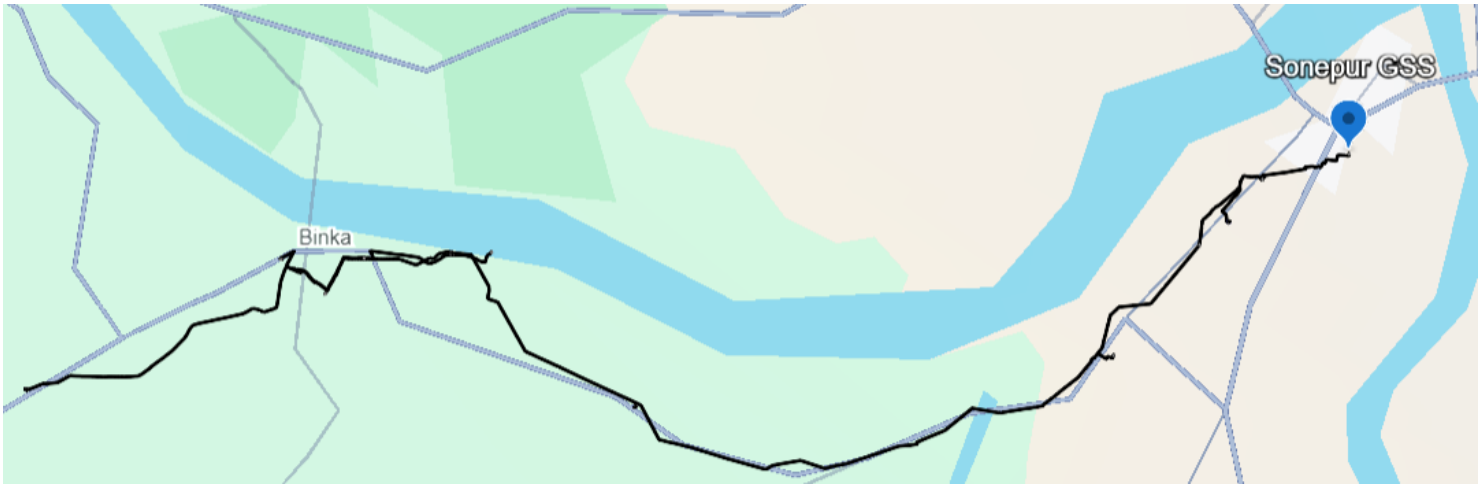
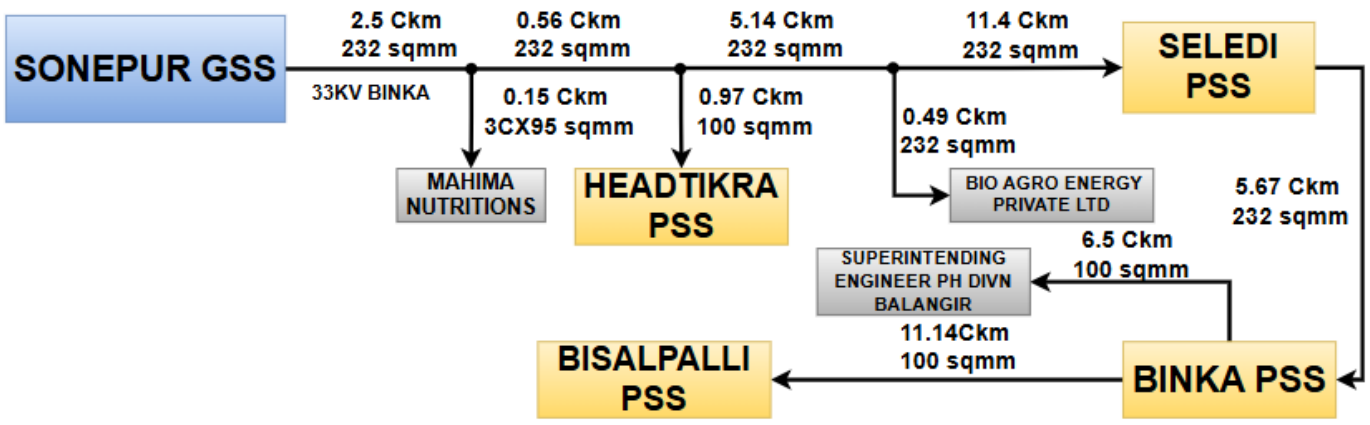
GIS Map:



Existing SLD:



Proposed Scenario:

- New 33kV Line of 232 sq.mm is proposed from Upcoming Sarasmal GSS to Bisalpalli PSS for improving reliabilty of 33kV Binka Feeder.
- The proposal will bifurcate 33kV Binka feeder load and mitigate its undervoltage issues and provide second source to the associated PSS and feeder.

- Ensure reliable & safe power supply to the consumers of Bisalpalli, Binka and Seledi Area.

Proposal for undervoltage mitigation of 33kV Ullunda Feeder:

Proposal:

Construction of new 33kV Line from Bidurapali Nh15 to Ullunda PSS.

Requirement/ Need of the proposal:

Objective:

To improve network reliability by increasing voltage profile and reducing technical loss of existing network through load shifting of 33kV Ullunda Feeder.

Existing Scenario:

- At present, 33kV Ullunda feeder is emanating from Birmaharajpur GSS and feeding power to Ullunda and Ainlachat PSS as well as HT Consumers. The feeder is having length of 63Ckm with conductor size of 80/100/148/232 sq.mm and the peak load demand in FY26-27 is 9.68MVA with minimum voltage of 29.2kV.
- Considering projected load growth for 2 years @5.75% per year, 33kV Ullunda feeder will experience a projected load of 10.51 MVA with minimum voltage of 28.8kV.

Proposal for reliability improvement of 33kV Binka Feeder:

Proposal:

Construction of new 33kV Line for LILO Arrangement of 33KV Binka feeder at Headkitikra PSS.

Requirement/ Need of the proposal:

Objective:

To improve reliability through LILO arrangement at Headkitikra PSS (Kalapathar) of 33kV Binka Feeder by ensuring uninterrupted power supply to the nearby town area of Sonepur and facilitate quicker restoration of supply during feeder breakdowns.

Existing Scenario:

- At present, 33kV Binka feeder is emanating from Sonepur GSS and feeding power to Headtikra, Seledi and Binka PSS as well as HT Consumers. The feeder is having length of 44.44Ckm with conductor size of 100/232 sq.mm and the peak load demand in FY26-27 is 19.62MVA with minimum voltage of 28.10kV.

Proposal for N-1 connectivity of 33kV Turunga Feeder:

Proposal:

Construction of new 33kV Line from Turuga Megalift and GMLIP feeder to Turunga Feeder.

Requirement/ Need of the proposal:

Objective:

To enable N-1 connectivity for 33kV Turunga Feeder through 33kV Turunga Megalift feeder and 33kV GMLIP feeder.

Existing Scenario:

- At present, 33kV Turunga feeder is emanating from Pradhanpali GSS and feeding power to Turunga PSS as well as HT Consumers. The feeder is having length of 25.17Ckm with conductor size of 232 sq.mm and the peak load demand in FY26-27 is 25.02MVA with minimum voltage of 29.5kV.
- The feeder is passing in the closer proximity to nearby urban houses of the Bargarh town area and and strung on 8 Mtr/9 Mtr PSC pole. As the existing conductor is very old and weak due to aging and brittleness. In addition, minimum ground clearance has not been maintained in several places over the feeder. The line shifting is not possible due to row issue at Bargarh town area.
- The existing 33kV Dasmile feeder having length of 20.26Ckm with 232sq.mm conductor and peak load demand of 16.12MVA acts as 2nd source to Turunga PSS and is unable to cater the total load of Turunga Feeder during N-1 condition owing to its present load.
- Also, 33kV Turunga feeder is emanating from Bargarh New GSS and feeding power to HT Consumer. The feeder is having length of 23.25Ckm with conductor size of 148 sq.mm and the peak load demand in FY26-27 is 9.27MVA with minimum voltage of 30.3kV. And, 33kV GMLIP feeder is emanating from Bhatli GSS and feeding power to HT Consumer. The feeder is having length of 19.68Ckm with conductor size of 148 sq.mm and the peak load demand in FY26-27 is 3.18MVA with minimum voltage of 32.2kV.
- Considering projected load growth for 2 years @8.61% per year, 33kV Turunga feeder will experience a projected load of 29.82 MVA with minimum voltage of 28.8kV, 33kV Turunga Megalift feeder will experience a projected load of 9.27 MVA with minimum voltage of 30.3kV and 33kV GMLIP feeder will experience a projected load of 3.18MVA with minimum voltage of 32.2kV.

Proposal for reliability improvement of 33kV Tora Feeder:

Proposal:

Construction of new 33kV Line from T-off (Tora PSS) to Panchayat College PSS.

Requirement/ Need of the proposal:

Objective:

To improve reliability of 33kV Tora Feeder which feeds Panchayat College PSS (Bargarh Town).

Existing Scenario:

- At present, 33kV Tora feeder is emanating from Pradhanpali GSS and feeding power to Tora and Panchayat College PSS. The feeder is having length of 9.2Ckm with conductor size of 148/232/3Cx400 sq.mm and the peak load demand in FY26-27 is 15.27MVA with minimum voltage of 32.2kV.
- The section from Tora Feeder (Near Trinath Mandir Railway Crossing) to Panchayat College PSS (newly charged – inaugurated by Deputy CM on 14th July, 2026) is experiencing frequent faults resulting in customer dissatisfaction towards utility. The said section is passing through densely populated residential areas, railway headquarters, government offices, hospitals and schools.
- Considering projected load growth for 2 years @8.61% per year, 33kV Tora feeder will experience a projected load of 18.19 MVA with minimum voltage of 32.1kV.

Proposal for reliability improvement of 33kV Melchhamunda Feeder:

Proposal:

Construction of new 33kV Line from Barihapali PSS to Jai Jagganath Agro (HTC).

Requirement/ Need of the proposal:

Objective:

To improve reliability through load bifurcation of 33kV Melchhamunda Feeder and enable 2nd source to 33kV Melchhamunda feeder and 33kV Dahita feeder.

Existing Scenario:

- At present, 33kV Melchhamunda feeder is emanating from Ghenss GSS and feeding power to Melchhamunda, Hirapali and Kundkhai PSS as well as HT Consumer. The feeder is having length of 69.3Ckm with conductor size of 148/173/232 sq.mm and the peak load demand in FY26-27 is 18.12MVA with minimum voltage of 29.8kV.
- And, 33kV Dahita feeder is emanating from Padampur GSS and feeding power to Dahita and Barihapali PSS. The feeder is having length of 33.91Ckm with conductor size of 148 sq.mm and the peak load demand in FY26-27 is 8.08 with minimum voltage of 32.3kV.
- Considering projected load growth for 2 years @8.61% per year, 33kV Melchhamunda feeder will experience a projected load of 21.73 MVA with minimum voltage of 29.2kV and 33kV Dahita feeder will experience a projected load of 9.6 MVA with minimum voltage of 32.2kV.

Proposal for reliability improvement of 33kV Tarbod Feeder:

Proposal:

Construction of new 33kV Line for LILO Arrangement of 33KV Old Nuapada feeder at Tarbod PSS.

Requirement/ Need of the proposal:

Objective:

To improve reliability by ensuring uninterrupted power supply to the nearby Tarbod, Gandamer, Udynbandh area of Nuapada and facilitate quicker restoration of supply during feeder breakdowns through LILO arrangement at Tarbod PSS of 33kV Old Nuapada Feeder.

Existing Scenario:

- At present, 33kV Old Nuapada feeder is emanating from Khariar GSS and feeding power to Bargaon PSS, Komna PSS, Tarbod PSS and Gandamer PSS as well as HT Consumers. The feeder is having length of 107.6Ckm with conductor size of 55/100/148 sq.mm and the peak load demand in FY26-27 is 9.37 MVA with minimum voltage of 27.8kV.
- In Recent Past 33/11 KV Tarbod PSS is charged under ODSSP Scheme and the tapping for 33 KV Connectivity is taken from Old nuapada feeder by means of 0.1 Ckm Line (148sqmm AAAC).
- As the PSS is not having any N-1 connectivity and the Gandamer PSS is also connected to the PSS so, it is hereby Proposed to create a LILO Line at Tarbod PSS for reliability improvement and N-1 Connectivity.
- Considering projected load growth for 2 years @7.26% per year, 33kV Old Nuapada feeder will experience a projected load of 9.67 MVA with minimum voltage of 27.6kV.

A	Construction of 33kV new Line using 232 sqmm AAAC Bare conductor – 0.1 CKm (Refer Annexure-161)	0.02
B	Construction of 33kV Outdoor Bay (Line Bay) at PSS - 1 Nos (Refer Annexure-197)	0.24
Total Amount (In Cr)		**0.26**
Total estimated cost is Rs. 0.26 Crore. (On TPWODL Capex Scheme)		

Physical Target:

March 2028

Cost Benefit Analysis (Refer Annexure – 88.10):

- **Revenue Return-** 109 %
- **Pay Back Period-** 0.9 Years

Benefit to the system and consumers:

- Improves reliability and continuity of power supply to consumers of Ladugaon and Gadramal areas through LILO arrangement.
- Enables faster fault isolation and restoration of supply during feeder breakdowns, thereby reducing outage duration and consumer interruptions.
- Enhances network redundancy, operational flexibility and system resilience by providing an alternate source path, facilitating maintenance activities with minimal disruption and supporting future load growth in the area.

Proposal for 33kV New Line from Rourkela GSS to NIT PSS:

Proposal:

Construction of new 33kV Line from Rourkela GSS to NIT.

Requirement/ Need of the proposal:

Objective:

To provide N-1 reliability to NIT PSS which comes under Rourkela City area and address the Low voltage issues in Bisra-Jareilkela area. The proposed 33 kV line from Rourkela GSS to NIT PSS is aimed at strengthening the reliability of the Rourkela city distribution network by establishing a new underground feeder, improving voltage regulation, and minimizing technical losses.

Existing Scenario:

- Presently, 33 kV NIT feeder is an HRF feeder emanating from Chhend GSS, supplying power to NIT PSS, Bisra PSS, Jareikela PSS and 8 nos. of HT consumers. NIT and PGCIL is the major HT consumer takes power from NIT feeder which comes under Rourkela City Area. The feeder has a total line length of 52 CKm with conductor sizes of 148 sq.mm and 232 sq.mm. The peak load for FY 2026-27 is 21.7 MVA. And Load Growth considered is 4.88%.
- The severe storm on 25th May 2026 exposed a major weakness in the existing network due to non availability of reliable power source at NIT PSS.
- During the storm (Kaalbaishakhi), more than 30 large trees were uprooted and fell on both circuits simultaneously, resulting in the outage of both feeders. Due to the extensive tree damage, restoration activities became extremely challenging and time-consuming. Even with the deployment of three ODRAF teams, it took nearly three days to clear the fallen trees from the line corridor and restore the network. Consequently, consumers experienced a prolonged power interruption of more than 8 hours.
- The incident clearly demonstrated that the existing overhead line failure during severe weather conditions. Therefore, it is proposed to lay underground (UG) cable between Rourkela GSS to NIT PSS to eliminate outages caused by tree falls, improve network resilience, ensure effective utilization of backup supply arrangements, and provide reliable power supply during adverse weather conditions.

Proposal for 33kV New Link Line from Baurimunda PSS to Kinjirkela PSS:

Proposal:

Construction of new 33kV Line from Baurimunda PSS to Kinjirkela PSS

Requirement/ Need of the proposal:

Objective:

To provide N-1 reliability to 33kV subdega feeder and address the Low voltage issues in area. The proposed 33 kV link line from Baurimunda PSS to Kinjirkela PSS is aimed at strengthening the reliability of the 33kV Subdega feeder by establishing a new link line feeder, improving voltage regulation, and minimizing technical losses.

Existing Scenario:

- Presently, the 33 kV Subdega feeder, emanating from Sundargarh GSS, supplies power to Karamdihi PSS, Subdega PSS, Kinjirkela PSS, Balishankara PSS, Bondega PSS, and 2 Nos of Megalift HT consumers. The feeder has a total line length of 92 CKm with conductor sizes of 80/148/232 sq.mm. The projected peak load for FY 2026-27 is 9.1 MVA, with an annual load growth rate of 4.88%.
- Similarly, the 33 kV Sadar feeder, emanating from Sundargarh GSS, supplies power to Sadar PSS, Baurimunda PSS, and one PGCIL HT consumer. The feeder has a total line length of 36 CKm with conductor sizes of 148/232 sq.mm. The projected peak load for FY 2026-27 is 3.8 MVA, considering the same annual load growth rate of 4.88%.
- The 33 kV Subdega feeder passes through a forest area and does not have any N-1 reliability arrangement. Due to its excessive length, low-voltage issues are being experienced from Subdega PSS to Bondega PSS.
- Any breakdown or fault in the Subdega feeder results in a complete blackout of five PSSs and two HT consumers, severely affecting supply reliability.
- The Subdega feeder extends up to the Odisha-Chhattisgarh state boundary, making operation and maintenance more challenging.
- To mitigate low-voltage issues, improve N-1 reliability, reduce feeder length, and minimize technical losses, the establishment of a new Grid Substation (GSS) at Subdega is essential. A new Grid Substation (GSS) has been proposed at Subdega to address low-voltage problems, improve system reliability, and facilitate load shifting. TPWODL submitted the proposal to OPTCL vide Letter No. TPWODL/DSS/2024-25/014 and has been regularly following up with OPTCL and other concerned authorities since 2022. However, the construction and commissioning of the proposed GSS are expected to take 2 to 3 years.
- Considering the urgent and interim requirement, the construction of a new 33 kV link line is necessary to improve N-1 reliability, reduce feeder length, minimize technical losses, and ensure a reliable power supply until the proposed GSS is commissioned.

Proposal for 33kV New Link Line from OG PGCIL (At NIT PSS of NIT Feeder) GSS to Dalposh PSS:

Proposal:

Construction of new 33kV Line from Dalposh PSS to PGCIL O/G Line(at NIT PSS)s

Requirement/ Need of the proposal:

Objective:

To provide N-1 reliability to Dalposh PSS which comes under outskirts of Rourkela City area. The proposed 33 kV line from from OG PGCIL (At NIT PSS of NIT Feeder) GSS to Dalposh PSS is aimed at strengthening the reliability of the outskirts Rourkela city distribution network by establishing a new underground feeder, improving voltage regulation, and minimizing technical losses.

Existing Scenario:

- Presently, the 33 kV Koelnagar feeder is an HRF feeder emanating from Chhend GSS, supplying power to Hamirpur PSS, Koelnagar PSS, Lindra PSS, Dalposh PSS, and one Mega Lift HT consumer. The feeder has a total line length of 26 CKm, with conductor sizes of 148 sq. mm and 232 sq. mm. The projected peak load for FY 2026-27 is 18.8 MVA, considering a load growth rate of 4.88%.
- Dalposh PSS is presently receiving power through a T-off arrangement from the 33 kV Koelnagar feeder.
- During the recent Kalbaishakhi storm, more than 30 large trees were uprooted and fell simultaneously on the 33 kV Koelnagar feeder, causing an outage of the feeder. Due to the extensive damage and obstruction caused by the fallen trees, restoration activities became extremely challenging and time-consuming. Despite the deployment of three ODRAF teams, it took nearly three days to clear the line corridor and restore the network. As a result, consumers experienced a prolonged power interruption lasting more than eight hours.
- This incident clearly highlighted the vulnerability of the existing overhead line network during severe weather conditions. To mitigate such outages and enhance network reliability, it is proposed to lay an underground (UG) cable from the PGCIL outgoing point at NIT PSS to Dalposh PSS. This will eliminate outages caused by tree falls, improve network resilience, facilitate effective utilization of backup supply arrangements, and ensure a reliable power supply during adverse weather conditions.

Proposal for 33kV New Line from Maneswar GSS to Sambalpur City PSS:

Proposal:

Construction of new 33kV Line from Maneswar GSS to Sambalpur City PSS.

Requirement/ Need of the proposal:

Objective:

To ensure a safe and reliable power supply to Sambalpur City PSS from Maneswar GSS and provide N-1 reliability to Sambalpur City PSS, thereby strengthening the power supply system within the Sambalpur city area. The proposed 33 kV line from Maneswar GSS to Sambalpur City PSS aims to enhance the reliability of the Sambalpur city distribution network by establishing a new feeder. The project will improve voltage regulation, reduce technical losses, and ensure a more reliable power supply to consumers in the Sambalpur City area.

Existing Scenario:

- At present, the 33 kV IOCL feeder is emanating from Ganeshnagar (Sambalpur) GSS. The feeder has a total route length of 11.5 CKM and a peak load of 7.8 MVA. It consists of a trunk line with 100 sq.mm AAAC conductor and 185 sq.mm XLPE cable. A load growth rate of 6.34% has been considered.
- This feeder is presently supplying power to an IOCL HT consumer and will also provide supply to the upcoming Sambalpur City PSS, which is currently under construction near Sambalpur Railway Station to cater to the increasing power demand in Sambalpur city and its surrounding areas.
- In addition, an 3-4 MVA load from the Cheduapada feeder is proposed to be transferred to this 33 kV feeder.
- Approximately 12-15 MVA of load from the Sambalpur city area will be catered through the new 33 kV Sambalpur City feeder. Any breakdown or outage of existing feeder would significantly impact the reliability of power supply across the city. Considering the existing loading condition and anticipated future load growth, the construction of a new feeder from Maneswar GSS to Sambalpur City PSS is proposed to share the load, reduce feeder overloading, and improve system reliability.
- The proposed feeder will ensure a secure and reliable power supply to both commercial and domestic consumers within the service area.
- Existing network constraints and feeder outages have resulted in widespread power interruptions, adversely affecting consumers in the Sambalpur city area.
- In view of these vulnerabilities, there is an urgent need to establish an additional power source from a separate GSS to provide N-1 redundancy, enhance network reliability, and ensure an uninterrupted power supply to this important urban load centre.

Proposal for reliability improvement of 33kV Kuchinda feeder :

Proposal:

A) Construction of new 33kV Line form Janakdihi Point (33KV Kuchinda Megalift) to Gochra PSS

B) Construction of new 33kV Line for LILO Arrangement of 33KV Kesaibahal feeder at Ardabahal PSS

Requirement/ Need of the proposal:

Objective:

To improve the reliability of the 33kV Kuchinda feeder which is in radial in nature by LILO arrangement at Ardabahal PSS and link line from Megalift point. The proposed 33 kV LILO arrangement at Ardabahal PSS and N-1 connectivity of Gochara PSS from Nearby 33kV Megalift point aims to enhance the reliability of the 33kV Kuchinda feeder. The proposal will improve voltage regulation, reduce technical losses, and ensure a more reliable power supply to consumers in the area.

Existing Scenario:

- At present, the 33 kV Kuchinda feeder is emanating from Khandakata GSS. The feeder has a total route length of 52 CKM, a peak load of 6.9 MVA, and is laid with 100/148/232 sq.mm conductors. The expected annual load growth on the feeder is 6.34%.
- The feeder supplies power to Kuchinda PSS, Ardabahal PSS, Gochara PSS, Kesaibahal PSS, and Rangiatikira PSS from Khandakata GSS. The feeder operates in a radial configuration, making all the downstream substations dependent on a single source of supply.
- Ardabahal PSS receives power through a T-off section of the feeder. Consequently, any fault occurring on the downstream section of the feeder can affect all the connected PSSs, leading to widespread power interruptions.
- The proposed interconnection between the Megalift Point and Gochara PSS will enhance the N-1 reliability of Gochara PSS as well as the 33 kV Kuchinda feeder by providing an alternative source of supply during contingency conditions. And also provide the N-1 reliability of 33kV Megalift HRF feeder through this proposal.
- In view of the existing vulnerabilities associated with the radial network configuration, there is an urgent need to establish an additional 33 kV power source to provide N-1 redundancy, improve network reliability, enhance operational flexibility, and ensure an uninterrupted power supply to consumers.

Proposal for reliability improvement of Deoghar PSS by laying 33kV UG link line from RCMS 4 pole Deogarh PSS:

Proposal:

Construction of new 33kV Line from RCMS DP to Deogarh PSS.

Requirement/ Need of the proposal:

Objective:

To ensure a reliable power supply to Deogarh PSS, new link line from RCMS 4 pole Deogarh PSS to provide N-1 reliability to Deogarh DHQ Area. The proposed 33 kV link line from RCMS 4 pole Deogarh PSS aims to enhance the reliability of the Deogarh Town (DHQ) area by establishing a new link line. The project will improve voltage regulation, reduce technical losses, and ensure a more reliable power supply to consumers in the Deogarh Town (DHQ) area.

Existing Scenario:

- At present, the 33 kV Deogarh New Feeder is emanating from Deogarh GSS. The feeder has a total length of 9.7 CKM and a peak load of 7.2 MVA. It comprises a trunk line constructed with 80 sq.mm and 232 sq.mm AAAC conductors. A load growth rate of 6.34% has been considered for planning purposes.
- The feeder is currently supplying power to Deogarh PSS through a T-off section.
- Power supply to the entire Deogarh DHQ area and its surrounding peripheral areas is being catered through Deogarh PSS.
- The existing 33 kV line from RCMS 4 Pole to Deogarh PSS passes through a densely populated area and uses conductors that are approximately 30 to 35 years old. Due to aging infrastructure, poor condition of the line, and severe Right of Way (RoW) constraints, the Deogarh DHQ area is experiencing reliability and maintenance challenges.
- Existing network constraints and frequent feeder outages have resulted in widespread power interruptions, adversely affecting consumers in the Deogarh DHQ area.
- The link line proposal will provide a secure, reliable, and uninterrupted power supply to both commercial and domestic consumers in the Deogarh DHQ area.

Proposal for N-1 connectivity of 33kV Birmaharajpur Feeder:

Proposal:

Construction of new 33kV Line from Sonepur PSS to T-off Ganpati Balaji (HTC).

Requirement/ Need of the proposal:

Objective:

To avail N-1 connectivity between 33kV Birmaharajpur Feeder and Sonepur PSS.

Existing Scenario:

- At present, 33kV Birmaharajpur feeder is an HRF feeder emanating from Sonepur GSS and feeding power to HT Consumers. The feeder is having length of 5.5Ckm with conductor size of 100 sq.mm and the peak load demand in FY26-27 is 0.4 MVA with minimum voltage of 32.98kV.
- And, 33kV Sonepur feeder is emanating from Sonepur GSS and feeding power to Sonepur PSS. The feeder is having length of 0.94Ckm with conductor size of 232 sq.mm and the peak load demand in FY26-27 is 10.03 MVA with minimum voltage of 32.91kV.
- Considering projected load growth for 2 years @8.61% per year, 33kV Birmaharajpur feeder will experience a projected load of 0.4 MVA with minimum voltage of 32.98kV and 33kV Sonepur feeder will experience a projected load of 11.24 MVA with minimum voltage of 32.90kV.

Proposal for reliability improvement of Kalinga Vihar PSS:

Proposal:

Construction of new 33kV Line from Kalinga Vihar PSS and Hockey DSS

Requirement/ Need of the proposal:

Objective:

To ensure the safe and reliable power to Kalinga Vihar PSS connectivity from Other GSS and also provide N-1 reliability to Kalinga Vihar PSS which comes under Rourkela City area. The proposed 33 kV new link line from Hockey DSS to Kalinga Vihar PSS is aimed at strengthening the reliability of the Rourkela city distribution network by establishing a new underground feeder, improving voltage regulation, and minimizing technical losses.

Existing Scenario:

- Presently, the 33 kV Kalinga Vihar and Hockey Stadium feeders are High Reliability Feeders (HRF) emanating from Chhend GSS, supplying power to Kalinga Vihar PSS and Hockey Stadium DSS, respectively. The feeders have total line lengths of 1.8 CKm and 1.9 CKm with 232 sq. mm conductors. The projected peak loads for FY 2026-27 are 5.7 MVA for Kalinga Vihar and 0.8 MVA for Hockey Stadium, with an annual load growth rate of 4.88%.
- The Kalinga Vihar, Hockey Stadium, and Chhend areas constitute a major commercial zone of Rourkela City. Therefore, ensuring an uninterrupted and reliable power supply to these areas is of critical importance.
- The Kalinga Vihar and Hockey Stadium PSSs serve a vital urban load center extending from the Industrial Estate area to Chhend Chhak, catering to a mix of residential, commercial, and institutional consumers.
- During the maintenance or breakdown of Chhend GSS, the 33 kV Kalinga Vihar feeders become unavailable, resulting in power outages. At present, there is no N-1 source redundancy available for supplying power to Kalinga Vihar PSS.
- These limitations can lead to complete power interruptions not only in the Kalinga Vihar area but also across other feeders emanating from Chhend GSS, adversely affecting a large number of consumers.
- In view of these operational vulnerabilities, there is an urgent need to establish an additional and reliable power source from a separate GSS to ensure N-1 redundancy, enhance network reliability, and maintain an uninterrupted power supply to this critical urban region.

Proposal for N-1 reliability of Ainthapali PSS from Remed PSS to Ainthapali PSS:

Proposal:

Construction of new 33kV Line from Remed PSS to Ainthapali PSS.

Requirement/ Need of the proposal:

Objective:

To ensure a safe and reliable power supply to Remed PSS from Ainthapali PSS and provide N-1 reliability to Ainthapali PSS, thereby strengthening the overall power distribution system within the Sambalpur City area. The proposed 33 kV link line from Remed PSS to Ainthapali PSS aims to enhance the reliability of the power supply system in Sambalpur City by establishing a new underground feeder. The project will improve voltage regulation, reduce technical losses, and ensure a more reliable and uninterrupted power supply to consumers in the area

Existing Scenario:

- At present, the 33 kV Ainthapali feeder (overhead line) is emanating from Ganeshnagar (Sambalpur) GSS. The feeder has a total route length of 2.15 CKM and a peak load of 27 MVA. It is a trunk feeder constructed with 232 sq.mm AAAC conductor and is currently operating under overloaded conditions. And there is not available of 2nd source to Ainthapali (Old) PSS.
- Approximately 35-40% of Sambalpur City's load is being supplied through the 33 kV Ainthapali feeder. Any breakdown or outage on this feeder significantly affects the reliability of power supply across the city. Considering the existing overloading condition and anticipated future load growth, the establishment of an additional power source is essential to share the load, reduce feeder overloading, and improve overall system reliability.
- Ainthapali PSS caters to a critical urban load centre covering major areas of Sambalpur City and serves a large number of residential, commercial, and institutional consumers.
- Existing network constraints and feeder outages have resulted in widespread power interruptions, affecting not only the Ainthapali area but also major parts of Sambalpur City.
- The proposed link feeder between Remed PSS and Ainthapali PSS will provide an alternative supply path, ensuring reliable power supply to both commercial and domestic consumers in the service area.
- In view of these vulnerabilities, there is an urgent need to establish an additional power source through the proposed 33 kV underground link line between Remed PSS and Ainthapali PSS. This will provide N-1 redundancy, enhance network reliability, improve operational flexibility, and ensure uninterrupted power supply to this important urban load centre.

Proposal for N-1 reliability of 33kV Sarandapali Feeder:

Proposal:

Construction of new 33kV Line from New Bargarh GSS to Bagbadi and Nuapali PSS.

Requirement/ Need of the proposal:

Objective:

To improve reliability through load shifting of 33kV Sarandapali Feeder and provide 2nd source to Bagbadi and Nuapali PSS.

Existing Scenario:

- At present, 33kV Sarandapali feeder is emanating from Barpali GSS and feeding power to Nuapali, Sarandapali and Bagbadi PSS as well as HT Consumers. The feeder is having length of 43.32Ckm with conductor size of 100/148/173/232 sq.mm and the peak load demand in FY26-27 is 15.43MVA with minimum voltage of 31.1kV.
- Considering projected load growth for 2 years @8.61% per year, 33kV Sarandapali feeder will experience a projected load of 18.14 MVA with minimum voltage of 30.7kV.

Existing FY26-27 Loading and projected load at 33kV Feeder:

11kV New line from Industrial Estate PSS to Ichhapada

Proposal:

11kV New line from Industrial Estate PSS to bifurcate Industrial Estate-1 feeder to mitigate overloading.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of 11kV Industrial Estate-1 feeder of Industrial Estate PSS and to ensure "N-1" connectivity.

Existing Scenario:

- In present scenario, the 11kV Industrial Estate-1 feeder emanates from 33/11kV Industrial Estate PSS PSS. It is a HRF and an Urban feeder.
- The length of the feeder is 4.99CKm and the conductor size of the feeder is 100 & 55sqmm. The peak demand of the feeder in Fy26-27 is 4.32MVA.
- Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 4.96MVA.
- Under the projected loading condition of Fy28-29 the feeder shall be overloaded by 128.1%.
- It shall be noted that augmentation of the feeder & would have only lasted till Fy28-29 only, however since it is an HRF and URBAN feeder it is wise and essential to bifurcate the feeder to ensure long term solution.

Proposed Scenario:

- To mitigate the overloading of 11kV Industrial Estate feeder, it is proposed to bifurcate the feeder by constructing a new 11kV underground line of 2.5kM from Industrial Estate PSS to Ichhapada.
- For the 11kV UG line, 2.5Km 3C*300sqmm XLPE cable shall be laid in HDD manner.
- For protection of 11kV outdoor bay with VCB shall be installed at Industrial Estate PSS.

11kV New line from Jail PSS to Sudpada

Proposal:

11kV New line from Jail PSS to bifurcate and enable N-1 source for Kansaripada Feeder of Sudpada PSS having single power transformer.

Requirement/ Need of the proposal:

Objective:

To bifurcate and provide N-1 source for 11kV Kansaripada feeder of Sudpada PSS having single power transformer.

Existing Scenario:

- In present scenario, the 11kV Kansaripada feeder emanates from 33/11kV Sudpada PSS.It is a HRF and an Urban feeder.
- The length of the feeder is 3.26 CKm and the conductor size of the feeder is 100 & 55sqmm.
- The peak demand of the feeder in Fy26-27 is 3.64MVA.
- Considering the load growth of 6.78% per annum, the expected demand in Fy28-29 shall be 4.16MVA.
- Sudpada PSS has single Power Transformer (5MVA) and due to space constraint, another Power Transformer cannot be installed. So, it is proposed to erect a new 11kV feeder from Jail PSS which will bifurcate Kansaripada feeder and will ensure absolute "N-1" connectivity.
- Total tripping and consumer hour loss of feeder is 32 nos and 116612 consumer hours respectively in FY25-26.

Benefit to the system and consumers:

- Establish **N-1 contingency** connectivity for 11kV Kansaripada Feeder.
- Feeder loading reduced from 80% to 60.9%, resulting in substantial reduction in technical loss percentage from 1.73% to 1.61% at Peak Load condition.
- The total technical loss of the 11kV Kansaripada feeder shall be reduced from 64.55kW to 61.92kW at peak load.
- The tail end voltage of the feeder shall be improved from 10.9 kV to 10.9kV.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hours by around 20% in case of tripping in any of the feeders after execution of scheme.

Proposal for overload mitigation of 11kV Petupali Feeder:

Proposal:

11kV new line from Ghenss PSS to mitigate overloading of 11kV Petupali Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11kV Petupali feeder to mitigate overloading, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- The existing 11kV Petupali feeder emanates from the 33/11kV Ghenss PSS and supplies power to various categories of consumers, including Domestic, Agricultural and small shop and local commercial establishments in and around Petupali and adjoining areas.
- This 11kV feeder operates in a radial configuration with a route length of 91.3CKm and 100/55sqmm conductor. The feeder is carrying a peak demand of 5.11 MVA during FY 2026-27.
- Considering the anticipated load growth of 8.51% per annum, by FY 2028-29 the feeder peak load expected to reach 6.18MVA.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.17kV, which is below the statutory permissible limit.
- Total consumer hour loss of feeder is 2039494 consumer hrs in FY25-26.

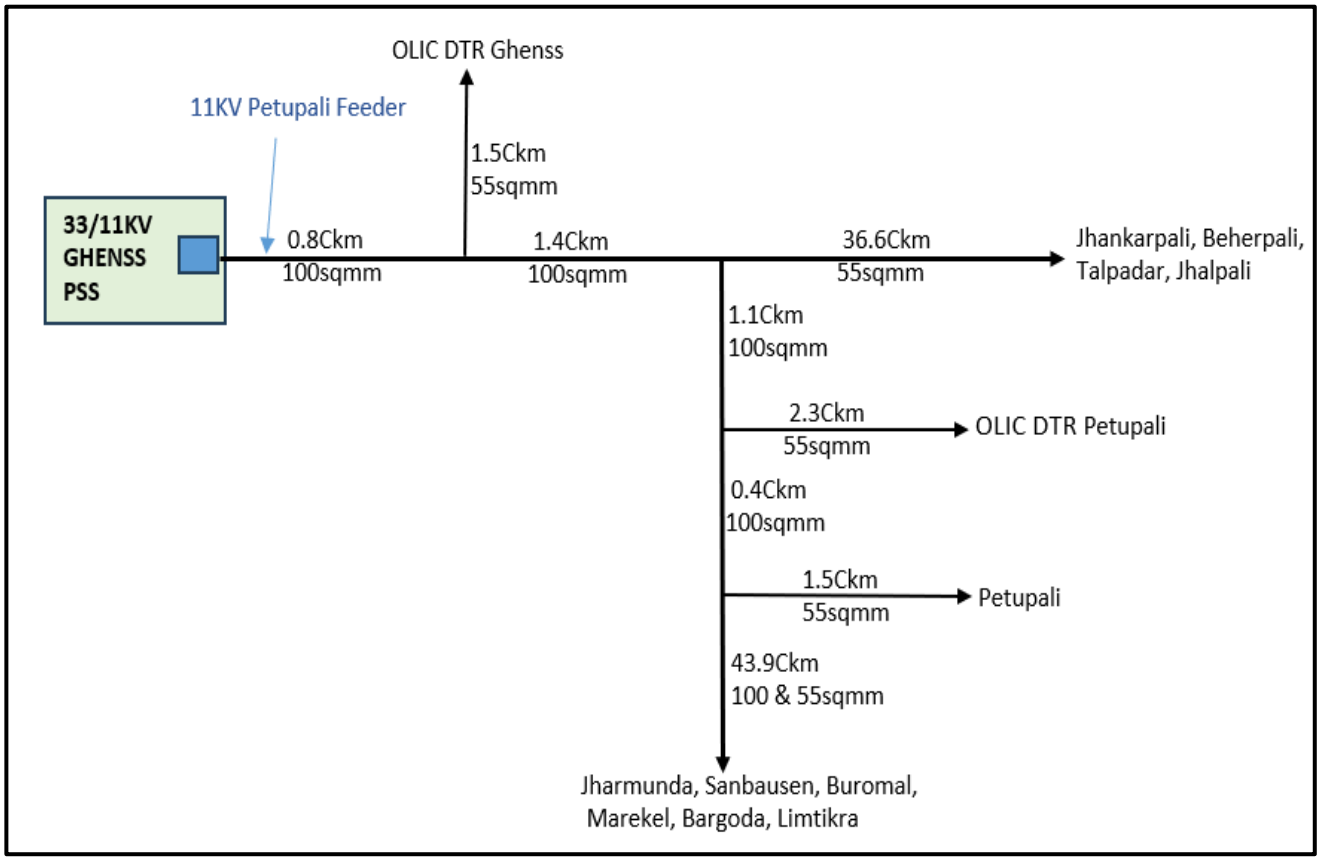
(11kV Petupali Feeder)



Proposed Scenario:

- To Bifurcate the existing 11kV Petupali feeder of Ghens PSS, the proposed line will be tapped from the 11kV busbar of Ghenss PSS.
- A 3C*300sqmm, 11kV UG cable(2R*80mtrs) shall be laid from the PSS to the proposed 11kV RMU Incomer.
- From the outgoing of the proposed 11kV RMU, 2runs of 3C*300sqmm UG cable(2R*40mtrs) shall be laid upto proposed DP with Isolator.
- The new line of length 4.1Ckm (3.1Ckm Bare, 1.0Ck Insulated) is proposed to construct using 11Mtr WPB poles along with 100sqmm AAAC conductor. The insulated conductor is proposed for the section passing adjacent to residential houses, 11kV line crossing, and proposed route will run parallel to the 33kV line, to enhance public safety and system reliability.
- The proposed route will cross the river whose width is tentatively 150Mtr. For crossing the river 2 nos. tower shall be used both sides of the river.
- Upon completion of the scheme, a portion of the load currently served by the 11kV Petupali feeder will be shifted to the proposed new feeder. The feeder bifurcation will also strengthen the N-1 contingency arrangement for both the existing Petupali feeder and the proposed feeder.

Cost Estimate: ₹1.15Cr.

Physical Target:

March 2028

Cost Benefit Analysis (Refer Annexure No- 91):

- Revenue Return- 44.26%
- Pay Back Period- 2.3 Years

Benefit to the system and consumers:

- The tail-end voltage of the feeder is expected to improve from 9.17 kV to 9.92 kV and loading of 11 kV Petupali will be reduced from 175% to 75%, resulting a substantial reduction in technical losses from 12.4% to 8.23% at peak conditions.
- The total losses at peak loading conditions on 11 kV feeders will decrease from 665.72 kW to 501.05 kW leading to enhanced energy savings.
- Establish N-1 contingency support for 11kV Petupali feeders.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to to various categories of consumers, including Domestic, Agricultural and small shop and local commercial establishments in and around Petupali and adjoining areas.

Proposal for overload mitigation of 11kV Jamutpali Feeder:

Proposal:

11kV new line from Kundakhai PSS to mitigate overloading of 11kV Jamutpali Feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading issue through load bifurcation of the 11kV Jamutpali feeder to ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- The existing 11kV Jamutpali Feeder emanates from the 33/11kV Kundakhai PSS and supplies power to various categories of consumers, including Domestic, Agricultural and small shop and local commercial establishments in and around Jamutpali and adjoining areas.
- This 11kV feeder operates in a radial configuration with a route length of 72.5CKm and 55sqmm conductor. The feeder is carrying a peak demand of 3.44 MVA during FY 2026-27.
- Considering the anticipated load growth of 8.51% per annum, the feeder peak load is expected to reach 4.16MVA by FY28-29.
- Total consumer hour loss of feeder is 854250 consumer hrs in FY25-26.

Loading Scenario (FY26-27) and Projected loading (FY 28-29):

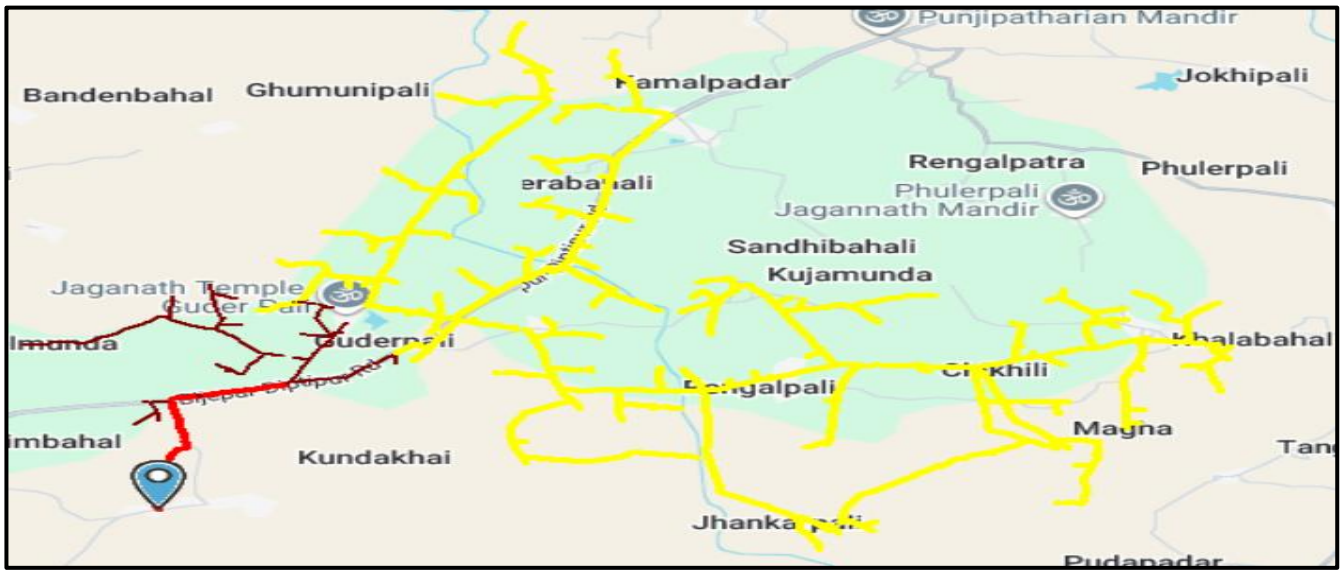
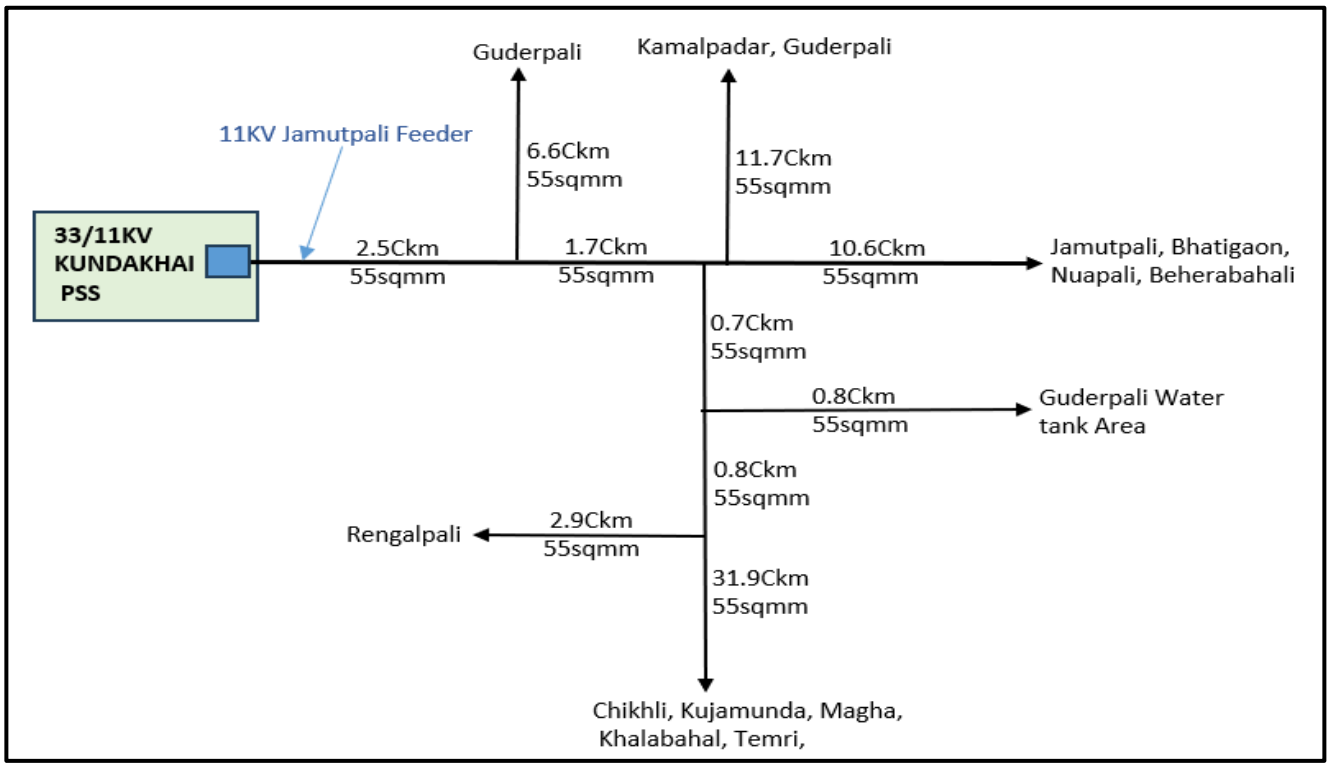
GIS Map:



Note: - Red Indicating the overloaded sections & Yellow indicating the undervoltage sections.

Existing SLD:

(11kV Jamutpali Feeder)



Proposed Scenario:

- It is proposed to construct a new 11kV feeder from the existing Kundakhai PSS to near Rengalpali village, where it shall be connected to the existing Jamutpali feeder for feeder bifurcation.
- The new line is proposed to construct using one 11kV indoor VCB & 3.9Ckm (3.5Ckm Bare, 0.4Ckm insulated) line using 11Mtr WPB poles along with 100sqmm AAAC conductor. The insulated conductor is proposed for the section passing adjacent to residential houses to enhance public safety and system reliability.
- Upon completion of the scheme, a portion of the load currently served by the 11kV Jamutpali feeder will be shifted to the proposed new feeder. The feeder bifurcation will also strengthen the N-1 contingency arrangement for both the existing Jamutpali feeder and the proposed feeder.

Proposal for overload mitigation of 11kV Town-1 Feeder:

Proposal:

11 kV new line from Padampur PSS to mitigate overloading of 11 kV Town-1 Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11kV Town-1 Feeder to mitigate overloading, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- The existing 11kV Town-1 Feeder emanates from the 33/11kV Padampur PSS and supplies power to various categories of consumers, including domestic, commercial and other essential consumers in Padampur town.
- This 11kV feeder is classified as a high-revenue feeder & operates in a radial configuration with a route length of 26.9CKm and 100/55 sq.mm conductor. The feeder is carrying a peak demand of 5.79MVA during FY 2026-27.
- Considering the anticipated load growth of 8.51% per annum, the feeder peak load expected to reach 6.84MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.68kV, which is within limit.

Proposal for overload mitigation of 11kV Old-Industrial Feeder:

Proposal:

11 kV new line from Dasmile PSS for load bifurcation of the existing Old Industrial Feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading through load bifurcation of the 11 kV Old Industrial Feeder, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV Old Industrial Feeder emanates from the 33/11 kV Turunga PSS and serves a significant number of industrial consumers and rice mills in Turunga area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 38CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 5.18 MVA during FY 2026-27.
- Considering the anticipated load growth of 8.71% per annum, the feeder peak load is expected to reach 6.2 MVA by FY28-29.

Proposal for overload mitigation of 11kV Jaleswar Feeder:

Proposal:

11kV new line from Kusadungri PSS for load bifurcation of 11kV Jaleswar Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11kV Jaleswar Feeder to mitigate overloading, ensuring N-1, and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11kV Jaleswar Feeder emanates from the 33/11 kV Kusadungri PSS and serves a significant number domestic consumer in Bhabanipatana Town area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 8.42CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 4.53 MVA during FY 2026-27.
- Considering the anticipated load growth of 6.80% per annum, the feeder peak load is expected to reach 5.2MVA by FY28-29.
- Under the projected loading conditions, the feeder loading is estimated to rise to 101%, which is above the statutory permissible limit.

March 2028

Cost Benefit Analysis: - (Refer to Annexure No-91 for details.)

Revenue Return- 21.36%

Pay Back Period- 4.68 Years

Benefit to the system and consumers:

- Loading of 11 kV feeder Jaleswar feeder will be reduced from 101% to 42%.
- The total losses at peak loading on 11kV feeders will decrease from 194.93 kW to 163.51 kW leading to enhanced energy savings.
- Establishment of N-1 contingency for 11kV Jaleswar feeder.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to domestic consumers as well as office building in the Bhabanipatana Town areas, supporting uninterrupted operations.

Proposal for undervoltage mitigation of 11kV Pastikudi Feeder:

Proposal:

11kV new line from Utkela PSS for bifurcation of 11KV Pastikudi feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the Tail end voltage as well as to reduce the feeder length for network reliability and efficiency by emanating a new feeder from Utkela PSS.

Existing Scenario:

- In present scenario, the 11 kV Pastikudi Feeder emanates from the 33/11 kV Raisingpur PSS and serves a significant number of LI Consumers, Small Industries and Domestic consumer in Pastikudi area.
- This 11kV feeder is an old feeder with a route length of 70CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 1.35MVA during FY 2026-27 and the tail end voltage of the feeder is 10.06 KV.
- Considering the anticipated load growth of 6.80% per annum, the feeder peak load is expected to reach 1.56MVA by FY28-29 and the tail end voltage of the feeder will be 9.9 KV.

Loading Scenario (FY 26-27) and Projected Loading (FY 28-29):

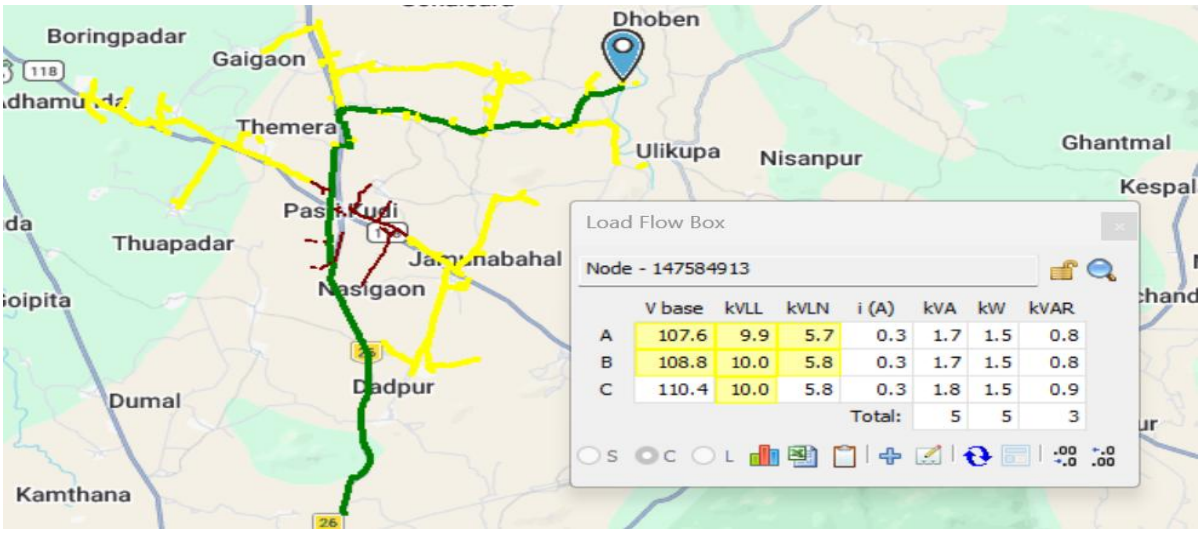
Total Loss (kW)											**134.30**

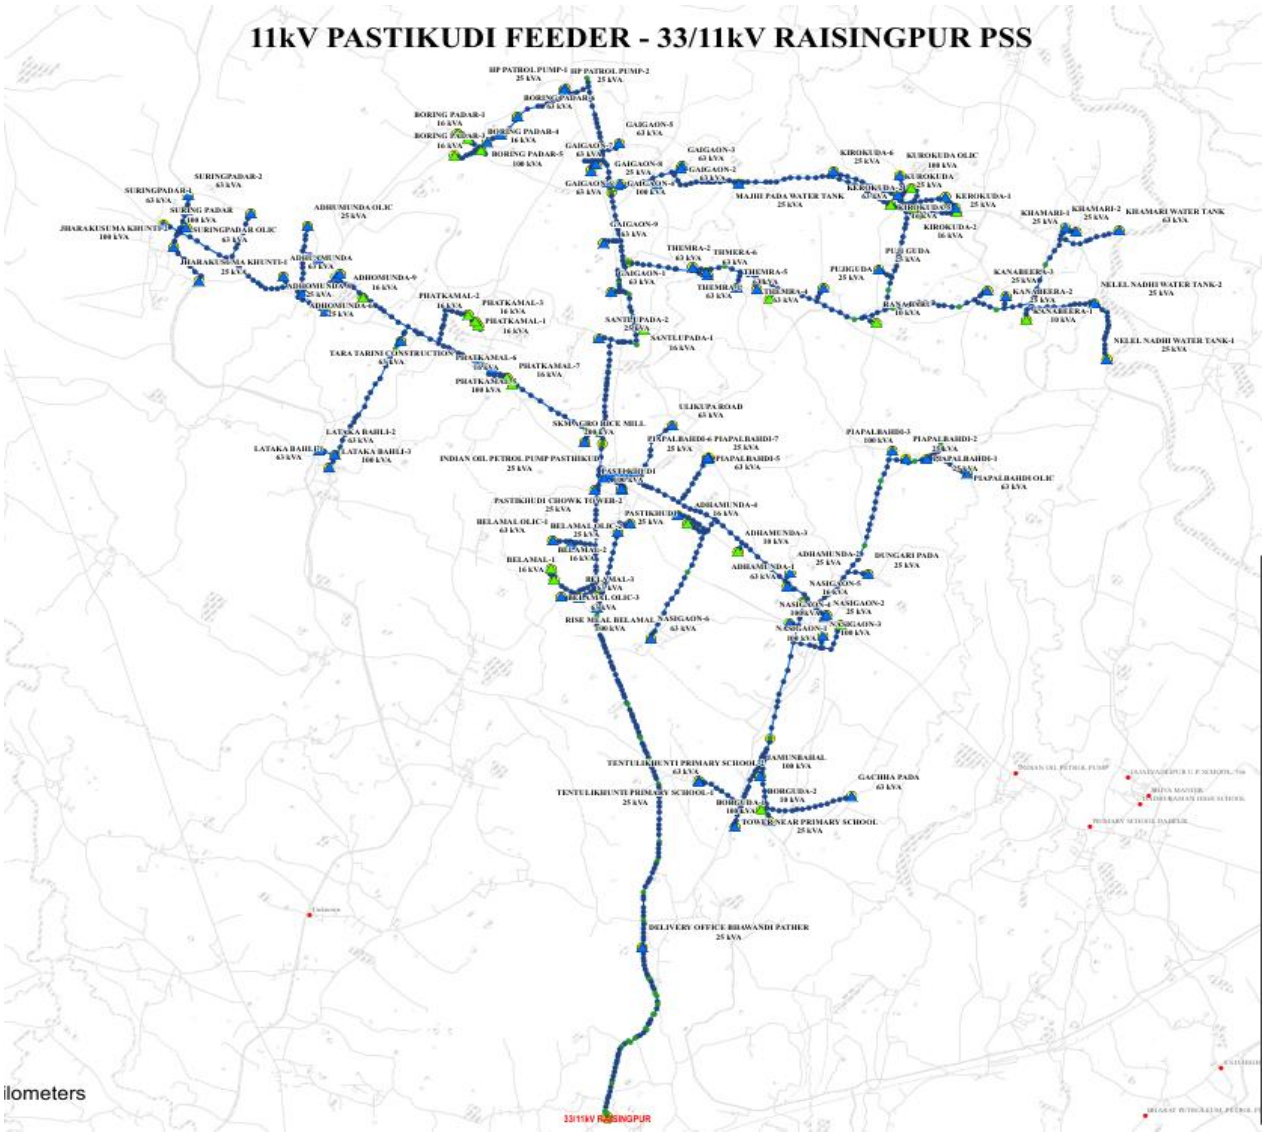
GIS Map:



Note: - Yellow Indicating the Under Voltage sections

Existing SLD:

(11Kv Pastikudi Feeder)



Proposed Scenario:

- To mitigate the Low Voltage issue as well as to reduce the length of the existing 11KV Pastikudi feeder hereby it is proposed to erect a new feeder from Utkela PSS and erect 6.5 Ckm of 11 KV new line and the termination will be done near Petrol Pump, Gaigaon (2.5Ckm of Covered Conductor will be required as the Proposed line will be run through private and dense vegetation areas).
- 1 no of DP with AB Switch will be required for NO & NC operation.
- Upon completion of the scheme, the new feeder will bifurcate the existing 11kv Pastikudi feeder as well as the new feeder will carry some Load of the existing feeder.

Note: A spare 11kV Bay is available in Utkela PSS. Hence, the newly proposed feeder will be evacuated using the spare bay.

Proposal for Overloading mitigation of 11kV Beltukri Feeder:

Proposal:

11 kV new line from Bisora PSS for bifurcation of 11kV Beltukri Feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate the Overloading issue as well as reduce the feeder length for network reliability and efficiency by emanating a new feeder from Bisora PSS.

Existing Scenario:

- In present scenario, the 11 kV Beltukri Feeder emanates from the 33/11 kV Bisora PSS and serves a significant number of LI Consumers and Domes in Nuapada area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 59.19 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 3.18 MVA during FY 2026-27 and the tail end voltage of the feeder s 10.15 KV.
- Considering the anticipated load growth of 6.78 % per annum, the feeder peak load is expected to reach 3.96 MVA by FY28-29 and the tail end voltage of the feeder will be 10.02 KV.

Proposal for undervoltage mitigation of 11kV Sialati Feeder:

Proposal:

11kV Link Line between 11kV Sialati feeder with 11kV Babeghati feeder & 11kV New Udyanbandh feeder.

Requirement/ Need of the proposal:

Objective:

To enhance the tail end voltage as well as to reduce the feeder length for network reliability and efficiency through two nos of link line (Sialati Feeder-Babeghati feeder) and (Sialati Feeder-New Udyanbandh Feeder).

Existing Scenario:

- In present scenario, the 11 kV Sialati Feeder emanates from the 33/11 kV Kurumpuri PSS and serves a significant number of LI consumers and rice mills in Sialati area.
- This 11kV feeder is classified as a critical feeder & operates in a radial configuration with a route length of 78.62 CKm and having 55 sq.mm conductor. The feeder is carrying a peak demand of 2.19 MVA during FY 2026-27 and the tail end voltage of the feeder s 9.3 KV.
- Considering the anticipated load growth of 6.78 % per annum, the feeder peak load is expected to reach 2.7 MVA by FY28-29 and the tail end voltage of the feeder will be 9.28 KV.
- To mitigate the low voltage and reliability problems of 11kV Sialati feeder it is proposed to erect link line with 11kV Babeghati feeder & 11kV New Udyanbandh feeder respectively for load shifting.

Proposed Scenario:

- To mitigate the Low Voltage issue as well as to reduce the length of the existing Sialati feeder hereby it is proposed to erect two nos of link lines (2 Ckm of Link line between Sialati feeder and Babeghati feeder & 3.5 Ckm of Link line between Sialati feeder and New Udyanbandh Feeder).
- 2 nos of DP With AB Swich (400 A) using 11 Mtr WPB Pole.
- Upon completion of the scheme, two portions of the load currently served by the 11 KV Sialati Feeder will be shifted to the Babeghati feeder and New Udyanbandh feeder and the low Voltage issue of Sialati feeder will be mitigated.

Note: 11kV Babeghati & 11kV New Udyanbandh feeder from Tarbod PSS is proposed under ODSSP scheme which will be charged by March'27. Upon, charging of both the feeders load of 11kV Sialati feeder to be shifted.

Proposal for providing N-1 redundency & Improving reliability of 11kV Jalda Industrial Feeder:

Proposal:

11kV link line between Jalda Industrial Feeder and Balughat feeder for N-1 and reliability Jalda Industrial Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and proving N-1 redundant supply to 11 Jalda Industrial Feeder.

Existing Scenario:

- In present scenario, the 11 kV Jalda Industrial Feeder emanates from the 33/11 kV Jalda PSS and provide power supply to to key LT & HT Consumers (including institutions, offices & important establishments) inside Rourkela city.
- This currently do not have N-1 redundancy from the same or different PSS. As a result, in the event of a fault, the associated feeder remains completely out of service.
- To improve reliability and ensure N-1 contingency, it is proposed to interconnect both feeders through an RMU in a ring configuration, enabling back-feeding from either feeder during outages or quick restoration of supply by isolating the faulty section.
- Total tripping and consumer hour loss of Jalda Industrial feeder is 97nos. and 403374 consumer hours in FY25-26.

Benefit to the system and consumers:

- N-1 Redundant supply from different PSS to 11kV Jalda Industrial Feeder & Improve reliability of Rourkela city area.
- As both the feeders will be N-1 to each other, so improvement in reliability is expected by reduction in consumer hrs by around 20% in case of tripping in any of the feeders after execution of scheme.

Proposal for N-1 Supply and Reliability Improvement of 11kV Hanuman Vatika Feeder:

Proposal:

11kV new line from Panposh PSS to Bifurcate Hanuman Vatika Feeder.

Requirement/ Need of the proposal:

Objective:

Load bifurcation of 11 kV Hanuman Vatika (HRF) Feeder, ensuring N-1 from different PSS, and reduction in technical losses.

Existing Scenario:

- At present, the 11 kV Hanuman Vatika Feeder, is HRF Feeder emanating from the 33/11 kV Civil Township PSS, caters to many domestic and commercial consumers in the Rourkela Civil Township area. Due to continuous load growth and the addition of new consumers, the feeder is likely to become overloaded soon. Further, the feeder is solely dependent on the Civil Township PSS and lacks N-1 redundancy; hence, any outage or shutdown of the PSS results in complete interruption of power supply to the consumers served by the feeder.
- The feeder is carrying a peak demand of 2.5MVA during FY 2026-27.
- Considering the anticipated load growth of 5.4% per annum, the feeder peak load is expected to reach 2.8MVA by FY28-29.
- Total tripping and consumer hour loss of Hanuman Vatika feeder is 34nos. and 92637 consumer hours respectively in FY25-26.

Loading Scenario (FY26-27) and Projected loading (FY 28-29):

Proposed Scenario:

- New 11kV feeder is proposed from nearby existing Panposh PSS to Hitech Chowk and shall be Bifurcate the existing 11kV Hanuman Vatika feeder.
- The new line is proposed to be constructed using one 11kV Outdoor, VCB, Bay & 11kV 1.71Ckm,3C, XLPE, 300Sqmm.
- After completion of this scheme the existing Hanuman Vatika feeder will bifurcate into two parts & having N-1 Supply from other PSS.

Proposal for N-1 Supply and Reliability Improvement of 11kV Jalda C-Block Feeder:

Proposal:

11kV new line from Jalda PSS to Bifurcate existing Jalda C-Block Feeder.

Requirement/ Need of the proposal:

Objective:

To load bifurcation of the 11 kV Jalda C-Block Feeder, ensuring N-1, and reduction in technical loss.

Existing Scenario:

- In the present scenario, the 11 kV Jalda C-Block Feeder, emanating from the 33/11 kV Jalda Primary Substation (PSS), supplies power to many domestic consumers located in the outskirts of Rourkela City as well as adjoining rural areas. Owing to continuous horizontal load growth and the addition of new consumers, the feeder is projected to become overloaded soon. Further, due to its extensive feeder length covering remote rural areas, any fault or interruption on the rural section adversely affects power supply reliability for urban consumers connected to the same feeder. This results in frequent interruptions and in the urban area
- This 11kV feeder is classified as a critical urban feeder & operates in a radial configuration with a route length of 20CKm and having 100/80/55 sq.mm conductor.
- The feeder is carrying a peak demand of 3.7MVA during FY 2026-27.
- Considering the anticipated load growth of 5.4% per annum, the feeder peak load is expected to reach 4.1MVA by FY28-29. The MU loss of the feeder is 0.047 MUs in FY-26.
- Total tripping and consumer hour loss of Jalda Industrial feeder is 75nos. and 438090 consumer hours respectively in FY25-26.

Requirement/ Need for the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11 kV Basanti PHD Feeder to mitigate overloading, ensuring N-1.

Existing Scenario:

- In present scenario, 11 kV Basanti PHD Feeder emanates from the 33/11 kV Basanti PSS and serves a significant number of urban consumers.
- This 11kV feeder is classified as a high-revenue feeder with a route length of 3.91 CKm and consists of multiple conductor sections, including 100/55 sqmm conductor.The feeder is carrying a peak demand of 4 MVA (208.09 Amps) during FY 2026-27.
- Considering the anticipated load growth of 4.88% per annum, the feeder peak load is expected to reach 229.6 A by FY28-29.

Requirement/ Need for the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation of the 11 kV Bondamunda Feeder to mitigate overloading, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV Bondamunda Feeder emanates from the 33/11 kV Bondamunda PSS and serves a significant number of high value consumers in Bondamunda area.
- This 11kV feeder is classified as a critical (HRF) feeder & operates in a radial configuration with a route length of 21.46 CKm and having ACSR 100/80/50 sq.mm conductor (18Ckm =80sqmm ACSR conductor). The feeder is carrying a peak demand of 4.20 MVA during FY 2026-27.
- Considering the anticipated load growth of 4.88 % per annum, the feeder peak load is expected to reach 242 A by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.21 kV, which is within the statutory permissible limit.

Benefit to the system and consumers:

- Feeder loading will be optimized from 102% to 65%, resulting in a substantial reduction in technical losses at peak from 4.34% to 2.53%.
- The total technical losses at peak loading on 11 kV feeders will decrease from 217.35 kW to 77.88 kW, leading to enhanced energy savings and system performance.
- Improvement in tail end voltage from 10.21 kV to 10.6 kV.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to approx. 7000 domestic and commercial consumers including public health centre and Police station.

Proposal for providing N-1 redundancy & Improving reliability of 11kV Basanti PHD and MS Pali Feeder:

Proposal:

11kV Link line between Basanti PHD & MS Pali Feeder for N-1 supply.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and proving N-1 redundant supply to 11 Basanti PHD Feeder from 11kV MS Pali Feeder.

Existing Scenario:

- In present scenario, the 11 kV Basanti PHD Feeder emanates from the 33/11 kV Basanti PSS and serves a significant number of domestic and commercial consumers in Basanti area. This 11kV feeder is classified as an Urban and critical feeder & operates in a radial configuration with a route length of 3.91 CKm and having 100/55 sq.mm conductor. The feeder is carrying a peak demand of 3.996 MVA during FY 2026-27. Considering the anticipated load growth of 4.88% per annum, the feeder peak load is expected to reach 4.408 A by FY28-29.
- The feeder has an existing physical N-1 interconnection with the 11 kV Basanti DAV feeder, which also originates from the same PSS. The Basanti DAV feeder carries a peak load of 3.592 MVA and currently does not have any interconnectivity with feeders emanating from other PSSs. During the joint site visit, it was decided to establish interconnectivity with the 11 kV MS Pali feeder (emanating from the MS Pali PSS) and Gangadharpali feeder (emanating from Industrial Estate PSS). The tail end of this feeder is located near the Basanti PHD feeder. The MS Pali feeder is currently lightly loaded, with a peak load of 1.928 MVA. This arrangement will help maintain load reliability and prevent overloading of the existing feeders during contingency conditions.
- Total tripping and consumer hour loss of Basanti PHD feeder is 8nos. and 59143 consumer hours respectively in FY25-26.

- **Note:** Considering the peak loading of both feeders, partial load transfer can be carried out through the proposed interconnection during contingency conditions. Bifurcation proposal with a new feeder of Basanti PHD feeder also proposed in CAPEX FY27-28 for further division of load on this feeder and enabling complete load transfer during N-1 condition. This arrangement will help maintain supply to critical consumer pockets of the Basanti area and reduce outage duration during feeder faults, shutdowns and maintenance activities.

Proposal for Interconnectivity between Bondamunda and Bisra-2 11kV Feeder:

Proposal:

11KV link line between Bondamunda feeder and Bisra-2 feeder to improve reliability.

Requirement/ Need for the proposal:

Objective:

To improve reliability and operational flexibility of the distribution network by providing interconnectivity between Bondamunda and Bisra-2 11 kV feeders, enabling load transfer and alternate power supply during outages and maintenance activities.

Existing Scenario:

- In present scenario, the 11 kV Bondamunda Feeder emanates from the 33/11 kV Bondamunda PSS and serves approx. 7000 consumers in Bondamunda area.
- 11 kV Bondamunda Feeder is classified as a critical (HRF) feeder & operates in a radial configuration with a route length of 21.46 CKm and having ACSR 100/80/50 sq.mm conductor (18Ckm =80sqmm ACSR conductor). The feeder is carrying a peak demand of 218.53 (4.20) MVA during FY 2026-27.
- Bisra-2 feeder emanates from the 33/11 kV Bisra PSS and serves appox 2000 Nos of commercial & domestic consumers.
- 11kV Bisra-2 feeder is rural feeder and operates in a radial configuration with a route length of 7.3 CKm and having ACSR 100/50/35 sq.mm conductor. The feeder is carrying a peak demand of 80.53 (1.54) MVA during FY 2026-27.
- The Bondamunda feeder presently operates without any alternate source or back-feeding arrangement, resulting in prolonged interruptions during faults, breakdowns, and maintenance activities.
- Total tripping and consumer hour loss of Bondamunda feeder is 77nos. and 1039374 consumer hours respectively in FY25-26.
- To enhance network reliability and ensure continuity of supply, interconnectivity between proposed New Bondamunda feeder (Bifurcation of existing Bondamunda feeder proposed in capex FY 27-28) and Bisra-2 feeders is proposed. The proposed arrangement will facilitate mutual N-1 support, enabling load transfer and alternate power supply during outages and maintenance activities.

Proposed Scenario:

- It is proposed to establish interconnectivity between 11 kV NEW Bondamunda Town Feeder and 11 kV Bisra-2 Feeder through a 0.8 CKm link line using AAAC 100 sq.mm overhead bare conductor.
- hence the complete load transfer of Bondamunda Town feeder is not possible to Bisra-2 feeder, bifurcation of Bondamunda Town feeder with a new feeder from Bondamunda PSS is proposed in CAPEX FY27-28 in a separate scheme. During load management of N-1 condition, this new feeder is also considered for load diversion.
- For reliable switching, fault isolation, and network flexibility, 02 Nos. 3-Way RMUs are proposed, one at the tail end of NEW Bondamunda Feeder and the other at the tail end of Bisra-2 Feeder.
- To facilitate crossing of the railway corridor near Kukudagate Railway Crossing, 0.455 CKm × 2 Run of 3C × 300 sq.mm XLPE Cable along with 02 Nos. DP structures equipped with isolators is proposed.
- Since the Bisra-2 Feeder is expected to carry additional load during N-1 contingency conditions, 3 CKm conductor upgradation from Ratakandi DTR to Kukudagate DTR using AAAC 100 sq.mm overhead bare conductor is proposed to accommodate the increased loading.
- Upon completion of the scheme, the Bondamunda and Bisra-2 feeders will operate as mutual N-1 feeders, enable load transfer and ensure reliable power supply during feeder outages, breakdowns, and planned maintenance activities.

To improve reliability and operational flexibility of the distribution network by providing interconnectivity between 11KV Jagda and Jhirpani kV feeders, enabling load transfer and alternate power supply during outages and maintenance activities.

Existing Scenario:

- The 11 kV Jagda Feeder, emanating from 33/11 kV NIT PSS, supplies power to approximately 3,000 domestic and commercial consumers in Jagda, Shakti Nagar and CWS Hospital areas of Rourkela. The feeder operates in a radial configuration over 8.66 CKm with ACSR 100/55 sq.mm conductor and carries a peak load of 3.02 MVA (157.36 A) during FY 2026-27.
- The 11 kV Jhirpani Feeder, emanating from 33/11 kV Koelnagar PSS, caters to around 3,200 urban domestic and commercial consumers in the Jhirpani area. The feeder operates radially over 5.61 CKm with ACSR 100/55 sq.mm conductor and carries a peak load of 4.57 MVA (238 A) during FY 2026-27.
- At present, the Jagda Feeder has N-1 backup support from the Shakti Nagar Feeder, which is also emanating from the same 33/11 kV NIT PSS. However, there is no alternate source available from a different PSS in case of contingencies affecting the substation or associated network.
- To further strengthen supply reliability, it is proposed to establish interconnectivity between Jhirpani Feeder and Jagda Feeder. The proposed arrangement will provide an additional N-1 support from a different source substation (33/11 kV Koelnagar PSS).
- Considering the peak loading of both feeders, partial load transfer can be carried out through the proposed interconnection during contingency conditions. This arrangement will help maintain supply to critical consumer pockets of the Jagda area and reduce outage duration during feeder faults, shutdowns and maintenance activities.
- Total tripping and consumer hour loss of Jhirpani feeder is 30nos. and 352990 consumer hours respectively in FY25-26.

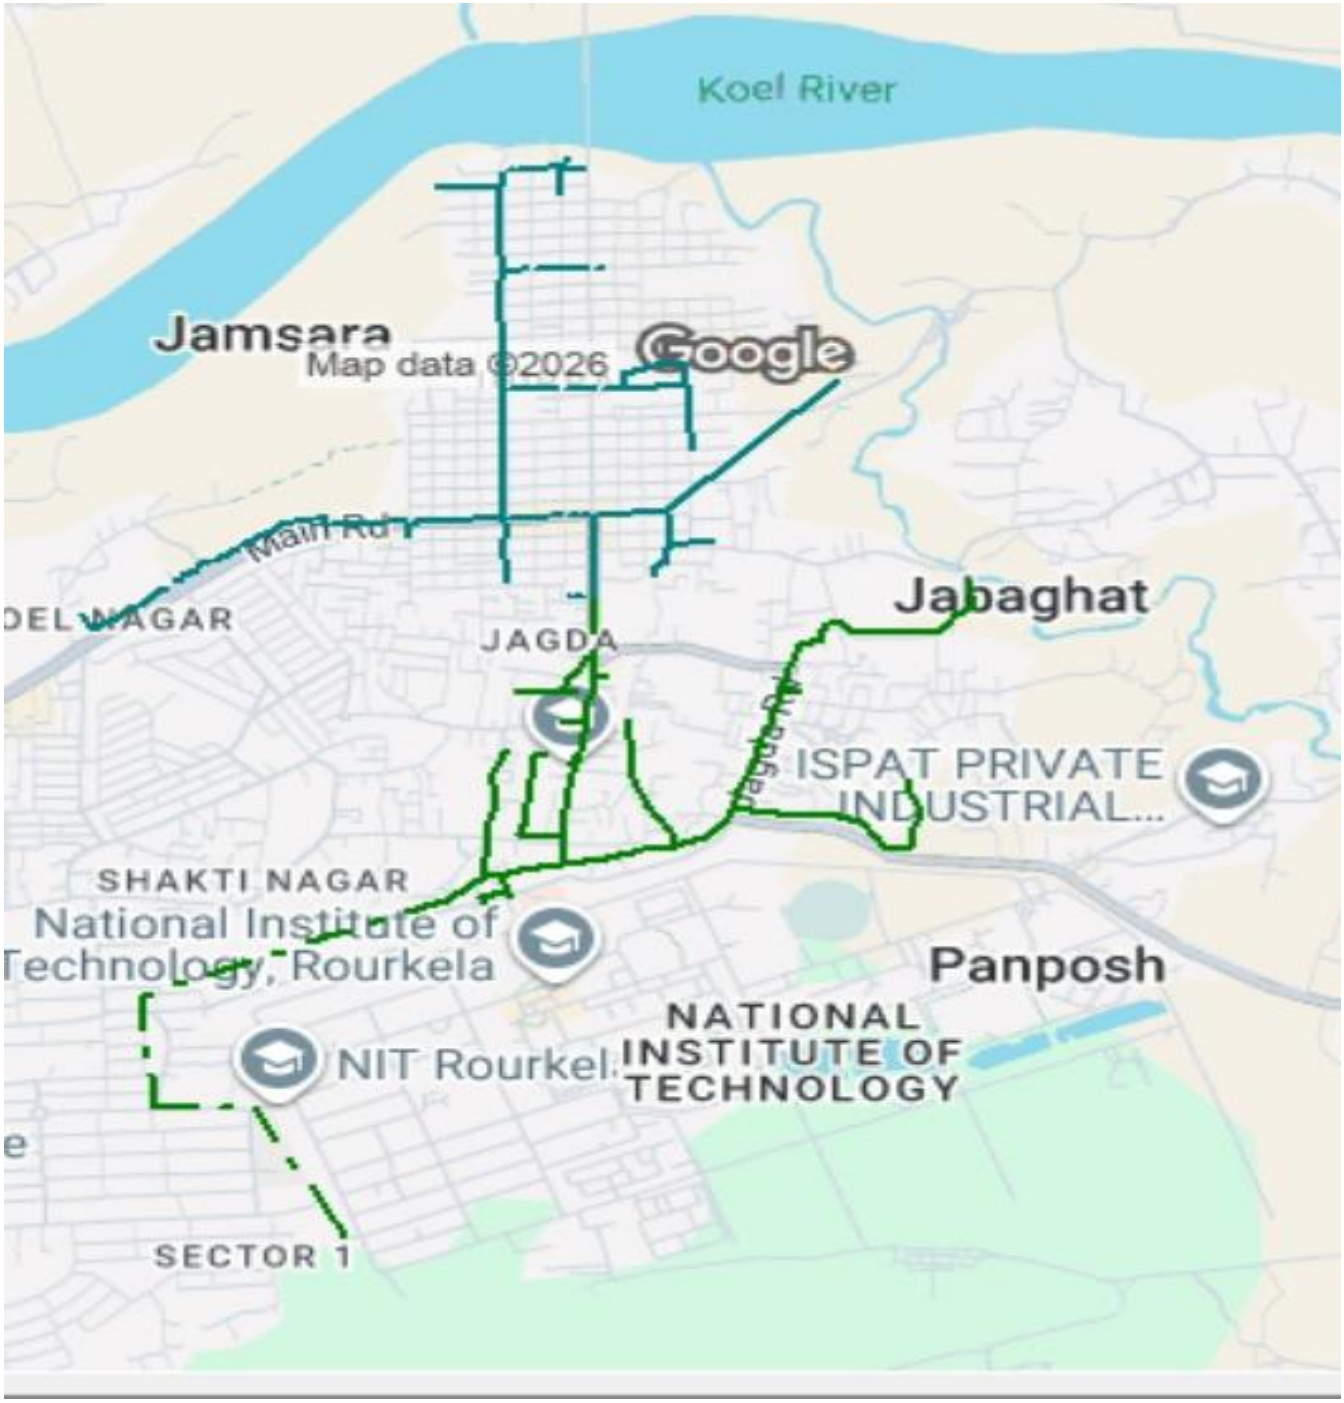
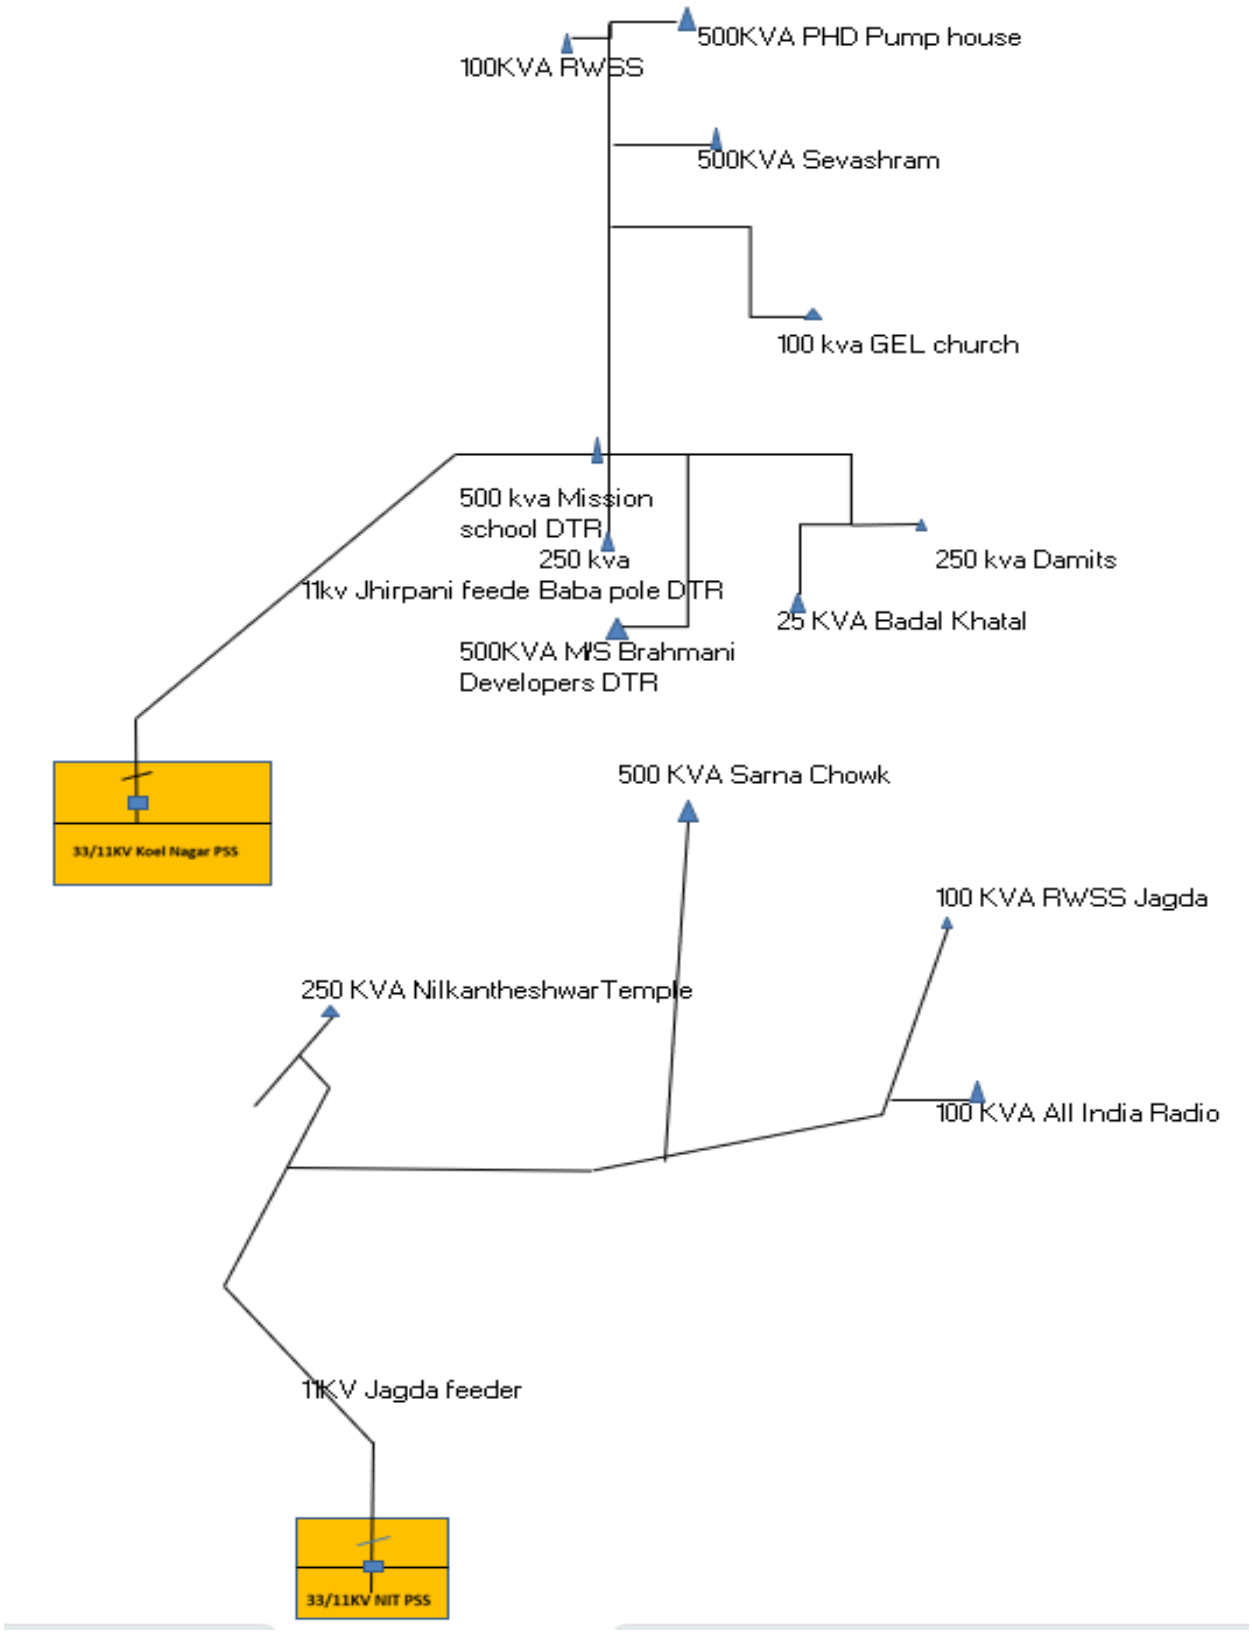
GIS Map:



Existing SLD:

(11Kv Jhirpani Feeder) and (11Kv Jagda Feeder)



Proposed Scenario:

- It is proposed to establish interconnectivity between the 11 kV Jhirpani Feeder near Sarna Chowk and the 11 kV Jagda Feeder near RI Office through a 1.0 CKm link line using 3C × 400

sq.mm XLPE cable.

- For reliable switching, fault isolation, and operational flexibility, 02 Nos. 3-Way RMUs with cable termination DP structures are proposed, one at the Jhirpani feeder end and the other at the Jagda feeder end.
- The proposed interconnectivity has been assessed under N-1 contingency conditions considering the peak loading of both feeders. As both feeders remain heavily loaded during peak demand, only partial load transfer is feasible under peak load conditions. However, under normal operating conditions, either feeder can support the complete load of the other feeder through back-feeding arrangement.
- Upon completion of the scheme, the Jhirpani and Jagda feeders will function as mutual N-1 feeders, enabling load sharing, improving supply reliability, and minimizing outages during faults, breakdowns, and planned maintenance activities.

Note: The N-1 contingency analysis has been carried out considering the peak load conditions of both the Jhirpani , Jagda and Shakti Nagar feeders. The study indicates that under peak demand conditions, neither feeders has adequate spare capacity to cater to the entire load of the Jada feeder independently in 5 years. Accordingly, only partial load transfer can be accommodated during an N-1 contingency. However, under normal operating

conditions, sufficient capacity is available on both feeders to enable complete back-feeding. Bifurcation proposal of Jhirpani feeder with a new feeder from Koel nagar PSS has to be taken in future.

- Consumers will benefit from improved supply continuity, fewer interruptions, and faster restoration of power, resulting in better service reliability and enhanced consumer satisfaction.

Proposal for Reliability improvement of 11KV Kinabaga Feeder:

Proposal:

11kV link line between Dalkibahal and Dongajore in 11 KV Kinabaga feeder to improve reliability.

Requirement/ Need of the proposal:

Objective:

- To enhance network reliability and efficiency by constructing 11 KV link line along the road connecting Dalkibahal and Dongajore.

Existing Scenario:

- The existing 11KV Kinabaga feeder emanates from the 33/11kV Garposh PSS and supplies power to various categories of consumers, including Domestic, commercial, establishments in and around Garpos Road, Manapali, Naik Pada, Mahulchapal, Sankobahal, Parmanpur, Charchuan, Gardega, Junani, Bihabali, Kinabaga, Dangajore,Joutukbahal, Masnakani and adjoining areas.
- The said 11 KV line trunk line after the taping towards Dalkibahal-3 DTR (100 KVA) is passing through a dense forest of around 1.5 CKMs leading to frequent fault and conductor snapping.
- This 11kV feeder operates in a radial configuration with a route length of 116 CKMs and conductor size of 50/35 mm^2 ACSR. The feeder is carrying a peak demand of 1.05 MVA during FY 2026-27.
- Considering the anticipated load growth of 6.12% per annum, the feeder peak load is expected to reach 1.20 MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 10.38 KV.
- Total tripping and consumer hour loss of feeder is 26 nos and 900934 consumer hours in FY25-26.

- Improvement in reliability is expected by reduction in tripping and consumer hours by around 10-15% after execution of proposal.

Proposal for N-1 Supply of 11kV Balibandha Feeder:

Proposal:

11kV link line from Tablapada to Balibandha DSS for load bifurcation of 11kV Balibandha Feeder.

Requirement/ Need of the proposal:

Objective:

To enhance network reliability and efficiency through load bifurcation and to provide N-1 supply of the 11 kV Balibandha feeder and reduction in technical losses.

Existing Scenario:

- In present scenario, the 11 kV Balibandha Feeder emanates from the 33/11 kV Cheruapada PSS and serves a significant number of domestic, commercial, consumer of Old Sambalpur town area.
- This 11kV feeder is classified as critical feeder with a route length of 4.1 CKm and having 100 sq.mm AAAC conductor. The feeder is carrying a peak load of 4 MVA during FY 2026-27.
- Considering the anticipated load growth of 9.07% per annum, the feeder peak load is expected to reach 4.8 MVA by FY28-29.
- Under the projected loading conditions, the loading of the feeder is beyond permissible limit in near future.
- Also, there is no N-1 supply to this feeder.
- Total consumer hour loss of feeder is 135969 consumer hours in FY25-26.

Benefit to the system and consumers:

- Feeder loading will be optimized from 121% to 55%, resulting in a substantial reduction in technical losses at peak from 2.52% to 1.57%.
- Establish N-1 contingency support for 11 Raw Water Feeder.
- The total losses at peak loading on 11 kV feeders will decrease from 175.89 kW to 120.26 kW, leading to enhanced energy savings and system performance.
- Improvement in tail end voltage from 10.68 kV to 10.89 kV.
- The proposed system strengthening will ensure a reliable, safe, and quality power supply to significant number of domestic, commercial, shopping malls & private hospitals of Sambalpur town area.

Proposal for overload mitigation of 11kV Sason Feeder:

Proposal:

11kV New line from Sason PSS to mitigate overloading of 11kV Sason feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading of 11kV Sason feeder of Sason PSS and to ensure "N-1" connectivity.

Existing Scenario:

- In present scenario, the Sason feeder emanates from 33/11kV Sason PSS. It is an urban feeder connected more than 20 Nos. of HT consumer.
- The length of the feeder is 60.7CKm and the conductor size of the feeder is 55 sqmm. The peak demand of the feeder in Fy26-27 is 3.8MVA.
- Considering the load growth of 4.94% per annum, the expected demand in Fy28-29 shall be 4.09MVA.
- Under the projected loading condition of Fy28-29 the feeder shall be overloaded by 121.94%.

Loading Scenario (FY26-27) and Projected Loading (FY28-29):

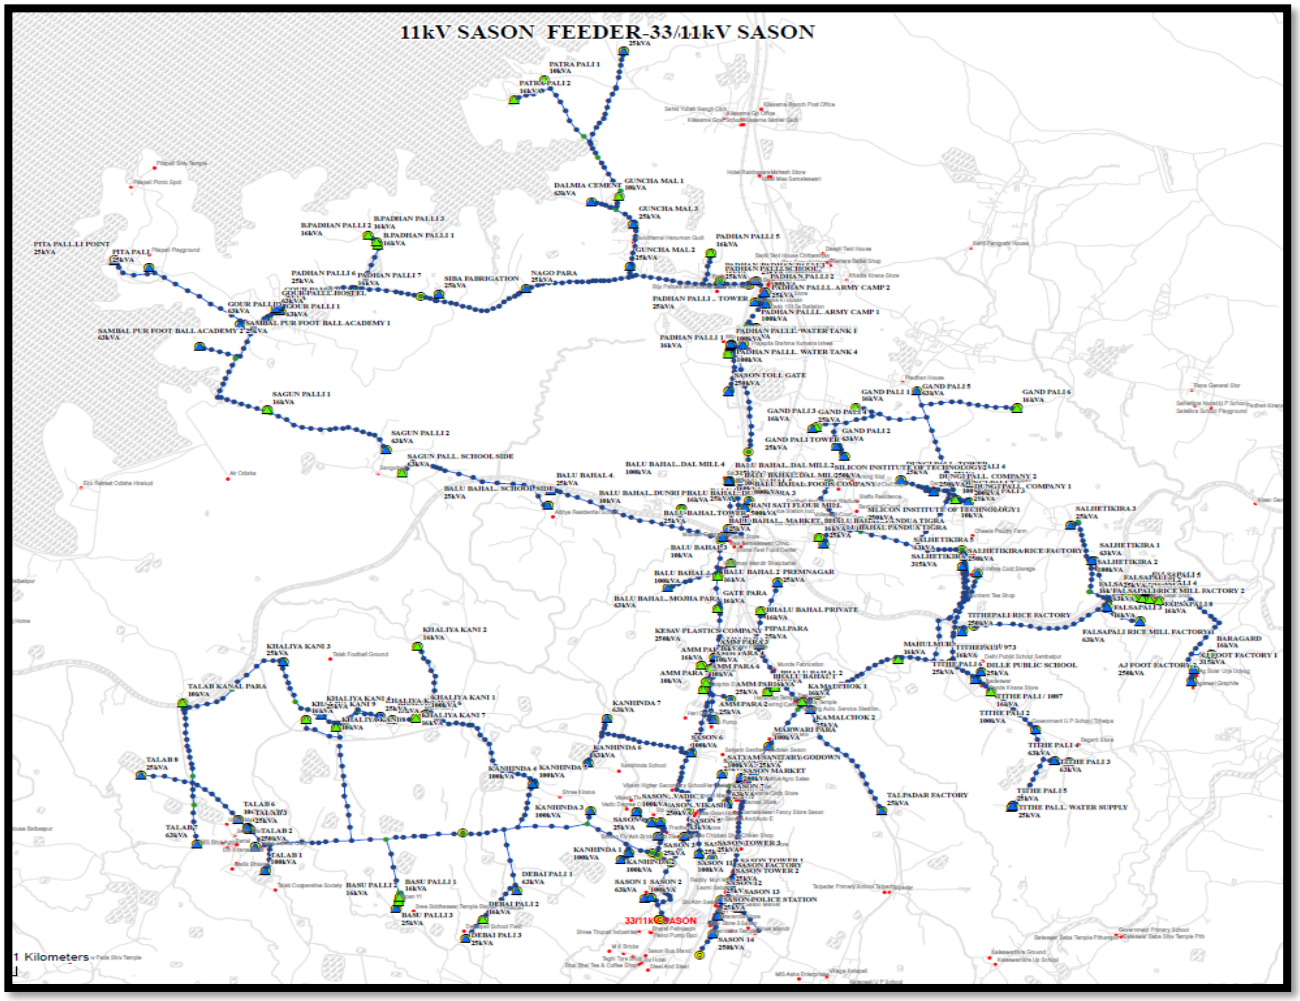
Note: - Red Indicating the overloaded sections & Yellow indicating the undervoltage sections

Existing SLD:

(11kV SASON Feeder)



Proposed Scenario:

- To mitigate the overloading of 11kV Sason feeder, it is proposed to bifurcate the feeder by constructing a new 11kV Overhead line of 2.75CKm from Sason PSS to near Sason Railway station.
- For the 11kV line, 2.75Km 100 Sqmm conductor and 2*0.2 ckm, 3C*300sqmm XLPE cable shall be laid for SH crossing.
- 11kV bay with Indoor VCB shall be installed at Sason PSS for evacuation of new feeder.

- The total technical loss of the Sason feeder shall be reduced from 113.53kW to 93.16kW at peak load.
- The tail end voltage of the feeder shall be improved from 10.25kV to 10.36kV.
- Establish N-1 contingency connectivity for 11kV Sason Feeder.

Proposal for reliability improvement of 11kV Katarbaga feeder

Proposal:

11kV Link Line between 11kV Katarbaga feeder (Katarbaga PSS) and 11kV Katarbaga feeder (Rengali PSS) to improve reliability.

Requirement/ Need of the proposal:

Objective:

To improve reliability of Gosaramal GP consumers located at tail end of Katarbaga feeder (Katarbaga PSS) 11kV Katarbaga feeder (Rengali PSS)

Existing Scenario:

- In present scenario, 11kV Katarbaga feeder (Katarbaga PSS) feeder emanates from 33/11kV Katarbaga PSS.
- The length of the feeder is 49.5 Ckm and the conductor size of the feeder is 55 & 35 sqmm.
- The peak demand of the feeder in Fy26-27 is 1.4MVA. Considering the load growth of 4.94% per annum, the expected demand in Fy28-29 shall be 1.6MVA.
- Tail end consumers of Gosaramal Gram Panchayat (approximate 300 Nos. consumers) are also facing reliability issue due feeder passed through Forest area.
- In present scenario, the 11kV Katarbaga feeder (Rengali PSS) feeder emanates from 33/11kV Rengali PSS. The length of the feeder is 27.9 Ckm and the conductor size of the feeder is 100 & 55 sqmm. The peak demand of the feeder in Fy26-27 is 0.8MVA. Considering the load growth of 4.94% per annum, the expected demand in Fy28-29 shall be 0.89 MVA.
- To improve reliability of Gosaramal GP, it is proposed to erect link line between 11Kv Katarbaga feeder (Rengali PSS) and 11kV Katarbaga feeder (Katarbaga PSS) feeder by load shifting.
- Total consumer hour loss of 11kV Katarbaga feeder (Katarbaga PSS) & 11kV Katarbaga feeder (Rengali PSS) is 202266 and 192118 consumer hours in FY25-26.

Benefit to the system and consumers:

- Improvement in reliability is expected by reduction in tripping and consumer hrs by around 10-15% after execution of proposal.
- Reliability improvement of Gosaramal GP tailend consumers.
- Establish N-1 contingency connectivity for 11kV Katarbaga feeder (Katarbaga PSS) and Katarbaga feeder (Rengali PSS).
- As both the feeders will be N-1 to each other , so improvement in reliability is expected by reduction in consumer hours by around 20% in case of tripping in any of the feeders after execution of scheme.

Proposal for overload mitigation of 11kV Kurlupali Feeder:

Proposal:

11kV new line from Dova PSS to mitigate overloading of 11kV Kurlupali Feeder.

Requirement/ Need of the proposal:

Objective:

To mitigate overloading issue through load bifurcation of the 11kV Kurlupali feeder to, ensuring N-1, improvement in voltage regulation, and reduction in technical losses.

Existing Scenario:

- The existing 11kV Kurlupali feeder emanates from the 33/11kV Dova PSS and supplies power to various categories of consumers, including Domestic, Agricultural and small shop and local commercial establishments in and around Kurlupali and adjoining areas.
- This 11kV feeder operates in a radial configuration with a route length of 96.9CKm and 100/34sqmm conductor. The feeder is carrying a peak demand of 7.49 MVA during FY 2026-27.
- Considering the anticipated load growth of 8.51% per annum, the feeder peak load is expected to reach 8.7MVA by FY28-29.
- Under the projected loading conditions, the tail-end voltage is estimated to drop to 9.26kV, which is below the statutory permissible limit.
- Total consumer hour loss of feeder is 961558 consumer hrs in FY25-26.

Loading Scenario (FY26-27) and Projected loading (FY 28-29):

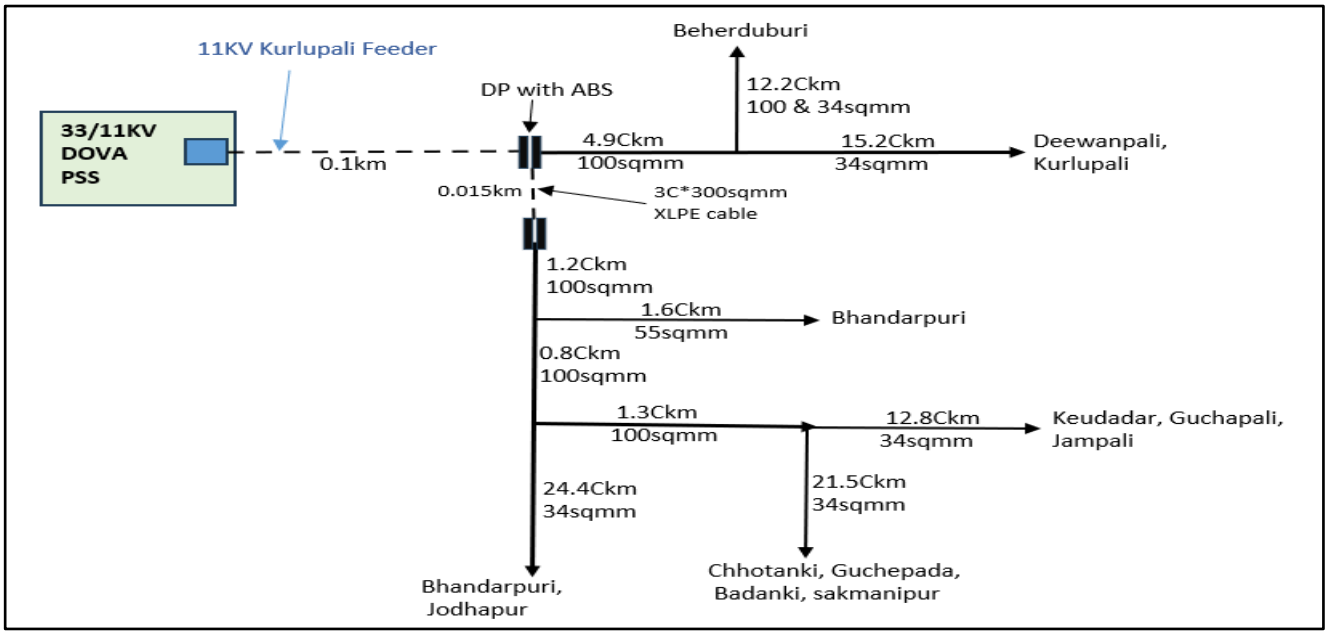
Note: - Red Indicating the overloaded sections & Yellow indicating the undervoltage sections.

Existing SLD:

(11kV Kurlupali Feeder)



Proposed Scenario:

- To Bifurcate the existing 11kV Kurlupali feeder of Dova PSS, the proposed line will be tapped from the 11kV bus of Dova PSS.
- A 3C*300sqmm, 11kV UG cable,30mtrs shall be laid from the PSS and terminated at the proposed 11kV RMU.
- From the outgoing of the proposed 11kV RMU, 2runs of 3C*300sqmm UG cable,70mtrs shall be laid upto the existing AB switch Inside the PSS premises.
- Upon completion of the scheme, a portion of the load currently served by the 11kV Kurlupali feeder will be shifted to the proposed new feeder.

Proposal for New 33/11KV PSS at BTM, Jharsuguda

Proposal for New 33/11KV PSS to improve reliable Power supply at Jharsuguda Town under Jharsuguda Constituency in Jharsuguda District.

Proposal:

Proposal for a new 33/11 kV PSS at BTM, Jharsuguda under Jharsuguda Constituency to mitigate overloading on Sarasmal PSS, provide N-1 network redundancy, and improve reliability of power supply to urban and industrial consumers.

Requirement/ Need of the proposal:

Objective:

Proposal for a new 33/11 kV PSS at BTM, Jharsuguda under Jharsuguda Constituency to mitigate overloading of 11 kV feeders, to resolve low voltage issue, provide N-1 supply, optimize urban and industrial load distribution, and decongest Sarasmal PSS.

Existing Scenario:

- Sarasmal PSS is equipped with three 33/11 kV power transformers of aggregate capacity 28.5 MVA (2 × 8 MVA + 1 × 12.5 MVA) to serve the increasing load requirements of Jharsuguda's urban and industrial consumers.
- Total 6 no 11 kV feeders emanating from Sarasmal PSS. Out of these 6 no feeders, 3 no feeders i.e LIC, OMP, Kachery having reliability issue.
- Significant load concentration exists at the tail-end sections of the 11 kV LIC, OMP, and Kachery feeders, resulting in higher loading stress and operational challenges.
- An industrial estate comprising several MSME units is located adjacent to the proposed BTM area, contributing to the increasing load demand in the vicinity.
- The LIC, OMP, and Kachery feeders primarily cater to urban consumers within the jurisdiction of Jharsuguda Municipality.
- Further load growth is anticipated as IDCO has already sought power connectivity for an additional demand of 5 MVA in the area.
- During faults on the OMP and LIC feeders, restoration activities are time-consuming due to high population density, traffic congestion, and limited accessibility for maintenance vehicles.
- The resultant supply interruptions have adversely impacted consumer satisfaction and led to an increase in consumer complaints and public grievances.
- Annual load growth considered 6.12%.

- The tripping performance of the OMP, LIC, and Kachery 11 kV feeders during the last six months is presented in the table below

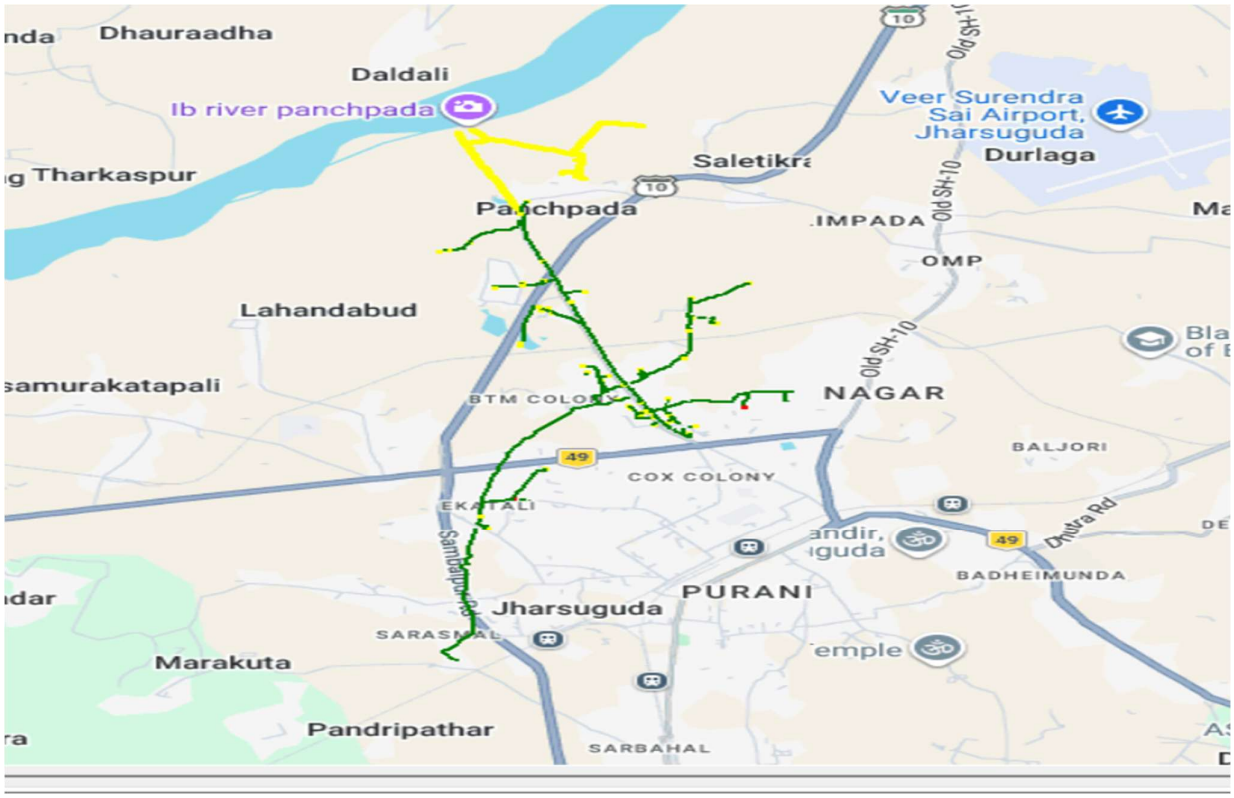
Note:

1. Loading of Sarasmal PSS shall be 87% in FY 28-29 and 106% in FY 31-32.
2. There is no space for augmentation/ addition of PTR at Sarasmal PSS.

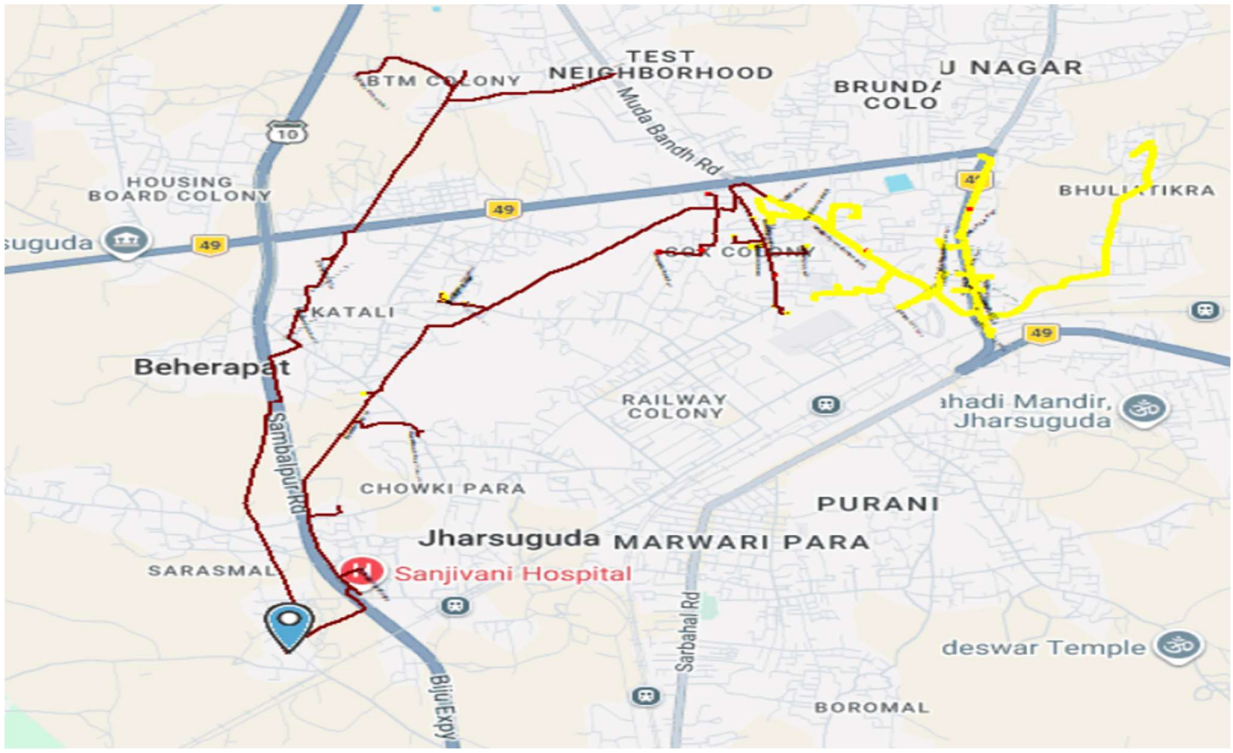
Therefore, new PSS of 33/11 kV(2x8) MVA is required at BTM to mitigate overloading of Sarasamal PSS.

Existing SLD of 11kV OMP Feeder:



11 KV OMP feeder showing under voltage in FY28-29

Existing SLD of 11kV LIC Feeder:



11 KV LIC feeder showing under voltage in FY 28-29

Proposed Scenario:

- Considering the rapid growth of urban, commercial, and industrial consumers in Jharsuguda, the projected loading of OMP, LIC, and Kachery feeders, and the expected demand from upcoming MSME units and industrial developments linked to NLC India Limited, a new 33/11 kV PSS (2 × 8 MVA) is proposed near BTM, Jharsuguda to strengthen network reliability, improve operational flexibility, and ensure quality power supply.
- **Source-I:** 33KV Tapping from **33KV Industrial-II (Budhipar GSS)** feeder with scope of 3.8 CKMs (OH Bare:2.5 CKMs, OH Covered:1 CKMs and UG :0.3 KMs).
- **Source -II:** 33 KV tapping from **33KV Airport (Sarasmal PSS)** with scope of 2.5 CKMs (OH bare:1.5 CKMs and OH covered: 1 CKMs).
- Four nos. of 11 KV feeders are proposed from this new PSS namely:

  a) **11 KV New OMP** with link line of 2 CKMs

  b**) 11 KV New LIC** with link line of 2 CKMs

  c) **11 KV New Kachery** with link line of 2 CKMs

  d) **SPARE**

Cost Benefit Analysis:

Revenue Return: 8.45 %

Pay Back Period: 11.82 Years

Benefit to the system and consumers:

- Mitigates existing undervoltage issues of the OMP, LIC, and Kachery feeders ensuring statutory voltage levels at consumer premises, thereby enhancing quality of supply.
  - OMP feeder: From 9.98 kV to 10.79kV
  - LIC feeder: From 9.86 kV to 10.8 kV
  - Kachery feeder: From 10.33 kV to 10.88 kV

- Overloading of 11 kV LIC feeder reduced from 101% to 28% and Kachery feeder is reduced from 100% to 34%.
- Provides N-1 supply security to the existing urban feeders namely OMP, LIC, and Kachery, ensuring enhanced network redundancy and continuity of supply.
- Tech loss at peak loading is reduced from 857.86 kW to 444.49 KW.
- Improves reliability indices (SAIDI and SAIFI) through reduction in supply interruptions and outage duration.
- Enhances overall system reliability by reducing feeder overloading, tripping, and breakdown incidence.
- Facilitates alternate feeding arrangements during faults, maintenance shutdowns, and emergency conditions.
- Strengthens network resilience by minimizing the risk of prolonged outages and improving restoration capability.
- Improves consumer satisfaction by providing reliable and quality power supply to urban, commercial, and industrial consumers.

Proposal for New PSS at Kandel in Kalahandi District.

Proposal:

New 33/11KV PSS is proposed at Kandel area under Kalahandi Constituency to mitigate Low Voltage issue of 11 kV feeders and overloading of Kesinga PSS and Reliable power supply at Kesinga area (Industrial belt).

Requirement/ Need of the proposal:

Objective:

1. To ensure reliable power supply, length reduction of existing feeder & mitigation of Undervoltage condition in Kesinga area under Kalahandi Constituency under Kalahandi District.
2. To mitigate overloading of Kesinga PSS.

Existing Scenario:

11kV feeder details:

- A total of **eight (08) 11 kV feeders** are emanating from **Kesinga PSS**. Out of these, **four (04) feeders**, namely **Kasurpada, Laitara, Boringpader, and Old Jagannathpada**, are experiencing reliability issues and require to improve supply reliability and service continuity.
- The existing 11kV Kasurpada feeder emanates from 33/11kv Kesinga PSS is approximately 105.6 Ckm long, the feeder carries an approximate load current of 2.66 MVA through 55/100 sq.mm AAAC and having a tail-end voltage of around 9.9 kV. This feeder gives power supply to 12nos. of Small/Medium industries with a tentative industrial load of 1.4MVA in peak.
- The existing 11kV Laitara feeder emanates from 33/11kv Kesinga PSS is approximately 74 Ckm long, the feeder carries an approximate load current of 1.98 MVA through 35/148 sq.mm AAAC and having a tail-end voltage of around 10.00 kV. This feeder gives power supply to 8nos. of Small/Medium industries with a tentative industrial load of 0.8MVA in peak.
- The existing 11kV Boringpader feeder emanates from 33/11kv Kesinga PSS is approximately 43 Ckm long, the feeder carries an approximate load current of 2.3MVA through 55/148 sq.mm AAAC and having a tail-end voltage of around 10.3 KV. This is an Industrial feeder and gives power supply to 22nos. of Small/Medium industries with a tentative industrial load of 1.8MVA in peak.
- The existing 11kV Old Jagannathpada feeder emanates from 33/11kv Kesinga PSS is approximately 13.4 Ckm long, the feeder carries an approximate load current of 1.85 MVA through 55/100 sq.mm AAAC and having a tail-end voltage of around 10.6 KV. This is an Industrial feeder and gives power supply to 7nos. of Small/Medium industries with a tentative industrial load of 1.2MVA in peak.
- Annual Load growth is considered as 6.8%.

Total			**16**	**12.9**	**80.5%**	**14.7**	**92%**	**8.95**	**112%**

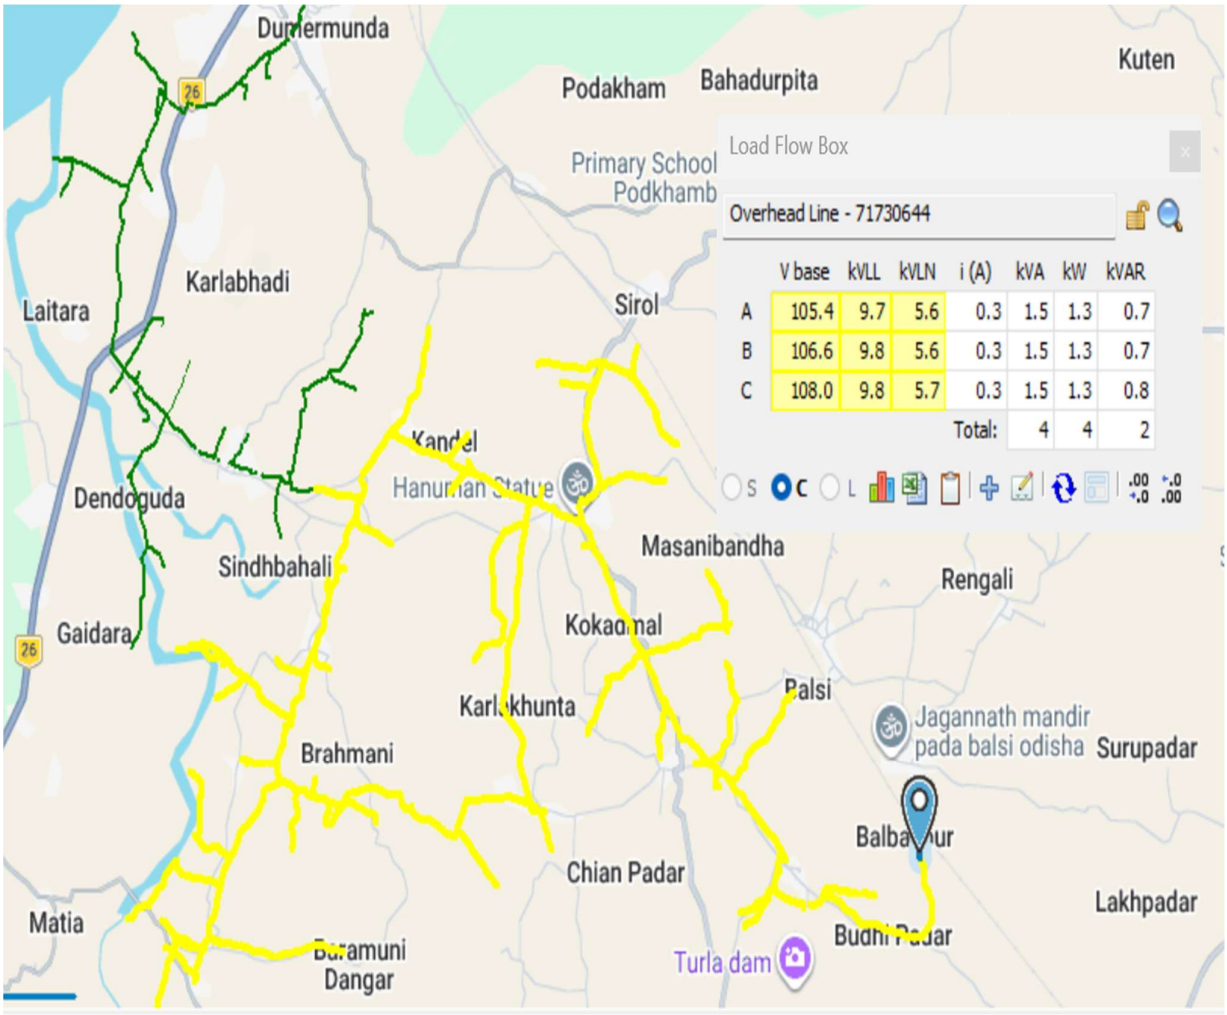
Note:

1. The loading of Kesinga PSS will be 92% in FY 28-29 and 112% in FY 31-32.
2. There is space constraint for augmentation/addition of PTR at Kesinga PSS.

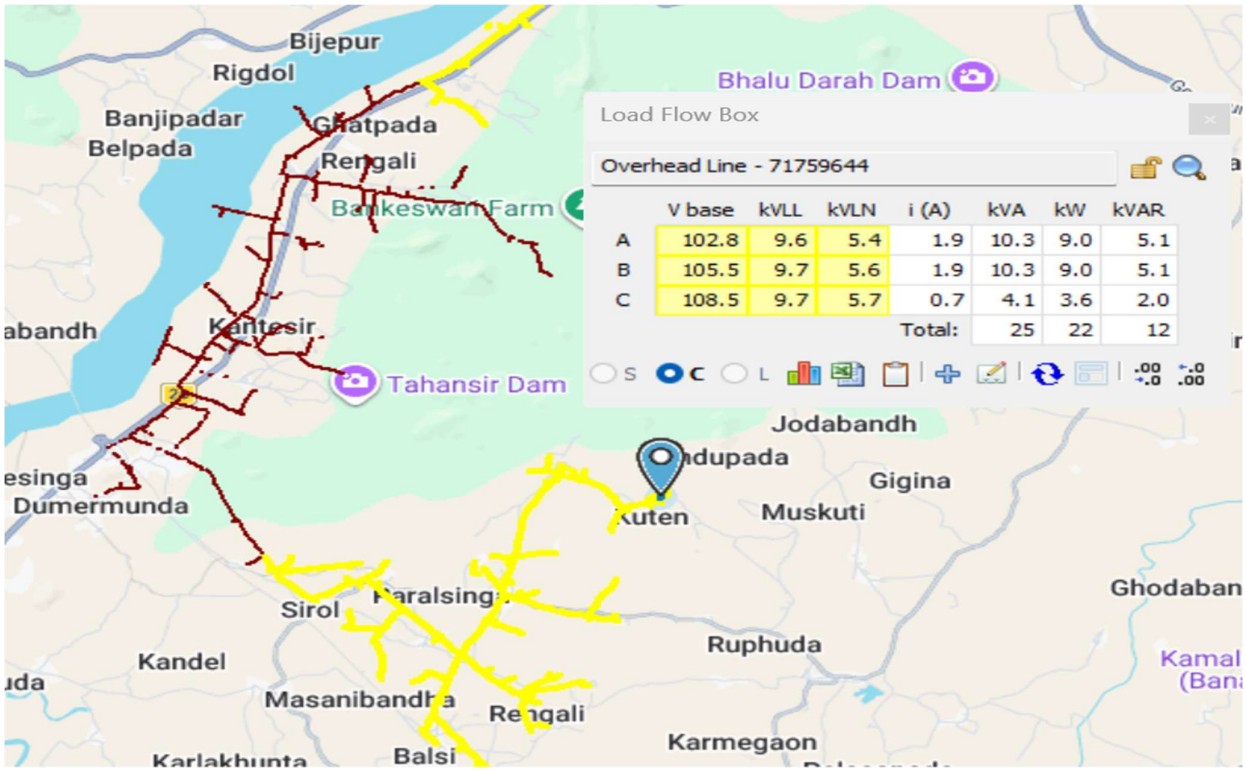
   Therefore New PSS is proposed at Kandel.

   - 4nos. of 11kV feeders proposed from Kandel PSS to provide reliable and uninterrupted power supply to the Industrial belt of Kesinga and to mitigate the undervoltage issue and reducing the feeder length of 11kv Kasurpada, 11kv Laitara and 11kv Boringpader feeder.
   - The proposed New Kandel PSS will provide N-1 backup support to the existing 11kv Kasurpada, 11kv Laitara, 11kv Boringpader, 11kv Old Janannathpada feeder of Kesinga PSS, enhancing supply reliability, operational flexibility, and continuity of service during outages or maintenance for Industrial operation.

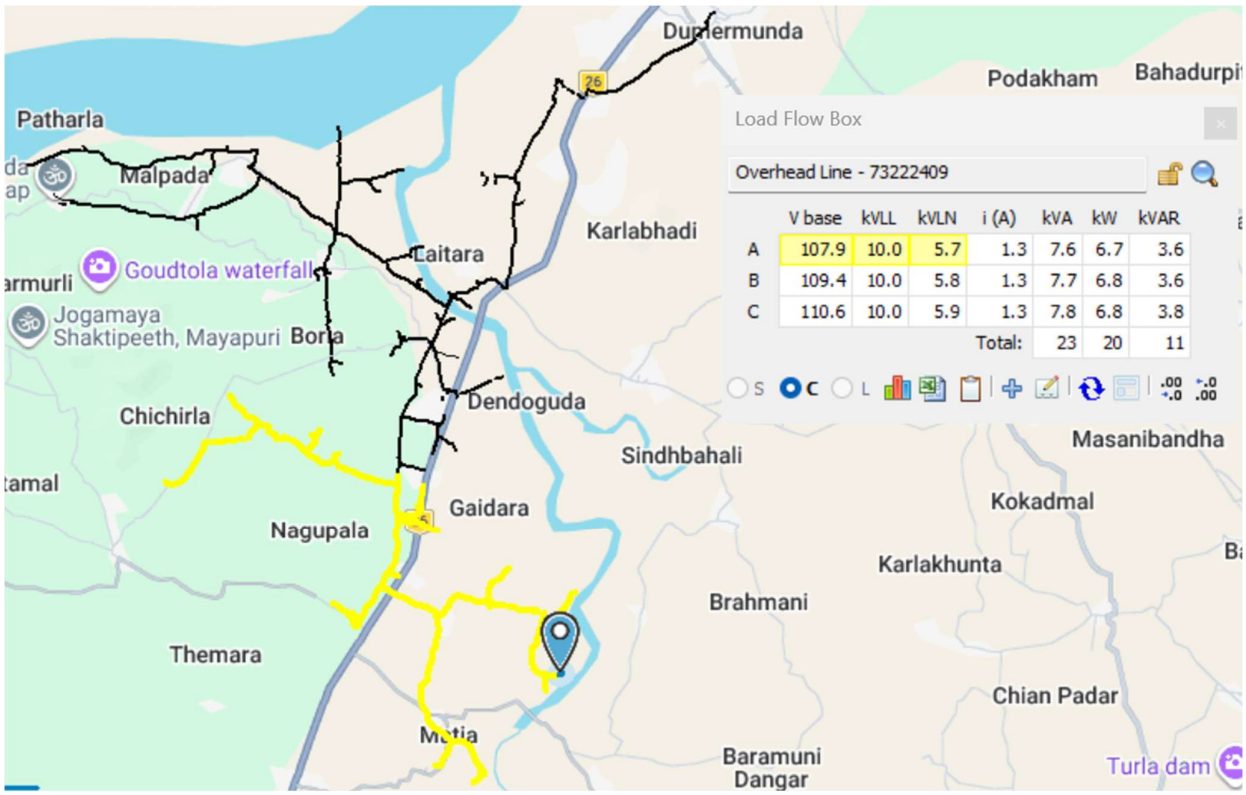
Existing SLD : 11KV Laitara Feeder



Existing SLD : 11KV Kasurpada Feeder

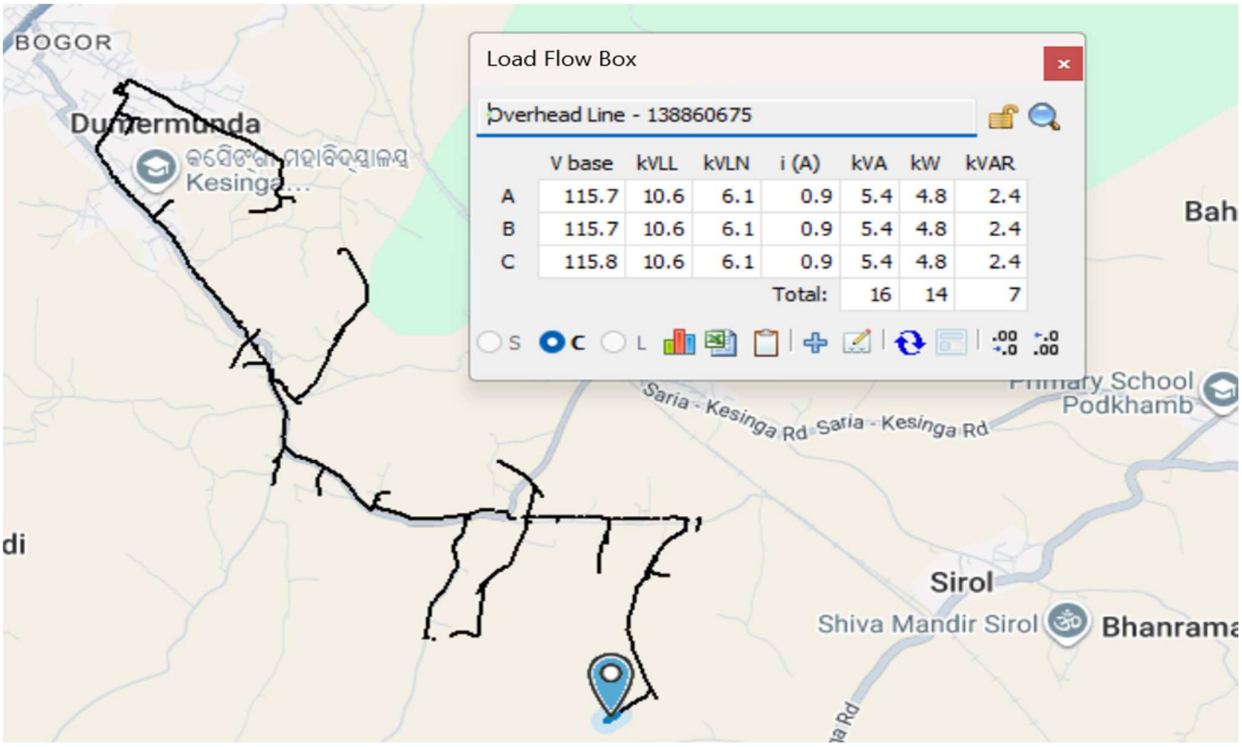


Existing SLD : 11KV Boringpader Feeder



NOTE: The above yellow marked part are the undervoltage parts of the feeder.

Existing SLD : 11KV Old Jagannathpada Feeder



Proposed Scenario:

- New PSS (33/11kV, 2*5 MVA) is proposed at Kandel to mitigate undervoltage of 11 kV feeder and overloading of Kesinga PSS.
- 33KV new line for proposed Kandel PSS:
  - Source-I: from 33KV Bhawanipatna No-2 feeder (Kesinga GSS) – 8Ckm
  - Source-2: From 33KV Narla feeder (Kesinga GSS) – 3Ckm
- Existing 11KV Boringpader, 11KV Laitara, 11KV Kasurpada, 11KV Old Jagannathpada feeder segregate into 4 numbers of new 11kV outgoing feeder propose namely
  a) 11 KV New Parlasing FDR – 44 CKM
  b) 11 KV New Sirol FDR – 22 CKM
  c) 11 KV New Brahmani FDR – 34.1 CKM
  d) 11 KV New Kandel FDR – 34.3 CKM

NOTE: 11 KV Boringpader FDR (From Kesinga PSS) – 32.1 Ckm
11 KV Kasurpada FDR (From Kesinga PSS) – 47.2 Ckm
11 KV Laitara FDR (From Kesinga PSS) – 20 Ckm
11 KV Old Jagannathpada FDR (From Kesinga PSS) – 7.5 Ckm

Note: By changing the normal operating point of 11KV Tundla feeder to 11KV Kasurpada feeder through shifting 10ckm of line of 11KV Kasurpada feeder to 11KV Tundla feeder the length of 11KV Kasurpada feeder will be reduced to 47.2Ckm from 57.2Ckm.

- **Length:**

  After commissioning of Proposed Kandel PSS with 4nos. of Outgoing feeder, Existing 11KV Boringpader feeder length will be reduced to 32.14Ckm from 43Ckm, 11KV Laitara feeder length will be reduced to 20.12Ckm from 74Ckm, 11KV Kasurpada feeder length will be reduced to 47.2 from 105.6Ckm, 11KV Old Jagannathpada feeder length will be reduced to 7.57Ckm from 13.14Ckm.

- **Tail end voltage:**

  After commissioning of Proposed Kandel PSS with 4nos. of Outgoing feeder, the tail end voltage of 11KV Boringpader feeder length will improve from 10kV to 10.6kV, the tail end voltage of 11KV Laitara feeder will improve from 9.7kV to 10.8kV, the tail end voltage of 11KV Kasurpada feeder will improve from 9.6kV to 10.4kV, the tail end voltage of 11KV Old Jagannathpada feeder will improve from 10.6kV to 10.92kV.

- **Over loading status:**

  After commissioning of Proposed Kandel PSS, the existing 4nos. feeder of Kesinga PSS and proposed 4nos. of feeder of Proposed Kandel PSS are going to sustain the load growth upto 5years.

- **N-1 status:**

  The proposed New Kandel PSS will provide N-1 backup support to the existing 11kv Kasurpada, 11kv Laitara, 11kv Boringpader, 11kv Old Janannathpada feeder of Kesinga PSS, enhancing supply reliability, operational flexibility, and continuity of service during outages or maintenance for Industrial operation.

Physical Target:

March 2028

Cost Benefit Analysis: - (Refer to Annexure No- for details.)

Revenue Return- 5.04%
Pay Back Period- 19.83 Years

Benefit to the system and consumers:

- Reduce the loading of Kesinga PSS from 14.7 MVA (92% of installed capacity) to 9.53 MVA (60% of installed capacity) by FY 2028-29.
- Loading of Proposed PSS at Kandel shall be 5.17 MVA (51.7% of installed capacity) in FY 28-29.
- Improve the tail-end voltage of the following 11 kV feeders:
  1. Boringpader: from 10.0 kV to 10.6 kV
  2. Laitara: from 9.7 kV to 10.8 kV
  3. Kasurpada: from 9.6 kV to 10.4 kV
  4. Old Jagannathpada: from 10.6 kV to 10.92 kV
- Reduce the total technical losses of the 11 kV feeders at peak loading from 646.00 kW to 383.09 kW, resulting in improved energy efficiency and system performance.
- Reduce the feeder lengths as follows:
  1. Boringpader feeder: from 43.0 Ckm to 32.14 Ckm
  2. Laitara feeder: from 74.0 Ckm to 20.12 Ckm
  3. Kasurpada feeder: from 105.6 Ckm to 47.20 Ckm
  4. Old Jagannathpada feeder: from 13.14 Ckm to 7.57 Ckm
- Provide N-1 connectivity to ensure reliable power supply to the industrial area during feeder faults or maintenance activities.
- Reduction in consumer hour loss will be expected by 15-20%, thereby improving supply reliability and consumer service quality.

POWER TRANSFORMER OVERLOADING MITIGATION AT ATTABIRA SUBSTATION

PROPOSAL:

Augmentation of existing 1no. of 33/11kV, 3.15 MVA Power Transformer (PTR-3) to 12.5 MVA at Attabira 33/11kV Substation in BED division of Bargarh circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Attabira PTR-1, PTR-2 & PTR-3 are 8.8 MVA, 7.1 MVA & 2.0 MVA respectively at peak load condition of FY 26-27. Considering load growth for 2 years (8.71% load growth per year for 2 years), the projected loading of FY 28-29 for PTR-1, PTR-2 & PTR-3 would be 10.4 MVA, 8.4 MVA & 2.4 MVA respectively.
- PTR-1, PTR-2 & PTR-3 will be loaded up to 130%, 106% & 75% respectively, w.r.t, the existing transformer capacity of 8MVA, 8MVA & 3.15MVA respectively in FY 28-29.

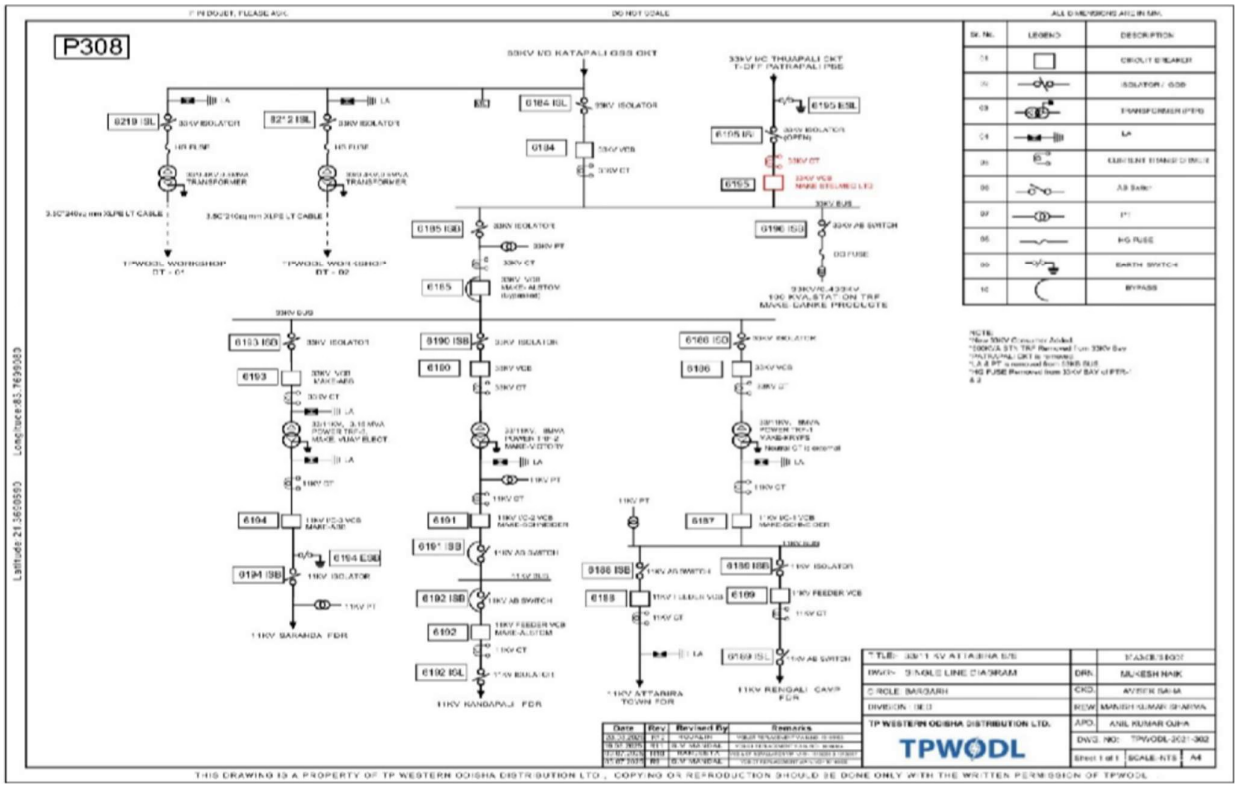
3		PTR-3	3.15	2.0	63%	2.4	75%	3.0	96%

EXISTING SLD OF ATTABIRA 33/11KV PSS:



Proposed Scenario:

- In order to Mitigate Over-Loading of PTR-1 & PTR-2 it is required to Augment PTR-3 from 3.15 MVA to 12.5 MVA at Attabira PSS.
- It is proposed to augment PTR-3 from 3.15 MVA to 12.5 MVA to **address the space constraints** associated with the upgradation of PTR-1 and PTR-2.
- To mitigate the overloading of PTR-1 (8 MVA) and PTR-2 (8 MVA), approximately 4.5 MVA and 3 MVA of load, respectively, shall be transferred through 11 kV feeder shifting following the augmentation of PTR-3 to 12.5 MVA.

POWER TRANSFORMER OVERLOADING MITIGATION AT UDEYPALI SUBSTATION

PROPOSAL:

Addition of 1 no of 33/11kV, 8 MVA Power Transformer at Udeypali 33/11kV Substation in BED division of Bargarh circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Udeypali PTR-1 & 2 are 5.5 MVA & 7.0 MVA respectively at peak load condition of FY 26-27. Considering load growth for 2years (8.71% load growth per year for 2years), the projected loading at FY 28-29 for PTR-1 & 2 would be 6.5MVA & 8.3MVA respectively.
- PTR-1 & PTR-2 will be loaded up to 131% & 104% respectively, w.r.t, the existing transformer capacity of 5MVA & 8MVA respectively in FY 26-27.

POWER TRANSFORMER OVERLOADING MITIGATION AT BIJEPUR SUBSTATION

PROPOSAL:

Augmentation of existing 1no. of 33/11kV, 5 MVA Power Transformer (PTR-3) to 12.5 MVA at Bijepur 33/11kV Substation in BWED division of Bargarh circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Bijepur PTR-1, PTR-2 & PTR-3 are 6.2 MVA, 4.9 MVA & 5.3 MVA respectively at peak load condition of FY 26-27. Considering load growth for 2 years (8.51% load growth per year for 2 years), the projected loading of FY 28-29 for PTR-1, PTR-2 & PTR-3 would be 7.3 MVA, 6.4 MVA & 6.2 MVA respectively.
- PTR-1, PTR-2 & PTR-3 will be loaded up to 91%, 81% & 124% respectively, w.r.t, the existing transformer capacity of 8MVA, 8MVA & 5MVA respectively in FY 28-29.

POWER TRANSFORMER OVERLOADING MITIGATION AT SARANDAPALI SUBSTATION

PROPOSAL:

Augmentation of existing 2nos. of 33/11kV, 8 MVA Power Transformer (PTR-1&2) to 12.5 MVA at Sarandapali 33/11kV Substation in BWED division of Bargarh circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Sarandapali PTR-1 & 2 are 8.1 MVA & 7.3 MVA respectively at peak load condition of FY 26-27. Considering load growth for 2years (8.51% load growth per year for 2years), the projected loading at FY 28-29 for PTR-1 & 2 would be 9.5MVA & 8.6MVA respectively.
- PTR-1 & PTR-2 will be loaded up to 119% & 108% respectively, w.r.t, the existing transformer capacity of 8MVA & 8MVA respectively in FY 28-29.

POWER TRANSFORMER OVERLOADING MITIGATION AT BISORA SUBSTATION

PROPOSAL:

Augmentation of existing 1no. of 33/11kV, 8 MVA Power Transformer (PTR-1) to 12.5 MVA at Bisora 33/11kV Substation in NED division of Kalahandi circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Bisora PTR-1 & 2 are 6.7 MVA and 5.8 MVA respectively at peak load condition of FY 26-27. Considering load growth for 2 years (6.78% load growth per year for 2 years), the projected loading of FY 28-29 for PTR-1 & 2 would be 7.7 MVA and 6.6 MVA respectively.
- PTR-1 and PTR-2 will be loaded up to 96% and 83% respectively, w.r.t, the existing transformer capacity of 8MVA and 8MVA respectively in FY 28-29.

POWER TRANSFORMER OVERLOADING MITIGATION AT AINTHAPALI SUBSTATION

PROPOSAL:

Addition of 1 no of 33/11kV, 12.5 MVA Power Transformer at Ainthapali 33/11kV Substation in SED division of Sambalpur circle to mitigate overloading condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- The peak loading of 33/11 kV Ainthapali PTR-1 to PTR-6 in FY 26-27 is 3.9 MVA, 4.9 MVA, 7.0 MVA, 8.9 MVA, 4.5 MVA and 9.0 MVA, respectively. Considering an annual load growth rate of 9.07% over the next two years, the corresponding peak loading in FY 28-29 is estimated to increase to 5.5 MVA, 5.8 MVA, 8.4 MVA, 10.5 MVA, 5.4 MVA and 10.2 MVA, respectively.
- Based on the existing transformer capacities of 8 MVA, 7.5 MVA, 8 MVA, 12.5 MVA, 12.5 MVA and 12.5 MVA, PTR-1 to PTR-6 are projected to operate at 69%, 77%, 105%, 84%, 66% and 82% loading levels, respectively, under the FY 28-29 peak load scenario.
- PTR-3
- However, the mentioned PSS caters to several high-revenue consumers, including the Sambalpur District Headquarters, multiple private hospitals, Railways, shopping malls and educational institutions.
- To address PSS overloading, PTR addition is essential for maintaining service availability during peak demand and delivering consistent customer performance.

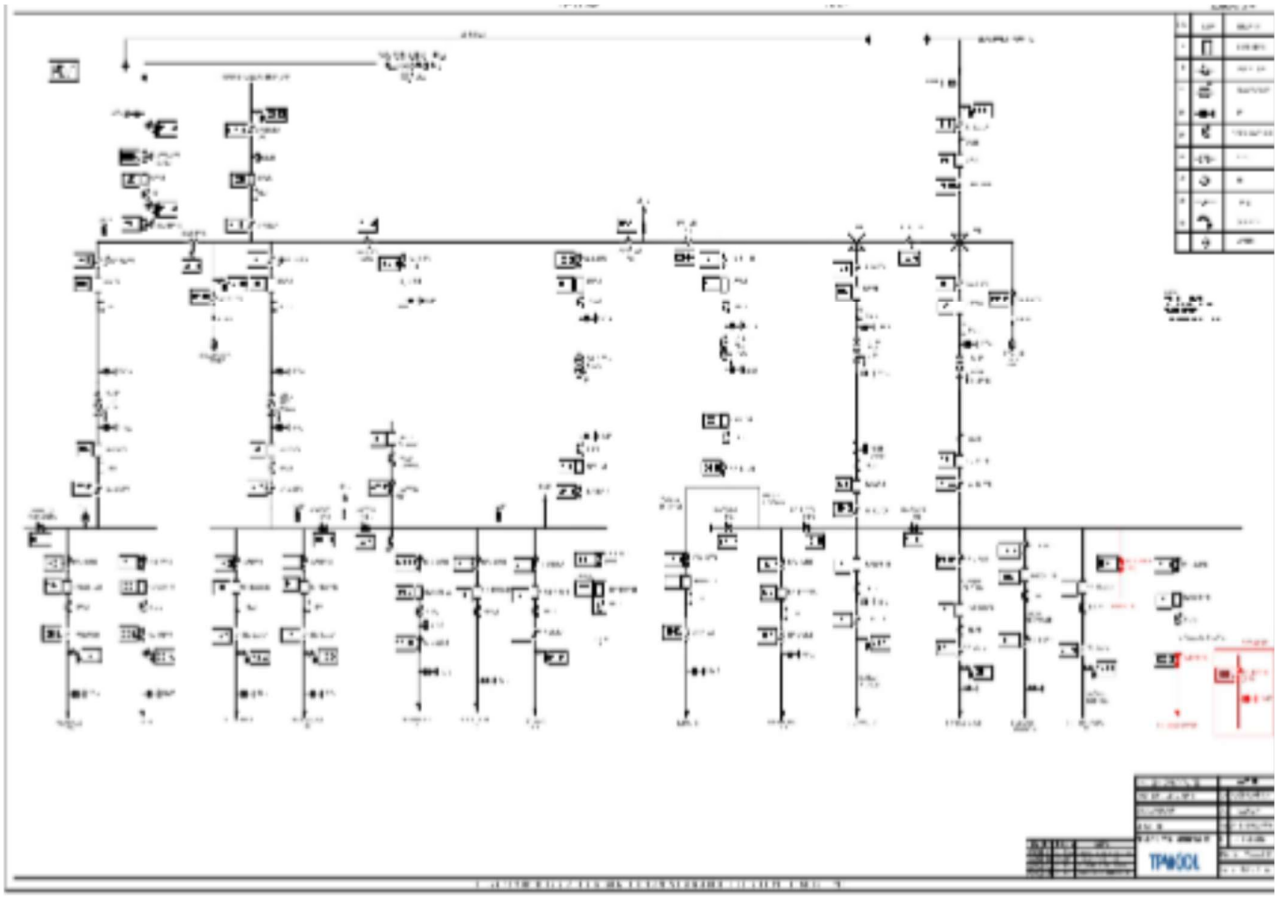
EXISTING SLD OF AINTHAPALI 33/11KV PSS:



Proposed Scenario:

- Due to space limitations at the proposed site, augmentation of the Power Transformer (PTR) is not feasible.
- In order to Mitigate Over-Loading of PTR-3 it is required to Add one no. of 12.5MVA PTR at Ainthapali PSS.
- Following the addition of PTR-7, it is proposed to transfer 2.7 MVA, 3 MVA & 2 MVA of load from PTR-2 PTR-3 & PTR-4 respectively, to PTR-7 through feeder reallocation.

N-1 REDUNDANCY ENHANCEMENT AT CHERUAPADA SUBSTATION

PROPOSAL:

Augmentation of existing 1no. of 33/11kV, 8 MVA Power Transformer (PTR-2) to 12.5 MVA at Cheruapada 33/11kV Substation in SED division of Sambalpur circle to maintain optimal transformer loading under N-1 contingency condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Cheruapada PTR-1 & 2 are 7.4 MVA and 5.4 MVA respectively at peak load condition of FY 26-27 as well as PTR Loading during N-1 condition is 161%. Considering load growth for 2 years (9.07% load growth per year for 2 years), the projected loading of FY 28-29 for PTR-1 & 2 would be 8.8 MVA and 6.5 MVA respectively & PTR Loading during N-1 condition is 191%.
- PTR-1 and PTR-2 will be loaded up to 110% and 81% respectively, w.r.t, the existing transformer capacity of 8MVA and 8MVA respectively in FY 28-29.
- However, the mentioned PSS caters to several high-revenue consumers, including the District Headquarters, multiple private hospitals, and educational institutions with no 11 KV Feeder back-feeding. Consequently, any fault condition may result in revenue loss and adversely impact customer service reliability, leading to consumer dissatisfaction.
- Therefore, augmentation of both PTRs is essential to mitigate overloading and maintain optimal transformer loading under N-1 contingency conditions.
- However, Augmentation of PTR-1 from 8 MVA to 12.5/16 MVA is being undertaken under CAPEX FY 2026-27, while augmentation of PTR-2 from 8 MVA to 12.5/16 MVA is proposed CAPEX FY 2027-28.

Note: As per CAPEX Order FY 2026-27, Case No. 82/2025, it is directed to provide N-1 contingency for PTRs in existing PSS.

In compliance with the directive, planning has been initiated for implementation of N-1 redundancy of Power Transformers (PTRs) in the urban areas of Rourkela and Sambalpur Circles. The proposed arrangement aims to ensure reliable power supply during transformer outage contingencies and improve overall system reliability by maintaining uninterrupted service under transformer failure conditions.

N-1 REDUNDANCY ENHANCEMENT AT BASANTI SUBSTATION

PROPOSAL:

Augmentation of existing 2nos. of 33/11kV, 8 MVA Power Transformer (PTR-1 & PTR-2) to 12.5 MVA at Basanti 33/11kV Substation in RED division of Rourkela circle to maintain optimal transformer loading under N-1 contingency condition.

REQUIREMENT/NEED OF PROPOSAL:

Existing Scenario:

- Loading of 33/11kV Basanti PTR-1 & 2 are 5.6 MVA and 4.3 MVA respectively at peak load condition of FY 26-27 as well as PTR Loading during N-1 condition is 123%. Considering load growth for 2 years (4.88% load growth per year for 2 years), the projected loading of FY 28-29 for PTR-1 & 2 would be 6.1 MVA and 4.7 MVA respectively & PTR Loading during N-1 condition is 135%.
- PTR-1 and PTR-2 will be loaded up to 77% and 59% respectively, w.r.t, the existing transformer capacity of 8MVA and 8MVA respectively in FY 28-29.
- However, the mentioned PSS caters to several high-revenue consumers, including the Public Health-care Centre, multiple private hospitals, and educational institutions with no 11 KV Feeder back feeding. Consequently, any fault condition may result in revenue loss and adversely impact customer service reliability, leading to consumer dissatisfaction.
- Therefore, augmentation of both PTRs is essential to optimal transformer loading under N-1 contingency conditions.

Note: As per CAPEX Order FY 2026-27, Case No. 82/2025, it is directed to provide N-1 contingency for PTRs in existing PSS.

In compliance with the directive, planning has been initiated for implementation of N-1 redundancy of Power Transformers (PTRs) in the urban areas of Rourkela and Sambalpur Circles. The proposed arrangement aims to ensure reliable power supply during transformer outage contingencies and improve overall system reliability by maintaining uninterrupted service under transformer failure conditions.

ANNEXURE 35

Scheme Name: Addition/Augmentation of DTRs

- ***Background***

Rapid urbanization and the growing electricity demand from residential, commercial, and industrial consumers have placed significant stress on the power distribution network. To meet the increasing load demand, augmentation or addition of Distribution Transformers (DTs) is essential to prevent overloading, which may lead to transformer failures and consequent power interruptions.

For ensuring a reliable and uninterrupted power supply to consumers, Distribution Transformers must operate within their optimum loading limits. Excessive loading can cause thermal and mechanical stress on transformers, adversely affecting their performance and service life.

A Distribution Transformer is considered overloaded when its loading exceeds 80% of its rated capacity. Based on the analysis of DT loading data, it has been observed that several transformers are currently operating at overloaded conditions or are likely to become overloaded in the near future due to anticipated load growth in their respective areas.

Therefore, to address the overloading issues in high load growth areas, it is necessary to augment the capacity of existing Distribution Transformers or install additional transformers. This will help maintain system reliability and ensure uninterrupted power supply.

- ***Proposal***

In this proposal, TPWODL intends to augment the capacity of existing Distribution Transformers and install additional DTs at locations where transformers have been identified as overloaded due to peak load demand.

- ***Requirement/ Need of the Proposal***

Overloading of Distribution Transformers (DTs) adversely impacts the reliability and quality of power supply and increases the risk of premature transformer failure due to prolonged operation beyond safe loading limits. To maintain transformer loading within permissible limits, augmentation of existing DTs and installation of additional DTs are proposed at locations where loading exceeding the allowable threshold.

When a Distribution transformer loading exceeds 80% of the rated capacity of the transformer in planned year (FY 28-29), then it is considered as overloaded DTR with projected annual load growth.

There is a total of 1399 Nos. of locations where DTs are overloaded, out of which 71 nos. DTs will be augmented with 250kVA,500kVA and 1000kVA DTR and 21 nos. new DTs (100KVA – 05 Nos ,250kVA – 04 Nos. and 500kVA – 12 Nos.) are proposed to be installed. The size of proposed AB Cable is 120sqmm considering the future load growth. The cost of lines(11kV/LT) is also included in the proposed budget of DT.

The transformers removed after augmentation will be utilised at other locations based on the availability of space through chain upgradation to mitigate overloading issues and optimize asset utilization. Approx. 164 nos. lower rating overloaded DTRs will be mitigated through chain upgradation including conversion of 1ph DT to 3ph DTs in phased manner.

Wherever the length of the new LT line is significant and the existing Distribution Transformer (DT) is overloaded, the provision of a new DT along with associated 11kV and LT lines is proposed to bifurcate the existing load, mitigate overloading, and enhance system reliability.

- **Benefit to the System and Consumers**

- To cater the increasing load demand, DT augmentation and DT addition is required to avoid overloading of transformer leading to transformer failures and power interruptions.

- To ensure reliable power supply to our consumers, Distribution Transformers has to be kept at optimum loading to avoid any mechanical stress on the transformers due to overload.

- Reduce over-burdening of existing Distribution transformers thereby reducing power cuts.

ANNEXURE 36

Scheme Name: Addition of New LT ABC network

Background

LT networks are the backbone to provide last mile connectivity to the consumers. Due to significant development in the TPWODL operational area the LT feeders are facing problems related to overloading and undervoltage. In addition to it, for providing steady and reliable power supply to the Commercials and Domestic consumers. Further to accommodate the future load growth at LT level, The LT network shall be adequately developed at the high load growth area. To mitigate the problems mentioned in above paragraph as well as to make system ready to take up future load, new LT ABC networks are proposed to be added in our operational area.

Proposal

Addition of new LT ABC network has been proposed to mitigate overloading and undervoltage issues and cater to future load growth. The proposed length represents the cumulative requirement across various feeders under the respective DTR, including feeder extensions and new feeder bifurcations for loss reduction and voltage profile improvement. Further, 120 sq. mm LT ABC has been considered taking into account the future load growth.

Requirement/ Need of the Proposal

i) To mitigate overloading & under voltage problem.
ii) To meet the future load growth.

ANNEXURE -37

Scheme Name: Build & Strengthen DC-DR Infrastructure & End-User IT Hardware:

Executive Summary:

This proposal contains IT capital investment plan for FY 2027-28 to support business expansion, strengthen cybersecurity, augment Data Centre and Disaster Recovery infrastructure, modernize workplace technology, and ensure scalable digital operations. The proposed investments are aligned with organizational growth objectives, the increasing user base, rising data volumes, compliance requirements, and the need for resilient business continuity."

Background:

Over the past five fiscal years (FY 2021–22 to FY 2025–26), TPWODL has undertaken a focused digital transformation journey to strengthen its technology landscape and support evolving business needs. This effort has been driven by four forward-looking strategies:

a) Establishing a robust core IT foundation by setting up a scalable data centre and enterprise-wide network
b) Expanding digital adoption by onboarding employees and business partners onto collaborative platforms
c) Enhancing cybersecurity with advanced threat detection and protection mechanisms
d) Implementing critical business applications such as ERP and MBC, CIS, CRM to automate and optimize key business processes.

These investments have improved operational efficiency, customer satisfaction, strengthened information security, and enabled seamless business continuity across the organization. The digital transformation initiatives have not only streamlined internal processes & customer service but also enhanced service reliability, agility, and stakeholder engagement. With a modern, scalable, and future-ready IT ecosystem now in place, TPWODL is well-positioned to drive sustainable growth and leverage emerging technologies to create greater business value in the years ahead.

Key milestones and achievements during the last five years include:

- **Establishment of a Tier-III Data Centre and Disaster Recovery (DR) for other Discoms**, providing a highly available, resilient, and secure platform for hosting critical IT and OT applications with business continuity capabilities.

- **Successful implementation and institutionalization of the Information Security Management System (ISMS)**, leading to the achievement and continued maintenance of **ISO 27001:2022 certification**, thereby reinforcing TPWODL's commitment to information security, risk management, and regulatory compliance.

- **Deployment of enterprise-grade compute, virtualization, and storage infrastructure** in Burla Data Centre to implement & manage mission-critical applications such as GIS, SCADA, ADMS, AMI (HES/MDM/SPM) for over 10 lakh smart meters, billing and collection systems, customer-facing digital platforms, and other enterprise and bespoke applications.

- **Provisioning of more than 3000 end-user computing devices** including laptops, desktops, and tablets, along with deployment of over **180 multifunction printers**, enabling digital workflows,

field-force mobility, paperless operations, and improved employee productivity across corporate and field locations.

- **Establishment of resilient network infrastructure** over MPLS, OFC, across more than **350 Offices,** ensuring reliable connectivity and uninterrupted network access to critical systems such as SCADA, ADMS, SAP, GIS, CIS, AMI, Billing, and Collection applications.

- **Implementation of enterprise software licensing and platform services** across user endpoints and data centre infrastructure to ensure operational efficiency, standardization, compliance, and supportability of business-critical applications.

- **Strengthening Cyber Security posture** through implementation of next-generation security solutions including Firewalls, Web Application Firewall (WAF), Distributed Denial of Service (DDoS) Protection, SIEM, Endpoint Detection & Response (XDR), Advanced Threat Protection (ATP), Antivirus, Patch Management, and Security Monitoring platforms. These initiatives have been aligned with ISO 27001:2022 requirements, CERT-In advisories, MeitY guidelines, and applicable provisions of the Information Technology Act.

Proposal (Context & Strategic Rationale)

TPWODL's rapid expansion across customer base, network footprint, and service portfolios has elevated IT architecture from an operational support function to a core strategic imperative. To sustain growth, optimize data-driven decision-making, and meet evolving power distribution mandates, the organization requires a more resilient, scalable, and future-ready digital foundation.

Core Investment Pillars	Objective	Impact
Enterprise Infrastructure & Resiliency (Compute, Network, Data & BCP)	Expand core compute, storage, networking, and business continuity (BCP) capabilities. Strengthening enterprise-wide connectivity, network performance, and security. Phased rollout of Advanced Metering Infrastructure, Smart Metering, and continual expansion of GIS asset mapping.	Provides the high-performance foundation required to ingest, process, and analyse rapidly growing volumes of operational and customer data across enterprise platforms. Delivers end-to-end operational visibility, real-time analytics, and automated decision-making to boost network efficiency, improve grid reliability, and elevate customer experience.
Next-Gen Digital Workplace Modernization & Lifecycle Refresh	Modernize end-user hardware, replace end-of-life (EOL) and underperforming IT assets, and deploy secure remote collaboration tools.	Eliminates tech-driven downtime, enhances workforce mobility, and improves employee productivity and agility across all operational sites.

- **Scope of Work**

TPWODL is witnessing a steady increase in digital transformation initiatives, resulting in the development of multiple bespoke applications to support evolving business requirements. The continuous growth in application data volumes necessitates the expansion of compute and storage infrastructure to ensure optimal performance, scalability, and reliability. Simultaneously, new office construction, renovation of existing facilities, and workforce expansion require adequate IT infrastructure provisioning. Modernization of network infrastructure—including routers, switches, and Wi-Fi access points, is essential to improve connectivity, strengthen security, and establish a unified enterprise-wide network across all locations.

To support business operations, procurement of MFDs, laptops, desktops, and LAN connectivity for new and renovated workspaces is required. In addition, the lifecycle refresh of aging end-user devices, including IPDS project assets that have completed over six years of service, is critical to reducing technology-related downtime and enhancing employee productivity. Further, deployment of UPS systems with battery backup is proposed to protect critical IT infrastructure, ensure business continuity, and safeguard investments against power disruptions.

The proposed cost and estimate break-up are provided below

Workplace Mobility & Business Continuity	Limited support for hybrid collaboration Power outages impacting IT operations	Deployment of VC and collaboration devices UPS deployment	Faster decision-making and reduced inter-office travel Reduced downtime and uninterrupted business operations
Office Infrastructure & Attendance Management	New and renovated offices require IT readiness Manual interventions and maintenance issues	LAN setup, routers, switches, Wi-Fi refresh Face detection based Biometric devices	Seamless connectivity and improved operational efficiency Improved compliance and administrative efficiency
Data & Application Performance	Increasing application load and data growth	Server and SAN augmentation	Faster application response and better user experience

- **Benefit to the System and Consumers**

The planned upgrades to TPWODL's IT infrastructure are designed not only to improve internal efficiency but also to significantly enhance the experience and service quality for external customers. The proposed investment is expected to deliver the following benefits:

- Enhanced reliability and availability of mission-critical IT services.
- Increased capacity to support new digital transformation initiatives.
- Better readiness for AMI, Smart Metering, GIS expansion, and future analytics platforms.
- Improved employee productivity through modern workplace tools.
- Reduction in maintenance costs associated with ageing infrastructure.
- Stronger cyber resilience and operational security.
- Improved business continuity through resilient infrastructure and power backup systems.
- Standardized IT infrastructure across all TPWODL locations.

ANNEXURE -38

Scheme Name: Augmentation of IT Applications & Software

Proposal (Context & Strategic Rationale)

The proposed scheme aims to deploy and renew critical enterprise software platforms that support IT infrastructure, improve service availability, strengthen cybersecurity, automate IT operations, and enhance employee productivity. The proposed investment in **IT Software and Applications** will complement TPWODL's infrastructure modernization initiatives by establishing a secure, resilient, and scalable software ecosystem. The proposed investments will strengthen business continuity, improve IT governance, enhance user experience, support future digital transformation initiatives, and ensure reliable delivery of services to employees and customers.

Core Investment Pillar	Objective	Impact
Enterprise Software Resiliency &	Strengthen backup, replication, reporting, database, and server operating system capabilities across Data Centre and Disaster Recovery environments. Support growing enterprise applications, data volumes, analytics platforms, and critical business operations.	Ensures high availability of business applications, faster disaster recovery, improved data protection, and enhanced operational resilience. Provides a scalable software foundation to support future digital initiatives, analytics, AMI, GIS expansion, and customer-centric services.
IT Operations Visibility, Automation & Security Management	Implement centralized ITSM Tool, NMS, Patch Management and infrastructure monitoring solutions to improve operational visibility, compliance, and endpoint security.	Enables proactive monitoring, faster fault detection, automated patch compliance, and reduced cybersecurity risks. Improves infrastructure reliability, minimizes downtime, and enhances service delivery across the enterprise.
Digital Workplace Productivity & User Experience Enhancement	Deploy user-centric solutions such as Password Reset Tool (AD), Adobe, AutoCAD, and other business productivity software to simplify daily operations and improve employee effectiveness.	Reduces IT helpdesk dependency, improves user productivity, enhances collaboration, and delivers a seamless digital experience. Empowers employees with the tools required to perform business functions efficiently across all operational locations.
Corporate Digital Transformation & Innovation Projects	Support development and implementation of enterprise-wide digital initiatives, workflow automation, and new business applications aligned with organizational objectives.	Accelerates process digitization, improves data-driven decision-making, enhances operational agility, and contributes to improved customer service and business efficiency. Delivers greater transparency, automation, and long-term business value.

- **Scope of Work**

To ensure high availability of critical business applications and strengthen disaster recovery readiness, the scheme proposes the deployment of Backup Replication Software, Backup Reporting Solutions, and enterprise-grade Oracle/MS SQL database and Linux/Windows Server licenses. These investments

will enhance data protection, improve system reliability, and support the growing infrastructure and application ecosystem.

The implementation of a centralized Network Management System (NMS) and Patch Management Solution will provide end-to-end infrastructure visibility, proactive monitoring, automated patch compliance, and improved cybersecurity for enterprise IT assets. Deployment of a Self-Service Password Reset Tool integrated with Active Directory (AD), along with renewal of essential software such as Adobe, AutoCAD, and other business applications, will improve employee productivity, reduce IT support effort, and provide a seamless digital workplace experience.

The scheme will also support Corporate IT and Business Automation Projects aimed at process digitization, workflow automation, and development of new digital solutions to meet evolving business requirements and improve operational efficiency.

Overall, the proposed software investments will establish a secure, resilient, and scalable software ecosystem, strengthen business continuity and operational efficiency, enhance employee experience, and support future digital transformation initiatives across TPWODL.

  The proposed software investments will provide a secure, resilient, and scalable technology foundation that complements TPWODL's infrastructure modernization initiatives, improves employee experience, enhances customer service delivery, and supports the organization's long-term digital transformation roadmap.

  - Improved application performance and availability.
  - Reduced downtime and IT-related disruptions.
  - Faster issue resolution through proactive monitoring.
  - Better security and compliance posture.
  - Enhanced productivity through modern software tools and self-service capabilities.
  - Higher availability of customer-facing applications.
  - Faster resolution of customer requests and complaints.
  - Improved data reliability and service continuity.
  - Better digital customer experience through stable and responsive systems.
  - Stronger foundation for future digital utility services and automation initiatives.

ANNEXURE 39

Scheme Name: Enhancement of Cybersecurity Solutions

Proposal

The proposed scheme aims to strengthen TPWODL's cybersecurity posture and ensure compliance with ISO/IEC 27001, CERT-In guidelines, and applicable mandates of the Ministry of Power (MoP), Ministry of Electronics and Information Technology (MeitY), and other relevant government agencies.

The scheme proposes the implementation of a comprehensive suite of advanced cybersecurity solutions and data protection controls to enhance cyber resilience, ensure regulatory compliance, and mitigate operational risks across both IT and OT environments. The key measures proposed under the scheme are as follows:

- Deployment of Network Intrusion Prevention System (NIPS) and Network Detection and Response (NDR) for real-time threat monitoring and mitigation.
- Expansion of Patch Management and Antivirus Coverage to ensure all endpoints and servers are protected against known vulnerabilities and malware.
- Establishment of a Unified Security Operations Center (SOC) to integrate existing SIEM systems and provide centralized visibility, threat intelligence, and coordinated incident response.

➢ **Requirement/ Need of the Proposal**

To effectively implement the proposed cybersecurity enhancements and ensure alignment with regulatory mandates, TPWODL requires the following:

- Advanced Threat Detection and Prevention Tools
    - Procurement and deployment of Network Intrusion Prevention System (NIPS) and Network Detection and Response (NDR) solutions.
    - Integration with existing network infrastructure for seamless monitoring and automated threat mitigation.
- Endpoint Security and Vulnerability Management
    - Comprehensive patch management solution covering all IT and OT assets.
    - Enterprise-grade antivirus and anti-malware tools with centralized management and reporting capabilities.
- Unified Security Operations Center (SOC) with Training and Awareness
    - Design and establishment of a centralized SOC with 24x7 monitoring capabilities.
    - Integration of existing Security Information and Event Management (SIEM) systems.
    - Cybersecurity awareness programs for employees across departments.
    - Specialized training for SOC analysts and IT/OT administrators on new tools and threat response protocols.
    - Skilled cybersecurity personnel for threat analysis, incident response, and continuous improvement.
- Compliance and Governance Framework
    - Implementation of controls and processes to ensure compliance with ISO/IEC 27001, CERT-In guidelines, and directives from MeitY and the Ministry of Power.
    - Regular audits, reporting mechanisms, and documentation to demonstrate adherence to regulatory standards.

- **Scope of Work**

Implementation of Secure Access Technologies:

- Zero Trust Network Access (ZTNA) for granular, application-level access control.
- Virtual Private Network (VPN) for encrypted remote access.

Data Protection, Access Controls & Monitoring:

- Data Loss Prevention (DLP) to prevent unauthorized data exfiltration.
- URL Filtering to block access to malicious or non-compliant web content.
- Role-Based Access Controls (RBAC) to enforce least-privilege access.
- Centralized SOC through Log monitoring, Identification & response solutions (SIEM).

These initiatives are designed to align with the Digital Personal Data Protection (DPDP) Act, 2023, which mandates lawful, transparent, and secure processing of personal data

Risk Assessment and Mitigation Priorities

Below identified high-priority cybersecurity risks and it's mitigation strategies:

SL No.	Risk Description	Mitigation Strategy
1	Non-compliance with the DPDP Act may lead to legal penalties and reputational damage.	Implement DLP, access controls, and consent-based data processing mechanisms.
2	Lack of integration between existing SIEM and the upcoming Unified SOC for TP Odisha Discoms.	Integrate SIEM with SOC for centralized threat detection and response.
3	Traditional VPNs lack granular access control.	Deploy ZTNA for secure, application-specific access.
4	Absence of patch management exposes systems to known vulnerabilities.	Enforce automated patch management across all assets.
5	Unprotected endpoints and servers are vulnerable to malware and ransomware.	Deploy enterprise-grade antivirus and endpoint protection.
6	Lack of NDR/NIPS increases risk of undetected lateral movement and advanced threats.	Deploy NDR/NIPS for proactive

Budgetary Details for Enhancement of Cybersecurity Solutions:

Sl. No.	Description	UoM	Qty	Total Cost (in Cr)
1	NIPS/NDR (Network Intrusion Prevention/Detection & Response)	AU	1	1.45
2	VPN License (unlimited)	AU	1	0.41
3	WAF License / vCPU + Tenant License	AU	1	0.5
4	Web URL Filtering	AU	1	1.25

6	ZTNA (Zero Trust Network Access)	AU	1	1.5
11	ITC charges (7% of item cost above)	LS	-	0.39
			Total Cost	**6.00**

- **Physical Target**
  Will be completed above activities by March 2028.

- **Cost Benefit Analysis**
  The proposed cybersecurity investments will significantly strengthen TPWODL's cyber defence capabilities by replacing End-of-Life and End-of-support security solutions and introducing advanced protection mechanisms for critical IT Enterprise, Application and OT AMI & GIS environments. The solutions will enable real-time threat detection, automated incident response, improved visibility of cyber risks, and enhanced protection against ransomware, malware, and sophisticated cyberattacks. The Enterprise AI Firewall will establish a robust security perimeter with high availability, while modern SOC and Endpoint Security platforms will improve operational resilience and business continuity. Additionally, these investments will support compliance with ISO 27001, CERT-In advisories, regulatory requirements, and industry best practices, thereby reducing organizational risk and strengthening overall cybersecurity governance.

- **Benefit to the System and Consumers**

  - Strengthened Cyber Resilience: Advanced security solutions (NIPS/NDR, Unified SOC) to proactively detect, respond, and mitigate threats across IT and OT networks.
  - DPDP Act 2023 Readiness: Deployment of VPN, ZTNA, DLP, URL Filtering, and Access Controls ensures secure data handling, remote access, and alignment with national data protection regulations.
  - Centralized Threat Visibility: Unified SOC facilitates real-time security monitoring and faster incident response, reducing business risk and downtime.
  - Regulatory & Standards Compliance: Ensures adherence to ISO 27001:2022, MeitY, CERT-In, and IT Act guidelines, minimizing legal and reputational risks

ANNEXURE-40

Scheme Name: AI-Based Geospatial Analysis & Route Marking for Smart Meter Consumer Connectivity Validation and Energy Audit Enhancement

Background

The TPWODL has undertaken large-scale Smart Meter deployment and GIS asset digitization across its distribution network. While GIS systems contain geo-tagged information of electrical assets such as feeders, Distribution Transformers (DTs), poles, HT/LT lines, and consumer locations, the actual connectivity between Smart Meter consumers and their respective DTs is not always validated and updated.

Further, Meter Data Management (MDM) systems maintain consumer meter data, load survey data, billing information, and operational parameters independently. In the absence of a validated consumer-to-network connectivity model, there are challenges in transformer-wise energy accounting, consumer indexing, loss identification, network planning, and asset optimization.

The proposed project aims to leverage Artificial Intelligence (AI), Geospatial Analytics, and Route Marking techniques to establish an accurate Smart Meter consumer connectivity map by integrating GIS and MDM data. The solution will create a validated digital network model for enhancing energy audit, loss reduction, and distribution network planning.

Proposal

The proposal involves implementation of an AI-driven Geo Spatial Analysis and Route Marking platform that utilizes:

- Existing GIS asset database.
- Smart Meter consumer geo-coordinates.
- DT, feeder, and network GIS layers.
- Consumer meter data available in MDM.
- Load survey and meter event data.
- Route tracing and network topology analytics.

Using advanced AI and spatial analytics algorithms, the system will:

- Map Smart Meter consumers to their probable Distribution Transformers.
- Validate GIS consumer connectivity against MDM data.
- Identify connectivity mismatches and untagged consumers.
- Conduct route-based network analysis.
- Create DT-wise, feeder-wise, and phase-wise consumer mapping.
- Support accurate energy accounting and network planning.
- Generate actionable reports for loss reduction and asset optimization.

This project will establish a continuously updated digital network intelligence platform for the Utility.

Requirement / Need of the Proposal

The current distribution network faces the following challenges:

1. Incomplete Consumer Connectivity Visibility

GIS databases contain location information; however, actual electrical connectivity between DTs and Smart Meter consumers is not fully validated.

2. Consumer Indexing Mismatch

Differences often exist between GIS databases, MDM records, and field connectivity, leading to inaccurate consumer indexing and energy accounting.

3. Challenges in DT-Wise Energy Audit

Without validated DT-consumer mapping, transformer-level input-output analysis cannot be performed accurately.

4. High AT&C Loss Identification Difficulty

Unmapped, wrongly tagged, or shifted consumers result in difficulties in identifying theft-prone or high-loss areas.

5. Inefficient Network Planning

Capital investment planning, load balancing, DT augmentation, EV charging integration, and renewable energy integration require accurate consumer-network connectivity information.

6. Manual Verification Requirement

Presently, consumer connectivity verification requires extensive field surveys, resulting in high operational costs and longer execution timelines.

The proposed AI-driven geo-spatial solution will address these deficiencies by automating connectivity validation using available GIS and MDM data.

Scope of Work

A. GIS Data Analysis

- Collection and verification of GIS layers.
- Mapping of:
    - Smart Meter Consumers
    - Distribution Transformers
    - Feeders
    - HT Lines
    - LT Lines
    - Service Connections
    - Poles and Network Assets

B. AI-Based Geo Spatial Analysis

- Consumer clustering analysis.
- Network proximity assessment.
- Route-based connectivity modeling.
- DT-to-Consumer connectivity prediction.
- Phase-wise connectivity analysis.
- Topology validation through AI algorithms.

C. MDM Data Validation

- Integration with Meter Data Management System.
- Analysis of:
    - Load Survey Data
    - Meter Events
    - Consumer Master Data
    - Billing Data
- Cross-validation of GIS findings with meter behaviour data.

D. Route Marking and Connectivity Validation

- AI-assisted route tracing between DT and consumers.
- Identification of:
    - Incorrectly tagged consumers
    - Unmapped consumers
    - Isolated consumers
    - Connectivity anomalies

E. Energy Audit Enablement

- DT-wise consumer inventory creation.
- Feeder-wise connectivity reports.
- Energy audit-ready network model.
- Loss pocket identification.

F. Dashboard and Reporting

Development of analytics dashboards for:

- DT-wise consumer mapping
- GIS-MDM mismatch reports
- Connectivity confidence score
- Consumer indexing status
- Network health indicators

Proposed Cost with Estimate Break-Up:

Sl. No.	Description	Total Cost (in Cr)
1	GIS Data Collection, Validation & Network Modelling	0.10
2	AI-Based Geo Spatial Analysis Engine Development	0.35
3	Smart Meter Consumer Route Marking & Connectivity Analysis	0.3
4	MDM Integration & Data Validation Platform	0.18
5	Consumer Indexing Validation & Energy Audit Module	0.1
6	Dashboard, Reporting & Analytics	0.1
	Total	**1.13**

Source of Estimate: Budgetary quotations, prevailing market rates for GIS analytics solutions, AI platform implementation, system integration services, and utility data analytics projects.

Projects Completion timelines: March 28

Cost Benefit Analysis

Operational Benefits

- Reduction in manual consumer connectivity surveys.
- Faster and more accurate consumer indexing.
- Automated validation of GIS records.
- Reduced manpower requirement for network verification.

Financial Benefits

- Accurate DT-wise energy accounting.
- Identification of loss-prone areas.
- Improved AT&C loss reduction initiatives.
- Better prioritization of CAPEX investments.
- Avoidance of duplicate or incorrect infrastructure planning.

Strategic Benefits

- Creation of a digital network twin for Smart Metering ecosystem.
- Enhanced Smart Grid readiness.
- Improved data quality across GIS and MDM platforms.
- Foundation for advanced analytics, load forecasting, and network optimization.

Benefit to the System and Consumers

Benefits to the Utility

- Accurate DT-wise and feeder-wise consumer mapping.
- Improved consumer indexing accuracy.
- Better network visibility through AI-driven geo-spatial intelligence.

- Enhanced transformer-wise energy audit capability.
- Faster identification of network discrepancies.
- Improved planning for load growth, EV adoption, and renewable integration.
- Reduction in technical and commercial losses.
- Data-driven decision making for future CAPEX investments.

Benefits to Consumers

- Improved reliability of electricity supply.
- Better transformer load management.
- Faster fault localization and restoration.
- Improved service quality through accurate network records.
- Enhanced efficiency of future Smart Grid and Smart Meter applications.

➢ Setup DR Infrastructure for GIS

Background

The existing GIS production environment currently operates without a dedicated Disaster Recovery (DR) infrastructure. With increasing GIS data volume, SAP-GIS integration, enterprise applications, and dependency on GIS for network operations, a resilient DR setup has become essential to ensure business continuity, minimize downtime, and safeguard critical spatial data.

Proposal

Establishment of a dedicated GIS Disaster Recovery (DR) Infrastructure by procuring enterprise servers, Windows and Linux operating systems, endpoint security (DS + XDR), patch management solution, and Red Hat Enterprise Linux licensing

Requirement/ Need of the Proposal

The proposed DR infrastructure will provide business continuity, disaster recovery capability, high availability of GIS applications, cyber security compliance, centralized patch management, and secure operation of mission-critical GIS services. It will eliminate the risk of prolonged outages and ensure uninterrupted support for utility operations.

Scope of Work

Supply, Installation, Configuration, Testing & Commissioning of:

- 2 Nos. Enterprise 4S Servers (1 Windows & 1 Linux)
- Windows Server OS Licenses – 50 Core
- AV DS + XDR Licenses – 8 Nos.
- Patch Management Licenses – 8 Nos.
- RHEL License – 1 No.

Proposed Cost with Estimate Break-up

Item Description	Unit Cost plus 20% escalation (In Rs.)	Windows	Linux	Total	Total cost (In Rs)
4S Server Cost	25,59,094.80	1	1	2	5118189.60

RHEL License	5,40,000.00	-	-	1	540000.00
Total					**8743168.10**
				In Cr	**0.87**

Source of Estimate: Last PO Rate with 20% Price Escalation.

Cost Benefit Analysis

The proposal minimizes business interruption risk, strengthens cyber resilience, improves system availability, reduces recovery time objective (RTO), protects critical GIS assets, and provides scalable infrastructure for future GIS expansion.

Benefit to the System and Consumers

- Continuous GIS availability during disaster scenarios.
- Faster restoration of GIS-enabled utility services.
- Improved data security and compliance.
- Reliable support for SAP-GIS integration and field operations.
- Enhanced operational efficiency and improved consumer service delivery

Expected Outcome

The project will establish a **Utility-wide AI-enabled Geo Spatial Consumer Connectivity Platform** that integrates GIS and MDM data to create an authenticated DT–Consumer relationship database, enabling accurate energy audit, AT&C loss reduction, network optimization, and future smart distribution planning, thereby justifying a CAPEX investment of **₹ 2.00 Crore**.

Sl. No.	Description	Total Cost (in Cr)
1	AI-Based Geospatial Analysis & Route Marking	1.13
2	Setup DR Infrastructure for GIS	0.87
	Total	**2.00**

ANNEXURE:41

Scheme Name: GIS-Integrated FCC Mobile Application for Enhanced Consumer Service, Network Visibility, and Outage Management

Background

At present, FCC is primarily used for consumer complaint management and does not provide visibility of the electrical network, outage locations, or asset information. Consequently, complaint resolution and outage management are heavily dependent on manual coordination between the control centre and field teams through phone calls and messaging platforms, resulting in delays in fault identification, restoration, and status updates.

Proposal

The proposed FCC-Mobile solution with GIS integration will provide a geospatial view of the electrical network, including feeders, DTs, consumers, and assets within the FCC platform. This will enable location-based complaint analysis, outage visualization, asset tracking, and improved field crew coordination. The solution will facilitate faster fault localization, efficient outage management, real-time monitoring of field activities, and enhanced decision-making, thereby improving operational efficiency and consumer service.

Requirement/ Need of the Proposal

At present, FCC is limited to consumer complaint management and lacks visibility of the electrical network, assets, and outage locations. This results in manual coordination between control centre and field teams, leading to delays in fault identification, outage management, and complaint resolution.

The proposed GIS-integrated FCC Mobile Application will provide real-time network visibility, asset mapping, and location-based complaint and outage management. This will improve operational efficiency, reduce restoration time, enhance field crew productivity, and provide better consumer service.

Scope of Work

- GIS integration with the existing FCC application for visualization of electrical network assets, feeders, DTs, consumers, and outage locations.
- Deployment of GIS based FCC-Mobile application for field staff and operational teams.
- Development of GIS-based dashboards, reports, and analytics.
- API-based integration of existing VTS with GIS-FCC Mobile Application to enable real-time vehicle and field crew tracking for efficient complaint and outage management.
- Procurement and deployment of required server hardware, storage, operating system, database licenses, and supporting software.
- Network and cybersecurity configuration for secure access to the application.
- Application Testing, User Acceptance Testing (UAT), Performance Testing, and Go-Live Support.
- User training, documentation, and knowledge transfer.

Proposed Cost with Estimate Break-up

Total Proposed Cost: **₹ 2.50 Crore (Rupees Two Crore Fifty Lakh only)** for implementation of the GIS-enabled FCC Mobile Application along with required hardware, software, integration, testing, and support.

NOTE: The above cost data is proposed based on earlier executed jobs and estimates considered by TPWODL

Project completion date: March 28

Cost Benefit Analysis

The proposed GIS-enabled FCC Mobile Application will improve complaint resolution, outage management, and field workforce efficiency through real-time network visibility and mobile-based operations. The solution will reduce fault restoration time, improve resource utilization, minimize manual coordination, enhance consumer satisfaction, and support faster and more informed decision-making. The long-term operational benefits are expected to outweigh the proposed investment.

Benefit to the System and Consumers

The proposed GIS-enabled FCC Mobile Application will provide real-time visibility of the electrical network, assets, outages, and field activities, leading to faster fault identification and restoration. It will improve coordination between the Control Center and field teams, enhance operational efficiency, and support data-driven decision-making

Scheme Name: CCTV Control Room Setup

Background

TPWODL is responsible for power distribution across nine districts of Western Odisha through a large network comprising Primary Substations (PSS), Distribution Substations (DSS), offices, stores, material yards and other critical installations. As part of infrastructure modernization, CCTV surveillance systems have been progressively installed at various operational locations to improve security, monitor assets, and support operational efficiency.

At present, CCTV systems installed at MOC sites have limited centralized monitoring and recording capability (locally). There is no dedicated centralized control room to continuously monitor critical installations and coordinate emergency response.

To strengthen physical security, improve operational visibility, and enable centralized surveillance, it is proposed to establish a modern CCTV Control Room equipped with an integrated Video Management System (VMS), video wall, operator workstations, storage infrastructure, and communication facilities. The proposed control room will serve as the centralized monitoring hub for CCTV feeds from critical installations across the TPWODL operational area.

The project shall be implemented in phases based on the availability of CCTV-enabled locations and future expansion requirements.

Proposal

It is proposed to establish a centralized CCTV Control Room at the designated monitoring facility with the following infrastructure:

- Video Wall comprising large-format LED display panels.
- Operator workstations with dual-monitor configuration (10 Nos).
- Network Video Management System (VMS).
- Network switches and communication equipment.
- UPS with backup power.
- Dedicated control room furniture and operator consoles.
- Access control for the control room.
- Environmental monitoring and air-conditioning.
- Structured cabling and LAN infrastructure.
- Integration of CCTV feeds from field locations over the existing communication network.
- The system shall support future expansion without major hardware replacement.

Requirement/ Need of the Proposal

The proposed CCTV Control Room is essential to address the following operational challenges:

- Lack of centralized monitoring of geographically dispersed CCTV systems.
- Difficulty in monitoring unmanned and remote electrical installations.
- Limited capability for incident investigation because of fragmented recordings.
- Inability to monitor multiple critical assets simultaneously.
- Requirement for improved asset protection against theft, vandalism, unauthorized entry, and operational safety incidents.
- Need for centralized monitoring during emergencies, outages, and disaster situations.
- Requirement for enhanced coordination between Security, Technical Services, Operation, Commercial, and Emergency Response teams.

The proposed arrangement will provide:

- 24×7 centralized monitoring.
- Faster incident detection and response.
- Improved operational safety.
- Better asset security.
- Scalability for future CCTV expansion.
- Better compliance with corporate security and infrastructure protection practices.

Scope of Work

The scope includes supply, installation, testing, commissioning, integration, and training for establishing the CCTV Control Room.

Major Deliverables

1. Design and establishment of CCTV Control Room.
2. Supply and installation of:
    - Video Wall
    - Video Wall Controller
    - LED Display Panels
3. Installation of:
    - 10 Operator Consoles
    - 10 High-end Monitoring Workstations
4. Installation of:
    - Central Recording Server
    - Video Management Server
    - Storage Server (NAS/SAN)
5. Network Infrastructure:
    - Switch & Router

- Firewall Integration
- Structured Cabling

6. Power Infrastructure:
   - Online UPS
   - Power Distribution Units
7. Integration of CCTV feeds from identified field locations.
8. Configuration of centralized Video Management Software.
9. User creation and role-based access.
10. Operator training.

Proposed Cost with Estimate Break-up

Total Estimated Project Cost: ₹5.00 Cr (Approx.)

NOTE: The above cost data is proposed based on earlier executed jobs and estimates considered by TPWODL

The estimate is indicative and shall be finalized based on approved rate contracts, competitive bidding, or finalized vendor quotations.

Project completion date: March 28

Cost Benefit Analysis
The proposed investment will provide both tangible and intangible benefits.

A. Quantifiable Benefits

- Leverages the benefits of existing CCTV cameras installed in various office locations through Optimization of security personnel in office locations.

Optimization of Security Resources in offices	
Monthly wages per security personnel (Rs.)	15000
Yearly wages per security personnel (Rs.)	180000
Office Count (54 Nos.)	97,20,000
ROI In 5 years (Rs.)	**4,86,00,000**

- Lower expenditure on manpower deployment in Unmanned PSS.

Unmanned PSS	
Monthly Manpower Cost/PSS(Rs.)	1,80,000

Yearly Manpower Cost/PSS(Rs.)	21,60,000
PSS Sites (50 Nos.) (Rs.)	10,80,00,000
30% cost considered for CCTV control room setup per year	3,24,00,000
ROI In 5 years	**16,20,00,000**
Note: For unmanning of PSS 70% cost contribution considered under substation automation system and 30% considered under CCTV deployment.	

- Reduced outage restoration time through visual verification.
  3 MUs considered for a year in case fire or flashover incidents and proactive maintenance activity in PSS- 15 Lakhs per year.

B. Qualitative Benefits

- 24x7 surveillance of unmanned PSS and critical office locations.
- Improved security of electrical assets and reduced risk of equipment theft or vandalism.
- Better coordination during natural disasters, emergencies, and network restoration and enhanced disaster response capability.
- Recorded footage supports investigation of accidents, thefts, equipment damage, and disputes facilitates compliance with legal and regulatory requirements.
- Faster response during accidents, emergencies, or unsafe conditions.

Benefit to the System and Consumers

Implementation of the CCTV Control Room will provide the following benefits:

- Continuous monitoring of critical electrical infrastructure.
- Improved reliability of the power distribution network.
- Better protection of utility assets.
- Reduced downtime during emergencies.
-
- Improved consumer service continuity through quicker restoration of affected installations.
- Centralized monitoring supporting future digital transformation initiatives.

The proposed project aligns with TPWODL's objectives of strengthening operational resilience, improving infrastructure security, enhancing workforce safety, and ensuring uninterrupted and reliable power supply to consumers through modern surveillance technology.

ANNEXURE-43

Scheme Name: Setup Communication Infrastructure for PSS - Ethernet Switch and Wireless Communication

Background

TPWODL operates a large network of Primary Substations (PSS) that form the backbone of the power distribution system across its operational area. In recent years, substantial investments have been made towards substation automation, remote monitoring, SCADA integration and digitalization initiatives.

However, many PSS locations currently have limited or fragmented communication infrastructure. Existing communication arrangements are largely dependent on conventional networking methods, which are inadequate for supporting increasing data requirements from SCADA, RTUs, CCTV systems, energy meters, protection relays, disturbance recorders, and future automation applications.

To establish a reliable, secure, and scalable communication network, it is proposed to deploy industrial-grade Ethernet Switches and Wireless Communication Infrastructure across identified PSS locations. The proposed communication system will facilitate seamless data transfer between field devices and central monitoring systems while ensuring high availability, cybersecurity, and future scalability.

The project shall be implemented in phases covering existing substations and future network expansion requirements.

Proposal

It is proposed to establish a standardized communication infrastructure in Primary Substations with the following components:

- Industrial Managed Ethernet Switches
- Layer-3 Communication Switches at strategic locations
- Wireless Point-to-Point Communication Systems
- Wireless Access Points for local connectivity
- Fiber and Copper Network Integration
- Redundant Communication Architecture
- Network Monitoring and Management Software
- Cyber Security Features including VLANs and Access Control
- Structured LAN Infrastructure
- Integration with SCADA, SAS, CCTV and future digital applications.
- Communication Network for Remote Monitoring and Control.

The proposed system shall support future automation requirements without major hardware replacement

Requirement/ Need of the Proposal

The proposed communication infrastructure is essential to address the following operational challenges:

- Inadequate communication facilities in many substations.
- Lack of standardized networking architecture across PSS locations.
- Difficulty in integrating various intelligent electronic devices (IEDs).
- Limited communication bandwidth for digital applications.
- Communication failures affecting remote monitoring and control.
- Requirement for reliable data transfer between substations and control centers.
- Growing need for integration of SCADA, CCTV, Energy Management Systems, and Substation Automation Systems.
- Requirement for cyber-secure communication infrastructure.

The proposed arrangement will provide:

- Reliable real-time data communication.
- Improved availability of SCADA and automation systems.
- Faster fault diagnosis and restoration.
- Secure communication channels with enhanced cyber security.
- Better network visibility and remote device management.
- Support for future smart grid initiatives.
- Reduced dependency on manual intervention in substations.
- Improved operational efficiency and system reliability.

Scope of Work

The scope includes supply, installation, testing, commissioning, integration, and training for communication infrastructure deployment in identified Primary Substations.

Major Deliverables:

- Supply and installation of Industrial Managed Ethernet Switches
- Supply and installation of Layer-3 Core Switches
- Installation of Wireless Radio Communication Systems
- Deployment of Point-to-Point and Point-to-Multipoint wireless links
- Installation of Wireless Access Points
- Network Design and Configuration
- Creation of VLANs for SCADA, CCTV, SAS, and Administrative Traffic
- Integration of:
    - SCADA RTUs
    - Numerical Relays
    - Multifunction meter
    - Disturbance Recorders

    - Network Monitoring Systems
- Structured LAN and Fiber Connectivity
- Network Redundancy Configuration
- Cyber Security Configuration
- Centralized Monitoring Integration
- Testing and Commissioning
- User Training and Documentation

Proposed Cost with Estimate Break-up

Total Estimated Project Cost: ₹0.50 Cr (Approx.)

- **Ethernet Switches- 0.36 Cr**
- **Wireless communication- 0.14 Cr**

NOTE: The above cost data is proposed based on earlier executed jobs and estimates considered by TPWODL

Project completion date: March 28

Cost Benefit Analysis

The proposed investment will provide both direct financial benefits and operational benefits through improved communication availability, reduced downtime, and reduced field visits.

B) Qualitative Benefits

- Reliable and secure communication backbone for PSS.
- Improved SCADA data availability and visibility.
- Seamless integration of CCTV, RTU, Numerical Relays, and SAS systems.
- Faster fault diagnosis and restoration.
- Reduced dependence on manual monitoring.
- Enhanced cyber security through managed network architecture.
- Improved operational efficiency and decision-making.
- Foundation for future digital substation and smart grid initiatives.

Implementation of the proposed communication infrastructure will provide the following benefits:

- Reliable communication connectivity across substations.
- Enhanced grid visibility and control.
- Improved power supply reliability.
- Faster fault detection and restoration.

- Reduced outage duration for consumers.
- Better utilization of existing digital investments such as SCADA, CCTV, and SAS.
- Improved workforce productivity through remote monitoring capabilities.
- Foundation for future smart grid and digital utility initiatives.

The proposed scheme aligns with TPWODL's digital transformation roadmap and will establish a robust, secure, and scalable communication backbone essential for modernization of substations, improved operational efficiency, and delivery of reliable power supply to consumers.

ANNEXURE – 44

Scheme: Construction of Office Buildings

Background

As part of TPWODL's ongoing commitment to strengthening its operational infrastructure and providing a safe, efficient, and employee-friendly work environment, significant initiatives have been undertaken in recent years to upgrade existing facilities and develop new office infrastructure. The organisation has successfully established several company-owned office buildings, reducing dependence on rented premises and enhancing operational efficiency.

Continuing these efforts, TPWODL proposes to undertake further infrastructure development works during FY 2027-28 in a phased manner. This initiative aims to facilitate the transition from rented offices to company-owned premises while upgrading aging infrastructure to meet current operational requirements.

Despite the progress achieved, a considerable number of offices continue to operate from rented buildings, which present challenges related to space constraints, limited customisation, long-term sustainability, and cost effectiveness. Furthermore, several existing office buildings have deteriorated over time and require urgent attention. Common issues include roof leakages during monsoon seasons, structural cracks in walls, inadequate sanitation facilities, insufficient storage space, poor housekeeping, and a lack of comfortable workspaces for employees.

The proposed infrastructure development program is intended to address these deficiencies by providing clean, hygienic, safe, and modern workplace facilities. Improved office infrastructure will enhance employee comfort, motivation, and productivity while strengthening the organisation's operational capabilities and enabling it to deliver better services to customers. This initiative will also contribute to creating a positive and professional work environment aligned with TPWODL's long-term growth and sustainability objectives.

Proposal

The organization has substantially strengthened its infrastructure network through the successful construction and renovation of 5 Circle Offices, 16 Division Offices, 42 SDO Offices, and 143 Section Offices up to FY 2025-26. In addition, key facilities such as the Corporate Office, Project Office, Commercial Building, MRT Lab, Technology center and ICC Building have been completed, significantly improving administrative efficiency, operational effectiveness, and customer service delivery. Further, under the approved budget for FY 2026-27, construction of 4 SDO Offices and 15 Section Offices is planned for completion.

To complete the remaining infrastructure and cater to future organizational requirements, it is proposed to undertake construction of 1 Division Office, 11 SDO Offices, 23 Section Offices and 1 no. Dispensary at Sambalpur during FY 2027-28.

Scheme	Description	Unit	Proposal Quantity
			FY 27-28
Construction of office building	Division Office	EA	1
	SDO Office	EA	11
	Section Office	EA	23
	Medical Dispensary	EA	1

Requirement / Need of the Proposal

The allocation of the proposed budget will not only address our immediate need for additional office space but also yield significant returns in terms of enhanced productivity, employee satisfaction, and organisational success. Furthermore, it underscores our unwavering commitment to fostering a culture of excellence and providing our team with the requisite tools and infrastructure to thrive

Scope of Work:

The scope of work for the proposed construction will broadly include:

- Development of a dedicated office room with adequate storage facilities
- Provision for essential utilities such as electrical fittings, lighting, ventilation, and office furniture
- Necessary civil and finishing works to ensure readiness for immediate operational use
- Office Boundary Wall & Peripheral Civil Work

Proposed Cost with estimate Break-up:

Total cost for construction of proposed 1 no. new Division office,11nos new SDO Office, 23 nos new Section Office, and 1 no Dispensary of all aforementioned offices with seating capacity FY 27-28 is Rs. 18 Cr.

SL No	Scheme	Description	Unit	QTY	Budgeted Amount (in CR)	Remarks	Costing Details
1	Construction of office building	Brajrajnagar Division Office	EA	1	2.15	Per No Cost 2.15 Cr Including Peripheral Development work	Refer Annexure 179
		SDO Office	EA	11	4.95	Per Nos Cost 45 lacs Including Peripheral Development work	Refer Annexure 180

Refer Annexure 179 to 181 for detailed costing.

Physical Target:

Physical Target for completion of below infrastructure by end of March'28.

- BNED Division Office – 1no
- SDO Office – 11 Nos

- Section Office – 23 Nos
- Dispensary – 1no

Cost Benefits Analysis

Not applicable

Benefits of the system and consumers

The proposed investment will result in substantial benefits for both employees and customers. Establishing modern, well-maintained office buildings will provide employees with a better workplace environment, enhancing their motivation, job satisfaction, and overall productivity. Customers will benefit from clean, aesthetically designed offices that improve their service experience and provide professional touchpoints. Furthermore, the development of safe and sound workplaces with essential amenities will address gaps currently seen in rented offices and temporary facilities. Operational efficiency will also be significantly improved through infrastructure such as various office buildings and upgraded Store facilities, which will streamline operations. Collectively, these investments will support organizational growth while ensuring long-term sustainability and customer satisfaction.

Barpali Section Office which is part of the Bargarh Circle's under BWED Division. It's distribution area is 80square km and it serves around customers. It encompasses 50 villages and 4 Gramme Panchayats.

We require a new office as the current office space within the PSS Control Room building has become inadequate to support the growing needs of our section. The limited space not only hampers our efficiency but also poses significant safety and hygiene concerns.

Space Constraint: The existing office space is insufficient to accommodate the personnel and equipment required for smooth operations. This limitation has led to overcrowding and hindered productivity.

Safety Concerns: Overcrowding and operated from PSS Control room exacerbates safety hazards, increasing the risk of accidents and injuries. A dedicated space will allow for better organization and compliance with safety protocols, ensuring the well-being of our staff.

Hygiene Issues: The cramped conditions make it challenging to maintain proper hygiene standards. A new office space will facilitate better sanitation practices, promoting a healthier work environment for all employees.

Given these pressing concerns, we propose for the construction of a new section office

Hence propose for New Section Office .

AMBAPALI SECTION OFFICE (23/23)

Ambapali Section Office which is part of the Bargarh Circle's under BED Division. It's distribution area is 55square km and it serves around 7000 customers. It encompasses 35 villages and 4Gramme Panchayats.

We required a new section office building on our own premises of. This decision comes in light of the deteriorated condition of the existing structure, which poses safety concerns and necessitates immediate action. After careful assessment it has been proposed that the current building no longer meets the required safety standards and is no longer feasible for renovation or repair. Therefore, it is imperative to proceed with the construction of a new building to ensure the safety and well-being of occupants and visitors.

Considering these factors, we kindly request your approval for the construction of a new section office at Ambapali on our own land.

Hence propose for New Section Office .

TPWODL MEDICAL DISPENSARY

MEDICAL DISPENSARY

TPWODL has completed six years since its formation and has expanded its operations across its jurisdiction through five operational circles. However, despite the continuous growth in workforce strength and operational activities, no dedicated medical dispensary facility is available in any of the five circles for providing primary healthcare services to employees and their dependent family members.

The absence of in-house medical facilities compels employees to depend on outside healthcare providers even for minor ailments, first-aid treatment, routine medical consultations, and emergency medical assistance, resulting in inconvenience, loss of productive man-hours, and delayed medical attention.

Considering the increasing employee strength and operational requirements, establishment of medical dispensaries at strategic locations is essential to strengthen employee welfare measures and provide accessible healthcare support. Accordingly, it is proposed to construct 01No. Medical Dispensaries during FY 2027-28, one each at:

1. Sambalpur

The proposed dispensaries will provide:

- Primary healthcare and consultation facilities.
- First-aid and emergency medical support.
- Periodic health check-ups and preventive healthcare services.
- Occupational health monitoring for employees.
- Improved accessibility to medical facilities for employees and their dependents.

The proposal will significantly enhance employee welfare, improve workplace health and safety standards, reduce loss of man-hours due to medical-related travel, and support the organization's commitment towards employee well-being.

In view of the above, approval is sought for inclusion of the following works in the DPR and Budget Estimate for FY 2027-28:

- Construction of 01 No. Medical Dispensary at Sambalpur.

ANNEXURE 45

Scheme Name: Enhancement of Technical & Safety Training Infrastructure and Mobile Training Facility (Training on Wheels)

Background

Safety is a core value of TPWODL and the well-being of our employees, business associates, and the public is accorded the highest priority. The organization consistently strives to improve safety practices across its operations, in alignment with industry best practices and statutory requirements. Ensuring the safety of personnel involved in fieldwork, particularly in remote and high-risk areas, is critical to maintaining operational excellence and preventing accidents involving employees, business associates, and the public.

TPWODL has established 5 HOTT Centres across 5 Circles and 12 Practice Yards. The major advantage of these facilities is that they bridge the gap between theoretical knowledge and actual workplace behaviour. Instead of simply explaining what a worker should do, trainees are given the opportunity to perform tasks, experience simulated hazards, make mistakes in a controlled environment, and learn the correct response. Therefore, investment in hands-on training centres and safety practice yards can contribute to:

Better competency → safer work practices → fewer accidents → reduced downtime and losses → improved productivity and a stronger safety culture.

Proposal

1. Enhancement of Technical and Safety training centres:

Providing **well-designed classrooms and hygienic lunch sheds** at a Safety Skill Development / Training Centre is an important investment in training quality, participant welfare and organizational effectiveness.

It is proposed to enhance Skill and Safety training centres as follows :

1) Class rooms – Hamirpur(Rourkela), Bhangabari (Bhawanipatna), Jharsuguda.
2) Lunch Sheds – Banai (Rourkela), Attabira (Bargarh),Dasmile(Bargarh), Balangir , Brajrajnagar, Sundergarh, Nuapada.

2. Introduction of "Learning on Wheels" Vehicles (02 Nos.)

The proposal includes procuring and deploying specially designed "**Learning on Wheels"** vehicles, equipped with essential training and awareness tools. These mobile units will travel to various work locations based on operational needs. Each mobile training unit will be equipped with

- Bolero Pickup Van with modify structure setup
- Training Aids (digital screen, generator, Sound system, writeup board, PVC chair etc.)

Benefits include:

- Mass safety and technical awareness across all divisions.
- Reduced workforce travel for training and awareness sessions.
- Lower road risk exposure by minimizing long-distance travel.
- Direct engagement with field staff and the local community, ensuring awareness at the grassroots level.
- Enhancement of community awareness also

Requirements /Need of the proposal

This proposal ensures a balanced approach capacity building through training centres, easy accessibility to the consumer and workplace workforce through mobile training vehicles, and risk mitigation through provision of safety equipment

1.Skill Gap Identification: Current staff lacks practical exposure to certain operational tasks due to limited Hands-on technical training centre.

2.Safety Compliance: High incidence of electrical accidents indicates urgent need for hands-on safety training.

3.Regulatory Requirement: To fulfil the CEA & DISCOM safety guidelines

4.Employee Development: To enhance productivity through practical hands-on training efficiency, and morale.

5.Consumer Expectation: Faster response, reliable service, and quality supply depend on skilled manpower.

Scope of the Work:

1. Enhancement of Technical and Safety training centres:

a. Classroom Development (3 locations)

- Adequate classroom space with proper seating capacity
- Good natural lighting and ventilation
- Electrical wiring, lighting and power points
- Fans/air-conditioning or other ventilation systems
- Audio-visual teaching facilities
- Projector/display system and instructor facilities
- Whiteboards and other teaching aids
- Storage facilities for training materials

- Acoustic treatment where required
- Internet/network connectivity

b. Lunch Shed Construction (7 locations)

- Foundation and structural work
- Roofing and weather protection
- Flooring and drainage
- Drinking-water facility
- Hand-washing facilities
- Food serving/counter area
- Proper ventilation and lighting
- Waste bins and waste-disposal arrangements
- Hygienic and washable surfaces
- Provision for kitchen/food preparation facilities, if required

c. Furniture & Equipment

For classrooms:

- Training tables and chairs
- Instructor table/chair
- Storage cupboards
- Projector/LED display
- Computer and audio system
- Whiteboard

For the lunch shed:

- Serving counters
- Drinking-water/RO facility
- Hand-washing stations
- Food storage and waste-management facilities

2. Learning on Wheels Vehicles (02 Nos.)

Each mobile training unit will be equipped with

- Bolero Pickup Van with modify structure setup
- Training Aids (digital screen, generator, Sound system, writeup board, PVC chair etc.)

ANNEXURE – 46

Proposal: Enhancement of Store Infrastructure

Background:

Over the past five financial years, CAPEX has been invested in strengthening store infrastructure to ensure timely material availability and uninterrupted operational support across TPWODL. However, with the increase in inventory volumes, recurring monsoon-related disruptions, and increased vehicular movement within store premises, the existing infrastructure at several locations is no longer adequate to meet the current operational requirements

Store yards at Balangir, Burla, and Rajgangpur continue to experience recurring waterlogging due to the absence or inadequacy of proper drainage systems. Further, uneven and unpaved yard surfaces increase the risk of damage to stored materials, equipment, and vehicles during storage and loading/unloading activities. The limited availability of adequate security infrastructure and modern material-handling equipment also impacts operational efficiency, safety, and effective material management.

In view of these persistent infrastructure constraints, a focused Store Infrastructure Development Plan has been formulated for FY 2027-28. The proposed works primarily include development of drainage systems, construction of concrete/paver-block platforms and yards, construction of watch towers, and procurement of suitable material-handling equipment across identified store locations. The proposed interventions are aimed at improving material protection, enhancing safety and security, reducing operational disruptions, and ensuring efficient and reliable store operations to support TPWODL's growing operational requirements.

Proposal:

The primary objective of this proposal is to strengthen the civil and yard infrastructure of stores to facilitate safe, efficient, and systematic material management. The proposed interventions, including drainage systems, concrete/paver-block platforms, a security watch tower, and modern material-handling equipment, are aimed at mitigating recurring waterlogging, reducing the risk of material and equipment damage, optimizing yard utilization, and ensuring uninterrupted store operations throughout the year.

The proposed drainage works at Balangir, Burla, and Rajgangpur Stores will address recurring monsoon-related waterlogging and improve the usability of store premises. Construction of concrete/paver-block platforms at identified shed and yard locations will facilitate safe movement of vehicles and material-handling equipment and improve loading/unloading operations. Construction of a watch tower at Balangir Store will strengthen security surveillance, while procurement of material-handling equipment across the stores will improve operational efficiency and reduce manual handling.

Overall, the proposed infrastructure improvements will enhance material protection, safety, security, and working conditions for store personnel, while supporting statutory and operational requirements. The upgraded infrastructure will also provide adequate capacity and flexibility to accommodate future growth in inventory volumes and store operations.

Requirement/ Need of the Proposal:

- Eliminates recurring waterlogging in store yards at Balangir, Burla, and Rajgangpur, ensuring all-weather accessibility and protection of stored materials.
- Provides firm and level concrete/paver-block platforms in front of sheds and near security rooms, enabling safe and efficient loading/unloading operations.
- Prevents damage to stored materials caused by dampness, mud, and moisture accumulation during the monsoon season.
- Facilitates the smooth and safe movement of material-handling equipment such as forklifts, trolleys, and pallet trucks within the store premises.
- Reduces wear and tear on vehicles and equipment caused by uneven and unpaved yard surfaces.
- Enhances security surveillance and enables early detection of unauthorized activities through the construction of a watch tower at Balangir Store.
- Strengthens overall material-handling capabilities across all stores through the procurement of storage bins, storage stands, trolleys, pallets, outdoor storage racks, and other handling tools.
- Minimizes long-term repair and maintenance expenditure by addressing structural and drainage issues on a permanent basis.
- Supports uninterrupted store operations throughout the year, improving overall productivity, safety, and turnaround time for material receipt and dispatch.

ANNEXURE 47

Scheme Name: Ready-to-Use Office Assets for Offices

Background

TPWODL is continuously upgrading its office infrastructure to support its increasing workforce, growing operational requirements. Hence, need has been felt for systematic upgradation and replacement of administrative assets.

A significant number of office assets have either completed their useful life, require frequent maintenance, or are insufficient to meet current operational requirements. The absence of standardized infrastructure adversely impacts employee productivity, workplace safety, statutory compliance, business continuity and stakeholder experience.

Proposal

The proposed Administrative CAPEX for procurement of Ready Use Assets for Offices aims to:

- Strengthen administrative infrastructure across Corporate Office and all Circle Offices.
- Improve operational efficiency and employee productivity.
- Ensure uninterrupted business operations through reliable support infrastructure.
- Enhance workplace safety, health and statutory compliance.
- Standardize office facilities across all operational locations.
- Improve stakeholder and employee experience.
- Reduce recurring repair and maintenance expenditure through timely replacement of ageing assets.
- Support future business growth and expansion.

Requirement/ Need of the Proposal

The proposed assets are required to address gaps arising from ageing, damaged, obsolete, inadequate, and frequently failing administrative assets across the Corporate Office and Circle Offices. The requirement has been assessed based on the existing infrastructure, asset condition, serviceability, operational requirements, workforce strength, and the need for standardization across offices.

- **Office Infrastructure & Furniture:** Office Infrastructure & Furniture (including executive and office tables, ergonomic chairs, visitor chairs, conference tables, meeting room furniture, sofa sets, centre tables, steel almirahs, file cabinets, storage racks, shredding machines, bookshelves, and reception furniture etc) are essential for providing a safe, functional, organized, and professional workplace. These assets support efficient day-to-day administrative operations, improve workplace ergonomics and space utilization, ensure proper storage of official documents and records, and enhance the overall employee and visitor experience.

- **Audio-Visual & Communication System:** TVs and sound systems with cordless microphones are required for conducting meetings, training programmes, management reviews, presentations, awareness programmes, and stakeholder interactions. These facilities enable effective communication and coordination between the Corporate Office, Circle Offices, and field locations, thereby supporting efficient decision-making and operational effectiveness.

- **Electrical & Power Backup Infrastructure:** Inverters, UPS and Batteries are required to provide reliable backup power for essential office equipment and critical administrative functions. These assets help minimize disruption during power outages, ensure continuity of essential office activities, and improve the reliability of critical electrical and electronic equipment.

- **Air Conditioning & Indoor Environment:** Split Air Conditioners and Desert Coolers are essential for maintaining a comfortable, healthy and productive workplace. These assets help regulate temperature, improve indoor air quality, protect office equipment from overheating, and ensure a conducive working environment for employees, visitors and business-critical operations. Air Purifiers are also proposed at identified locations to support a cleaner and healthier indoor environment.

- **Water & Pantry Infrastructure:** Drinking Water Facilities and Pantry equipment (including RO Water Purifiers, Water Coolers, Refrigerators and Microwave Ovens, pump sets etc.) are essential to provide safe drinking water and hygienic pantry services for employees and visitors. Washing machines are proposed at identified locations to support housekeeping and cleaning requirements. These assets promote employee health and well-being, improve workplace convenience and productivity, and ensure compliance with health, hygiene and workplace welfare standards**.**

- **Transportation & Mobility:** Official vehicles are required to support administrative functions, field inspections, statutory and official visits, emergency requirements, logistics, inter-office coordination, and movement of employees across operational locations, thereby ensuring timely execution of business activities. The company-owned vehicles OD-15-B-0372 (Mahindra Bolero), registered in December 2013, and OD-02-F-8762 (Hyundai Verna), registered in May 2013, are ageing vehicles approaching completion of their service life. Both vehicles will complete 15 years of service during FY 2028-29 and are therefore proposed for replacement.
